5. Each subscriber to the trust agrees to assign absolutely to the trustees the number of shares of capital stock of the particular corporation or corporations indicated in article 6 of this agreement; in consideration of which said trustees do hereby agree to execute and deliver to each subscriber trust certificates as above specified for the number of shares, which certificates, at the par value thereof, shall represent the cash value of the stock so delivered. The value of the capital of any corporation, whose stock shall be assigned to said trustees, shall be first agreed upon between said trustees and the stockholders willing to transfer the same, and after it is agreed upon there shall be no discrimination in the purchase price as between other stockholders of same corporation transferring at same time.

6. This agreement shall take effect as soon as those holding a majority of stock in the following corporations, formed or to be formed, to wit, The Storrs Distilling Company, by the Mill Creek Distilling Company; the Maddux-Hobart Company, by Maddux, Hobart & Co.; the White Mills Distilling Company, by Geo. K. Duckworth; the Great Western Distilling Company, Monarch Distilling Company, Woolner Bros. Distilling Company, Peoria Distilling Company, Birmingham Distilling Company, by the Chicago Distilling Company; Missouri Distilling Company, by Mound City Distilling Company, have transferred the same to said trustees.

Thereafter said trustees and their successors shall have power to purchase other stocks of said companies, or of companies organized for conducting same business, or any of the business hereinbefore specified, and may issue therefor certificates of trust equal at par value to the cash value of the stocks so purchased, or shall have power to lease the premises of such companies, paying therefor such rental as they may deem proper, and whenever in their judgment it is for the best interests of the trust to lease rather than purchase.

7. All stocks sold and transferred to said trustees shall be held by them and their successors for the benefit of all the owners of said trust certificates. No stocks so held by said trustees shall be sold or surrendered by said trustees during the continuance of this trust without the consent of a majority, in number and value, of the trust certificates: *Provided, however,* That said trustees may from time to time assign such shares of stock as may be necessary to qualify any person or persons as directors of any companies, the stocks of which are held by said trustees.

8. Said trustees shall have power to cause corporations to be formed for the purposes and with the necessary powers for carrying on distilling and kindred business: *Provided,* That the stock of such corporations shall be issued for cash or for property at its cash value, and shall be issued or be purchased by said trustees in the manner provided in section 6 of this agreement.

9. Said trustees shall safely keep all moneys received from dividends or interest upon stocks or money held in trust, and shall distribute the same, as well as all moneys received from sales of trust property, by declaring and paying monthly dividends upon said trust certificates, as funds accumulate, which are not needed for the uses and expense of the trust. The trustees shall keep separate accounts of receipts from dividends and interest and of receipts from trust property.

10. Trustees shall render to the holders of trust certificates at each annual meeting a statement of the receipts and disbursements of the trust for the year. They shall also, whenever demanded by a majority in value of the holders of trust certificates, furnish a true and perfect inventory and appraisal of all property held in trust, and a statement, as full as possible, of the financial affairs of the various companies whose stocks are held in trust.

11. Said trustees shall exercise supervision, so far as their ownership of stock enables them to do, over the several corporations or associations whose stock is held by said trustees. They shall elect, or endeavor to elect, the directors and officers thereof, who shall be paid reasonable compensations for services; they may elect themselves as such directors and officers.

12. None of the powers of trustees can be exercised except by unanimous vote of their full number, either in person or by proxy, except in the election of officers as provided in the by-laws: *Provided,* That no proxy of a trustee can be given to any person other than a trustee; and in case of disagreement among trustees on any matter, a majority of the trustees may call a special meeting of the holders of certificates, as herein provided for, and to whom shall be submitted the matter of disagreement, and a decision of a majority in value of the holders of trust certificates present, in person or proxy, shall be final.

The trustees may appoint from their own number an executive committee and other committees composed wholly or partly of persons not trustees.

13. Trustees may employ and pay such agents and attorneys as they may find it necessary to employ in management of such trust.

14. Each trustee shall be entitled to a salary of \$10 per day. Such may be increased by a majority of certificate holders.

15. Trust shall have principal office in Chicago, subject to change by vote of trustees. There should be a safe or vault for the safe deposit of the stocks held in trust.

16. All powers and duties vested in the trustees appointed shall be exercised by their successors.

17. Elections for trustees to succeed those herein appointed shall be held annually. At first annual election 8 trustees shall be elected for 1 year, 3 trustees for 2 years, and three trustees for 3 years. Thereafter 8 trustees shall be elected annually for a term of 3 years, to take the place of those retiring. Trustees

elected to fill vacancy shall hold office only for the unexpired time of said vacancy.

18. No person eligible as trustee, unless actual owner of not less than 500 shares trust certificates at time of election, which must stand in his name on the trust books, and continue so, as well as actual ownership, during his term of service.

19. Trustees are elected by owners of trust certificates, and no stock shall be voted which has not stood in owner's name 30 days prior to election.

20. Annual meeting of owners of trust certificates for election of trustees and other business, shall be held at the office of trustees on the Wednesday nearest April 15, of each year. Trustees must call meeting whenever requested by one-third in value of the trust certificates.

21. By-laws must be in conformity with this agreement.

22. Trustees may fill vacancy in their number or call meeting of owners of trust certificates for the purpose.

23. Trustee or trustees appointed by any court to fill vacancy or vacancies shall hold his or their offices only until his or their successors shall be appointed or elected in manner above provided for.

24. Trustees must attend every meeting of the board of trustees, either in person or by proxy. If any trustee is absent from 3 successive meetings, or fails to be represented by proxy at such meetings, his office shall be considered vacant, and filled as heretofore provided.

25. Whenever any change shall occur in the board of trustees the legal title to the stock or other property held in trust shall pass to and vest in successors of said trustees without any formal transfer thereof. But the board of trustees must obtain formal transfer from any retiring trustee, or from his executor, if retirement be caused by death.

26. The trust shall continue for 25 years and shall thereafter continue until terminated by a vote of two-thirds in value of the holders of certificates at meeting called for the purpose.

At same meeting the holders of certificates may decide, by a vote of 51 per cent of their number, the mode in which the trust affairs shall be wound up; the trustees continuing to hold office for that purpose.

27. This agreement was signed on May 10, 1887, by the Great Western Distilling Company, per J. B. Greenhut, secretary, capital stock of owner company, \$100,000; Peoria Distilling Company, per Wm. McLean, secretary, capital stock of owner company, \$100,000; Missouri Distilling Company, per Mound City Distilling Company, by A. Bevis, vice-president; Storrs Distilling Company, per Mill Creek Distilling Company, by Thomas T. Gaff, president; White Mills Distilling Company, per George K. Duckworth; Birmingham Distilling Company, per Chicago Distilling Company, P. J. Hennessy, treasurer, capital stock of owner company, \$50,000; Maddux-Hobart Distilling Company, per Maddux-Hobart & Co.; Woolner Bros. Distilling Co., per A. Woolner, treasurer, original capital stock, \$200,000, increased in 1885 to \$350,000; Monarch Distilling Company, per George J. Gibson, treasurer, capital stock of owner company, \$250,000.

THE WESTERN EXPORTERS' ASSOCIATION.

The Distillers and Cattle Feeders' Trust was immediately preceded by an association known as the Western Exporters' Association. This association allowed each distillery in it a certain number of bushels as its capacity, and then pro rated the consuming capacity of the country among the various distilleries. Any distillery mashing more bushels than were allowed it had to export the excess of alcohol or spirits produced at its own cost. If the total output of the number of bushels allowed by the association produced more goods than the country would consume, then the association exported the goods and stood the loss on this export out of an assessment on each member of the association, which was regulated at a certain amount per bushel.

In the ordinary acceptation of the word, the Distillers and Cattle Feeders' Trust was not promoted.

Q. Who fixed the assessment upon each one of these different companies for the payment of the expenses of exportation?—A. They had an organization, and a committee did that work.

DISTILLERS' AND CATTLE-FEEDERS' TRUST NOT PROMOTED.

As I was saying, in the ordinary conception of the word the Distillers' and Cattle Feeders' Trust was not "promoted." The 9 trustees were paid as well or possibly better for their properties than the bulk of those joining the association, but they had at that time the best properties in the country.

Q. Is it a matter of record that they were paid more in proportion? Is that something which can be proved?—A. No; that is an inference from the prices. They were selling, and did the first selling. They sold to themselves and made tolerably good bargains.

Q. Were they substantially the ones who fixed the values on all of the plants?—A. I think so.

SAVINGS OR LOSSES THROUGH COMBINATIONS.

Q. Including their own?—A. My recollection of this is not distinct, but that is what I infer.

In reference to the savings or losses in advertising, there are no statistics. The cost of advertising at any time is purely nominal in the spirit-distilling business, from the nature of the business.

As to savings or losses in transportation, it is doubtful whether any advantages were secured by them that could not be secured by an outside distiller at the same time. There was nothing saved by filling orders from the nearest plant, owing to the fact that purchasers very frequently, if not generally, designated what particular distiller's goods they desired.

ADVANTAGES OF PEORIA AS A DISTILLING POINT.

Q. Would purchasers from New York, for example, be likely to designate a St. Louis distillery instead of a Cincinnati distillery, and pay the difference in freight?—A. They would be very apt to. Peoria was the general center. The conditions at Peoria were felt to be better for distilling than at any other point in the country.

Q. Can you give any estimate as to how much better; what per cent?

Q. (By Mr. PHILLIPS.) And the reason?—A. I can give you the reason, but the per cent I will have to figure out. Peoria is in the center of a very large corn-producing section. Corn is cheap, and there is a good market at Peoria and vicinity. It is also in the vicinity of the coal mines, and coal is furnished very cheap—as cheap, perhaps, as anywhere. More important than all other things together, however, is the water supply. They have an illimitable supply of cold water, running at a temperature of about 54° F., and not varying to exceed 2° at any time during the whole year. That vein of water runs under the bank of the river close by the whole river front, where the distilleries are. Temperature being a dominating factor in distilling, that water supply gives an efficiency to the distilleries there that could not be secured by the use of ice.

Q. (By Mr. PHILLIPS.) Is it artesian water?—A. No; practically an underground river. It is pumped from wells about 30 feet deep. It is drawn from a stratum of gravel, and is cold and illimitable in supply. Cincinnati is a good producing point, but I think not so good as Peoria. Pekin, 10 miles down the river from Peoria, is as good a point as Peoria, with the exception that its corn market is not so extensive.

Q. (By Mr. JENKS.) Do you think the advantage of a Peoria distillery over a Chicago distillery is as much as 10 per cent?—A. I can not estimate the per cent, but it would be considerable; I should not be surprised at all if it were nearly that much. The additional cost of real estate is one of the adverse conditions in Chicago. The value of land is much greater than in Peoria, and they also lack the cold-water facilities. Chicago is, however, a good grain market.

Q. Is corn cheaper there than at Peoria?—A. Of course the markets are not uniform, but as a rule it is not. The difficulty of handling corn in Chicago—the switching from point to point—adds considerable to the cost.

Q. Is it more difficult than at Peoria?—A. Yes, because more transfers of cars are required in order to reach the district drawn from.

Q. Is there any other raw material at Peoria that is of consequence besides corn? Do they use rye?—A. That is not a rye country. Rye and barley are brought from the north; there is very little of it produced down there.

Q. (By Mr. PHILLIPS.) Do they make rye whisky there?—A. Some. The Clark distillery is a rye-whisky distillery.

Q. (By Mr. JENKS.) Where does the rye come from?—A. It comes from Nebraska, Minnesota, the Dakotas, and other points. There is not a uniform local production in the region of Peoria; rye and barley generally come from farther north. In other words, in the corn-belt section corn-growing land can not, as a rule, be used profitably to grow the smaller grains. There is greater profit in raising corn until a rotation of crops is necessary, and then they generally grow oats.

Q. Does Chicago have any advantage over Peoria in the cattle-feeding part of the industry?—A. None at all; Peoria has the advantage.

Q. Why?—A. First, in a large city you can not or are not permitted, for sanitary reasons, to have large herds of cattle; you have to go outside the city limits. The Riverdale and Calumet distilleries were arranged for cattle feeding, and they were not absolutely prohibited from it, but they would have been if reopened. I think the city authorities would not have permitted cattle feeding at the Calumet any longer. In both of these distilleries ice is a considerable amount of the cost, and in icing there is a lack of that uniformity in temperature which they get in spring water at Peoria. I may illustrate with a case that I investigated in the Monarch distillery at Peoria, observing and following the mash. They put 900 bushels of fine-ground cornmeal into a cooker and cooked it under pressure at a temperature of 325° for about 15 minutes. After removing the pressure and reducing the temperature they turned in the malt-meal mash from another tank which converted the starch into sugar. They then ran it off by gravity into a big tank below. I do not remember the temperature at this stage, but it was very much lower than it was in the cooker. From the lower tank, holding 900 bushels, they forced it by steam pumps through 40,000 feet of pipe which was jacketed its entire length by a water pipe. That is, there was a smaller pipe running inside of the larger one. A stream of cold water from the well beneath the distillery was forced through the larger pipe from the opposite end, so that the warm mash ran for 40,000 feet inside of a stream of cold water, separated only by the thickness of a thin metal pipe. By lessening or increasing the quantity of cold water going through, the temperature of the mash, when it came to the fermenting tub, could be regulated to a fraction of a degree. In the ice distilleries there would necessarily be irregularity in the temperature, and therefore in the product. There would be variations in the ice, producing greater cooling effects at some times than others.

PATENTS AND IMPROVED PROCESSES.

There were no patents, that I know of, owned or controlled by the Distillers and Cattle Feeders' Trust, or the Distilling and Cattle Feeding Company.

Q. Were there not, perhaps, some better processes that they used and that were more or less secret?—A. Yes. Those processes, as I understand it, consisted mainly in the character of the yeast used—the fermenting germs. I attempted to get some knowledge of that subject, and one of the experts there, in a conversation, claimed that there was almost an infinite variety of fermenting germs—between 360 and 400 distinct germs, divided into a number of families, which I do not remember, as I did not go into their genealogy. Some of those germs are more potent than others, and, when a particularly good species is obtained, great care is exercised in propagating them and in preventing other species getting mixed with them in the yeast. When they get the best kind the yeast is more efficient, and a small quantity of it is considered of great value. I heard them talk about distillers giving from \$500 to \$2,500 for a half-gallon jug of yeast. Of course, gentlemen, I do not vouch for that. But it is true that the men who advance in the line of that study become the foremost men in the distilling business; the per cent of spirit yielded, to the extent of determining profit or loss, depends upon the skill of the yeast maker, who is the distiller. I believe that now, or even at the time when I operated the distilleries, less disparity appeared in the yeast than in former times.

Q. When the different distilleries united, did those who had the better yeast give free use of it to the others?—A. I can not say that I remember about that. The houses that went in first were the most efficient; that is, they produced a larger per cent. I take it for granted that, as they were interested in all the distilleries, they sent their yeast to all. I do not know that they guard with great care their yeast and their methods. When I took possession, I found there employed some of the best-known yeast makers and most skillful chemists in that line in the country. They were applying the most advanced methods and using the best-known appliances.

Q. Are there any other methods in which there might be an advantage in case of combination?—A. Do you mean methods of operation?

Q. Yes.—A. I do not think of anything now.

Q. As you had charge of the work, I thought possibly there might be some other special thing that you could mention.—A. Yes; in machinery and in methods of handling and cooking they are advancing right along, and have made great progress within a few years.

There were practically no by-products manufactured by the Distilling and Cattle Feeding Company. Fusel oil has always been produced in the manufacture of spirits, and the refuse or slop has always been used for cattle feeding;

that is, fusel oil has always been produced in this modern process. By the old process of distillation I understand that they did not take the fusel oil out of the spirit, but everything that came from the still went into the barrel.

Q. Do you not think there was some improvement in that particular when the different companies were organized in one great company?—A. Not at all; they all used the same general process and followed the same general methods.

No statistics as to the cost of superintendence or of labor, either before or after the organization of the trust or the company, can be obtained. It is supposed that large houses can be operated more cheaply than small ones, though it is claimed that this point is not even settled now between houses running 3,000 bushels and houses running 12,000 bushels daily. My own opinion is that, the larger the house, with like conditions and management, the less will be the cost of production.

THE DISMANTLING OF DISTILLERIES AND ITS EFFECT.

Q. When these different companies came together, is it true that a number of establishments were closed that had been running before?—A. A large number of the smaller houses were closed; it would have been unprofitable to have run them; they were what they call dismantled. The house was purchased and the machinery taken out. What could be used in a larger house was so used and the balance was sent to the scrap heap. The shell only of the old house was left.

Q. Then, if there were 35 or 40 distilleries dismantled in this way, would not the presumption be that the number of superintendents was lessened correspondingly?—A. Yes; the number would be lessened. The concentration of the working forces would necessarily lessen the amount of superintendence and decrease the cost of production.

Q. Were overseers left in charge of the plants that had been dismantled?—A. In some cases there were simply watchmen to keep the building from being destroyed; in some cases the buildings were abandoned absolutely.

Q. Is it true that in a number of cases the distilleries were simply suspended for a time and the former managers continued on salaries, with nothing to do?—A. That occurred in some cases for short intervals. But I do not remember any instances in which the houses were kept up for long periods and the managers paid, unless by agreement, as in the case of the 5-year agreement.

Q. What was that 5-year agreement?—A. The distillery was purchased and brought into the trust with the understanding that the owner should be continued as manager at a salary of \$800 a month.

Q. Did that apply to all of the distilleries that were taken in—the 81 or the 65?—A. My memory does not serve me on that. I should think that in some of the smaller ones it did not; it would apply only to the distilleries that were strong or producing concerns, and which it was necessary to get out of the way solely because they were market disturbers. Some smaller distilleries would not warrant an expense of that kind.

Q. Would the manager of a small one be paid a salary correspondingly less, but yet a regular salary?—A. I do not remember; that is a matter of detail for which I should have to go to the records.

As to traveling salesmen, there were none for the company proper. The only traveling salesmen were those employed by the house of H. H. Shufeldt & Co. in the distributing business. Its purchase by the Distilling and Cattle Feeding Company did not change their number or affect the rate of wages.

There are no statistics on the subject of labor. The labor is comparatively a small part of the cost of production of spirits and alcohol.

Q. Would not the same general observation apply there as in the case of the superintendents, viz., that where distilleries were closed a number of men were thrown out of employment?—A. Yes; I think so.

IMPROVED PROCESSES (RESUMED).

As to raw material, the principal cost is in corn and barley, rye or barley, or other malt, which is bought in the open market, on the board of trade or in the usual way, in large quantities. The increase in the amount of spirit produced from a given amount of grain by the larger houses in the last 5 years has been only slight, and that increase is owing to the improved methods, which were open to any one to use. The increase of yield in the small distilleries over that produced by the old and primitive methods, still in use, has been small.

Q. Improvements of that kind can hardly be ascribed, then, to the formation of the combination?—A. Not at all; it is the use of the improvements on a large scale. The increase of the yield over that produced by the old and primitive methods,

still in use in many, indeed most, of the small distilleries, however, is very great. I have another paper which I present to you and which covers that ground. The product during my time—and I think it still runs about the same—was somewhere from 4.70 to 4.85; that is, 4.70 to 4.85 gallons of spirits per bushel. Some of the smaller houses get down so low, I believe, as 3½ gallons to the bushel. The higher yield is due to the larger capacity, the methods, and machinery.

There has been no specialization, each distillery continuing to make its own brands and being known by its brands. The products of certain distilleries are sought for by particular customers.

PRODUCTION OF SPECIALTIES BY CERTAIN HOUSES.

There are also specialties produced by certain houses. They have a brand of whisky or gin that has become popular—as, for instance, the Shufeldt gin, which became very popular and commanded a higher price in the market than any other brand. The other houses, however, are spirit houses; i. e., they make spirits and alcohol, but in that you will find that buyers—especially compounders—often call for brands from a certain distillery, and that not always the distillery nearest to them.

Q. Did the popularity of the Shufeldt gin continue after the distillery was purchased?—A. Yes; and increased. But these gentlemen were not after gin just at that time; they were after the plant as a spirit-producing plant.

Q. Does not your last statement practically shut out the question of good will in the purchase of a plant?—A. The good will, no doubt, had a money value; but they would not, I think, have bought it for the good will alone. It was bought in order to control the output from it.

Q. The main thing was to get rid of the competition?—A. Yes; to get rid of the competition in spirits, not in gin or whisky. The gin and whisky were simply an incident. If they had made gin and whisky, and that alone, and kept out of the spirit business, I do not think they would have been disturbed. I think they might have continued in the field of the regular whisky manufacture, i. e., the old-style product.

THE MANUFACTURE OF GIN.

Q. (By Mr. PHILLIPS.) From what kind of material do they make gin, particularly the excellent quality of which you have been speaking?—A. I might answer that question from the standpoint of a layman, and say that the whole thing has just one base—pure spirits, chemically, common alcohol.

Q. (By Representative OTJEN.) It is a question of mixing, is it not?—A. Yes; it is a question of mixing, of preparing it. The base of the whole thing is pure spirit, or chemical alcohol, not commercial alcohol. There is a distinction between high-proof spirits and commercial alcohol. Commercial alcohol is not so highly refined as spirits; i. e., it has more of fusel oil and acids in it. The Shufeldt gin is a carefully prepared high-proof spirits. In the preparation they have a formula which is a secret with the house, or at least was a secret until they showed it to me as an officer of the court; but I soon forgot it, so that in substance it remains a secret yet. With absolutely pure spirits, distilled water, juniper berries, and other vegetable material they make an infusion, and that infusion is the gin. I became convinced, in studying the question with the chemist, that it was a purer spirit and a better gin than anything that was imported. In other words, it is pure ethyl and distilled water, compounded with juniper berry and other vegetable juices, which give it its medicinal properties. Most if not all the gin made in this country is made in this way.

Q. (By Mr. PHILLIPS.) Is not pure gin made directly from juniper berry?—A. That is the theory, I think, that is generally advanced, but I understand it is not the fact; it would be worth less than if it were made of pure corn or any other grain. Starch is the basis, and there is little, almost no starch, in the juniper berry, while it is abundant in corn and as pure as it can be got. The starch is converted into sugar by the use of the malt, and then the sugar is converted by yeast into the spirit globule, which is evaporated by heat. Now, where they get the pure globule, or purify it, leaving it as they do in this process without the other chemical elements that go with it, or where the pure ethyl is obtained, I do not know. The chemists claimed to me that 16 chemical elements come out of the still in the vapor. The ethyl, or the pure spirit, is the one they want. Now, in the spirit made from corn by the modern process they get it in its purity; and in going over that question I was led to believe that in Holland, where they make gin, they do not make it out of the juniper berry, or by our process, but out of grain, or potatoes, or something that has starch in it. But there the juniper ber-

ries and other vegetable materials are ground up and cooked with the mash, and are put through the still by the old process without any purification of the spirit.

Q. (By Mr. JENKS.) When the Shufeldt distillery was purchased by the Distilling and Cattle Feeding Company did they not also purchase this secret process?—A. Yes; the man that had the secret process stayed there; and they were entitled to it and got it.

Q. Have they made that process generally known to the other houses of the company?—A. I think not. When I went into the place which they call their laboratory I had the man show me how he did it, his formula, the berries, roots, and herbs that he used. He told me the proportions of each, how they separated them, and how they used them; it was not known outside; they kept the secret closely.

Q. Does not the American Spirits Manufacturing Company control that process now, and can they not use it in every one of their distilleries, if they want to?—A. Yes; if they want to, but I don't think they will do it. They have not as yet.

Q. Do you think it would overstock the market with that particular kind of gin?—A. Well, it is a matter of value that appeals to them. There is no reason why they should give it away that I know of. One plant makes all the gin that they need of that kind. I do not know what they have done with it. There are other distilleries that make gin, but I think nothing anywhere near as good as Shufeldt gin; they certainly had not up to the time of my investigation of that matter.

HIGHLY REFINED SPIRITS USED IN THE MANUFACTURE OF GIN.

Q. Then you do not think that the claim that the great combinations enjoy special advantages in secret processes of manufacture holds true in this particular case?—A. I do not think it does in the case of Shufeldt gin, but that is limited somewhat to this infusion. The production of the spirit which is the base of Shufeldt gin is common to them all, and is generally done by double or treble distilling. They have triple-distilled spirit which they call "Sunbeam." There is but very little water in it. I do not remember now, but I think it contains 96 per cent of spirit. There is just enough water to hold the spirit in liquor form and prevent it from going to vapor. In order to demonstrate to me that it was absolutely pure, or as pure as it could be made, the chemist dropped a piece of pure white quicklime into a tumbler full of it, letting it fall easily, so as not to splash the spirit. The quicklime had no more than settled on the bottom than the tumbler was empty, the lime having absorbed the water, allowing the spirit to go off in vapor. Nothing remained in the tumbler but the damp slaked lime, which still retained its pure white color. This experiment also showed the difference between the modern process of distillation and the old one, where fusel oil and everything that comes from the still goes into the liquor and ultimately into the stomach of the man who drinks it. I agreed with the chemist in the conclusion that gin made from pure spirits is the best, and that the cheap, so called, common rotgut corn whisky, made from refined spirits, is the purest whisky that man can make. It is a mere question of palatability and age. It is unpalatable in the beginning, but is improved by age, so that in the end it is the best and is free from anything that is injurious. At least, that is my opinion, and it is also the opinion of a number of chemists with whom I conferred on the subject.

Q. The question is suggested to me whether this was the commissary whisky of war times?—A. I was not posted on distillation at the time of the war; I was at the other end of the line; but I am inclined to think not. Most of the whisky furnished the Army was produced prior to the time when the new processes for extricating the fusel oil and the acids were applied. Most of the old commissary whisky was just weakened, rectified, high wines; yet I do know that under the conditions many of the men in the Army estimated it to be good. I have been informed that some of the best made during the later part of the war was by the modern process.

Q. Have you anything further with reference to the specialties of different plants?—A. I know of nothing further that I can give you on that point, unless you call my attention to something. I know of no figures or data that would go to show that there has been any loss in efficiency through lack of the stimulus of competition. Competition has certainly been strong except for very short periods. The central office has kept track of the various distilleries—that is, the central office of the Distilling and Cattle Feeding Company kept track of the various distilleries, by means of daily reports which covered all journal entries of the purchase of grain or shipment of goods, and which showed the daily production, every bushel of grain distilled, etc. The quality and character of the output depended largely on the trade, the customer giving notice if the goods received by

him were satisfactory. The company also had inspectors visiting and checking the various plants, and samples of goods were sent to the head office from time to time.

THE DISTRIBUTERS OF THE DISTILLING AND CATTLE FEEDING COMPANY.

The Distilling and Cattle Feeding Company sold only to special agents who were known as distributors. A list of these distributors is given on the back of the rebate voucher used by the Distilling and Cattle Feeding Company. A copy of the rebate voucher and a list of the distributors is given in Exhibit 4, which I present to you here.

EXHIBIT 4.

[Face of voucher.]

PEORIA, ILL., - , 189 . No.

Subject to the conditions named herein, and for the purpose of securing the continuous patronage of the within-named purchaser, the successors and assigns of the same, for its product

DISTILLING AND CATTLE FEEDING CO.,

Six months from the date of this purchase voucher.

Will pay to - , of - , purchaser —, - dollars (\$ - -)

Being a rebate of 7 cents per proof gallon on — proof gallons of the Distilling and Cattle Feeding Company's product purchased this day. This voucher will be valid and payable only upon condition that the above-named purchaser, the successors and assigns of the same, from the date of this voucher to the time of its payment, shall have bought their supply of such kinds of goods as are produced by the Distilling and Cattle Feeding Company, and all compounds thereof, exclusively of one or more of the dealers named on the back hereof, until further notified, and shall also have subscribed to the certificate on the back hereof.

DISTILLING AND CATTLE FEEDING CO.
By J. B. GREENHUT, President.

When due forward to the *German-American National Bank of Peoria, Ill.*, where this voucher is payable without exchange or other charge.

Stamped across face: Not transferable nor negotiable.

[Back of voucher.]

It is hereby certified that from the date of this voucher to the maturity thereof the within-named purchaser, and the successors and assigns of the same, have purchased all of their supply of such kind of goods, and their compounds, as are produced by the Distilling and Cattle Feeding Co., exclusively from one or more of the dealers named hereon.

THE PRICE OF SPIRITS.

Q. Were the prices fixed by the Distilling and Cattle Feeding Company upon its products uniform throughout different sections of the country?—A. There was some difference in price in different markets, because of nearness or remote-

ness of the source of production, but outside of that their prices were very uniform. They did not, however, hold the market, except for a while. Other distilleries grew up around them like mushrooms in the night. A number of men sold distilleries to them for stock, and then sold their stock and built more distilleries. In some cases the company bought 2 or 3 distilleries from the same parties, and finally distilleries were built faster than they could buy them.

Q. Was the competition resulting from the high price fixed by the company the real cause of the difficulties into which it finally fell?—A. That, together with speculations in the stock of the company, was very largely the cause. The stock was listed in New York, and men interested in it speculated in it and failed to hold its value up.

Q. How much was the price advanced under this combination?—A. I do not remember.

Q. Have you a list of the prices?—A. I do not think I followed the prices of the stock.

Q. I mean the prices of the products?—A. I will give that to you. The stock was down, I think, to about 7½ or 8 at the beginning of the receivership, and during the receivership it went back to about 22 or 23. The distilleries that were bought in by the new company were purchased practically on the basis of 28½ for the stock.

THE REBATE SYSTEM.

Q. Going back to the rebate system, what, on the whole, do you think was its effect on the business? The rebate certificate you have offered in evidence provided for a rebate of 7 cents per gallon; in addition to that was there another rebate to the distributor?—A. The distributor had 2 cents a gallon.

Q. So that 9 cents on the whole was withheld for 6 months. What was the general effect?—A. I do not think its effect was good. It demoralized the trade and created bad feeling among the customers, so that there was a general disposition to get out of it. I think the rebate system was started at a time when the company had almost entire control of the market, and when it looked as though it would get complete control. There was no alternative for buyers except to start distilleries of their own, and so they submitted to it, but always regarded it as a great burden.

Q. Did the company institute the rebate system solely for the purpose of controlling the output?—A. Yes; they went to a customer, and in terms, either expressed or implied, told him that he might stay in the business if he would let them supply him with goods. Some of the distributors had a very large business. If they desired to continue in it they could do so only under the rebate system, for if they refused they would be left without a supply, the company having substantial control of all the plants. Having once got in, however, the system became burdensome, because it was not long until new houses commenced competing and underselling the company in the market.

Q. Is the feeling among wholesalers with reference to the rebate system so hostile that, on the whole, they will give preference to independent distillers who operate without this system?—A. I think it hardly possible ever to start the rebate system again, at least within the memory of the men who had experience with it.

Q. You are informed, then, that the American Spirits Manufacturing Company has not adopted the rebate system?—A. They have never thought of that, and I do not think they ever will. My understanding is, from conferences I have had with the officers, that they will not attempt it. There are two things that they will avoid—first, the rebate system, and, second, any attempt to control the market in order to hold the price above what it ought to be.

THE MARKET MAY BE CONTROLLED BY CHEAPENING PRODUCTION.

On the contrary, they will seek to control the market by cheapening the cost of production. That is the only way, in my opinion, they can ever do it; and I do think they can do it in that way.

Q. Do you remember whether the old Distillers and Cattle Feeders' Trust, so far as the officers are concerned, made any attempt along that line?—A. Not very much; I did not find any conspicuous evidence of it in the records. The tendency seemed to be the other way. They tried to increase the price and corner the market.

Q. That is, it was the officers themselves who tried to push prices up as well as the stockholders?—A. Yes; after the concern reached the point where they controlled a large proportion of the output of spirits. I think that is really where they made their mistake. If they had depended on controlling the market by cheapening the product, they would have secured control and kept it. If the present company continues to do that, the chances are they will get it yet.

METHODS OF DRIVING OUT COMPETITION.

Q. Did you find any evidence that the company sent agents into special localities to make prices low enough to the customers of competitors to drive them out of business?—A. I think that is probable; that is one of the common tricks of the trade, and those gentlemen are experts at it. But I must say that these distributors are as a class the ablest and straightest set of men I ever came in contact with. They are intelligent and honest.

Q. Of course my question applies to the company and not to the distributors.—A. The company resorted to the same methods to get trade.

Q. Did you find other sharp practices for the purpose of getting rid of competitors besides that of cutting prices?—A. I do not think any methods were employed outside of the ordinary ones among competitors, but I did not go into the details of that question. There had been a very sharp fight in California, and special rates were offered there by the company. When I took charge there was an outside distillery that had been built up by parties who had sold their original plant to the trust and who were establishing a trade and securing customers out there, so that the distributors of the Distilling and Cattle Feeding Company were being crowded out of the market. It was one of the first problems I met, and one of the first I acted upon, which I did, of course, considering the circumstances, in a very mild and equitable manner.

METHOD ADOPTED BY THE RECEIVER.

Q. Have you anything further with reference to cutting prices?—A. No; nothing more. That method is practiced right along. To be entirely frank, when I discovered the condition of affairs in California I called in men of experience in that line and wanted to know what would settle these gentlemen and bring them down to work. They said, "Take their customers;" so I gave an order to take them, and lowered prices. They cut just below my rates. I had a large stock on hand and proposed to take the customers. They didn't get the customers in the end and soon came to terms. That is the ordinary method of doing business.

Q. (By Mr. KENNEDY.) The independent houses came to terms?—A. Yes; they had some trade there. They were trying to get trade by underselling.

They were just following the practice of the trust?—A. Just exactly, sir.

(By Mr. JENKS.) Then the Distilling and Cattle Feeding Company simply beat them at their own game?—A. That, of course, seems to be the fact. It was merely the question of holding the goods on hand until they depreciated in value or letting them go off on some other market. I thought better to just cut prices right then, and did so. I knew the opposition would have to shut up their distillery in a few weeks if they kept on, for I should have emptied all the warehouses on the market. They soon came to the conclusion that it would be best to hold prices above the cost of production. That is a common method of settling controversies of such a character.

Q. You think it better to sell at a fair price?—A. Yes; not an exorbitant price, but one that will give a fair living profit. When a man produces goods and sells them below cost of production he is not doing a fair business, and the only way to make him do so that I know of is just simply to cut a little below him. In this case I deemed it expedient. My competitor soon found that he was spending his capital and that I was taking care of property which I should have had to sell at marshal's sale ultimately, if not otherwise disposed of, and which would not have brought one-half the market value.

Q. (By Mr. FARQUHAR.) You mean that your competitor was either spending his own capital or cheating his creditors?—A. Yes.

Q. (By Mr. KENNEDY.) You sold below the cost of production, then, in order to bring him to time?—A. Yes; I sold below the cost of production, but there was nothing secret about it. It was open, and I made it perfectly plain to him. When he fixed his price, I made a price, I think, 2 cents a gallon under his and notified him that when he came down to that price I would go 2 cents lower, and keep going until I had emptied the warehouses. He seemed to think that I would do it. I held this trade alone, however.

Q. (By Mr. JENKS.) Was this method followed by the old trust in order to drive competitors into combining with them?—A. I think it was.

Q. The result, then, in certain cases was the same as in this case where you and your competitor practically agreed upon prices?—A. That is it. Each man knew of the product of the other companies. He saw what was a reasonable profit and knew what prices must be secured in order to obtain that profit. By common consent we agreed to sell in that way. The competitor had his customers and supplied them; we had ours and supplied them. If he took our customers by cutting prices, we took his in the same way.

Q. Now, after the agreement, did you think between you and all your associates, did you carry all of them?
A. Yes.

Q. Then, allowing for difference in freight rates, you had prices substantially uniform throughout the country?—A. Yes. The prices were not absolutely the same everywhere, but the price was fixed according to the cost of production. The average cost differed in different plants, probably from one-half to one cent. We took an average and tried to obtain from 1½ to 2 cents profit. The cost of production was based upon the price of corn at the time. As corn went up the price of spirits went up, and as corn went down the price of spirits went down at the rate of one-half cent a gallon for every 5 cents variation in the price of corn. All agreed to abide by that, and, as a rule, they did. It fared well for a while, but they did not stand long to the agreements.

Q. If prices had been fairly maintained upon the basis which you fixed, what dividends did you calculate to pay?—A. I have no recollection on that, but I was not calculating to pay dividends. It was a question of handling the goods and getting out of business as soon as possible. My calculations were not based at all upon dividends upon the capital, but wholly on the cost of production.

Q. But were not the other parties to the agreement counting on making some money, so far as their plants were concerned?—A. You can calculate that on the cost of production; the amount of capital does not cut any great figure; if you make from 1 to 1½ cents a gallon on spirits you can compute what the profit will be. It varies, of course, according to the cost of production, and that varies according to the price of corn. We followed the board of trade price of No. 2 corn on the Chicago market. If No. 2 corn went up 2 cents, the market price of spirits went up one-half cent. I think that is the rate; my figures may be wrong, but the method is all right. The profit would be determined according to the number of bushels mashed, and would bear no relation to the amount of stocks or shares outstanding in the distillery that mashed.

Q. (By Representative OWEN.) About how long did this understanding as to prices continue in operation, or was it lived up to?—A. It was made some time in February of 1890 and continued until some time in July, probably about 5 or 6 months, when the stock speculations in New York broke it up.

Q. Did you find the arrangement beneficial?—A. I think it was, or I should not have gone into it. I was an officer of the court; I studied things in all aspects as an officer of the court charged with the preservation of the property interests in my case. I think it was beneficial and fair. I think it was honest, I think I was performing my duty in looking after that trust property.

It made some profit for the interests I represented, but not much. Its best effect was in preventing heavy losses, which without it would have been inevitable. They had an umpire who watched the markets; and when corn went up, he raised the price of spirits to correspond by sending out telegrams. In other words, I was the umpire, and being the officer of the court and having no interest, the other men thought I would likely be as fair about it as anybody else. When the price of corn rose I sent out telegrams to all these men that spirits had gone up, and when it fell I notified them that spirits had gone down. In a word, I fixed and settled the price.

Q. (By Mr. KENNEDY.) Did the market keep you pretty busy sending telegrams?—A. No; the markets did not fluctuate often. A 5-cent fluctuation of that time was very rare; there was no complaint. I followed the market and the results were satisfactory, but the profits were only moderate; they probably did not average more than a cent a gallon. The important thing it did was to prevent the sacrifice of the large stock on hand.

NOW THE PRISON AGREEMENT WAS BROUGHT UP.

Q. (By Representative OWEN.) Will you explain in what way the market was kept?—A. Yes; one of the important things was that there was a fair market was indicated by the market on the Chicago board of trade, and all the distilleries and others in the country followed that market. The market was kept by the board of trade, and the distilleries and others in the country followed that market. The market was kept by the board of trade, and the distilleries and others in the country followed that market.

Exhibit 2.—Statement of rebates for years ending March 31, 1893, 1894, 1895, and ten months ending January 31, 1895.—Continued.

Year ending March 31, 1893.		
Gallons.		
27,513,532.05 at 9 cents		\$2,476,994.05

Less amount refunded		18,490.34
		1,082,447.72

Further information regarding rebates is as follows:

The 2-cent rebate was 2 cents paid to distributors at the end of 5 months from the date of purchase, this rebate being a continuance of the rebate inaugurated under the old trust arrangement, and was continued until January 28, 1895, the date of the passing into the hands of the receivership.

The 5-cent rebate applied only to the distributors' customers or wholesale dealers, being allowed to them on their purchases from distributors, and due 6 months after date of purchase. This was instituted on May 25, 1890, and continued until November 25, 1891, when there was an advance of the voucher rebate to 7 cents. This continued until about the last of September or first of October, 1894. The exact date of the discontinuance is not obtainable.

There was no regular 9-cent rebate, it being made up of the 2-cent distributors' and 7-cent customers' or wholesale dealers' rebates.

SELLING PRICE OF SPIRITS.

Q. (By Mr. JENKS.) What have you to say to the question of the average selling prices of the chief products?—A. Exhibit 6, which I present here, gives the average net price received for spirits for each quarter, from April 1, 1891, to January 31, 1895, and also the average cost of production during those years.

Exhibit 6.—Average net price, i. e., without the tax, of spirits per gallon for each quarter and each year; also average cost of production for each year.

	Fiscal years ending March 31—				10 months ending Jan. 31, 1895.	Present price.
	1891.	1892.	1893.	1894.

PRODUCTION AND COST OF SPIRITS.

Q. Does that period cover the time of the Distilling and Cattle Feeding Company?—A. It does. Exhibit 7, which I present here, shows the production and cost per gallon at the various running houses of the Distilling and Cattle Feeding Company for the years ending March 31, commencing in 1891, and continuing until the beginning of the receivership. It is impossible to give the average monthly price paid for the raw material used, there being no statistics kept on that point. It would take several months to complete reliable data.

Q. Have you any figures that cover the period before the Distilling and Cattle Feeding Company was organized?—A. During the period of the trust?

Q. Yes.—A. I have no such statistics; the papers are all gone.

EXHIBIT 7.—Comparative statement: Gallons produced, cost per gallon, and profit or loss for fiscal years ending March 31, 1891, 1892, 1893, 1894, and 10 months ending January 31, 1895.

Notes.—The operation of the Nebraska City Distillery for 1894 would show a loss of a few dollars, owing to the fact that about 250,000 gallons were not paid for in advance of the year 1894.

Statement 7.—Comparative statement: Gallons produced, cost per gallon, and profit or loss for fiscal years ending March 31, 1901, 1902, 1903, 1904, and 10 months ending January 31, 1905.—Continued.

The above houses show an increase of profit in proportion to amount of their product as they were enabled to withdraw prior to the advance of tax, August 25, 1904.

CHARACTER OF THE STATISTICS.

By Mr. Sawyer. Do these tables which you are presenting contain Government statistics in regard to this trust that have never been published and are reliable? I think there is only one part here that is Government statistics—that is the last showing the amount of the production of spirits. The other

tistics are taken from the books, papers, and bills of the Distilling and Cattle Feeding Company.

Q. Were they gathered under your direction?—A. No; before I took charge, at the time when the receivership began. As receiver I took possession of the office and all the books and accounts of the company. I had all the books and accounts examined by experts to determine the operations of the company from its organization up to the time of the receivership. I examined into their methods of business, and the character of the business, and particularly with reference to the question as to whether there had been any misappropriation of the funds of the corporation. I was representing, as the officer of the court, the stockholders and the creditors with a view to ascertaining the facts. These data were taken from the books by the experts. I took them first for my own use, and have had one of the experts in charge (Mr. E. H. Harrison) make these exhibits which I am presenting to you.

Q. (By Mr. JENKS.) You consider these statistics entirely trustworthy, being taken from the books of the company?—A. They are entirely reliable.

Q. Have they ever been published before in such form as this?—A. I do not think they have ever been published in any form. I do not see how they could be. There may be some things that have been published, but I do not see how the cost of production, for example, could have been published. The Government has nothing to do with the cost.

Q. (By Mr. KENNEDY.) Of course the Government has nothing to do with that; but were not most of them gathered under a sort of Government direction, you being an officer of the Government?—A. Yes; in that sense they were. I got all of this information as an officer of the United States circuit court, being appointed receiver to take charge of this property and control and direct it under the orders of the court. The papers and books of the company were thoroughly examined, but not with this particular object in view. Exhibit 7 shows, as I have said, the gallons produced, the average cost, and the profit or loss at each distillery and for the whole country. Exhibit 8 shows the sales of product by months.

EXHIBIT 8.—*Comparative statement of sales by months for the fiscal years ending March 31, 1889, 1890, 1891, 1892, 1893, 1894, and 1895.*

Year ending March 31—	April.	May.	June.	July.	August.

Exhibit 9 shows the statistics of the Internal-Revenue Department as to the number of proof gallons of whisky produced in the country. Below that is a statement of the number of gallons of spirits and alcohol, and a small amount of whisky and gin, that were produced by the Distilling and Cattle Feeding Company during the same years. I call your special attention, however, to the fact that the statistics of the Internal-Revenue Department are not simply for spirits and alcohol, but cover everything that can be classed under the head of whisky or alcohol, namely, all the Kentucky bourbons, Pennsylvania ryes, fruit brandies, and every form of liquor that was covered by the 90-cent and \$1.10 tax. Exhibit 9 is worthy of your consideration. This exhibit shows the bushels of grain used during 1890, 1891, 1892, 1893, and 1894, a total of 126,787,596, of which there was used by the Distilling and Cattle Feeding Company 45,804,333; and the total gallons produced, 548,492,824, of which there was produced by the Distilling and Cattle Feeding Company 214,597,314. The average yield per bushel of the whole is 4.326. The average yield of the Distilling and Cattle Feeding Company's distilleries is 4.685.

EXHIBIT 9.

1. Comparative statement of material used and spirits produced in the United States during the fiscal years ending June 30, 1890, 1891, 1892, 1893, and 1894, as per report of Commissioner of Internal Revenue, 1894.

Years.	Bushels used.	Gallons produced	Yield per bushel.
1890.....	25,202,901	107,618,120	4.270
1891.....	26,347,641	114,176,077	4.338
1892.....	26,499,827	112,512,723	4.257
1893.....	29,080,409	123,545,017	4.266
1894.....	19,716,818	87,340,897	4.426
Total.....	126,787,596	548,492,824	4.326

A report showing the increase in yield by modern methods as compared with earlier and more primitive methods in the seventies—1870 to 1880—is asked for. The distilleries calculated their yields in quarts of high wines at that time. Twelve to 14 quarts was a good yield, meaning 8 to 8½ gallons. At the time of the organization of the Distilling and Cattle Feeding Company they were making a finish yield of 4.75, or a yield in high wines of 4.90, meaning 4.9 gallons. The finish yield now is, perhaps, 4.90, and the yield in high wines 5.05 gallons. Since the organization of the Distilling and Cattle Feeding Company there has been little gain, except by the use of copper in all parts of the distillery in place of the old wooden tubs.

2. Comparative statement of material used and spirits produced by the Distilling and Cattle Feeding Company during fiscal years ending March 31, 1890, 1891, 1892, 1893, and 1894.

Years.	Bushels used.	Gallons produced.	Yield per bushel.
1890.....	8,481,699	39,682,736	4.671
1891.....	10,012,421	47,149,012	4.708
1892.....	9,858,873	45,509,884	4.616
1893.....	11,023,683	51,774,888	4.696
1894.....	6,425,657	30,510,548	4.742
Total.....	45,804,333	214,597,314	4.682

Q. During that time the Distilling and Cattle Feeding Company was producing considerably less than half of the total output of the country, was it not?—A. Yes; less than half of the entire output; but that Government statement covers the whisky, which they were not manufacturing. It does not show their proportion of the spirits and alcohol.

PROFITS OF THE DISTILLING AND CATTLE FEEDING COMPANY.

Q. Can you give us their percentage of the production of spirits and alcohol?—
A. I have nothing here that shows what the percentage is. Exhibit 10, which I
present here, gives the dividends paid by the Distilling and Cattle Feeding
Company:

EXHIBIT 10.—Dividends paid on outstanding stock.

	Amount.	Per cent.
April 1, 1890, to March 31, 1891	\$1,280,053.40	4
April 1, 1891, to March 31, 1892	1,590,022.25	5½
April 1, 1892, to March 31, 1893	874,876.30	2½

In the beginning these were monthly dividends. Later they were quarterly dividends, all profits being declared in the nature of dividends, and no redistribution being made to former owners, dividends being on outstanding stock. Later, instead of declaring dividends, they purchased property; about \$4,000,000 was invested in distilleries. These profits were invested in the distilleries which I have already mentioned, in answer to a former question, as being purchased, viz: Riverdale, \$300,000; Calumet, \$500,000; Shufeldt, \$1,600,000; Star and Crescent, \$700,000; Central, \$850,000, and Nebraska City, \$425,000. The distilleries in Peoria, and certain of the better properties, were enlarged and kept up.

I know of no charge for the annual depreciation. The plants which were not used were dismantled and the buildings disposed of to the best advantage possible. The supreme court of Illinois declared the organization of the Distilling and Cattle Feeding Company a trust.

Q. (By Mr. JENKS.) Were these distilleries on ground owned by the trust or company, or were they all on leased ground?—A. They were nearly all on leased ground. Their plan of operation, in substance, was to acquire ownership of the buildings, and lease the ground for a term of 20 to 25 years, for which they paid rent at the rate of 6 per cent on an estimated value of the ground, which was revised every 5 years.

Q. Did they continue to pay rent on the ground after the distilleries were dismantled?—A. Yes; they paid that until after the receivership. Soon after that I applied for and obtained an order from the court to abandon those properties, or a large number of them; they had no value.

Q. (By Mr. PHILLIPS.) What became of the ground?—A. It reverted to the owners of the fee.

Q. Original owners?—A. The original owners of the fee. Then there were claims set up for the rent of the ground during the remainder of the period of the lease; and I think one, at least, or two of those claims are still pending. That demand was resisted on the ground that the contract was void, being in violation of the trust laws and a restriction of trade. That was my answer in those cases, and they have not yet come to an official issue in the courts on any one of them.

COURT DECISION ON THE DISTILLING AND CATTLE FEEDING COMPANY.

Q. (By Mr. JENKS.) Did the court of Illinois decide that this company was an illegal combination?—A. It did. I have the case right here, and will refer to it. *Distilling and Cattle Feeding Company v. People*, 156 Illinois, 448. In the organization of the Distilling and Cattle Feeding Company it was sought to evade the law which was infringed by the Distillers and Cattle Feeders' Trust, whereby a number of distilleries put their stock into the trust, or rather put their stock into the hands of trustees and took the certificates of those trustees instead of their stock. Finding that that was in violation of the law, they then adopted another method, and organized a corporation under the general law of Illinois. The Distilling and Cattle Feeding Company bought these properties, taking stock for the purpose; that is, there were \$35,000,000 of certificates of the trustees of the Distillers and Cattle Feeders' Trust that were converted into \$35,000,000 of stock of the Distilling and Cattle Feeding Company. The point is made that the new effort to form a trust was faulty, because they took stock instead of money. As I understand it, they now make new corporations and buy outright plants of old corporations by selling the stock of the new. I do not see a particle of difference between the one and the other.

Q. (By Mr. JENKS.) What was done in this special case? Was a share of stock issued for each trust certificate that was delivered?—A. Yes.

an exchange of one for the other?—A. Yes; of one for the other, dollar for dollar.

Q. Then the trustees who had been elected by the certificate holders were reelected by the new stockholders as directors of the new company?—A. They were substantially the same set of men, though there may have been a few changes. In a word, the Distillers and Cattle Feeders' Trust converted itself into a corporation, known as the Distilling and Cattle Feeding Company, by getting articles of incorporation and getting stock in that corporation in lieu of the old trust certificates.

Q. (By Mr. PHILLIPS.) Was that decided to be illegal?—A. Yes. The main question, however, is not that; it is the attempt to control the trade of the country; in other words, the cornering of the market, the reaching out beyond the legitimate limits of one manufacturing enterprise.

Q. (By Mr. JENKS.) Was the decision made under a special trust law of Illinois or the common-law doctrine of restriction of trade?—A. The trust law of Illinois. It was a proceeding in quo warranto, a judgment of ouster; judgment was rendered by the circuit court and an appeal was taken to the supreme court. Pending that appeal a bill was filed by the officers of the company for the appointment of a receiver, on the ground of the insolvency of the company, its inability to pay its debts, and the insufficiency of its assets. It is not clear that they were relying upon the fact that it manifestly would have been unable to meet its obligations when due. If it had been closed up under any other process than it was, the assets would have been insufficient to meet the obligations; but, as I will show later, the assets proved abundant.

WHAT WOULD BE THE POSITION OF OTHER TRUSTS IN ILLINOIS.

Q. (By Mr. PHILLIPS.) Would such corporations as are now being made, and have been for the last year or more in New Jersey, in your opinion be declared illegal under the trust law of Illinois?—A. I think they would not stand the test of the trust law of Illinois; and I do not think the expedient resorted to in paying for stock in money would help them a particle; I think they are all illegal.

Q. Under your law?—A. Under the laws of Illinois. It is merely a question of pushing the cases to a final decision before our courts. They are all in contravention of the law. I am of the opinion that they would be illegal, irrespective of common law.

my opinion, I should say they would. It was opinion upon a state of facts that I do not know.

Q. (By Representative LIVINGSTON.) How would these trusts of which you have been speaking stand under the Sherman law; would it cover them?—A. I think it would, but of course only such of them as come under Federal jurisdiction. I think it is more a matter of the enforcement of the law than the making of the law.

ALL TRUSTS NOT DANGEROUS.

Nevertheless, I do not regard all of these industrial trusts as dangerous, as some people do, because I do not think it is possible for them to exist and hold up prices for any long period of time, as in the case of this distilling company, and as it would be in any enterprise that can be started with a small amount of capital. As I said to you awhile ago, they may start a trust and buy up a hundred or two hundred distilleries or factories in any other industry, but the only way they can keep them in operation is by keeping the cost of production below what it can be kept by small concerns. The moment they reach out for more than a reasonable profit on the cost of production, that moment other plants will be created faster than any trust can buy them up. I brought out in my statement this morning the exceptional advantages of Peoria. There is one 12,000-bushel distillery there—the Great Western, the new distillery. They can mash and put in spirits every day, when running at full capacity, 12,000 bushels of grain.

Q. (By Representative OTTEN.) About 50,000 gallons?—A. Nominally 60,000 gallons, or a trifle under. When it comes out of the still it is higher than when it goes into the barrel; there is a considerable loss. My opinion is that they can put their feet at Peoria and absolutely control the spirit market of America, and, bearing discriminating customs laws, of the world, by cheapening the product; but they can not do it by cornering the market and raising the price.

Q. (By Mr. JENKS.) Do the several corporations which have sold their entire properties to the central, or so-called trust corporation, remain in existence?—A. Do you mean all the old corporations?

Q. Yes.—A. Some of them remain in existence, but many of them have died out, and are forgotten. Some of them held their organization until along toward the last.

RELATIONS BETWEEN THE TRUST AND THE COMPANIES ENTERING INTO IT.

Q. Was that under the trust form?—A. Yes, under the trust form. The property yet owned in these companies, or most of them at least, that I now think of (my memory does not serve me just at this moment, for it is some time since I have been working on these details), became part of the Distilling and Cattle Feeding Company's property. The buildings alone belonged to the company and stood on leased ground. The owners of the fee were generally the owners of the old plant. They continued to receive their rental. Now, in case of some of the old plants, one that I have in mind in particular, there was a purchase of the buildings and a rental of the ground, and then a rental of the buildings back to the original owners. That is a little complicated; let me give it to you again. Suppose A and B owned a piece of land with a distillery upon it. The Distilling and Cattle Feeding Company bought the buildings and machinery for, say, \$250,000. They had a lease upon the ground for 25 years, the usual lease. They then leased the buildings back to A and B, the original owners, for \$1 a year, in the meantime paying the annual rental on the ground of, say, \$2,000—I do not remember what the amount was, but it was not less than that—in quarterly installments, but getting a dollar. In the lease of the buildings back to the original owners there was a stipulation that it should be used only for a specific purpose.

Q. (By Mr. PHILLIPS.) Was the specific purpose not to distill?—A. Well, in the case I refer to, to distill only rye whiskey.

Q. (By Mr. JENKS.) That is, not to come into competition?—A. Yes; not to come into competition. To be explicit, it was the Clark Distillery at Peoria. After awhile, and during my administration of the trust, the Clark Distillery, in the hands of the original owners, then the lessees, did start to make spirits and I at once applied for a restraining order upon them, held them up, and refused to pay them any more rent. We have not got that thing quite satisfactorily adjusted yet.

Q. Was the restraining order granted?—A. Certainly.

Q. Did it stop them for the time being?—A. Yes; because they had rented it for a specific purpose. The order still stands. We have not either of us come to a square issue before the court, because we are not certain on either side where we will land.

Q. Can you give further particulars regarding the work of the original organization and its effects?—A. The original organization made contracts with the owners of the various distilling properties, leasing the ground on which the distillery stood, and making a practical purchase of the building. They also contracted with the owners to pay them, as managers, certain sums in salaries for 5 years. At the end of 5 years, which came after the organization of the Distilling and Cattle Feeding Company, the majority of these contracts were discontinued. The rentals were dependent upon the value of the land, which was fixed by a commission of 3 at the end of each 5 years.

PLAN OF ORGANIZATION OF THE DISTILLING AND CATTLE FEEDING COMPANY.

I offer you here Exhibit 11, which is the articles of incorporation, bill of sale, and the by-laws of the Distilling and Cattle Feeding Company, covering some points that may be interesting to you.

EXHIBIT 11.

APPLICATION FOR LICENSE.

STATE OF ILLINOIS, *Peoria County*, ss.

ISAAC N. PHARSON, *Secretary of State*:

We, the undersigned, Joseph B. Greenhut, Adolph Woolner, and George J. Gibson, propose to form a corporation under an act of the general assembly of the State of Illinois, entitled "An act concerning corporations," approved April

18, 1872, and all acts amendatory thereof, and for the purpose of such organization we hereby state as follows, to wit:

1. The name of such corporation is, Distilling and Cattle Feeding Company.
2. The object for which it is formed is to carry on a general business of distilling, redistilling, and rectifying high wines, alcohol, spirits, gins, and whiskies of every kind and description, and deal in the same, in the State of Illinois and elsewhere, and owning the property necessary for that purpose; also to engage in feeding and dealing in cattle and other live stock; also malting, dealing in malt, and doing any other business incident to the main purpose of this corporation.
3. The capital stock shall be \$35,000,000.
4. The amount of each share is \$100.
5. The number of shares, 350,000
6. The location of the principal office is in Peoria, in the county of Peoria, State of Illinois.
7. The duration of the corporation shall be ninety-nine years.

JOSEPH B. GREENHUT.

ADOLPH WOOLNER.

GEORGE J. GIBSON.

STATE OF ILLINOIS, *County of Peoria, ss:*

I, J. S. Stevens, a notary public in and for the county and State aforesaid, do hereby certify that on the 80th day of January, A. D. 1890, personally appeared before me Joseph B. Greenhut, Adolph Woolner, and George J. Gibson, to me personally known to be the same persons who executed the foregoing statement, and severally acknowledged that they executed the same for the purposes therein set forth.

In witness whereof I have hereunto set my hand and seal the day and year above written.

[SEAL.]

J. S. STEVENS, *Notary Public.*

LICENSE.

State of Illinois, department of state, Isaac N. Pearson, secretary of state, to all to whom these presents shall come, greeting:

Whereas it being proposed by the persons hereinafter named to form a corporation under an act of the general assembly of the State of Illinois, entitled "An act concerning corporations," approved April 18, 1872, in force July 1, 1872, and the amendments thereto, the object and purposes of which corporation are set forth in a statement duly signed and acknowledged according to law, and this day filed in the office of the secretary of state:

Now, therefore, I, Isaac N. Pearson, secretary of state of the State of Illinois, by virtue of the power vested in and the duties imposed upon me by law, do hereby authorize, empower, and license Joseph B. Greenhut, Adolph Woolner, and George J. Gibson, the persons whose names are signed to the before-mentioned statement as commissioners, to open books for subscription to the capital stock of Distilling and Cattle Feeding Company, such being the name of the proposed corporation as contained in the statement, at such times and places as the said commissioners may determine.

In testimony whereof I hereto set my hand and cause to be affixed the great seal of state. Done at the city of Springfield this 31st day of January in the year of our Lord 1890, and of the Independence of the United States the one hundred and fourteenth.

I. N. PEARSON, *Secretary of State.*

SUBSCRIPTION OF STOCK.

ISAAC N. PEARSON, *Secretary of the State of Illinois:*

The commissioners duly authorized to open books of subscription to the capital stock of Distilling and Cattle Feeding Company, pursuant to license heretofore issued, bearing date the 31st day of January, A. D. 1890, do hereby report that they opened books of subscription to the capital stock of said company and that the said stock was fully subscribed; that the following is a true copy of such subscription, viz:

We the undersigned, hereby severally subscribe for the number of shares set opposite our respective names to the capital stock of Distilling and Cattle Feeding Company, and we severally agree to pay the said company for each share the sum of \$100, as the same shall be called for.

ELECTION OF DIRECTORS.

That on the 11th day of February, A. D. 1890, at 207 North Jefferson avenue, Peoria, Ill., at the hour of 10 o'clock a. m., they convened a meeting of the subscribers aforesaid, pursuant to notice required by law, which said notice was deposited in the post-office, properly addressed to each subscriber, 10 days before the time fixed therein, a copy of which notice is as follows, to-wit:

To ————:

You are hereby notified that the capital stock of Distilling and Cattle Feeding Company has been fully subscribed, and that a meeting of the subscribers of such stock will be held at 207 North Jefferson avenue, Peoria, Ill., on the 11th day of February, A. D. 1890, at 10 o'clock a. m., for the purpose of electing a board of directors for said company, and for the transaction of such other business as may be deemed necessary.

JOSEPH B. GREENHUT,
ADOLPH WOOLNER,
GEORGE J. GIBSON,
Commissioners.

That said subscribers met at the time and place in said notice specified, and proceeded to elect directors, and that the following persons were duly elected for the term of one year, viz:

Joseph B. Greenhut, Warren H. Corning, Wm. N. Hobart, Lewis H. Greene, H. L. Terrell, Adolph Woolner, Peter J. Hennessy, Nelson Morris, H. M. Kingman.

JOSEPH B. GREENHUT,
ADOLPH WOOLNER,
GEORGE J. GIBSON,
Commissioners.

STATE OF ILLINOIS, *County of Peoria, ss:*

On this 11th day of February, A. D. 1890, personally appeared before me, a notary public in and for said county, in said State, Joseph B. Greenhut, Adolph Woolner, and George J. Gibson and made oath that the foregoing report by them subscribed is true in substance and in fact.

[SEAL.]

N. E. D. HUGGINS, *Notary Public.*

STATE OF ILLINOIS, *Peoria County, ss:*

I, Francis G. Minor, clerk of the circuit court in and for the county of Peoria, and State of Illinois, and ex-officio recorder of deeds in said county, do hereby certify that the annexed instrument was filed for record in my office on the 12th day of February, A. D. 1890, at 9.19 o'clock a. m., and has been duly recorded in book 3 on page 64, in said recorder's office.

In witness whereof, I have hereunto set my hand at my office in Peoria, the day and year above written.

F. G. MINOR, *Clerk and Recorder.*
By J. P. DURKIN, *Deputy.*

CHARTER.

State of Illinois, Department of State, Isaac N. Pearson, Secretary of State, To all to whom these presents shall come, Greeting:

Whereas a statement, duly signed and acknowledged, has been filed in the office of the Secretary of State on the 31st day of January, A. D. 1890, for the organization of the Distilling and Cattle Feeding Company, under and in accordance with the provisions of "An act concerning corporations," approved April

18, 1872, and in force July 1, 1872, and all acts amendatory thereof, a copy of which statement is hereto attached; and,

Whereas a license has been issued to Joseph B. Greenhut, Adolph Woolner, and George J. Gibson as commissioners, to open books for subscription to the capital stock of the said company; and,

Whereas the said commissioners have, on the 11th day of February, A. D. 1890, filed in the office of the secretary of state a report of their proceedings under said license, a copy of which report is hereto attached;

Now, therefore, I, Isaac N. Pearson, secretary of state of the State of Illinois, by virtue of the powers vested in me by law, do hereby certify that the said Distilling and Cattle Feeding Company is a legally organized corporation under the laws of this State.

In testimony whereof I hereunto set my hand and cause to be affixed the great seal of State. Done at the city of Springfield this 11th day of February, in the year of our Lord 1890 and of the Independence of the United States the one hundred and fourteenth.

I. N. PEARSON, *Secretary of State.*

This is to certify that the articles of incorporation of the Distilling and Cattle Feeding Company (capital stock \$35,000,000) was filed for record in my office on the 13th day of February, A. D. 1890, at 9.19 o'clock a. m., and was duly recorded in corporation record, volume 3, page 65, official records of Peoria County, State of Illinois.

Dated at Peoria this 7th day of November, A. D. 1894.

[SEAL.]

JOHN JOHNSTON, *County Recorder.*

BILL OF SALE.

Whereas the holders of certificates of the Distillers and Cattle Feeders' Trust did, by resolution, on the 11th day of February, A. D. 1890, authorize and empower the trustees of said Distillers and Cattle Feeders' Trust, on certain conditions, to sell, assign, convey, transfer, and set over to the Distilling and Cattle Feeding Company, a corporation organized under the laws of the State of Illinois, all the property, real, personal, and mixed, of every nature, kind, and description, and all moneys and bills receivable belonging to or under the control or in the hands of said trustees;

Now, therefore, in compliance with the direction of said certificate holders, and in consideration of the receipt of \$35,000,000 of the capital stock of the Distilling and Cattle Feeding Company, the receipt whereof is hereby acknowledged, we, J. B. Greenhut, Adolph Woolner, P. J. Hennessy, H. M. Kingman, Nelson Morris, W. H. Corning, L. H. Greene, H. L. Terrell, and W. N. Hobart, trustees of the Distillers and Cattle Feeders' Trust, do hereby sell, assign, convey, transfer, and set over to the Distilling and Cattle Feeding Company, its successors and assigns, all our right, title, and interest in and to all property of every nature, kind, and description in our possession or under our control as trustees as aforesaid, and we also hereby agree to see that the various corporations holding the property represented in the Distillers and Cattle Feeders' Trust and interested therein legally and properly convey to said Distilling and Cattle Feeding Company all the property of said corporations, including all leasehold interests, and also to cause all leases held by said various corporations to be duly and properly transferred to said Distilling and Cattle Feeding Company; and the said Distilling and Cattle Feeding Company, in consideration of the sale, transfer, assignment, and conveyance of all the property aforesaid by the said trustees and by the various corporations interested in said Distillers and Cattle Feeders' Trust and represented therein, does hereby agree and bind itself, its successors and assigns, to assume all the outstanding contracts of the trustees aforesaid, and also of the various corporations conveying property to said Distilling and Cattle Feeding Company as aforesaid, and to see that they are faithfully carried out and executed to the same extent as the various corporations making said contracts would be required to do, and also agree to accept said property leases, leasehold interests, and all herein required to be conveyed, assigned, and turned over to said corporation, in full payment for all the capital stock of the said Distilling and Cattle Feeding Company, turning over to said trustees an amount of stock equal at par value to the amount of said outstanding certificates of the Distillers and Cattle Feeders' Trust, and the balance of said stock being retained in the treasury of the said Distilling and Cattle Feeding Company for such use as the stockholders and directors thereof may deem for the best interests of the corporation.

In witness whereof the said trustees hereunto affix their hands and seals this 18th day of February, A. D. 1890, and the said Distilling and Cattle Feeding Company, by its president, hereby duly signs and executes this agreement on its part the day and year aforesaid.

J. B. GREENHUT.

DISTILLING & CATTLE FEEDING COMPANY,
J. B. GREENHUT, *President*.

Attest:

GEO. J. GIBSON, *Secretary*.

BY-LAWS OF THE DISTILLING AND CATTLE FEEDING COMPANY.

ARTICLE 1.—*Meeting of stockholders.*

The annual meetings of the stockholders shall be at the office of the company on the Wednesday nearest the 15th day of April, in each year, at the hour of 12 m., and on any subsequent day or days to which such meetings may be adjourned. At the first annual meeting 9 directors shall be elected by ballot, 3 of whom shall be elected for 3 years; 3 shall be elected for 2 years, and 3 shall be elected for 1 year. At each annual meeting thereafter, 3 directors shall be elected by ballot, who shall continue in office during 3 years, and until their successors are chosen and qualified. The term of office of each director shall begin on the 1st day of May following the date of the annual meeting.

In case of the death, resignation, refusal, or inability to act of any person as director, a majority of the board may fill such vacancy until the next annual meeting of the stockholders, when the vacancy shall be filled for the unexpired term by a vote of the stockholders, separate from the class to be elected at the regular election.

The said election shall be conducted by two judges appointed by the board of directors, or if such appointees are not present, the vacancy or vacancies shall be filled by the presiding officer of the meeting. Stockholders shall be entitled to one vote for each share of stock held by them, respectively, upon the books of the company, to be voted by the holder in person, or by his or her duly authorized proxy or attorney. All questions shall be decided by vote of a majority of the stock present or represented. In case the annual meeting of holders of stock should not be held on the day fixed therefor, or should be finally adjourned without completing the election of directors, such election may be held subsequently at a special meeting of stockholders called as hereinafter provided. The president and board of directors may call special meetings of the stockholders of this company at its general office, at such time as they may see fit, designating in such call the purpose of such special meeting. Notice may be given the stockholders by mail or telegraph 10 days before the time for the holding of such special meeting. No business shall be done at such special meeting except such as may be designated in the call. Special meetings may also be called as provided by law.

ARTICLE 2.—*Officers.*

The board of directors shall elect from their number a president, one or more vice-presidents, as they may determine, and a treasurer. They shall also elect a secretary, who may or may not be of their number. Such officers shall be elected by ballot, and a majority shall elect. They may also elect or appoint such officers, agents, or factors as they may deem necessary.

ARTICLE 3.—*Meetings of directors.*

Regular meetings of the board of directors shall be held each month, on such day of the month as the president may designate, by giving notice of the same 8 days previous to the date of such meeting by mail or telegraph. Special meetings of the board of directors may be held upon the call of the president, and it shall be his duty to call special meetings upon the request of 4 or more of the directors. Written or printed notice of all special meetings of directors, with a brief statement of the object thereof, shall be served on each of the directors personally, or by mail or telegraph, at least 3 days previous to the time of meeting.

ARTICLE 4.—*Order of business.*

The order of business at all meetings of the board of directors shall be as follows: (1) Reading minutes of last meeting; (2) considering all communications to the board; (3) reports of officers of the board; (4) reports of committees; (5) unfinished business; (6) original resolutions and new business.

ARTICLE 5.—*President.*

The president shall, when present, preside at all meetings of the stockholders and of the directors. He shall, together with the secretary, sign all obligations, contracts, deeds, and leases in behalf of the company, upon the direction of the directors only. The president shall also generally have the powers and perform the duties which, by law and general usage, appertain to the office. In case of the absence or disability of the president and vice-presidents, the directors shall appoint another one of their number to perform his duties ad interim.

ARTICLE 6.—*Vice-president.*

In the event of the absence or inability to serve of the president, the vice-presidents shall perform all the duties of the president, in the order of their designation.

ARTICLE 7.—*Secretary.*

It shall be the duty of the secretary to prepare and keep proper books of accounts pertaining to his office, the stock, certificate and transfer books. He shall give notice of all the meetings of the stockholders and of the board of directors, and he shall keep records of the proceedings of the same. He shall carefully preserve and keep in his custody, in the office of the company, all letters, contracts, leases, assignments, and other instruments of writing, and documents not properly belonging to the office of the treasurer, and shall perform such other duties as he may be charged with by the board of directors. The board of directors may appoint one or more assistant secretaries, with such powers and duties as may be fixed by the board from time.

ARTICLE 8.—*Treasurer.*

The treasurer shall keep full and accurate accounts of the receipts and disbursements, and take and preserve vouchers of all moneys paid out. He shall deposit all moneys received by him in the name and to the credit of the company in such bank or other place or places of deposit as the board of directors shall designate, and for that purpose shall have power to indorse all checks or other negotiable paper drawn payable to his order or to the order of the company, and shall disburse all the moneys of the company received by him as directed by the board, by checks, which shall bear his signature as treasurer and also the signature of the president or other officers designated by the board. He shall render a full and accurate statement of the accounts and of the financial condition of the company at every annual meeting of the stockholders for the fiscal year next preceding such meeting, and a correct summary statement of the accounts and finances at every regular meeting of the board of directors, and he shall likewise produce vouchers and make special and complete reports whenever required to do so by the board of directors. He shall also perform such other duties as he may be charged with by the board of directors. The treasurer shall execute a bond in the sum of \$100,000, with such surety as the directors shall approve, conditioned for the delivery to the president, or according to the order of the board in case of his decease, resignation, or discharge, all moneys, bonds, evidences of debts, vouchers, accounts, books, writings, and papers belonging to the company received by him or in his possession, charge, or custody, and for the faithful performance of all the duties of his office. The board of directors may appoint an assistant treasurer, who shall give such bond and shall have such powers and duties as may be fixed by said board from time to time.

ARTICLE 9.—*Government papers.*

All papers required by the Internal-Revenue Department of the United States Government may be executed in the name of the company by the president, or any of the vice-presidents, secretary, or treasurer, and by such other persons as may from time to time be designated by the board of directors for that purpose.

ARTICLE 10.—*Certificates of stock.*

Bound books of certificates of stock of the form and tenor determined by the directors shall be placed in the custody of the secretary, and all certificates of stock shall be signed by the president and secretary and countersigned by the treasurer.

ARTICLE 11.—*Transfer of certificates of stock.*

The certificates of stock shall, upon surrender and cancellation thereof, be transferred upon the books of the company, at the request, in writing, of the holder thereof named in the surrendered certificate or certificates, or of his legal representative, or of his attorney duly authorized by a written power of attorney filed with the secretary of the company.

In case of loss or destruction of a certificate of stock another may be issued in lieu thereof upon satisfactory proof of such loss and the giving of a satisfactory bond of indemnity. No certificates shall be transferred upon the books of the company within ten days next preceding any meeting of stockholders for the election of directors.

ARTICLE 12.—*Fiscal year.*

The fiscal year of the company shall begin on the 1st day of April and terminate upon the last day of March in each year.

ARTICLE 13.—*Amendments.*

These by-laws or any of them may be altered, amended, repealed, or added to at any regular meeting of the board of directors, by a majority of the board.

Exhibit 12 is a list of the salaries at the general offices of the company. At the commencement of the receivership the salary of the president was \$10,000 per year; that of the vice-president was, I think, \$6,000; the secretary received \$6,000, and the secretary of the president, \$2,400.

EXHIBIT 12.

John Biggs	300.00	Wabash Distillery.
Total	2,950.00	

A PLAN FOR RAISING THE PRICE OF CORN.

Exhibit 13, which I think has a bearing upon this subject—at least it was one of the important matters to me relating to the whole distilling business—is marked “An argument in favor of developing industries which will enhance the price of corn,” to which I ask your attention. When this subject was fresh in my mind I worked up the question of the relation of the distilleries to the farming interests of the country. I did it from the standpoint of a farmer, because my own personal interests are in that line, substantially all the savings of a life of hard work being invested in farms. I am specially interested in that question, and I have touched particularly upon the revenue tax, the methods of conducting the distilling business, the revenue laws, and certain laws which seem to me to need revision.

EXHIBIT 13.

An argument in favor of developing industries which will enhance the price of corn.

[Copy.]

CHICAGO, January 2, 1897.

S. M. RICE, Esq.,
Mills Building, New York.

DEAR SIR: In your favor of the 21st ultimo you say: “I have taken the liberty of using some of the material in your (my) letter of November 16, in reference to the free-alcohol matter, without, however, mentioning your (my) name. I think the arguments presented are very strong and ought to be of weight with our legislators.”

At the time of writing that letter it did not occur to me that you desired to make use of my views upon this question in the way of presenting them to Congress as information, to enable the committee of that body to reach a correct conclusion in making modifications to our existing laws; otherwise, I would have written more fully and covered more points, and should at the same time have expressed my willingness for you to use my letter in its entirety over my signature, which you are authorized now to do with this letter. If it shall appear that my opinions, reached from an experience in the management of a large number of distilleries as an officer of a United States circuit court, are of any value, I will cheerfully give them for use before any committee of Congress and upon any point that may be suggested.

The questions involved are of vital importance, not alone to the distilling interests, but to the grain-producing sections of the country—the tax on alcohol and spirits being, in effect, a tax on corn, barley, rye, and other grains used in their production.

It is well known that grain in the vicinity of Peoria and other large distilling centers commands a higher price than in the markets of the country; that the large consumption of grain in the production of spirits and alcohol enhances the prices of the cereals used throughout the whole country. Each barrel of alcohol exported is the product of from 16 to 20 bushels of grain, and, going abroad, carries with it also the value of the labor, etc., expended in its production. The product has also incidentally required an additional consumption of grain and other material of home production by the people engaged in its manufacture. The export of alcohol and spirits does not, to the slightest extent, decrease the export of grain.

The policy of taxing alcohol in every form in which it is used for beverages to the highest revenue-producing point is, I think, a correct one.

The suggestion that the tax should be the same on alcohol or spirits produced or used for similar purposes, in whatever form, is an equitable proposition, involving equality of taxation to all men upon articles of home production for similar use. It seems to me this proposition needs no argument to support it. The tax should be a specific sum on every proof gallon of alcohol used as a beverage, no matter in what form it may be used, whether as brandy, whisky, rum, gin, wine, beer, or compounded or mixed drinks or beverages.

I think, however, that the present and past inequality on this point, resulting from existing laws, arises from the lack of information upon the part of the public, and probably upon the part of many of the Representatives in Congress, as to the technical method of producing alcohol and ignorance as to the readiness with which the amount of spirit contained in any kind of a beverage can be ascertained. The amount of alcohol in a barrel of beer, wine, or any other beverage can be ascertained with the same facility and as accurately as it can be in a barrel

of whisky. There is substantially the same quantity of stimulant or intoxicant obtained at retail for a given sum whether it be invested in native wine, beer, whisky, or other drink containing alcohol.

It seems to me the making known of some of the leading facts that are understood but by comparatively few people not in the business would secure the passage of more equitable laws, which would remove the conspicuous inequality in the taxing of the whisky, wine, and beer production of the country.

In many cases the amount of alcohol produced in the juice of the grape or wine by ordinary fermentation not being sufficient for the purpose of the wine maker, regular distilleries are established, and the alcohol produced by the ordinary methods of distillation from grapes is then added to the fermented wine, thus completing what is known as a fortifying process. This distilled alcohol, as well as the alcohol produced by fermentation, is free from taxation. This wine used as a beverage carries from 8 to 10 and often as high as 15 to 17½ per cent of alcohol, while the ordinary whisky in form ready for use as a beverage carries only from 40 to 50 per cent of alcohol. The wine goes upon the market as a beverage wholly free from tax, while a like quantity of alcohol in whiskies and various compounds and beverages used as stimulants and intoxicants, made from spirits, bears a tax of \$1.10 per proof gallon, with a considerable additional burden by way of expenses imposed in the carrying out of rules and regulations supposed to be necessary for the collection of this tax.

The standard whisky of commerce stands at about 100 proof, or 50 per cent alcohol and 50 per cent distilled water—much of it when sold for immediate use being 15 to 20 points below proof. Beer contains 2½ per cent to 6 per cent of alcohol produced wholly by fermentation—that in common use having about 3 per cent of alcohol; so that for the purposes for which these articles are used, 1 quart of the best whisky is equal to about 3 to 4 quarts of wine and 15 to 16 quarts of ordinary beer. Beer is taxed, regardless of its alcoholic strength, \$1, less 7½ per cent, per barrel of 31 gallons. A barrel of ordinary beer contains over 2 proof gallons of alcohol.

The practical difference in whisky, wine, and beer is the same that exists between "whisky straight" and "mixed drinks." The effect of the law is to tax "straight drinks" and let "mixed drinks" go free. I am assured, by those who know, that there are a few who swallow "whisky straight" containing 40 to 50 per cent of alcohol, but most men find it necessary to dilute it with water until it is brought down to about or below the standard of 15 per cent wine.

The difference between whisky, wine, and beer is wholly in the per cent of alcohol contained in each and in the character of the dilutant or watery substance mixed with the spirit. The alcohol in each is chemically the same. A given amount of alcohol will produce substantially the same result in whichever form it may be taken. The dilutant or watery substance in the best beer, however, furnishes a nutriment or food in addition to the stimulant and intoxicant contained in the alcoholic portion of it, and that in wine and whisky simply reduces the alcoholic strength to a point where it is made palatable.

The argument that, because native wine is produced from the native grape, it should be relieved from its just proportion of the public burden is wholly untenable. Native corn, rye, and barley are entitled to the same patriotic consideration and generous treatment accorded to any other product of our soil. If any preference is given, it should be to those cereals which are the mainstay and principal source of the wealth of our nation, and to the men engaged in producing them, who are the main reliance of our nation for its strength and greatness.

Then, too, equality of taxation on these articles would not add to the cost to the consumer, but would simply lessen in a small measure the profit of the producers, which by reason of combination and agreements between them is now very large. Indeed, owing to these combinations and agreements, few, if any, investments in this country have yielded larger dividends, and none has drawn a larger amount of foreign capital as a direct investment in the ownership of producing properties than have the breweries of this country.

The great brewers, by improved methods, cooperation, and association for some time past have been prosperous and have become and are able to stand upon an equality with the corn, rye, and barley growers, and to bear an equal share of the public burdens with them. The importation of cheap foreign wines is practically prohibited by a tariff of 50 cents per gallon. This tariff gives our wine producers ample protection, and it should be no hardship for them to pay a tax on all alcohol produced by them for use as a beverage. New native wines in large quantities at the points of production are now sold from 10 to 15 cents per gallon, indicating a margin of profit sufficient to bear a just proportion of tax to put them on an equality without any increase of cost to the consumer.

With an equal tax on wines carrying 10 per cent of alcohol, ordinary native claret and white wines would pay 22 cents per proof gallon, or 4 to 5 cents per so-called quart bottle; and beer, if not over 3 per cent alcohol, would pay \$3 to \$2.10, instead of \$1 less 7½ per cent per barrel of 31 gallons, and proof, or the best whisky, as now—\$48.40 per barrel of 44 gallons.

I have not had time or opportunity to make a careful estimate as to what would be the financial effect of this equality of taxation upon the revenues of the Government, but in a rough, offhand way, I conclude it would increase the revenues between \$40,000,000 and \$50,000,000 yearly. In other words, I estimate that the unjust discrimination made by the Government in favor of the wine and beer producers is equivalent to a loss of revenue to the Government of from \$40,000,000 to \$50,000,000 yearly.

After securing equality of taxation on all alcohol in whatever form produced for or used in beverages, next (if not first) in importance is to secure practical legislation for free alcohol for use in the arts and sciences and for exportation.

There are, or were, laws upon the statute books, expressly passed by Congress, intended to cover both of these objects. Notwithstanding this, there was not and is now no alcohol free from the tax of \$1.10 per gallon permitted to be furnished for the arts and sciences, and the more than a thousand avenues in which it could be drawn off and consumed for such purposes have been and are substantially closed.

Notwithstanding the provision of the law for free export alcohol, its transoceanic exportation has practically long since ceased, because of the regulations governing its handling, storing, and shipping, and the inability of our people to compete with advanced methods and governmental regulations of competing foreign nations.

That free alcohol should and can be provided for, to be used in the arts and sciences, I think can be clearly demonstrated, and without endangering or decreasing the revenues of the Government, but greatly to their benefit, and to the advantage of the corn and barley producing sections of our country. Such provisions would result in making an immense increase in the demand for grain, doubling the quantity now used for distillation for all purposes, and thereby increasing the market value of our grain crops.

Radical changes should be made in the present internal-revenue laws and regulations to make them conform to present conditions, and to put our people upon an equality in placing their products in the market of the world with other nations.

I do not mean by this that any of the safeguards in use that are necessary for the protection of the revenue should be withdrawn; but experience has demonstrated that many things are required to be done by the law which insure no additional safeguards, but cause great embarrassment and place heavy burdens upon the product, obstruct, and often—as in the matter of exporting—result in the prohibition of trade.

As the receiver of the United States circuit court, operating a number of the distilleries of the Distilling and Cattle Feeding Company, and the representative of a coordinate branch of the Government, I received all the courtesy from the internal-revenue officers that could be extended by them within the limits of the statutes. I found, however, much difficulty and many embarrassments by the limitations of their provisions, which in my opinion are not only wholly useless, but impose burdens upon the traffic. These provisions ought to be removed, as they can safely be eliminated.

Free alcohol, to be used in the production of a large number and variety of articles where its use is indispensable, would put our people on an even footing with other nations in our market and in the markets of the world for such products. By reason of the heavy tax we are now prevented from using alcohol for manufacturing purposes. In other words, the provisions of the law imposing this tax of \$1.10 upon an article that costs to produce but from 7 to 15 cents, varying with the price of grain, acts as a prohibition of the use of it in many branches of industry. The removal of this tax, and allowing alcohol free to the arts and sciences, would result in its production for these purposes where it is not now used at all, and with free alcohol the production of a great variety of articles that can not now be produced in this country would be rendered possible and their importation from countries where free alcohol for their manufacture is allowed would cease. There are more, I dare say, than a thousand important uses requiring large consumption to which alcohol could and would be put, if free, where it is now prohibited by the tax.

Corn is admittedly one of the best, if not the best, of alcohol-producing grains, and corn can certainly be produced as cheaply or cheaper here than in any other part of the world; and with the enormous and improved machinery and appli-

ances now in use for its distillation our alcohol ought to compete successfully in all of the markets of the world where it is not excluded by a prohibitive tariff. In nations where it is so excluded by a prohibitive tariff, or one that imposes a burden that can not be borne, the alcohol produced by those nations and coming into our country should have a burden placed upon it equal to the burden placed upon our alcohol when going into their country. To be more specific, our alcohol was largely used in Europe for fortifying wines and for making different compounds and beverages; the wine so fortified with American alcohol, or large portions of it, was imported into our country for use by our people. These foreign wines are now being fortified by alcohol produced elsewhere, and as I understand it, no change has been made in the tariff upon them because of this change of condition.

The manner of keeping, holding, and transporting alcohol required by the law is obsolete; is a heavy burden upon the producer, putting him at a great disadvantage; is practically prohibitive of exportation; is no benefit whatever to the Government, and gives no additional safeguard in protection of the revenue. On the contrary, in my opinion, it does not give as good a safeguard as could be obtained by the use of tanks and tank cars and the like.

A simple change in the existing regulations is all that is necessary to permit this to be done. The present cumbersome and expensive method of the Government, which requires spirits to be put into barrels of small capacity, should be done away with.

While United States storekeepers are now obliged to watch, say, 20,000 packages, they would only have to watch 3 or 4. It would, in effect, simply change the existing old-fashioned primitive warehouse into a modern one. The present warehouse capacity of 20,000 barrels, requiring stamps for each package and the watchful care of each barrel, could be all concentrated into 3 or 4 packages, which in effect these tanks would be.

The ability of distillers to make and store great quantities of alcohol in tanks would enable them to manufacture very largely when corn is plentiful, and the operations of distilleries could be of such magnitude as to have an appreciable effect on the price of corn when the farmers most require it; that is to say, when corn is abnormally low. The increased use of corn, used in this shape for export—where we have no export business now and no other way of utilizing the corn—would in a great measure tend to consume the surplus of a large crop and in this way increase the price of the entire crop. It needs no argument to prove that the surplus of a product makes the price of the product.

When corn is high the distiller need not distill, nor does the farmer then require the aid of the distiller to get him a good price for his crop.

I have no hesitation in saying that the rebate of the tax on alcohol, for the purpose of the arts and manufactures, together with the tank privilege and the right to ship in tank cars, would create entirely new industries in this country, all of which are impossible under existing laws and regulations.

The enormous benefit to the agricultural interest to be derived from these changes in our laws can scarcely be estimated.

Another important factor is, that fresh alcohol and high-proof spirits, which is a refined alcohol, unlike whiskies and brandies, deteriorate and depreciate in value by age when in contact with wooden casks. The market requires new, clear, unstained alcohol and high-proof spirits. The holding and shipping of alcohol and high-proof spirits in wooden packages, notwithstanding all that can be done by gluing on the inside to prevent contact with the wood, causes a very considerable loss in the market value of the product, often running from 5 to 20 per cent in the course of a few months, and in addition thereto a heavy loss on the package.

Much of this loss by deterioration could be saved by different methods of handling, in the storing in distilleries, and in transportation, and I can see no reasons, and, indeed, I am confident there are none, why a change should not be made.

There are many other reasons that occur to me too numerous to be recited within the scope of an ordinary letter why modifications in the internal-revenue laws should be made, but I think that those that I have given sufficiently illustrate the leading and important points to be covered.

You are at liberty to use this letter in any way you may see fit. Lest, however, the question might arise as to whether my interest might in any way influence my judgment, I think it well to state the fact that I have no interest whatever as stockholder, attorney, or representative of any distillery, brewery, vineyard, or other establishment producing, selling, or handling alcohol, in any form whatever, except as receiver of the United States circuit court in the different circuits where the case is now pending in the settlement of the affairs of the now defunct Distilling and Cattle Feeding Company, or so-called "Whisky Trust," and some

of its property, but with no distillery in operation or intended to be hereafter operated under my charge, and that what I have written is of my own suggestion and not upon the request of anyone for my opinion on the subject.

It is but fair for me to state, however, that I am very much interested in the production of grain, substantially all of my accumulations from a busy life being invested in farm lands. Probably, for that reason, I in a great measure view the subject from the standpoint of a farmer while analyzing it as a lawyer. I have utilized the knowledge gained by practical experience as an officer of the court directing the operation of distilleries and disposing of their products, the latter amounting to a large proportion of the entire alcohol and high-proof spirit output in the United States.

Let me summarize my views and recommendations:

First. An internal-revenue tax to the highest revenue-producing point on all alcohol used as a beverage in whatever form produced, whether it be whisky, wine, or beer. The tax on each should be so much per proof gallon.

Second. The privilege to store spirits in tanks and to ship spirits for export in tank cars.

Third. The rebate of the tax on alcohol used for all purposes except for use as a beverage (the Government providing such regulations as will safeguard and insure the collection of the tax on all alcohol used as a beverage as efficiently as it is now done).

Fourth. A discrimination against the products of every Government that discriminates against our products, whether by bounty, tax, or other burden.

Very truly, yours,

JOHN McNULTA.

SUGGESTIONS FOR CHANGES IN LAWS AFFECTING THE DISTILLING BUSINESS.

Q. (By Mr. JENKS.) Can you sum up briefly your objections to the laws which concern the distilling business and your suggestions for changes?—A. In the first place, the restrictions upon the distilling business come down from times when there was trouble and complications that no longer exist. Great loss, or great expense, is incurred on account of the manner of handling the spirits that is required by the rules of the Department, i. e., barreling instead of shipping in metal tanks. Handling in metal tanks in the warehouses would save a great deal of waste. As regards the tax, I should say that the method of the Government in collecting it is radically wrong and that the amount of the tax is too great.

Q. (By Representative LIVINGSTON.) Is it above a revenue producer?—A. It is above a revenue-producing point and manifestly unjust upon the face of it. Spirit product that costs from 8 to 15 cents, according to the price of corn in the market, bears a tax of \$1.10, which is manifestly too great. From a revenue-producing point of view it fails to accomplish what is sought to be accomplished by it. A parallel case would be for the railroad companies to charge 10, 15, or 20 cents a mile for a passenger. They would get some passengers, but there would be very few. The statistics of the Department show that 70 cents a proof gallon produced the largest amount of revenue. I am satisfied that a tax of 50 cents per gallon would produce more revenue to the Government than \$1.10 does, just as I believe that 2 to 2½ cents per mile would produce more revenue to the railroads than 10 cents, and for like reasons.

THE RESULTS THAT WOULD FOLLOW.

Q. (By Mr. JENKS.) Do you think the consumption would be largely increased?—A. It would be largely increased, not in the use of the spirits as a beverage, but in the use of the product in manufactures. The exports of the country, on account of the methods adopted by the Government, are practically cut off. This country ought to furnish the world with spirits. There ought to be easy and cheap facilities afforded to the producer to export his goods in whatever form they can best be disposed of in the markets of the world, whether in bottles, barrels, tanks, or cases of any kind. There has been an act passed by Congress permitting exportation in tin cans for Asiatic countries, so that they can be taken on the backs of men or horses over the mountains. The transportation ought to be permitted in tanks like oil tanks, and not in barrels. It ought to be permitted to be kept in the warehouses in tanks and not in barrels. It ought to be permitted to be sent on shipboard in tanks. Germany, I understand, ships a large portion of her product of alcohol in that manner. There is a loss in soakage in the barrel and a heavy loss by evaporation. The case of the experiment of the chemist that I spoke to you about this morning illustrates that. Spirits is a very volatile product, and

the higher the proof the more volatile and the greater the loss. Triple distilled, or, as some call it, extra fine spirits, is so volatile, as I described to you, that a little piece of lime will evaporate a whole tumbler of it. There is a loss in wood that is porous beyond the soakage that is allowed for in barrels. By carrying the product in air-tight metallic tanks, the loss from soakage in the barrel would be saved. The barrel in most places after it is used is also of very little value. There is a loss on account of the discoloration of the finer product, such as is required for making the Shufeldt gin. Put it into a plain wooden barrel that is not incased—paraffined is another name for it—and in forty-eight hours its commercial value is impaired, absolutely destroyed for that purpose. Put it in a copper tank, and it can be kept for an unlimited period of time, just as in a glass bottle. By the easy method of getting it out, by the reduction of the amount of tax, a great many avenues for the use of these spirits would be opened that are now closed. Manufacturers who would use large quantities of it are now absolutely prohibited. In countries where manufacturers are allowed free alcohol their goods are given an advantage when competing with like manufacturers in our country. I once had a list worked up, and it seems to me there were something over 2,000 things that alcohol could be used in, and would be used in, at a reasonable cost, but in which its use is now prohibited because of the high price. A tax on the product of corn is equivalent to a tax on the corn itself. One bushel of corn produces 4.85, practically 5, gallons of spirits. The tax of the Government on that is \$5.50. That is equivalent to a tax of \$5.50 per bushel on corn, dropping the fractions. That prevents corn from getting to points of consumption that it otherwise would go to. It is prohibitive. The same is true of barley malt and the small grains they use. The difference between a tax of \$1.10 and one of 50 cents a gallon touches almost entirely the manufacturing interests and does not affect its use for beverages, where it is converted into beverages.

CHANGE IN TAX WOULD NOT AFFECT THE USE OF SPIRITS IN BEVERAGES.

Q. (By Representative LIVINGSTON.) Do you mean to tell me that people will drink whisky taxed at \$1.10 about as liberally as they would if it were taxed at 50 cents?—A. Yes; its use as a beverage will be just about the same. The difference between \$1.10 and 50 cents is 60 cents, which is 15 cents a quart or 7½ cents a pint. Now, that is nothing on a drink. A man pays so much for a drink of whisky, irrespective of whether the tax is 50 cents or \$1.10. But to the manufacturer who uses it in large quantities it is prohibitive. Now, I would not advocate an immediate drop from \$1.10 to 50 cents. I do not think that we could convince anybody that such would be the result, but I do say that Congress ought to drop the tax from \$1.10 to 70 cents and try it. Seventy cents was the revenue-producing point many years ago. Since then there has been an extensive growth of manufactures in this country which can use spirits, and I believe the increase of manufactures would so increase the demand that 50 cents would yield the largest amount of revenue.

NO SUCH THING AS ADULTERATION OF WHISKIES.

Q. Is there a stronger tendency to adulterate when the tax is high than when it is low?—A. Sir?

Q. Are there not more whiskies and liquors adulterated with a high tax than with a low one?—A. No; I think not; I think not. I do not think the loss of revenue comes in that way. I think it is in the failure to pay the tax.

Q. Would not more adulterated whisky be drunk at \$1.10 than at 50 cents?—A. No; I think not; I think not. I think the minds of the people are filled with false notions about the adulteration of whisky. I had my head chock full of that idea when I started in on my investigations, but I soon got it all out. I think a man who can drink whisky at all—I am unfortunately one of those who can not—need have no apprehension about getting impure whisky. The Distilling and Cattle Feeding Company had a compounding house in New York, and the Shufeldt house in Chicago was a compounding house. I went through both of them, studied their methods, examined their compounding processes, and reached the conclusion that there is no such thing as an adulteration of whisky. It is a myth; it is purely imaginary. There is nothing to adulterate with except brown sugar and distilled water, and if you add glycerine and prune juice you have covered the whole field. It is pure spirits. The distillers recognize a difference between commercial alcohol and spirits. High-proof spirits is simply refined alcohol. There might be an adulteration by putting in common alcohol and making whisky of that. There are some impurities in that; but there is only half a cent a gal-

lon difference in the cost of the production, which is not enough to warrant the operation. There is absolutely nothing than can be used as a substitute for alcohol in compounding beverages. In the large distilleries I saw nothing to lead me to a suspicion that the Government ever lost a fraction of a dollar in its revenue. My relation with the Department—the Internal-Revenue Bureau—was very cordial. They extended every courtesy, and where it was a matter of mere rule of the Department and not a provision of law that interfered with me and was a restraint upon me in doing my work the rule was always suspended; and in turn, of course, I did all that it was possible for me to do in seeing that the interests of the Government were subserved.

Q. The number of gallons obtained from a bushel of corn being always the same, the revenue produced is essentially the same, is it not?—A. Yes; but I do not think the amount of production from a bushel has anything to do with it. The amount produced is always above the amount required by the Government.

Q. Do I understand you to suggest prominently two amendments to the present law, one relating to the protection of the business abroad, and the other to the high tax which prohibits manufacturers from using alcohol who would otherwise do so?

ILLICIT MANUFACTURE OF WHISKY.

A. There is no cheating of the Government in the big distilleries. I am satisfied that there is not the loss of a dollar of revenue in any of the large distilleries. In the multiplicity of little distilleries, as shown by the effect of the product in the country, there is but a very small per cent of the tax paid. A \$1.10 tax makes moonshine distilleries; it makes little distilleries with capacity so small that they can not have guardians and watchmen put over them. These small distilleries use from 5 to 20 bushels a day, and produce from 3½ to 4 gallons. Their yield is less than in the large distilleries. It is physically impossible, from a financial standpoint, for these distilleries to compete with the Great Western at Peoria. If they pay their tax to the Government they will never sell 1 gallon of whisky in competition with a 12,000 bushel house.

Q. (By Mr. KENNEDY.) Would not they lose the other way around if the tax was 50 cents instead of \$1.10?—A. These small distilleries could not afford to manufacture it at 50 cents; the risk and expense would be too great. As it is now, if they are reporting to the Government, they report, say, 2 gallons out of every 10, or 1 gallon out of 5, and they then have a \$1.10 margin to make on every gallon they fail to pay on. They get their goods out in jugs and cans, and spread it in small quantities. I went over this matter with the officers of the revenue, and there is a loss, I think, admitted by the revenue department, and shown by statistics, of not less than \$10,000,000 a year, and which others claim to be over twenty. I am satisfied that fifteen millions would be a moderate estimate of the loss. On a 50-cent tax or a 70-cent tax—I do not think you can come to a 50-cent tax now—you will get revenue from all that spirits. It will interest you to compare the tax paid by one of the large Peoria distilleries with that paid by several hundred distilleries in some of the States to the south of us, say Virginia and North Carolina. I figured it out once, and I think I found that one distillery in Peoria paid, or would pay on full capacity, about three times as much tax to the Government as 2,700 distilleries here to the south of us pay.

Q. (By Mr. PHILLIPS.) What is their capacity compared with the large one?—A. Their capacity was greater, of course; the capacity shown was greater. In the districts where these small distilleries operate the products of the other distilleries have no market.

Q. (By Mr. KENNEDY.) Can you say whether better whisky is made at the distilleries in Peoria than at these 2,700 in the South?—A. It depends a good deal on where the man comes from who drinks the whisky. A man down there would say that whisky was the best; and, of course, there are some of those distilleries that do make fine whisky. But, gentlemen, I am not myself a judge of whisky. I say to you that I do not think I have drunk a pint of whisky in all my life.

COMMON OPINION OF THE BUSINESS.

There is another point that ought to be inquired into. This whole business is regarded by a very large percentage of the people as being disreputable, if not quasi criminal, and there is a tendency to treat the men who are engaged in it as a class of people not worthy of much consideration. Now, I think it ought to be decided whether it is legitimate or not legitimate. If illegitimate or improper, it ought to be prohibited, and every man that engages in it should be prosecuted as a criminal. If legitimate, it should be encouraged and protected and be given the

same rights and the same treatment that other lines of business are given. It ought to be fostered; it ought to be given the same treatment under the law. It has become disreputable because of its antecedents.

OUR LAWS OUT OF DATE.

At the time of the whisky troubles and frauds during the war laws were enacted that are still on the statute books. Rules have come down from the time when to be a distiller was almost conclusive evidence of the fact that a man was living upon frauds committed upon the Government by cheating the revenue; that he was a smuggler, a briber, and a perjurer. That is no longer the case, and I say those laws do not fit. There probably was corruption in the old time. The men who were committing those frauds lived by perjury, by bribery of Government officers, by crime. Men no longer do it. Nevertheless, you go to the Department and you find those same rules there.

CHARACTER OF THE REVENUE OFFICERS—THEIR RESPONSIBILITY.

I do not think there is a more honest set of men serving the Government than the revenue officers, but they are mindful of the old trouble, and it is almost a sacrifice of reputation for a Government officer to decide, in close or doubtful cases, on the side of the distiller. I have had 2 or 3 cases of that kind where large sums were involved, a distiller being short, and it being plain why he was short. Dealing with an officer of the court the revenue officer has not, of course, the same apprehension; but suppose that he wipes off a tax of \$50,000 or \$100,000 from a distiller improperly taxed, the inference in the minds of a great many people is that he has received a fee, that he is bribed, no matter how honest he may be. These questions involving property rights ought not, gentlemen, to be left to the final adjudication of the officers of the Department; but a man in the business ought to have a right to settle them in the courts, and let an independent judge say what the rights of property are, and construe the law. Let the Department in the construction of the law follow the judiciary of the country; let it be subordinate, not superior to the judiciary. You have got to change it, got to revolutionize the whole methods in order to do simple, straight justice, and let this business run as the banking business or the grocery business does. In my various callings and work I have come in contact with strong men, men who have handled large business interests in this country, but I never came in contact with a brainier set of men than those in the distilling business, nor, on the whole, with a more honest set of men, absolutely desiring to do right. Now and then there is a tricky one, and when you do find such a one he is one of the slipperiest eels that can be found anywhere, and is well known.

JUDICIAL FUNCTIONS SHOULD BE TAKEN FROM REVENUE OFFICERS.

I would place the power to decide on the rights of these people in the hands of the courts. Give these men straight, fair, simple justice and do not leave them dependent upon the decisions of an administrative officer, where, if the justice of the case demands a decision in their favor, he will hazard his reputation and prospects in life by rendering it.

Q. (By Representative LIVINGSTON.) That can be done in the district court where the property is located, can it not?—A. It can be determined in the district or circuit court just like any other right. Let a controversy between a Government officer and an individual be settled by the same courts that would settle the rights between us. But a man is at the mercy of the officer, and the officer is at the mercy of the clamor of the crowd, of public opinion. He does not have the moral courage to go out and lose his reputation in order to do justice, and it should not be required of him. He would lose it sure; he could not decide a question involving as much as some of these do, fifty, a hundred, two hundred thousand dollars. At times the taxes paid by the Distilling and Cattle Feeding Company ran over \$100,000 per day. If any Government officer decided favorably to the distiller a case involving such an amount, rumor would say that he was getting a share of the rake-off.

Q. (By Mr. PHILLIPS.) How often do questions arise involving such large sums of money? How do they arise between an officer of the Government and a distiller?—A. Well, one that occurs to me concerns the capacity tax, which requires that the capacity of the distillery shall be estimated and the tax paid on the capacity, whether the amount actually produced is equal to the capacity or not.

NATURE OF THE CAPACITY TAX.

Q. (By Representative LIVINGSTON.) Whether it makes it or not?—A. Yes, whether it makes it or not. It is just as we used to hear it talked of when we were boys. It is one of those games they call, "Heads I win; tails you lose." They measure the capacity of a distillery, and the distiller is bound to pay on the estimated product of spirits. The company made an experiment along a new line with molasses or some other ingredients in one of their plants. They had produced by the ordinary grain process a given capacity and paid on it to the Government. They made this experiment by leave of the officer of the Government under the supervision of the revenue officers; and when they ended the experiment they did not get much spirits; the experiment proved a failure, but the capacity tax went up. They had two cases like this—I do not remember what the deficiency was, but I think about \$30,000 in either case—left for me to pay. I said, "Here we did not get any of these spirits; they were not produced; there is nothing to pay on. Capacity is nothing; the capacity is all left. There is just as much capacity there as there was before they ran the distillery, and you can have it." This capacity business is like a barrel that is all bunghole. After delaying along, I suggested that the right way to settle the thing was to put it in the hands of the court and let the court decide whether we had a capacity, and what the intent of the law was. There were two of the cases. One of them was submitted to the United States circuit court, and on the hearing the court promptly decided that it was not the intent of the Government, notwithstanding the language of the act, where no fraud was committed, and where everything was open and honest and aboveboard, to collect that tax, and no tax was due. The other case did not get to the court for reasons I need not explain to you, notwithstanding the good will of the officers of the Government. A special act of Congress is required to give the needed relief. It is all wrong, gentlemen, and it is an oppression upon this industry.

Q. (By Representative LIVINGSTON.) Was that decision the reason why the other case did not get to the court?—A. Yes; they would certainly have got a like decision in the other case, as it ran on all fours with the first one, and the officer submitting it would have been severely criticised for establishing a bad precedent.

Q. (By Mr. KENNEDY.) I would like to ask you if the internal-revenue figures in regard to the production of whisky are based only on the whisky that pays the tax. Is the moonshine whisky brought into the computation?—A. No; the moonshine whisky does not appear in the list of the Government. They do not get hold of that, but still the experts in that line can tell pretty near how much moonshine whisky is run.

INCREASE IN THE PRODUCTION OF SPIRITS.

Q. Do not those statistics show a steady increase in the production of whisky from year to year? I mean the whisky upon which the tax is paid.—A. Yes; but, as I remember it, not in the ratio of the increase in population.

Q. It increases, then, notwithstanding this excessive tax you speak of?—A. Yes; but the people who consume it increase more rapidly in proportion.

Q. If the tax were put down to 70 cents, do you say there would be a large increase in the production of whisky?—A. Yes; there would be a very large increase in the production of spirits. I do not think there would be any increase in the consumption of whisky proper; i. e., drinkable whisky.

Q. Would it be in excess of the amount that is illicitly distilled now?—A. Oh, yes, in excess of everything now. In the first place, they would collect the revenue upon a large part that does not now pay. Then there would be an increase in the output. I do not think they would stop all the moonshine whisky business on 70 cents, but I do think they would stop it all on 50.

Q. Do you say that this excessive tax does not interfere with the quantity of whisky consumed by drinkers, but that it has interfered with the amount of whisky that goes into the arts and manufactures?—A. Yes.

Q. Therefore, what you have said is not a temperance argument after all?—A. I do not think it affects the drinker, at least materially; it may to some extent, but for the ordinary drinker at the bar not at all. It might affect the man who buys his whisky by the jug or by the bottle. You can very readily calculate the effect. The present tax is \$1.10 a gallon. If you put the tax down to 70 cents there is a difference of 40 cents, which is 10 cents a quart and 5 cents a pint; but when a man wants to get a pint bottle of whisky he is not going to stop on 5 cents, if he can get the 5 cents.

Q. (By Mr. FARQUHAR.) Can you give the commission any idea what you think the increase in production would be provided the tax was so low that the product could enter into manufacturing?—A. There is nothing to base a calculation upon, i. e., there are no definite figures. I attempted that and I did make a rough calculation, but I forget what it was. It was at the time that I prepared this argument on the price of corn. It was very large. There are more than a thousand things that are manufactured, as I calculated then, into the making of which alcohol goes, that are now not made, or if made at all, to a very limited extent in this country, but that are made in other countries where they have free alcohol and the free use of it. It would be so large, I think, that at 50 cents there would be a large increase in the revenue over what we get at the rate of \$1.10. In other words, the amount of production would be over two and a half or three times what it is now, and the most of that increase would go into the manufactures and benefit the establishments concerned.

COST OF COLLECTING THE TAX.

Q. (By Representative LIVINGSTON.) What does it cost the Government of the United States to collect the whisky tax?—A. I do not remember; that is a matter of figures, which can be obtained from the reports of the Commissioner.

Q. I asked the question because I thought it might suggest an amendment to the law concerning the collection of the tax. Suppose the tax should be levied on the sellers, the wholesalers and retailers, would not that reach all the whisky to be taxed, including the moonshine stuff, and reduce the cost of collection 50 or 75 per cent?—A. My investigations and experience would not warrant me in passing on that question; it is one I have never considered. It seems to me it would be a very complicated and very intricate matter to determine how to collect the tax without having an evasion of it and allowing goods to get on the market unpaid; and you could not at all times and in all places discover, by inspection, what goods had and what had not paid the tax. There are experts in the revenue who have followed that subject.

Q. You understand that no package would pay a tax or be branded, and no stamps would be bought; but whenever a drink of whisky was offered for sale it would pay a tax. My question is this: Could not the Government collect the same amount of revenue that it collects under the present system with 75 per cent less cost?—A. The theory now is, and I am disposed to concur in it, that the product should not get out of the hands of the Government officer until the tax is paid.

Q. That is the theory.—A. And in the large manufacturing concerns I do not think it does. The Government has got its hands on it and has absolute, physical possession of the entire product until the tax is paid. Then it goes out in such form that the party gets the stamp of the Government, so that there can be no cheating, and the officer who sends it out must account for those stamps. It is checking one by the other, and I should want to investigate pretty closely before I would recommend to let up on that line. You would have to chalk every glass. When it is not very dangerous, the inclination of man—the ordinary man—is to cheat the Government if he can. In the case of these large distillers the penalty is very heavy. If one of them is found cheating the Government, he forfeits his distillery and loses an immense fortune. But if a man with a little distillery, which he can take around on a mule, is caught and his distillery forfeited, there is a stoppage of revenue for a week or two, and then he will get another one. So that, in one man's hand, both being of the same temperament, it is tolerably safe because of the consequences that will follow, where it is not in the hands of the other man. I wish I could answer your question more satisfactorily, but it is a subject that I have not studied.

Q. When you come to consider the cost of collection under the present system, do you not have to consider the expenses of the district courts, the United States marshals, and the commissioners who have been trying these moonshiners and illicit distillers from Virginia to Texas?—A. I would reduce that cost by taking away the inducement of the moonshiner to carry on his trade. I would make the whisky so cheap on the market that he could not afford to do the work. He might better chop wood; he could make more money.

Q. (By Mr. PHILLIPS.) Before proceeding further with this discussion, it might be well to finish the general questions regarding the Distilling and Cattle Feeding Company.

PROPERTY OF THE DISTILLING AND CATTLE FEEDING COMPANY SOLD.

A. August 14, 1895, the receiver of the Distilling and Cattle Feeding Company sold at public auction certain properties of the said company for \$9,800,000. These properties were purchased by the American Spirits Manufacturing Com-

pany, and consisted of: Shufeldt Distillery, Chicago; Central distilleries, St. Louis; Star and Crescent distilleries, Pekin, Ill.; St. Paul Distillery, South St. Paul, Minn.; Riverdale Distillery, Riverdale, Cook County, Ill.; Hamburg Distillery, Pekin; Northern Distillery, Peoria; Manhattan Distillery, Peoria; Monarch Distillery, Peoria; Great Western Distillery, Peoria; Woolner Distillery, Peoria; Peoria Distillery, Peoria; Willow Springs Distillery, Omaha; Consolidated Distillery, Cincinnati; Maddux-Hobart Distillery, Cincinnati; The Wabash Distillery, Terre Haute; The Latonia Distillery, Milldale, Ky.; and the office building of the Distilling and Cattle Feeding Company at Peoria. The price paid was a lump sum; there was no particular price for any distillery. The American Spirits Manufacturing Company was organized by a committee of the stockholders. The amount realized on sale of these properties, it is estimated, will exceed all liabilities and be about \$10,500,000. There are some claims still in litigation and until they are finally disposed of the receivership can not be closed up. I am continuing to act as receiver merely pending the settlement of these claims.

Q. (By Mr. JENKS.) You say that the amount of property turned over to this new company, the American Spirits Manufacturing Company, is, in your judgment, about ten millions and a half?—A. Yes; about ten millions and a half.

Q. Would that amount be realized if these properties were sold in open market separately to different individuals?—A. I think it would; I think that would be a fair valuation for distilling purposes.

Q. What is the capitalization of the American Spirits Manufacturing Company?—A. It is thirty-five millions, the same as the old Distilling and Cattle Feeding Company.

Q. Is part of it in preferred stock and part of it in common stock?—A. Yes; \$28,000,000 common and \$7,000,000 preferred.

Q. So that here, again, we should be substantially right in saying that perhaps a third of the stock would represent a fair cash selling value?—A. The American Spirits Manufacturing Company made an assessment upon the stockholders of \$4 a share, and that assessment added to the amount turned over to them by me as receiver of the Distilling and Cattle Feeding Company, to that ten million and a half, and the value of the remaining distilleries not sold to the reorganization committee, would be a fair cash value of their assets at the time.

NO EXPORTATION OF SPIRITS.

Q. There are one or two questions further that have been suggested along this line. Has there been much exportation of spirits of late years?—A. Very little; practically none. Exportation has been stopped by the friction created by the Government.

EFFECT OF HOSTILE LEGISLATION.

Q. It has often been suggested in connection with these larger combinations in trade that it has been necessary for them to protect themselves against hostile attacks in our legislatures, that considerable expenditure has been made for that purpose, and that they have also made quite large expenditures for instigating and securing legislation favorable to them. Did you find any evidence along either of these lines in taking up the work of this trust?—A. I found no evidence of anything of that kind, except in common report.

Q. You found nothing in that regard at all?—A. Nothing that showed. There were some cases that looked as though there might have been expenditures of money for the prevention of sandbagging legislation, but nothing definite. There is a general belief, however, among the men operating that it is necessary to make up a fund of that kind. A large portion of this, however, I am satisfied is fraudulent. While sums are doubtless collected for the prevention of the destruction of the business by hostile legislation, I am satisfied that the collectors of it are the main beneficiaries. It is very rare that the distilling interests have to fight an act of the legislature in our State and I have not in the other States that I have gone through seen anything of it, notwithstanding the fact that sandbagging bills are introduced at nearly every session.

Q. You spoke this morning with reference to the increase in price that followed the organization of the Distillers and Cattle Feeders' Trust, and said that you thought the price was put so high that it ultimately resulted in the destruction of the trust itself?—A. Yes; the price of its product.

WHO BEARS THE BURDEN OF AN INCREASE IN THE PRICE OF SPIRITS.

Q. Now, when the price of the product is put up in this way, considerably above the ordinary competitive price, who bears the burden, in your judgment?—A. The consumer, in manufacturing; the retailers, when sold by the glass; the consumer, when sold by the bottle or jug.

Q. That is, the man who drinks the whisky?—A. No; the man who uses the spirit; it is not a beverage, you know. Only a very small percentage of all this product is converted into a beverage. That is, of this high proof spirits, a very small proportion is converted into whisky. The larger proportion of it is used in manufacturing, and is the alcohol of commerce.

Q. Supposing, let us say, a third goes for consumption—that is, for making the beverages that are used in ordinary consumption—would you think that it was the consumer of that who bears the burden, or would it be the retail dealer?—A. The man who drinks the whisky, when sold by the bottle; the retail dealer when sold by the glass.

Q. Yes?—A. To the man who is drinking it by the glass it does not make a particle of difference—the price is the same to him.

Q. Would it be the retail dealer or the wholesale dealer? Where does this tax fall?—A. It would be divided along the line, of course lessening the profits of the retailer and the wholesaler. The man who drinks by the glass at the bar would not be affected; and a matter of 3 or 4 cents a gallon would not greatly affect the man who buys by the small bottle. He would pay some of it, but the man who buys a larger quantity, i. e., by the gallon, or by the barrel, would pay it.

Q. Part of it would stop with the retailer?—A. Yes; the retailer would bear the greater portion of it on an average, and would receive the greatest benefit of a reduction in the taxes on alcohol and spirits for manufacturing purposes, and for the export trade, which is an important factor.

Q. The question is suggested as to whether the price of whisky, even for the consumer by the glass, was not cheaper under the old revenue tax of 50 cents long before this revenue tax of \$1 was levied?—A. No, I think not; my experience does not go back to anything anterior to the tax, save by way of the general statement that everything produced from grain was cheaper then. Before the war, in 1860 and 1861, corn was 7, 8, 9, and 10 cents a bushel; we used it in lieu of coal, because it was cheaper; and whisky was very cheap, but the yield of spirit per bushel was, however, much less. I estimate that it cost then only from 7 to 12 cents a gallon to the retailer, but he sold it under conditions different from what they do now. The tax is only a part of the burden laid on by the Government; the compliance with the rules and requirements which are necessary entails a large expense to the distiller. The country is different now; then, out West, it was miles between houses; now there are houses and farms everywhere, and we are getting toned up higher and we are selling things for 2 or 3 cents; they would not stop to take 2 cents then. It would be 5, 10, 15, or 20 cents a drink for whisky, regardless of the revenue tax on it.

EFFECT OF THE COMBINATION ON ITS MEMBERS.

Q. Judging from your observation, since you have been acting as receiver for this company, what do you think has been the effect on the individual distillers of going into this great combination? Have they, on the whole, been benefited or injured?—A. I think they have lost money in it.

Q. You think they have lost?—A. I think it has been a detriment to every man that touched it, except probably a few individuals.

Q. Can you explain more fully just where they lost? Did they lose during the first two or three years, or was it when the combination broke up?—A. No, I think they thought they were ahead for a while. In the first place, they thought no distillery could compete for the trade, big or little; it was theirs; they owned it; and in the next place, they got a lot of certificates, the value of which was probably two or three times the value of the distilleries which they represented, but it said dollars on them and they felt rich and carried them along. At first the certificates went up and up, and by and by down and down until they got to be worth almost nothing, so that they went from the poor little distilleries that they actually owned, but which produced some income for them, to a lot of paper trash that depreciated to a few cents on the dollar and finally left them out of business.

Q. (By Mr. KENNEDY.) Was not Mr. Clarke's testimony to the effect that they gave the value of the distillery in cash and the value again in preferred stock and the value and a half in common stock?—A. When he made that statement he was doubtless referring to the later organization.

Q. (By Mr. JENKS.) There went into this combination, of course, a good many distillers who were favorably situated with good plants, and who had been making money; but there were a good many more who were not well equipped and who were not making much money. What was the effect on owners of the better distilleries?—A. Of the better distilleries?

Q. Yes; what was the effect as regards their profits and the advantages which they could get from such a combination?—A. There were a few of the leading men who went into this combination who made profits and accumulated large fortunes; they had large fortunes before the break. Some of them lost very heavily, principally in stock speculations; but I should say that, of the small concerns that went in, the rule was loss. Some who went in got certificates and immediately converted them into cash before the market fell and invested the proceeds in other classes of property. They did well, but those who held on to their certificates lost.

Q. They lost rather than the large ones?—A. Yes; I think from the start; most of them started in with something and got out with nothing.

Q. (By Representative OTJEN.) Did they receive dividends on their stock?—A. Yes, they received dividends.

COMBINATIONS FOR CERTAIN PURPOSES VERY DANGEROUS.

Q. (By Mr. FARQUHAR.) You have already touched upon some phases of industrial combinations in a part of your testimony. What is your general view of the present forms of combinations that are being chartered in New Jersey and elsewhere?—A. I am not familiar with the facts of their organization, but I regard any organization or combination to control or corner the markets of the country for the purpose of raising prices as very dangerous, no matter what line it is in. They are undertaking to combine in some lines in which I think it is impossible of accomplishment. In those cases the real sufferers will be the men who buy the stock, i. e., those who invest in most of the industrials. But where large capital is required, as in iron and steel, and where competition can not be easily brought about, combinations will be very dangerous and be very injurious to the country. The safety of the Government requires that they be suppressed. The one will be a temporary the other a permanent injury. But those enterprises that cheapen the cost of production and reduce the price to the consumer will be beneficial. To prohibit them, if it could be done, would be to give their trade to others at a greater cost to the public.

Q. Do you suppose that most of the injury will come from the fact that they will issue stock and then catch the willing public, what they call the "gudgeon," on Wall Street, and that those will be the ones who will suffer?—A. Those will be the ones. They will form a combination and issue new stock for two or three times the amount of the old, and in a little while the combination will all go to pieces, just as the whisky trust did, and the men who have got the stock will lose the money. The men who effected the organization will have their profits. The motive in most of these industrial combinations is to "fleece the lambs."

Q. Is it not possible in some of the great capitalistic combinations in this country, for instance the Carnegie Steel Company and the Standard Oil Company, for the owners of plants to keep on a business basis, maintain a large capitalization, and do a fair business? In other words, does the matter of overcapitalization affect the product at all, provided the business is done legitimately and through the ordinary market?—A. The overcapitalization only means a smaller income from the capital or a larger demand from the consumer. The kind of organizations that you speak of, in my opinion, if permitted to go on, will absolutely control the markets of the country and get whatever they please to demand for their product. They can control the output. We have got to keep our people working; we have got to do something to dispose of the product of their labor. I think the remedy for that is more markets; we must go into the markets of the world in the line that I have suggested in the spirits manufacture. I think that Illinois alone, or Illinois and Iowa, at least the corn belt, will furnish the whole world with spirits, if somebody will take hold of it and break the line and let them out. The remedy is to make a market for the product of our workshops. A combination of immense interests, like those of iron and steel, can not be met by home competition. It is not in the nature of man to keep down the price of his property when he can hold it up so long as there is a market. The only way it can be met is to invite foreign competition, but that is quite as harmful as it would be to leave our workmen unemployed and produce financial distress. The right way is literally to crush such combinations by the authority of the Government. They are inimical to public safety.

Q. You stated in your testimony that the cause that led to the end of the whisky trust was the fact that they had got control of the market by buying up competitive plants and then raised their product to a price that invited competition by the erection of new plants, causing overproduction, and therefore they went to pieces. Is that so?—A. Yes.

Q. Does that hold good in any industrial pursuit in this country where they have a large capitalization?—A. It does not hold good where the capitalization is very large, as in the iron business. We can raise \$5,000 or \$20,000 to build a distillery where we can not raise fifty millions to start an iron mill. You can find thousands of men in Iowa and Missouri that will start distilleries where there is a profit of 40, 50, or 100 per cent; but you can not get the men anywhere to start iron and steel mills that cost forty or fifty millions.

WHAT THE PROFIT IN SPIRITS SHOULD BE.

What would you call a safety per cent of dividend in the spirits trade?—A. In the spirit trade?

Q. Yes.—A. They ought to have from a cent to a cent and a half a gallon; in some cases possibly 2 cents per gallon. The commercial arrangement that I told you I went into I think was fair; it was within these limits. They should make a fair profit. Every man should have the right to a fair profit for his labor and his capital, and a cent or a cent and a half a gallon would be a fair profit, irrespective of the amount of capital he had in it.

LITTLE ADVANTAGE IN EXTENDED COMBINATION.

Q. How often does the spirit trade turn over its capital in a year?—A. I did not go into that. This report of dividends will indicate to you the profits on the stock. There is a report of those dividends and then other funds—earnings that were used for purposes of increasing their plants, and that was on a capitalization of about thirty-five millions. The cash value of the properties in actual use would have cost much under that, say half of it, so that you would double the per cent of dividends upon an actual cash basis.

Q. (By Mr. A. L. HARRIS.) It is chiefly an economic question. If you have 5 distilleries with an output of 5,000,000 gallons a year each, would they produce the 25,000,000 gallons more economically than one distillery equally well located could produce the same amount?—A. They can not do it under like conditions. The concentration of the plants to a practical limit cheapens the cost of production.

Q. Would the five have no advantage in buying raw material over the one in the open market?—A. No; not that I see.

Q. If they were distributed over the entire country, and the number increased from 5 to 25, say, and produced a hundred million gallons a year, would they not have any advantage over the one equally well located?—A. Not on the cost of production.

Q. Would there not be an economic advantage in the cost of production?—A. Up to a certain point the more you concentrate the more you reduce the cost of management. You get to a point where, of course, you can not go any further. What that point is, I have not had experience to determine; but you could determine it. As a rule, the point of most efficient operation would be reached when they absorb the product of the country all around them; when expense is increased by bringing in the material from other districts. I do not think, unless there were exceptional conditions, that any manufacturing business would be well located if located all in one spot. Of course, the matter of transportation is an important one.

Q. In asking the question, I had in mind the combination of plants that are scattered all over the United States.—A. There is absolutely no use of combining where they are scattered all over the country. If combinations are formed it is to get a corner on the market and better somebody's fortune. There is no practical advantage in it; not a bit. For instance, the distilling people had distilleries in Peoria, Nebraska City, Pekin, St. Louis, Cincinnati, over across the river in Kentucky, and in a dozen different places. There was absolutely no necessity for combining. It was only to control the market, limit the output, and commit extortion. They attempted to do it and failed, simply because, as I have explained to you, it did not require a large capital to get up competition—to build new distilleries. Why, they threw away property that cost them hundreds of thousands of dollars merely to eliminate it; they paid men for staying out of the trade; they paid rent on this abandoned land right along from year to year, nearly

\$100,000 a year. I have got on the roll here, I think, \$100,000 approximately, if I remember it, a year for rent for nothing. They rented the places where the distilleries were in order to put them out of the way.

PRICE OF SPIRITS BASED UPON THE PRICE OF CORN.

Q. If they had reached the point where they could make it more profitable for the capital invested, would they not have to control the output as well as the price of the raw material on the market?—A. Yes. They did not seek to control the price of the raw material; corn is really their guide. The corn market is the indicator for the spirit market, and as corn goes up the cost of production goes up. They did seek to control the output and succeeded for a time, while fair prices were maintained, but when extortion was attempted they failed.

Q. That is owing to the fact of the immense amount of corn, and the various uses to which it is put. Is that true in any other industry?—A. No, because they have to pay for the corn. They get the corn in a solid form and after they run it through the mash and the still it comes out in liquid form. Every bushel of corn produces from 4 to 4.85 gallons of spirits. The cost of the spirits is based upon the cost of the corn; it is corn in liquid form; and the price of the corn is, of course, controlled by the amount of it consumed. If you will open the markets of the world to these people and let them run the corn through their mills and ship the liquid spirit, the price of corn will go up because there will be more demand for it, the consumption being greater. With proper encouragement by our Government, i. e., the necessary facilities in handling for export, I am confident that the grain used to make spirits for export would be greater than the whole amount now used for all distilling purposes, and that a 50-cent tax would require double the present amount to meet the demand on an easy export. And a low tax that would permit the use of spirits and alcohol in manufactures would require at least four times the present amount of grain to meet the demand of our distilleries, and would necessarily raise the price of grain. If you reduce the tax on the liquid corn there will be more of it used in the arts and sciences and manufactures; and if you will provide rules under which it can be exported—merely prevent friction—more will be exported. The law as it now stands and the rules for its enforcement are practically a prohibition on the exportation of spirits and alcohol.

EFFECT OF COMBINATIONS ON THE PRICE OF RAW MATERIAL.

Q. Suppose that corn was used only for the manufacture of spirits, what would be the effect of combinations upon the price of raw material?—A. If the corn had no other use?

Q. If the corn had no other use, as raw sugar is used chiefly for making refined sugar, what would be the effect upon the raw material?—A. On the corn?

Q. On the corn.—A. Why, it would not have any price; they would have to stop raising corn. It would not bring enough to pay the cost of production, until the supply was correspondingly diminished.

Q. Supposing there was only an amount of corn raised sufficient to supply the demand for spirits, and that competition was destroyed so far as the producer of corn was concerned?—A. I think the natural law is that, if you limit the output, you increase the price, because there is an increased demand. If the amount produced is not equal to the amount consumed, the price necessarily goes up. The whole thing depends on regulating the output, or getting a market for the output. I do not however conceive, and never have, that you could limit the production of corn to the amount required for spirits. Increase the export of spirits and its use in manufactures and you increase the demand for, and necessarily, the price of corn.

Q. All of the raw sugar at the present time is, of course, not converted into refined sugar, but what I was trying to get at is the effect of the large combination that substantially controls the refined sugar. What effect does it have on the raw sugar? It was the general economic proposition that I had in mind, rather than the special circumstances of the distilling business.—A. I can not conceive of such a condition; I might construct a theory about it, but I do not think it would be worth a button after I had; it would be mere guessing. I do not see how a condition of that kind could be permitted to exist. If there was no use for corn except to make spirits of it, and one set of men had control of all the spirits, they would have control of all the corn; but that would not be tolerated; that is all. In these industries where a small amount of capital is required I do not think it would be possible for them to do it. They may do it

for a while, but in the end they will get downed; they will be troublesome while they are in the ascendancy. The only way they can control the spirit output is to cheapen the production, as can perhaps be done in Peoria, and sell at from one-half to two and one-half cents a gallon cheaper than anyone else who has not the same conditions. Of course, with the same conditions elsewhere their prices could be met.

Q. (By Representative OTJEN.) I understand that you regard these large combinations, such as the iron combination, as injurious?—A. Very; they are a menace to our form of government. They are a permanent evil, while other trusts are but a temporary one. In the end some of them may reduce the cost of production and result in some good after doing much harm.

Q. Have you any suggestion how that can be prevented, or how a remedy could be applied?—A. I have not been a student of that question, and my opinion would not be of any value. I really have not come to a conclusion with which I am myself satisfied, but I would stop the formation of trusts. Just how I do not know, but I would stop them some way. I would hold them up somewhere on their mad career and give them a shock. There is sufficient power under our State and Federal constitutions. It is an inherent power of the Government to protect the people from oppression of this character.

Q. (By Mr. JENKS.) Have you any definite information with reference to the profits of the new companies, the American Spirits Manufacturing Company, the Standard Distilling and Distributing Company, and some of these later organizations?—A. No; not much. My mind has been kept on other work and I have not paid much attention to those matters. The knowledge I have would not be of any value, except what I have already given you. It is my belief that these men are working on the line of reducing the cost of production. I know for a certainty that the American Spirits Manufacturing Company is, because I have worked with those gentlemen in getting the business straightened out and starting them on from the point where I dropped it.

AFFIDAVIT.

STATE OF ILLINOIS, *County of Cook* :

I swear that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

JOHN MCNULTA.

Sworn and subscribed before me this 5th day of July, 1899.

[SEAL.]

E. M. COLTON,
Notary Public.

WASHINGTON, D. C., May 19, 1899.

TESTIMONY OF MARTIN R. COOK,

Wholesale liquor dealer.

The Commission met at 10.45 a. m., Vice-Chairman Phillips presiding. Mr. Martin R. Cook, of 146 Franklin street, New York, N. Y., appeared as a witness on the subject of the whisky combinations.

Q. (By Mr. JENKS.) What is your business?—A. Wholesale liquor dealer.

Q. How long have you been engaged in the business?—A. About 36 years.

Q. So you have been in business during the whole period of these different combinations among the distillers?—A. Yes.

Q. Have you, during all this period, had dealings with all of these different combinations, from the old pools through?—A. Yes.

EFFECT OF THE FIRST COMBINATIONS ON PRICES.

Q. Would you be kind enough to give us your opinion as to the effect upon prices that the old pools among the distillers had, before the formation of the so-called whisky trust?—A. We had several pools for the regulation of prices, which practically resulted in the formation of trusts. As I recollect it, the first attempt at a combination was conducted by a man named Miller—Buffalo Miller.

I do not know that they called it a trust at that time. The trust, organized by Mr. Greenhut, was at a later period.

Q. Do you remember anything as to the effect on prices of this earlier pool organized by Mr. Miller, before the organization of the trust?—A. Its effect was to advance the price of the raw product, spirits and alcohol.

Q. About how long did the pool organized by Mr. Miller last?—A. I do not remember.

PRICES FIXED BY THE TRUST.

Q. What was the effect of the whisky trust, which was organized with Mr. Greenhut as president, upon prices?—A. Before this trust was formed there was great competition and general demoralization in the business. After the formation of the trust prices became more regular to the jobber, and the trust required the jobber to sell at certain fixed prices to the small dealer. The arrangement was very similar to the one followed at the present time by the sugar trust.

Q. That is to say, the trust itself fixed the price at which the jobbers should sell to the dealers?—A. Yes; and the arrangement was a very satisfactory one while the trust adhered to it; it maintained a fair price and was willing to accept a fair profit.

SYSTEM OF REBATES.

Q. In case the wholesale dealer did not observe the price fixed for him by the trust, was there any penalty attached?—A. Yes.

Q. Will you explain that to us?—A. The buyer had a rebate; if he violated the price agreement, or bought from any other parties, he lost his rebate; or, in other words, the voucher which was given for rebates was conditioned upon his loyalty to the trust to the extent of making all of his purchases from it.

Q. Was this system of paying rebates and fixing prices made by the old Distillers and Cattle Feeders' Trust, or by the Distilling and Cattle Feeding Company after the first association had reorganized?—A. It was by the first trust—that organized by Mr. Greenhut. After the organization was formed they advanced prices and demoralized the whole business.

EFFECT OF THE INCREASED PRICE ON THE MARKET.

Q. Do you recall for about how long a time the trust kept prices at what you considered fair rates, so they could hold the market steady?—A. I do not; I can not tell you without referring to our books.

Q. But you state that afterwards they succeeded in demoralizing the market?—A. Yes.

Q. How?—A. By advancing the price when there was no corresponding advance in grain. Just prior to their breaking up they made several advances, that were entirely uncalled for, of about 5 cents at a time, which, as I recollect, amounted in the course of 30 days to 30 cents a gallon. There was no reason for this that they could give, except that it might affect the stock market.

Q. Why should they desire to influence the stock market?—A. I do not know, but surmise that if they were stockholders they might want to enhance the value of their stock.

EFFECT ON CONSUMPTION.

Q. What was the effect upon the consumer of the product, or the effect on the consumption of alcohol, of pushing the price up so suddenly 30 cents a gallon?—A. All advances of that kind have a tendency, I think, to lessen the consumption.

Q. In this special case, do you think that orders for the goods on the part of the wholesalers were decidedly and immediately checked?—A. I have no doubt that people who understood the situation and were unable to see any adequate reason for the advance held off in making purchases.

Q. For how long a time did this very high price last?—A. I do not recollect; not very long.

Q. Any longer than a month or 2—3 or 3 months?—A. Not more than 2 or 3 months; I do not think as long as that; I can not tell you now.

SYSTEM OF REBATES EXPLAINED.

Q. Will you explain to us a little more in detail just what this system of rebates was?—A. It was something like this: If the market price, as it is to-day, were \$1.20, we will say, they added on 7 cents a gallon, and we all paid \$1.27. For that 7 cents they gave us a rebate voucher, payable 6 months after date, provided we

had made all of our purchases of them and complied with their regulations, as stated in the voucher.

Q. Were you compelled to make oath to the effect that you had bought only from them and sold at the price they had fixed?—A. Yes; when we sent our vouchers for collection we had to make that oath.

Q. Are you speaking now of the rebates of 7 cents a gallon given to the wholesalers?—A. Yes; those are the rebates; but sometimes, I think, where we ourselves sold to wholesalers we were allowed to give vouchers on behalf of the trust. For instance, if we sold to a jobber in Philadelphia or Baltimore, or to a large retailer, he would receive a voucher and pay the 7 cents advance, the same as we had. Instead of our paying it all, we were allowed by agreement to make vouchers; so that the trust, instead of our company, paid the Philadelphia or Baltimore buyer the rebate on his purchase from us.

Q. That is, you would take a rebate of 2 cents a gallon and he would have a rebate of 5 cents a gallon, or how was it distributed?—A. I do not recollect how it was now, but in substance it was 7 cents.

Q. Was it 7 cents for the wholesaler, or wholesaler and retailer together?—A. I think it was the same all the way through. I think it was. I would not be sure, but my recollection is that it was.

Q. Your recollection, then, is substantially this: That if a person wished to get at the real price of the product from the market price, as quoted, he should deduct 7 cents a gallon?—A. If he wanted to know the net cost to him ultimately, provided he lived up to his agreement with the trust, then he would be entitled, at the end of the 6 months, to 7 cents less than first cost.

Q. What was the effect of this rebate system upon the trade?—A. In what way?

Q. After the rebate system had been in vogue for some years, I have understood that the combination itself had trouble in paying these rebates to the wholesalers. Is that true?—A. When the dealers found they were unable to collect their rebates, there was a feeling of great dissatisfaction.

Q. What action was taken by the trade in order to secure their payment?—A. I think many of them commenced suits to collect.

Q. Was there any general, organized movement on the part of the dealers to whom rebates were owing?—A. I think there was one or two things of that kind started, but they were never pushed very far; I do not think they amounted to much.

Q. Did you yourself have any connection with such a movement as that—one that was more or less uniform among several dealers?—A. Yes; I think I had, but the distinct details of it I can not recall just now.

INCREASE IN PRICE ULTIMATELY PAID BY THE CONSUMER.

Q. You have spoken of the very decided increase in price, unreasonable increase, as you thought, on the part of the Distilling and Cattle Feeding Company. Upon whom do you think the burden of the increase ultimately rested? Who, in the main, bore the burden?—A. I think that it was ultimately paid by the consumer. So far as the retail liquor dealer was concerned, prices remained the same. It is difficult to change retail prices in this business; in fact, it is not attempted. If the retailer maintained and sold the same quality of goods, then he was the sufferer; as a rule, however, on account of accumulating licenses and taxes and increased cost of doing business, the retail dealer has been compelled to sell a class of goods which has continually grown poorer and cost less money.

Q. You yourself are a rectifier, are you not?—A. We are rectifying as known under the law. We do not do any real rectifying. All we do is to buy the high spirits and reduce them to proof. That is what is called rectifying now. In that sense we are rectifiers.

Q. Can you tell us something from your own experience concerning the changes in the demand of the retail dealers for different grades of goods, so as to make plain what you have said about retailers buying cheaper grades of goods when taxes or prices are high?—A. There is no doubt about that. It is known by every wholesale dealer who has experience. Look at the condition, for instance, in Pennsylvania, where they have a very high license. They were large consumers of fine goods, and we perhaps handled as many of those goods as anyone. Fifteen years ago it was not an unusual thing for us to get from \$4 to \$6 a gallon for strictly fine goods; but now, for goods of equal nominal quality, it would be very difficult to get more than half that price. In fact, it is an infrequent occurrence for us to sell them the best goods they use for as much as \$3.

Q. Did you notice the same effect when the prices were put up by the whiskey combinations, by the Distillers and Cattle Feeders' Trust, and later by the Distilling and Cattle Feeding Company? For example, very soon after the trust

was organized, in 1888, they put the price very high; did you notice in your business during that year that the nature of the retailers' demand changed in the way you suggested? Did they ask for cheaper goods?—A. Is that the time of that 20-cent advance?

Q. No; that was two or three years before. The 20-cent advance was in the latter part of 1892 and the beginning of 1893. At that time did you notice the change?—A. I do not recollect about it, but I should say, from general experience, that such a short-lived affair would have had but little influence, because people will withhold from making purchases as a rule if they have stock enough on hand to carry them along for a while.

Q. This first increase that I have spoken of, under the old trust, was an increase in price that lasted just about a year. Do you think that in a period of time of that length you would notice the change?—A. How much was the increase?

IN SOME CASES THE CONSUMER IS NOT AFFECTED.

Q. There was an increase, in the first place, of about 4 cents a gallon, then after 3 months an increase of 5 cents a gallon more in round numbers.—A. I do not think that of itself would have made much if any difference.

Q. Somewhere from 9 to 10 cents a gallon?—A. I do not think even that would be enough to induce dealers to purchase a lower grade of goods.

Q. The increase of 9 or 10 cents a gallon, then, would not be enough to affect the retailers' price to any great extent?—A. I do not think it would, because they would have to calculate, you know, on 50 or 60 drinks to a gallon, and such an increase would be but a small fraction of the price of a drink.

Q. Under these circumstances you would say that the burden of an increase in price that was not over 10 to 25 cents a gallon would really rest on the retailer?—A. Taking all other expenses into consideration I think it would; but that of itself would not affect him much.

Q. In that case, then, the retailer is the man who pays most of the increase?—A. I think that is correct.

Q. Would the effect be the same, do you think, in the case of bottled goods as in the case of goods sold over the counter?—A. I do not think that goods with an established price in the market would be subject to change, unless they were low-priced goods. In that case, if it would make a difference of 25 to 30 cents, I think they might charge the difference; but where there was a profit of \$3 or \$4 a case I do not believe they would make a change.

THE EFFECT OF THE FEDERAL TAX ON SPIRITS.

Q. Will you give us your opinion with reference to the effect of the present high tax of \$1.10 per gallon of proof alcohol on the revenue? Do you think the Government would secure more or less revenue if the tax were reduced, let us say, to 75 cents a gallon?—A. I think the Government would get more revenue at \$1.10; there is no doubt about it in my mind.

Q. Do you think that the tax is, on the whole, pretty efficiently collected at present; not very much liquor gets on the market without paying a tax?—A. I have no doubt about the tax being efficiently collected. We do not hear of much illicit production. Occasionally, in New York, some East Side Russian Jew, who understands distilling on a small scale, is brought up; but, aside from that and what is produced in the mountain districts of North Carolina, Tennessee, and Kentucky, there is very little illicit whisky made.

Q. Of course you can not give information in detail regarding this illicit distilling in the mountains of North Carolina and Tennessee, etc.—A. I do not know that there is any way of forming an opinion. I do not think the amount of the tax cuts much figure in the matter of illicit production. It would be practically the same if it were 75 cents. There is much talk about the increase of illicit distillation, but I think, when we come down to it, it comes from some man who wants a lower tax because he is loaded up with bonded whisky and wants to get out.

USE OF SPIRITS IN THE ARTS AND SCIENCES.

Q. Do you yourself sell many goods for the arts and sciences?—A. Only in the way of alcohol.

Q. Do you suppose that, if the tax were lowered or entirely removed, there would be a large increase in consumption of alcohol in the arts and sciences?—A. There would be very much more consumed. It is a great mistake that it is not regulated in some way.

Q. Do you suppose, if the tax were reduced to 75 cents a gallon, this increase would be very decided?—A. Yes; I think it would. It is, of course, impossible to tell how much, but I should say it would be 25 per cent.

Q. Not enough, you think, to make up the difference in the revenue?—A. Oh, no; it would not be sufficient for that.

EFFECT OF THE LATER COMBINATIONS ON PRICES.

Q. Have you yourself had any dealings with this later combination among the distillers, the American Spirits Manufacturing Company, or the Standard Distilling and Distributing Company?—A. We have had with the Standard.

Q. What has been the course pursued by the Standard as regards prices?—A. Well, as I remember it, their organization was practically completed about a year ago. At that time we were requested to take the position of a distributor. We asked for the terms which they would give us, or special concessions that would enable us to do the business with a profit, and the best terms we were able to get from them were what is known as the price to the smaller jobbing trade, i. e., 1 cent per gallon, payable, provided we were loyal to them, 6 months after the purchase, and a half a cent more, payable in sixty days, but from that half cent was to be deducted what they called the expenses of the organization and management of the distributing company, so that, according to their estimate, the net amount from these two sources would be a cent and a quarter a gallon.

Q. Was that to come in the form of rebate?—A. Yes; but there would be no voucher about it. It was simply an understanding—an agreement.

Q. To be credited to you on the books?—A. Yes.

Q. After how long a time was this to be paid?—A. The cent a gallon was to be paid six months after date, provided we were loyal to them, and the half cent in 60 days, with the same provision; but the half cent a gallon was reduced by expenses, as I stated, to about a quarter of a cent, making the total rebate a cent and a quarter. We thought we saw in that scheme an attempt to get control of the large jobbing or distributing trade of the country, inasmuch as they had in almost every large place—for instance, Cincinnati, Boston, New York, Philadelphia, and Baltimore—distributing houses of their own, which, having been absorbed into the standard company, or part of it, were not affected by the cent and a quarter rebate, their principal profit coming from the distillery branch, or the stock they owned. Their earnings were in spirits. For instance, I recollect that we looked into the subject pretty carefully at the time, and found that the cost of making spirits, provided it was through an operation of building a distillery without being loaded with these fixed charges, as they were, would be about 10 cents a gallon. At that time they were getting a profit of from 40 to 50 per cent on spirits.

Q. That is, they are selling at something like 15 cents?—A. Yes; 14 to 15 cents. Of course it did not matter to them as distributors what it was. The cent and a quarter per gallon which they chose to offer us was not equal to a guaranty for loss by bad debts. We sell those goods tax-paid, and that means about \$1.28 and \$1.30 a gallon, or a little over \$60 a barrel. They offered us a cent and a quarter a gallon, which was about 75 cents, for doing a business and having the risk of credit and leakage and all other expenses on a barrel of goods worth about \$65. We declined to accept the proposition. We declined to act as distributors.

COMPARISON OF THE EARLIER AND LATER COMBINATIONS.

Q. Let us compare this offer that was made you by the Standard Distilling and Distributing Company with the terms you had from the former whisky trust. How much did you get out of them?—A. My memory is not so good as it was some time ago, and I do not recollect. But the other arrangement was broad and satisfactory in comparison with this. It was very good, so far as the trust was concerned, and so long as they conducted it properly it was satisfactory to the trade.

Q. Their unsatisfactory management consisted in putting up the price unreasonably high, as you thought, for speculative purposes?—A. It was partly in the too high price and partly in the small profit they offered us as distributors. The result was that we immediately looked about with a view of helping to build a plant in order to secure our supply at the lowest possible cost.

Q. So you have built a plant of your own?—A. Yes; in connection with several large houses we have.

Q. Do you know whether the trade generally, if the dealers do not have their own distillery, prefer at present to buy of independent distillers or of the combination? Is there any preference?—A. Yes; people who have been in trade and

have had much experience with the old trusts are not in favor of the present one. We have had cases recently where large houses paid us a half cent more because they felt their position as large houses was insecure, much the same as we felt when we decided to go out of our regular business and into the manufacture of spirits.

Q. This last offer you said came to you from the Standard Distilling and Distributing Company. The American Spirits Manufacturing Company was, I believe, the organization that took over the most valuable plants of the old whisky trusts, along in 1895?—A. We understand so.

Q. Have you any knowledge with reference to the terms they make to the trade?—A. No.

Q. It has been reported of late in the papers that the American Spirits Manufacturing Company, the Standard Distilling and Distributing Company, the distillers in Kentucky, manufacturers of rye whisky in the East, etc., are uniting to make one great organization to control practically all the manufacture of spirits in the country. Have you any knowledge with reference to this?—A. Nothing more than what I see in the papers. We would naturally not know much of anything about it.

EFFECT OF INCREASED PRICE ON CONSUMER (RESUMED).

Q. (By Mr. KENNEDY.) To return to the question of who bears the burden of the increase in the price of spirits, you said, I believe, that ultimately the consumer pays it. Now, we have had considerable testimony to the contrary, and I would like to ask you what the effect is with the retail dealer who carries special popular brands of whisky. If he continues to sell these special brands when the price is increased, how does the consumer bear the burden?—A. Of course there are exceptions to all rules. I was only speaking of that in a general way. The retail price of the leading case goods on the market would not be changed unless the advance in the wholesale price was large, because competition would prevent it. What I referred to was consumption in general. To illustrate, let us say that a large jobbing drug house in New York pays an advance of 10 cents. They sell to their retail customer, charging the 10 cents advance and probably the profit on it, which they should do as a correct business principle, and the retailer who uses those goods, either selling them as they are or manufacturing them, would, I think, always charge the full advance which he had paid. There might be some little circumstances concerning the fixed prices upon known, reputable brands, so that they could not be very well changed; and in that case it might be that the dealer would bear the burden of the larger portion of the increase. In our own case (we put up some case goods) we find that they are now costing us a little more than they did 6 months ago, on account of the very large advance in rye whisky. Here we are the sufferers because we do not think it good policy to change our prices; but so far as the general trade, the great volume of consumption, is concerned, I think the other rule will hold good.

CONDITION OF THE DISTILLING INDUSTRY.

Q. (By Mr. C. J. HARRIS.) What is the capacity of the distilleries of the country? Are they able to produce largely in excess of what is consumed?—A. Yes; I think they are.

Q. Has there been a great deal of dismantling of distilleries by the trust?—A. Yes; I understand there has.

Q. What would you say is the capacity of the distilleries at present? Could they produce double the amount that is consumed?—A. I should think so. The fact is that the Standard Trust and the old trust confined their manufacturing operations to the plants which they found most economical to run. They do so to-day.

EXPORTATION OF SPIRITS AND OVERPRODUCTION.

Q. Is there much of an export business in spirits?—A. No.

Q. Does the Government tax prevent it?—A. No.

Q. What, to your mind, is the reason?—A. Well, the action of the German Government in paying a bounty on alcohol made from beets is an important factor, and has been a controlling one when corn was high. But we are now very near the point, I think, when spirits can be exported.

Q. Are not the conditions in this country more favorable than in any other for the production? Is not this the greatest corn-producing country in the world?—A. For grain, yes.

Q. (By Mr. PHILLIPS.) You say we are pretty nearly at the point now where we can export spirits, but would we not be still nearer that point if there were no tax?—A. The tax really has no effect, because all exports are in bond without the payment of tax.

Q. (By Mr. A. L. HARRIS.) What is the cause of the overproduction of distilleries? I mean the number of distilleries.—A. The manufacture of spirits is a profitable business. When fair prices can be obtained the distiller can make money very fast. For instance, in the distillery we have, running about 4,000 bushels of grain, if we can get 1 cent a gallon net profit we make \$50,000 or \$60,000 a year. Such a possibility is a temptation to some people, and through that the building of distilleries has been overdone. Overproduction has followed, just as in many other lines of manufacture, and the result has been a great desire to combine in the form of trusts. The tendency is not confined to the whisky business.

Q. Is the foreign demand for whisky at the time when prices are good?—A. The foreign demand is not for whisky, but for spirits and alcohol. We used to export a great deal of spirits to the Mediterranean, where it was used largely in fortifying wines, but that supply now comes from Germany, mainly because the German Government pays a bounty upon the manufacture of sugar and spirits.

Q. (By Representative OTJEN.) Is there no tax upon spirits and alcohol exported?—A. No.

Q. Then, so far as the foreign trade is concerned, the tax of \$1.10 a gallon cuts no figure?—A. None at all.

REASONS FOR THE EXISTENCE OF THE TRUST.

Q. (By Mr. A. L. HARRIS.) What was the object in forming the trust originally?—A. To prevent competition in the business, precisely as it was a year ago.

Q. With the view of controlling the output?—A. With the view, yes, of controlling the output and combining all the interests so as to prevent large competition.

Q. Regulating the price to make a profit?—A. Yes. For two years before the last trust, which we call the Standard, was formed, there had been no money made in the business; on the contrary, there had been some loss on account of competition.

Q. What was the result of the operation of the trust upon the output?—A. They reduced the output to correspond with the demand, and fixed and made an advance in the price.

Q. Do you know whether or not the trust at any time fixed the price that the distributor should sell for?—A. No.

Q. Was it not done at all?—A. Yes; in a certain way. The distributor's own interest would prevent him from changing the price; but I do not think they had any agreement about it. The trust made the price at which it would sell to the jobbing trade, which was 1½ cents less than they gave to the small distributors—those who occasionally buy a carload.

Q. Do you know whether there was any arrangement among the distributors to prevent their customers from selling for less than the prices received from the distributors?—A. No; I do not think there was any.

Q. (By Mr. RATCHFORD.) Was the only cause for the existence of the trust, that which you have stated?—A. To fix the price systematically?

Q. To regulate the production and raise the price; was that the only cause?—A. I think that was primarily the moving cause.

Q. What, in your opinion, would have been the result if this trust had not been organized?—A. There would have been a cutting of prices.

Q. Do you not believe that production and prices would regulate themselves under the operation of supply and demand, if the trust had not been organized?—A. I can only say that such was not the case before. Some distilleries can make spirits much cheaper than others, and sometimes the needs of a distiller for money makes a difference in price.

Q. If the whisky business became unprofitable, is it not a fact that men would refuse to put their money into it and in that way prevent this enormous production which tends to reduce prices?—A. When a business is at a low ebb, and money is being lost, people do not often invest in it.

Q. That is true of all branches of business, as well as the whisky business, is it not?—A. Certainly.

Q. Then if a trust is advantageous to the whisky men, would it not also be equally advantageous to men in all other branches of business?—A. If properly conducted, I am in favor of it.

THE AMOUNT OF SPIRITS PRODUCED.

Q. (By Mr. KENNEDY.) Do you think the supply of spirits on hand is largely in excess of the demand for it?—A. You are speaking of spirits now?

Q. Yes; the products of these trusts.—A. Stocks of spirits are not ordinarily carried for any length of time; they are manufactured to-day and sold to-morrow. But whiskies, both bourbon and rye, are contracted for and held in bond for years. In this respect the two kinds of business are quite different, as well as in the methods of handling the goods.

Q. What was it you said about there being a surplus on hand beyond the demand of consumers?—A. I do not remember in what connection that was, but it probably had reference to the overstock in whiskies, such as Kentucky bourbon whiskies, which are carried for years in bond, and also to rye whiskies, which are made in the East.

Q. Do you believe, then, that the amount manufactured is equal to the demand right along?—A. Oh, yes.

Q. And that there would not be anything gained in the production by decreasing the Government tax?—A. The Government would receive less money.

Q. Do not these combinations aim to manufacture all that is necessary, and they all pay the tax on it?—A. I do not see what that has to do with the amount of revenue received by the Government.

QUESTION OF THE FEDERAL TAX RESUMED.

Q. We had the other day a very high authority to the effect that the production would be largely increased if the tax were lowered, and I want to be sure about that. Is it your opinion, then, that the production would not be increased by reducing the tax?—A. By reducing it from \$1.10 to what figure?

Q. Well, say to 75 cents.—A. Compared with other liquors and wines, spirits would, to that extent, seem cheaper to the consumer; but if the revenue was not diminished there would have to be an increased quantity consumed, and I do not think you will find statistics to show that the consumption has been materially less at \$1.10 than it would have been at 75 cents. There has been a great deal of talk about the last advance from 70 cents, or whatever the tax was, to \$1.10, that it paid the Government a great deal more; but the fact is, that before the new law went into effect, in order to avoid the increase, the former tax had been paid on an amount equal to nearly three years' consumption. Of course that affected the revenue collected at the new rate for two years certainly, and perhaps three. We now have goods on hand that we thought it wise to pay taxes upon a year ago. In the same way, many in the trade thought there would be a profit in borrowing money beyond what was usual in order to pay the tax and accumulate a stock. The depressed condition of trade also had a great deal to do with the payment of the tax. All these things should be considered in making any calculation concerning the two rates of tax.

EXPORTATION OF SPIRITS RESUMED.

If it is within your province to bring up the question of exports of alcohol or whisky, I should like to say something on that question. Some of you gentlemen have said that we are in position to make whisky or spirits as cheap as any country in the world, and that is undoubtedly the case. It is also true that there is no country that makes as good a quality of goods as we do, though each country has its peculiar flavors or brands. We ought to be the largest exporter, whereas we are substantially the smallest. Great Britain has the most liberal laws concerning exportation of any country of which we know. The result is that London has become the great warehouse for the world. If we want Jamaica rum, we do not go to the island for it, but to London. It is all shipped there for storage or distribution. They have no such thing as a bonded period. The goods are deposited there, and the duty is paid on what goes out. It does not affect the consumption at all, and would not with us if our laws were the same. The main difficulty with us is that when we undertake to export goods the Government throws as many obstacles as possible in the way.

We have attempted three times to open an export trade through what is known as class 6, bonded warehouses—that is, manufacturing warehouses—and twice we have been compelled to close up because the expenses were so great. In the first place, there must be a beginning, and it takes time to build up a trade. The expenses should therefore be adapted to the situation; but the Government requires us to have a warehouse, an entire building, first class in every way, with

iron shutters, etc., which in New York costs something, besides a Government officer at \$1,800 a year in addition to the expense of our own force of employees. On the whole, we found it did not pay us. We opened again when the recent war commenced, and have made very fair progress. The conditions here should be the same as in London, where there are very large warehouses operated by merchants who put their goods in and export them. Better facilities, in other words, should be given to the export trade.

Q. (By Mr. JENKS.) Can you tell in just what way our laws should be modified so as to encourage the export trade?—A. I think that a system of drawbacks might be devised so that goods which have paid the tax could be put into the present bonded warehouses, in order to prevent any fraud, and allowed to go through these warehouses, the same as French brandies do now.

THE CORRECT METHODS OF MANAGING A TRUST.

Q. (By Mr. KENNEDY.) You have stated that you believe trusts would be a very good thing if properly conducted. Will you mention the particular ways in which you think they should be differently managed?—A. In a word, they should adopt the same principles as the Standard Oil Company follows, which account for the success of that organization—simply attempt to secure a fair and reasonable profit. I think that is all that would be necessary.

Q. (By Mr. A. L. HARRIS.) What can refined oil be sold for at a profit?—A. I do not know. I am not familiar with it. My information concerning the Standard Oil Company is derived from the vice-president of their largest plant, who is a bank director in the place where I live. In the course of many years' association with him I have learned something of their business methods. There is a rivalry among the different plants to see which can produce the best results—i. e., produce oil of equal quality at the lowest cost. If any of them, he has said, succeed in making an improvement, or in reducing the cost, even slightly, and it is reported to Mr. Rockefeller, the extra profit does not go to the stockholders, but the price of oil is reduced. The company's gains are in a small profit on all the oil produced in the country and in their methods of handling it. Small economies, of which smaller producers can not avail themselves, aggregate, in a vast business, a large amount. What has been accomplished in the oil business might also be accomplished in the distillery business. As I have said, the product of our own plant is practically 10 per cent of the total consumption of spirits and alcohol in the country. Ten such plants could supply the whole demand—about 60,000,000 gallons. Two cents a gallon on that product, with the present capitalization, would pay very well; and yet there is no part of the established trade but what would be willing to pay that price. A year ago we made an offer to the Standard Distilling and Distributing Company not to undertake any competition, if they would give us a fixed price, based upon the price of corn and not upon inflated charges, but yielding them a profit of 2 cents a gallon.

Q. (By Mr. PHILLIPS.) Would you consider it unreasonable if your profit on each bushel of corn bought was more than the amount paid for it?—A. I should consider it unusual.

Q. Do you believe the Standard Oil Company, for instance, makes more on each barrel of oil than they pay the producer for that oil?—A. No.

Q. Do you not think their profits show that for the last ten or fifteen years?—A. I do not know anything about that.

Q. (By Representative OTJEN.) Do you think the profit of \$50,000,000 made by the Standard Oil Company from the oil industry of Ohio is a moderate profit?—A. I do not know anything about it.

Q. (By Mr. A. L. HARRIS.) What per cent of the total supply of spirits in the country must be controlled in order to regulate the price?—A. I do not know that there is any fixed percentage, but in order to regulate it closely it is necessary to control the whole supply.

Q. Control all of it?—A. Yes; every distiller, if it is proposed to regulate it closely. Of course that would probably not be possible. The competition to the Standard Distilling Company to-day is limited to one or two very small concerns outside of our own company, which I have named.

Q. (By Mr. JENKS.) Then you think that they control about 85 per cent of the output?—A. I should say so.

OVERCAPITALIZATION OF TRUSTS.

Q. (By Mr. KENNEDY.) I think the witness may be able to give more reasons why he is in favor of trusts "if they are properly conducted." I should like to have him say something about overcapitalization—whether he does not believe

that it means the "working" of the public by the trusts in order to pay dividends?—A. Overcapitalization, of course, is a bad feature. Still I do not know how you are going to have trusts control and regulate prices in any special industry unless plants are taken in at more than they are worth. For instance, consider our company: Our plant cost us \$150,000, and we have a first-class plant in every way, with a capacity, as I say, of 10 per cent of the consumption of the country. Ten such plants would be all that is required. That would be \$1,500,000. Then you might want two or three hundred thousand dollars more perhaps for a working capital, although it is a strictly cash business. There is no bank, where the plant is out of debt, but what would be willing to advance all the capital necessary. The corn is bought one day and turned into spirits in the next two or three, and on shipment is paid for by sight drafts. It is a three or four day business.

Q. (By Mr. JENKS.) You think, then, that \$2,000,000 would be really a sufficient amount of capital to produce all of the spirits that the regular market of the country demands?—A. Yes, it can be done now.

Q. The old Whisky Trust and the Distilling and Cattle Feeding Company were capitalized, the first I believe at \$80,000,000 and the second at \$35,000,000?—A. Yes, and the present one at \$24,000,000.

Q. So you would be inclined to think that, so far as this capitalization is concerned, part of the capital is perhaps used in carrying dead plants which they can not make any use of, and the rest is water?—A. They have, I understand, some very valuable real estate as a portion of their assets in Chicago. They have one plant there that is worth a million or two. That is real estate.

Q. Were not the distilleries taken up by the old organization, and represented by such a large capitalization, mostly on leased ground?—A. Yes.

Q. The point you have just made concerning the necessary capitalization brings up another question with reference to the management of these organizations. Can they be managed and the output and prices regulated so that dangerous speculation will be largely taken out of the business?—A. These trusts could be made successful on a basis of fair profits, based upon the price of grain, and would be acceptable to the trade and deter anyone in it from building distilleries when there were already more than there should be. When, however, the trust undertook to force us out of business, we were compelled to adopt the course we did. Two cents a gallon on 60,000,000 gallons is \$1,200,000. If they had said to the wholesale trade, We will sell you goods at all times at a profit of 2 cents above the cost of manufacture and a reasonable cost of administration, based upon what is known as "the grain clause," they would have had no difficulty with competition, and would have been able to pay a reasonable dividend on the stock.

Q. On the present capitalization?—A. Yes; and it would have been a growing organization.

Q. That is to say, such a price would really be high enough so that it would pay dividends on four times the building value of the plants, to speak moderately, and at the same time be low enough so that competitors would not be tempted to come into the field?—A. Yes.

Q. Considering the nature of this business, do you think it at all likely that a combination can be formed that will live up to the modest conditions you have imposed?—A. That I do not know.

ADVANTAGES OF THE TRUST TO CONSUMERS AND LABORERS.

Q. What you have said thus far of the advantages of these combinations has been mainly from the standpoint of the distiller and the large wholesale dealer or distributor. What do you think is the effect of these combinations upon the consumer? As compared with the competitive system, are there any advantages to him?—A. Well, as I said before, if the profit is made reasonable so as to yield dividends sufficient to make the business a satisfactory investment, I believe it would be better all round. It would be better for the dealer because prices would be regular. A year or more ago we could buy \$20,000 or \$50,000 worth of goods one day with no certainty that they might not be lower the next. What we want in business is certainty in prices; that is one of the things that a trust, properly conducted, gives.

Q. As regards the effect upon labor, do you think there are likely to be as many men employed when we have great combinations controlling the output absolutely as when there are a large number of concerns competing with one another?—A. Of course if the production of spirits were confined to 8 or 10 houses, while formerly there were twice that number, there might be a slight difference in the amount of labor employed; but I do not think it would be appreciable, because there is not much labor employed anyway.

Q. You think perhaps that the conditions of employment would be more certain also?—A. Yes.

Q. There was a question asked by Commissioner A. L. Harris, regarding which there seems to have been a contradiction, with reference to fixing prices by the old combination. I understood you to say that the Distilling and Cattle Feeding Company furnished you goods, and that you received rebate certificates payable on condition that you dealt only with them; and I understood also that these certificates were payable on condition that you would maintain the price fixed by them. Is that right or not?—A. Well, now, I do not recollect, but the test of loyalty was the essential feature in the arrangement.

Q. You are not quite clear as to the question of fixing prices?—A. My impression is that there was some regulation as to the prices.

AFFIDAVIT.

STATE OF NEW YORK, *County of New York*, ss.:

I swear that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

M. A. COOK.

Sworn and subscribed to before me this 8th day of August, 1899.

[SEAL.]

LOUIS J. KAUFMAN, Jr.,
Notary Public, *Kings County, N. Y.*

Certificate filed in New York County, N. Y.

WASHINGTON, D. C., *May 19, 1899.*

TESTIMONY OF MR. HENRY E. G. LUYTIES,

Wholesale liquor dealer.

The commission met at 10.45 a. m., Vice-Chairman Phillips presiding. Mr. Henry E. G. Luyties, wholesale liquor dealer, New York City, N. Y., appeared as a witness on the subject of the whisky trust, at 12.05 p. m.

Q. (By Mr. JENKS.) What is your business?—A. Wines and liquors; I have been in this business since 1866.

Q. You have had experience, then, with all these different organizations?—A. Yes.

THE PAYMENT OF REBATES BY THE TRUST.

Q. Can you supplement, with one or two particulars, the testimony of the previous witness, with reference to the rebates received by wholesalers from these combinations? Did you receive rebates from both organizations; from the trust before it went into the company?—A. No; only from the company.

Q. From the Distilling and Cattle Feeding Company?—A. Yes.

Q. Do you recall how much these rebates were?—A. They were first 5 cents a gallon, afterwards 7 cents, with the condition that they would be paid, when they became due six months later, only if we had bought all our supply from the company. There was one feature which perhaps was not mentioned. We did not buy our goods from the trust, but from their distributors, and the rebates were furnished by the trust, so that if they did not wish to pay them they could more easily get out of it.

Q. Explain that a little more fully. You say you bought from the distributors; for example, what distributors?—A. Curtis & Co. was one of them. When we bought a carload of spirits they would charge \$1.30 or \$1.35, whichever it was, and, together with the bill, would send us a rebate from the Distilling and Cattle Feeding Company, so that they had nothing to do with it directly. I remember it very well, because when we wanted to deduct our rebates from their bills they would not allow it. We did not wish to get into a lawsuit with them, and so paid their bills and collected our rebates in some other way later on.

Q. Did you receive any other rates of rebate besides the 5-cent and 7-cent ones you just mentioned?—A. I think not; it was quite a while ago, but I think that was all.

Q. Would you be able, from your books, to give us exactly the rebates received at the different dates?—A. Yes; but we would have to look up the books.

Q. Will you look up the books and report to the commission concerning the rebates you received, and the dates you received them?—Yes, with pleasure.

[From letter of June 5, 1898.]

The last rebate vouchers paid \$0.07 per proof gallon. Before that time it was \$0.05 a gallon. The spirits were sold by the distributors, but the vouchers were delivered direct by the Distillers and Cattle Feeders' Trust to the customers of the distributors. The rebate vouchers were stopped in the summer of 1894, but the contract as issued was held to be valid by the court in 1896. So far as I know, \$800 to \$400 remained unpaid at that date. The highest amount of vouchers issued at one time was about \$2,000,000. Finally the trade became restless and other distilleries were built, as is always the case, I believe, when any trust charges an exorbitant price. The temptations to get into the distilling business are so great, because of the enormous profits when spirits bring a high price, but these profits are often realized on paper only. Other concerns started up which were not saddled with \$4,000, or \$5,000, or \$10,000 in rebates; they came into the market and purchased spirits without a rebate, and even cheaper than we could buy from the trust, considering the rebates.

Q. You mean from the independent distilleries?—A. Thus the trade gradually worked away from the trust, except that of those companies on whom they had a particular hold by owing them a large amount of rebates. In order to work our own way out of it we started another company, got it to buy the goods, kept our business up as well as possible, and in that way collected most of our rebates. Is that clear to you?

Q. Not quite.—A. Well, for instance, if I sell you a lot of spirits with rebates, I bind you for 6 months not to buy spirits from anybody else. If I then transfer my business to another gentleman, take out a new license, let him deliver my goods for 6 months, I am out after 6 months, all the vouchers being paid. The trust eventually paid the balance of our vouchers, in order to have our good will, although we commenced to buy from other sources before our vouchers were all paid by the trust. The trust, if I remember right, did not pay many of these rebates when they became due. They did not, at least, until they had evidence that the agreement was kept, and I think the law upheld them. The receiver, General McNulta, took the same position, and most of the people who violated the agreement were never paid. We got our money because they thought it was better to pay us the balance of our rebates than to let our trade go altogether.

Q. What did the committee which was appointed by the dealers who had received these rebate certificates in order to protect themselves, and of which, I believe, yourself, Mr. Cook, Mr. Rice, and possibly others were members, do in the way of securing their payment—simply threaten the combination that you would do what you have done?—A. When we came to consider the legal points, it was a very ticklish question. Our trade influence was more protection to us than that offered by the law. It was an expensive lawsuit, and I do not know what its effect really was. I think we sent most of the rebates back to the owners, and settled with the trust directly, in one way or another. The rebate business was simply a contract that we would buy all our spirits from them, and we only made such a contract because we could not get our spirits anywhere else. After the independent distilleries started a new man with no contract could go into the business without any effort. He could buy spirits and sell them with a profit where we could not, and we were continually fearing, "Can these people pay the rebates, or will they pay them when they come due?"

Q. As Mr. Cook was not quite certain with regard to these vouchers, can you recall whether the selling price was fixed or not?—A. The idea was—I do not exactly remember—but the idea was that we could sell at the full price and keep the 7 cents anyhow. Of course we were empowered to sell higher if we could, but we could not.

Q. Were you empowered to sell lower?—A. I really do not remember, but I think I can find some of those rebate vouchers which must still be in existence, and you can have them.

THE EFFECT OF THE FEDERAL TAX ON SPIRITS.

Q. What is your opinion in reference to the United States tax, and what would be the effect if it were lowered to 75 cents?—A. In that regard I do not quite agree with Mr. Cook. A tax of \$1.10 is a very high one, and many people advocate a lower tax. At one time about a year ago, when corn was very low, spirits

netted the distiller only 5 cents a gallon. I remember we bought a thousand barrels for export a year ago which we shipped to Hamburg, Germany.

Q. What kind?—A. We did not buy it from the distillery, but from the American Distilling Company, who sold it simply to relieve themselves of their surplus stock. They could not make money at the price obtained. It was the lowest price that was ever charged for spirits. Goods were not then sold with a profit, but with a little loss to the distiller. I believe the very lowest price was 7 cents and a fraction. We shipped spirits to the other side at 8 cents. Now, if you calculate that, you will find the tax amounts to about 2,200 per cent of the raw product. There is no doubt in my mind that if a law could be devised for the United States something like England has, and if the alcohol or spirit could be methyized, made entirely unfit for consumption—

Q. You mean unfit for drinking?—A. Unfit for drinking purposes entirely, as they have it in England; that would help the consumption of spirits a great deal. It would be so cheap that it could then be used for many purposes for which it is not used now. But the difficulty is, as it has been very well expressed by some dealers, and also by some very efficient revenue officers who have had the matter in charge, that there is great temptation here for people to mix up one with the other, tax-paid and methyized, and in that case we would not know whether we were getting tax-paid spirits or spirits without tax. Therefore, it is a great deal better as it is. The Government passed laws giving the Commissioner or the Secretary authority to establish some such regulations, but it was found an enormous task and was dropped. There were some lawsuits pending, but they were dropped. Some druggists had sued the Government for the tax which they had paid on certain goods supplied to the arts, but they could not get any rebate out of the Government. This, however, is a very delicate question, and before anything of the kind is attempted there must be some certainty of its working satisfactorily; otherwise it would be much better to collect the tax from every gallon used for any purpose.

Q. Are you inclined to think the amount of revenue would be lessened if we were to retain the present law in regard to method, and reduce the rate from \$1.10 to 75 cents?—A. I actually believe the consumption would be much higher. I do not quite agree with Mr. Cook. It is difficult to answer the question, for it is merely a matter of theory as to what rate of tax will produce the greatest amount of revenue. I think there is another view in this country on that question. Many people want to suppress the consumption. If you want to make the consumption of alcohol less, and favor the consumption of lighter drinks, then, of course, the higher the tax the less will be consumed, but the revenue will consequently suffer. I think the revenue suffers now at the rate of \$1.10. I have here the total amount upon which taxes have been collected in 20 years, which is about 1,866,000,000 gallons. The average annual consumption for 20 years is then about 93,000,000 gallons, but I believe that the consumption of spirits per capita has already decreased considerably. Perhaps it ought to, but the revenue must show a corresponding decrease.

Q. Suppose there had been a decrease in the consumption on account of this higher tax, do you think that that means a decrease in the consumption for use in the arts, or a decrease for drinking purposes, or both?—A. It certainly means a decrease in both. It can not be estimated what use would be made of spirits if a liberal law were passed, and if the danger to the revenue could be overcome. The Secretary of the Treasury has been struggling in vain with this project, but I am sure he has not given it up without an energetic effort to carry out his instructions and make the law effective. He has abandoned it simply because the difficulties in his way were so great, and because he feared the revenue from spirits would suffer a diminution.

Q. Do you think the increase in the tax has decreased the consumption for drinking purposes very materially?—A. Yes, very materially.

Q. We have had some different opinions expressed here.—A. No doubt you have, but just where the largest revenue-producing point is, whether 90 cents or 75 cents, can only be determined by trial. Mr. Cook spoke quite correctly in that. Only recently more liberal laws were enacted in regard to leakage. I think that was very wise, because formerly we were taxed on a large number of gallons which evaporated from the barrels.

Q. Evaporation?—A. Yes; evaporated. It was unjust for a dealer to pay tax on goods which had evaporated, and were not contained in the barrels.

DISCRIMINATIONS BY THE TRUST.

Q. I wish to ask another question or two with reference to the methods of the earlier combination. Do you know whether special prices were quoted by the combination in some particular localities in order to drive out certain opponents,

or whether or not they cut prices to special customers?—A. Yes; they did that then and they do it now.

Q. Can you give any specific instances?—A. No; that would be rather difficult. I can only speak in a general way. We must consider the question from two sides. They bought the spirit business at an enormous cost. They went to a great deal of trouble and expense, but they are not the only organization. There are the Standard, with \$8,000,000 preferred capital and \$12,000,000 common stock, and the American Distributing Company which, I think, has \$24,000,000 stock. Of course, all these stocks are quoted very low, and if their actual value alone is considered the amount will be very much reduced. They have \$3,000,000 of bonds besides, so that the total capitalization is enormous. Now, after purchasing, with a great deal of trouble and at an enormous expense, such a business they consider, and perhaps with some justice, that they have an exclusive or prior right to it, and naturally resent and fight competition more than an ordinary company would. But the individual who has a large business is at a disadvantage as compared with the trust. If the individual, who has invested his own money, commences to fight, he fights with his own; and if he loses, he loses his own; but trusts are generally managed by people whose financial interests are comparatively small, and, as some newspapers have correctly expressed it, the hardest thing in the world to fight or the most difficult competition to overcome is that of the decaying trust. It need not pay any dividends, but it is there just the same, and can take the profit and life out of the business of competitors.

Q. Then you do not think they made special discriminations in price in order to destroy competition?—A. I can not say; I can only speak from our own experience in the distilling business. You know we are interested in this business with Mr. Cook.

Q. Yes; I understand.—A. We went into it simply because we thought we were safer, a conclusion naturally reached from our former treatment. Of course, the new trust is not the same as the old one. The old Whisky Trust is now a matter of history, but with a wise policy it might still have been in existence.

Q. That is, you think the policy ought to be —?—A. The policy ought to be, to cheapen the production and improve the product, to make a moderate profit and unite the business. So long as this is the result of its operations the trust has a right to exist, and its existence is not a danger but a real benefit to trade.

THE ADVANTAGES POSSESSED BY GREAT COMBINATIONS.

Q. You have raised a point which I should like to have you develop a little further. What special advantage does a great organization of that kind have over you, for example, as the owner or part owner of a single distillery?—A. Mr. Cook has expressed that quite correctly. We had no desire to go into the distilling business in competition with the trust, but were induced to do so because of our unfortunate experience and fear of the future. We do not like it at all, for a man can only do one business well, or attend to one branch properly, and he ought to be at the place where his business is. I believe trusts or combinations in this business are more necessary than in any other.

Q. Why?—A. Because the cost of the article is so very small; but of course the Federal tax of \$1.10 must always be considered. Calculated on the short price the profit of 1 or 2 cents seems enormous, but if the tax is taken into account, it is very small. At present the price of spirits in New York is very low on account of the moderate competition which our small distillery causes the trust. Consequently, their hold on the trade can not be very great, or they would not put down their price.

Q. That is, the price has fallen since you have started your distillery?—A. Yes; lately. Mr. Clark, who was here, explained that.

Q. How long is it since you started your distillery?—A. It is only since February, 1899.

Q. Who began this cutting in prices, you or the other company?—A. They, of course.

Q. They began?—A. Yes; they began to sell lower. They found, as Mr. Cook has said, that outsiders always enjoy a little favor or preference, especially in this line. I think that if the trust is not enjoying favor it is more on account of the Cattle-Feeding Trust than its own sins.

Q. People are afraid?—A. Of course if people have had transactions with the vouchers and a new company goes to them and says, "Gentlemen, we want to supply you; we are independent of all trusts," they will naturally make some friends and get trade in competition with the others.

Q. When you put your product upon the market did the Standard Distilling and Distribution Company commence cutting prices?—A. Yes; we went into their line and into their field.

Q. Somewhat?—A. Yes; somewhat. Every large dealer uses a considerable quantity of spirits, and the consumption is very important and very great just now. It is the most important article in the trade, being really the corner stone of the whole business. Of course I am not speaking of spirits in the English sense of the word, meaning every form of liquor spirits.

Q. Then your distillery, which produces 10 per cent of the output of the country, has of itself been able to bring down the prices quite decidedly?—A. Yes. They have a temporary advantage in being able to make a special price to a few customers in New York and thus indemnify their distributors. If they were selling to any of the trade and lost it on our account, they would attempt to recover it by making some allowance. In this they have an advantage. They can make special allowance to some people whose trade they wish to retain.

Q. But people who are your customers?—A. Yes; the same ones to whom we go.

Q. Now, in your judgment, is there advantage enough in this so that they are likely to drive you out of the business?—A. I am sure they think so, but I do not believe it, because the price of spirits travels and becomes known rapidly. One quotation follows another, and the price in New York is lower than anywhere else, because there are three distributors from our distillery alone. There is another gentleman besides Mr. Cook and myself who is distributing there. New York is a place where a quantity can be disposed of. The trust makes a special effort to retain the trade or else drive us out of the business. I do not know that it has any other object.

THE ADVANTAGE OF DEALING IN LARGE QUANTITIES.

Q. What advantages have you which make you think you can stay in the business in spite of the trust?—A. The advantage which they have consists in shipping an enormous quantity at a time and disposing of it rapidly. If you consider that a single carload of spirits of 75 barrels costs about \$8,000 or \$9,000, and that with from 2 to 10 carloads on the way, it takes a large amount of capital, you will see that large shippers can secure all possible advantages of saving in the way of leakage. Just think, if only 1 per cent is lost in leakage, we can not compete. The goods must be emptied and distributed quickly. Another danger in the spirit business—I do not know that you are aware of it—lies in the fact that a large part of the business is always done in high-proof goods. If a carload of such goods lies a day or two longer at the depot and is not emptied immediately, the profit is lost. Of course a large organization can regulate this much better than a small one, and in that way the trust has a certain advantage.

Q. You mean to say that they have an advantage in being able save a part of the leakage which you must lose?—A. They ought to, if they manage wisely.

OTHER ADVANTAGES.

Q. Do you think of any other advantage which they have over you?—A. They have an advantage in being able to run their distillery more regularly after once starting. A distillery can not lie idle with a contract to feed cattle.

Q. Do you feed cattle in connection with your establishment?—A. We have a drying plant. But this is only a recent invention, and a good deal of the slops runs away which might be used to feed cattle. If all plants were united it would benefit the whole trade, which could then be regulated perfectly. An uncontrolled supply is just like turning on a faucet until the tub overflows, the goods go to waste. The allowance by the Government on goods kept in bond is hardly large enough, and the tax on leakage is exacted when goods are kept in bond. The article of spirits is therefore entirely different from anything else. If you have oil or other articles you have no tax to pay, but only the article itself to deal with, while in spirits you often have to pay taxes on something which you do not get.

Q. There seem, then, to be four advantages they have over you. Are there any others?—A. These appear to me to be the main points. The important fact is that they are larger, and can make larger quantities. I do not think they can make it very much cheaper. A 10,000-bushel distillery might reduce the cost a little—that is, produce goods cheaper than a 4,000-bushel house.

Q. Do you think a 10,000-bushel distillery would be able to make a larger amount out of a given quantity of grain than a 4,000-bushel one?—A. No; I think we have an excellent distiller who gets as high a yield as anybody, but a plant using 10,000 bushels may be operated a little cheaper.

Q. Would there be a little saving on labor?—A. Yes; such a plant may be operated on the whole a little cheaper than a smaller one.

ADVANTAGES POSSESSED BY COMPETITORS OF THE TRUST.

Q. What advantages have you over the trust and how do you expect to stay in the business?—A. In the first place, they have this enormous amount of capital.

Q. That is, the capital upon which they are trying to pay dividends?—A. As Mr. Cook explained to you, a million and a half or two millions could make all the spirits wanted in the United States and just as good in quality or even better. We have an advantage in our distillery being entirely new. Great progress has lately been made in distilling in the United States, and the newer the distillery the better the product. Since the old trust ceased to exist very much better spirits have been made; and, as we have an entirely new plant, we can easily compete in quality.

Q. Then I understand you to say that you have an advantage in a brand-new plant, while they have some old plants?—A. Yes; and another advantage is that spirits are only a part of our business. We have no particular expense in selling, for we use part of the goods in our own blending business, and distribute the remainder to the trade without much extra charge, while their business is spirits pure and simple, and all the expense of selling falls on that one branch of the business.

Q. You are so situated, then, that you make your distillery a feeder to your other business?—A. Something like that. One who is a distiller only and who should try to sell in competition with the trust would be a much less formidable competitor than we are, because our distiller is sure that he can always get rid of a certain amount to us as distributors who use a large amount in our business, and who will pay him the price which others get; so, too, we get it with much less expense, not considering the capital or the high salaries which the trust has to pay.

THE QUESTION OF SALARIES.

Q. That is another question. You have stated several times that they have to pay dividends, or at least propose to pay the dividends on a highly inflated capital. Now, do you have an advantage in being willing to take dividends only on the capital put in?—A. Certainly.

Q. And, as regards salaries, do you think they pay higher salaries for their management than you do?—A. I do not know. One can not tell exactly. Such a large organization is usually more expensive to run than a smaller one, unless the business gets too small, when comparatively the expense is again high.

Q. Is it not implied in what you have said that this great combination pays its officers, who are perhaps not all practical distillers, very high salaries?—A. There are two sides to that question. I do not believe, for instance, that an efficient manager of a life insurance company, who handles so many hundred millions, is highly paid when he receives \$100,000 salary. I am sure he is cheaper than a poor manager at a small salary.

Q. The question is, how is your business going to live? Is it partly from the fact that you are getting more efficient service in proportion to the money you put into salaries than the trust does in proportion to what it so expends?

Q. (By Representative ORJEN.) That is, how are you going to compete?—A. The hardest kind of competition is that with a trust, because they have officers with little responsibility.

Q. But you spoke a little while ago of the efficiency of the trust's management. Now, do you think that in a great organization which controls a large number of plants it is possible to get as definite and efficient management as in a single distillery?—A. Oh, I really believe that there is no business in which there is so great a necessity for combination. When all distilleries were independent, it was impossible for them to make money. They did not act together until necessity compelled them to do so.

Q. (By Mr. JENKS.) As regards the way in which you are going to compete with this organization, do you think that, on account of the more efficient management which you have because you are yourselves particularly interested, you will be able to produce more?—A. That ought, perhaps, to be one way. Another advantage consists in the fact that we have only about seven or eight houses which have to invest but a small amount each, and in consequence the business is done without much cost to the different firms. Such a combination as we have formed is a strong one. If the trust fights, it does so at its own expense. However, it does so now in New York; and if we can not live, it can not live or make money either. That is my idea, in which, of course, I may be mistaken.

THE OBJECT OF THE BLENDING PROCESS.

Q. You spoke a little while ago concerning your blending business. Can you tell a little more about the way in which distillers use proof spirits in blending and improving liquors, and how they manage to make part of their profits thereby?—A. The general idea about the use and the healthfulness of whiskies is entirely wrong. Kentucky whisky does not cost very much more than spirits, but unless it is aged for a considerable time, or distilled with great care, it is certainly very much less healthful than carefully made spirits such as we make now, blended or flavored with the finest whiskies made in the East, and which, on account of the small quantity used, can be ripened in the bonded warehouses. The prevailing ideas on this subject are much confused, and most people do not know anything about it.

WHO BEARS THE BURDEN OF A RISE IN THE PRICE OF SPIRITS.

Q. We have had similar testimony before, but I asked the question in order to find out your opinion as to who it is that bears the burden when the price of spirits rises. Will the burden be on the consumer, and will the distiller make no profit out of it?—A. I do not quite agree with Mr. Cook in respect to that.

Q. Did the profit not increase with a 15-cent rise?—A. When we had a 20-cent rise we had the newspapers full of it. The price was increased 5 cents at a time, and many of our customers came to us and wished to buy at the old price. We tried to obtain the full increase in price, but could not, and so took whatever part of the increase we could get. Mr. Cook had the same experience. Everybody wanted us to hold a certain quantity for them and deliver it as they needed it. We did so in order to keep the trade, but after the price dropped 18 cents the stock was left on our hands and we had to bear the loss.

Q. In this case, then, the wholesaler lost?—A. Yes; the wholesaler lost.

Q. If the price had gone up equally high, what would have been the effect on the consumer?—A. Do you call the consumer the man who buys by the barrel?

Q. No; the man who drinks it.—A. It makes no difference to him. The consumer always pays the same price, but the dealer is induced to buy an inferior quality for him.

Q. What induces the retailer to buy a cheaper article?—A. Judging from my own experience, not only here, but also in Europe, there is no country in which the business of liquor dealers, generally speaking, is as bad as it is in the United States. They are so overburdened with taxes. On the other side the wine merchants' trade is generally considered the "first." If you go to Bordeaux, London, Bremen, Hamburg, or Stockholm, you will find them to be the principal and most prominent men in town; but here dealers in wines, etc., are poor, comparatively speaking. There are some men who have made money out of it, but usually they have made less out of the business than out of certain speculations. Their position can not be compared with that abroad. Their taxes are too high.

Q. (By Representative OTJEN.) Do you refer to the \$1.10 tax?—A. To both local and national taxes. When they put this new law in force, or when they increased the beer tax, the wholesalers were in a position where many people owed them money, while the retailers had to pay a tax of \$800, and they were so situated that they could not pay any more. When they could not pay, the wholesaler lost money.

Q. If retail dealers, generally speaking, sell a poorer quality of goods, when the price of spirits rises, does not the burden, as a matter of fact, ultimately rest upon the man who drinks the whisky? Does he not get poorer whisky at no lower price?—A. The retailer is forced to sell a poorer article to make a living. If you put a man in a position where he can not live, he naturally looks for some way in which to better himself, or indemnify himself.

Q. (By Mr. JENKS.) That is all, Mr. Chairman, I care to ask now.

Q. (By Representative OTJEN.) Does any commissioner care to ask a question of the witness?

THE SPIRITS BUSINESS IN GERMANY.

Q. (By Mr. PHILLIPS.) Perhaps he might have some statement of his own.—A. I find that the business of spirits has been troublesome all the world over. For instance, in Germany they have regulated it, though not quite as Mr. Cook explained here. They found many distilleries in existence with competition great, but as the Government there takes a little different view of the matter—the whole Government is a little more paternal than ours—they said: You have got a distillery, and you must run it or you will be bankrupt. The country consumes just so much spirits, and your proportion of it is just so much. We will

require you to pay 50 marks per hundred hectoliters on your proportion, which we shall fix, and if you make any more you must pay 70 marks.

Q. Does the Government fix the output?—A. Yes; it does. Those people are put on a living basis, and if they can export any of the surplus above their fixed proportion the tax is refunded.

Q. Is that a rebate?—A. Yes; you see that makes the duty low. Spirits is cheap all over the world. We can make it very cheap from corn, but Hamburg spirits is made from potatoes, and is still cheaper.

Q. (By Representative OTJEN.) Do you mean that Germany does not pay a bounty, but simply grants a reduction of the taxes?—A. It is simply a reduction; and many people are anxious to get rid of their surplus product by export under the rebate law, as they can not afford to pay the high duty of 70 marks and a dividend to the stockholders.

The German method of regulating the spirit trade is as follows: The Government considers it a necessity to facilitate making spirits all over the country on account of the by-products, the feed, etc., which are often more important than the spirits. Each of the distillers is allowed to make a certain quantity and pay a tax of 50 marks per 100 liters of 100 per cent. This means 200 liters of 50 per cent alcoholic strength or proof, as we call it in the United States. If they make any more than their allotted quantity, they must pay 70 marks per 100 liters of 100 per cent. This difference keeps the small distillers going, and allows them to compete with the larger distillers, who have to pay the higher rate of tax on any surplus.

Q. (By Mr. KENNEDY.) Is it true that the German Government will not permit anybody to conduct business at a loss for the purpose of driving out competitors? Are you familiar with that?—A. No, they do not do that; but they look into the matter with a great deal more care than we do here. They are always ready to hear people the same as you do here, in order to see whether trade conditions can be improved; and there is one thing I know the German Government would not do.

REGULATION OF CORPORATIONS.

They would not allow new corporations to start up and hold out glowing promises to stockholders, sell their stock, and when an actual report comes to be made present an entirely different condition of affairs from what had been represented. They hold the people who manage corporations to stricter account than is customary here.

Q. (By Mr. JENKS.) Do you mean that the Government holds every promoter responsible for the truth of what he puts out?—A. Yes; more so than they do here.

Q. Can you tell us something with reference to the reports which the German Government requires every corporation to make?—A. I could give you that very easily, for I have an intimate friend who is a large woolen manufacturer. I know, for example, that the minority of a corporation has much greater power there, and that if anything wrong is going on a single stockholder can make trouble. He has more to say than the people have here in that respect.

Q. It has been mentioned many times, and you and Mr. Cook have intimated also, that in case of the whisky combination the directors of the company have speculated in their own stocks. Do you know whether anything of that kind would be permitted under the German laws?—A. No, it would not; they would get after them with a sharp stick; they would not allow that. In general I agree with Mr. Cook perfectly. There is no business in which the existence of a combination, or trust as you call it, is more beneficial and has become more a matter of necessity than in this line, on account of the enormous tax and on account of all the difficulties connected with it; and there is no business in which a better and more careful or conservative management is required, looking to the commercial interests of the business and keeping away from speculation, and if this business, or the combinations in it, have not been a success, it is on that account. I think the spirits combinations were about the first ones to start, because they became necessary before combinations in other lines of business. If it has not been a success, there is no doubt in my mind that the people managing it, or some of them, looked more for profit in other directions than in legitimate business, and were not satisfied with the moderate profits which could have been made.

SUGGESTED LEGISLATION.

Q. Can you suggest any legislation that you think would tend to improve the management of this business and help people wishing to enter into it to carry out their purpose?—A. I happen to be a director of a bank in New York, and I

know that a banker or bank has some advantages over an individual, because everybody can not start a bank. Running a bank is a privilege; and since people who start corporations sell their stock in Wall street and have it officially quoted there also have an advantage over individuals, I believe the Government ought to make some provision requiring them to assume more responsibility. For instance, under the banking laws none of the directors can borrow money unless a majority of them approve.

Q. That is, none of the directors can borrow money from the bank?—A. Yes; and another thing, the director must hold the stock in his own right; he can not borrow money on it when votes are taken. He must swear that he possesses it in his own right. Another arrangement which, though it does not keep all mismanagement out of the business, prevents a great deal, is a careful and efficient examiner.

Q. Yes.—A. Now, I heartily believe in this whole business of trusts; but it will become necessary for the Government to provide such legislation as each case requires and to look more carefully into the affairs of trusts, so that their actual condition will be more in keeping with the glowing statements which are sometimes made in print.

Q. Substantially, then, do you not favor putting all these great combinations, according to their situation, under restrictions similar to those under which the banks are placed?—A. I believe they ought to give greater security for the advantages which they possess. For instance, when a man gets tired of business in a combination he can sell out and go to Europe; but when an individual wants to quit he can not do it, for he can not sell. Now, I believe there would be no injustice in requiring large corporations, in return for the advantages which they enjoy, to submit to careful examination and publish clearer statements. A sound corporation should not only be willing to be examined, but should be anxious, and it would save many people from serious loss.

IMPORTANCE OF SPIRITS PRODUCTION AS A SOURCE OF REVENUE.

Q. Have you any further general observations?—A. Nothing just at present.

Q. (By Mr. KENNEDY.) Have you some memoranda?—A. I have one. I have a memorandum here which shows the important part which spirits play in the revenue. It is one taken from the statistics, which you can easily secure, and which shows how the revenue of the United States, as Mr. Cook says, has greatly improved. In the collection of the revenue from spirits enormous progress has been made, but I believe it is very difficult to improve the revenue without hurting the honest man and helping along the rogue. The average annual production of all spirits for twenty years has been about 93,000,000 gallons. The annual production of rye whisky has been 9,000,000, and of bourbon whisky, part of which is not much better or not as good as spirits, 20,000,000. Thus the spirits production is the main and most important part. And then another thing which must be considered in spirits production is that by-products are produced, which are dried or fed to the cattle. The making of this dry food is so very important that in Germany, for instance, and in Holland, the whole spirits production is carried on for the sake of the by-product, because it is required for feeding cattle.

EXPLANATION OF THE DRYING PROCESS.

Q. Will you explain that drying process?—A. The spirits is extracted by fermentation and distillation and a thick refuse is left. That is put in a patent drier and baled and sent to Europe for feed.

Q. (By Mr. JENKS.) What is this dry-process product called in the market?—A. The product made from the refuse of the distillery is sold under the name of dried slop. This slop is allowed to settle in the tubs, and then the thickest part of it is put into a so-called patent drier and afterwards pressed and packed. The value to the distillery is about 5 cents per bushel of grain used, so that it is quite an important item, and it has the advantage that the slops can also be so employed in summer, when the cattle can not be fed on slops. A further advantage is that the distillery need not be run on account of the cattle which it has contracted to feed if the prices should go very low. However, even if the slop is dried, there is always a certain quantity left to be used for feeding.

The great value of the drying process is, as mentioned before, that the distillery does not depend solely on the cattle feeding for the use of the slops, and that it can change the quantity produced, provided the market for the spirits should become unfavorable. As far as we can learn, most of this dried slop is shipped to Germany, where feed is comparatively dear. This is only a recent invention,

and some of the distilleries have not capacity enough to dry all their slops. Driers are pretty expensive arrangements, but where they are in use cattle feeding can also be carried on in a small way. If a distillery is feeding cattle, it is impossible to stop production when the price of spirits is low; but if the slops are dried, the production can be regulated according to the demand for spirits.

Q. (By Mr. KENNEDY.) I should like to ask the witness if he has submitted all the memoranda that he cares to?—A. I do not know that I have anything more to say. I may add one thing, viz, that while I believe in the forming of corporations or combinations, I do not believe that any business has been attended with greater evils than this one, and I also believe they could have been avoided.

THE DISADVANTAGE OF THE BONDS REQUIRED BY THE GOVERNMENT.

Q. (By Mr. JENKS.) The chief evils are the two that you have mentioned, i. e., the pushing of prices too high and the speculation in stocks?—A. The managers seem to think they can make more money in some other way than by attending to business as they ought. To return to the question of export again, Mr. Cook said it was very easy to export; but unfortunately our Government is very severe on the spirit exporters, and they suffer perhaps for the sins of our fathers. Enormous bonds are exacted. For instance, when I exported a thousand barrels of spirits to Hamburg last year, I had to give two bonds of \$100,000 each, and everybody is not ready to sign a bond for \$100,000 to the Government. It is a great drawback to the export business.

Q. (By Representative OTJEN.) How does the amount of the bond compare with the value of the goods?—A. The value of the goods does not play any part. The duty is certainly 1,500 per cent. The tax on a barrel of spirits containing 90 gallons is \$100. The value is \$10; so for a value of \$10 you must give a hundred-dollar bond. A thousand barrels would require two \$100,000 bonds; you must have 2 bondsmen who can each qualify in real estate for \$100,000. This is very troublesome, but necessary under the present law.

AFFIDAVIT.

STATE OF NEW YORK, *County of New York*, ss:

I swear that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

HENRY E. G. LUYTIES.

Sworn and subscribed to before me this 8th day of August, 1899.

[SEAL.]

H. ADOLPH WINKOPF,
Notary Public.

STANDARD OIL COMBINATIONS.

NOTE.—About the year 1872 leading refiners of oil began to combine for the purpose of making the business more profitable. The combination was by means of purchase of stocks and interests of various companies, and until 1882 the combination was solely by stock ownership in the hands of a limited number of individuals, who controlled the corporations as agencies in a common business. In 1882 these owners entered into the trust agreement. The companies whose stocks they owned in whole or in part were not then competing companies. The individuals named as trustees had controlled them by virtue of absolute ownership of a majority of their stocks. Under the trust the stocks were placed by their owners in the hands of the trustees, who exercised all the powers of the owners. In exchange for the stocks the trust issued trust certificates, and the profits were divided on these. When the trust was dissolved in 1892, the same conditions existed as before the trust was formed. The individuals, then trustees, continued to control the companies by virtue of absolute ownership of a majority of their stocks; consequently the corporations named have been, many of them since 1872, separate agencies carrying on business as a unit for the individuals who are their common stockholders. In June, 1899, a new corporation was organized in New Jersey, with a capital of \$110,000,000, to combine into a single, more compact organization the separate companies which had been of late years controlled through ownership of a majority of their stocks by the few individuals who had formerly been trustees of the Standard Oil Trust. This new company is intended to unite again in compact form all of the separate companies which have been working together ever since the formation of the trust.

WASHINGTON, May 11, 1899.

TESTIMONY OF MR. JAMES W. LEE,

Former State senator of the State of Pennsylvania.

The commission met at 11 a. m., May 11, 1899. Vice-Chairman Phillips presided, and introduced Mr. James W. Lee, who testified in regard to trusts.

PERSONAL HISTORY—THE INDEPENDENT OIL COMPANIES.

Q. (By Mr. PHILLIPS.) Will you give your name, place of residence, and business?—**A.** James W. Lee. I reside at Pittsburg, Pa. I am at present engaged in practicing law. I am also connected with the independent pipe lines and independent oil companies. There are four companies. I am president of three of them and attorney for the fourth.

Q. Will you please name these companies?—**A.** The first company to be organized was the Producers' Oil Company, Limited, with its general office at Warren, Pa. The second to be organized was the Producers and Refiners' Oil Company, Limited, with its general office at Titusville, Pa. The third was the United States Pipe Line Company, which is organized exclusively for the transportation of oil, both refined and crude, by means of pipe lines. One terminus of its pipe line is at Oil City; the other is intended to be finally at New York. The fourth company is the Pure Oil Company, which has the right to engage in the production, transportation, manufacture, and marketing of oil and its products. That company was organized 3 years ago last November, and was the last to be organized. All four are owned by substantially the same persons, and operated together.

Q. Where were you admitted to the bar?—**A.** I was admitted to the bar in 1869, at Franklin, Venango County, Pa., which is one of the original oil counties.

Q. Did you practice law in Franklin after being admitted there?—**A.** I practiced law in Franklin until 5 years ago, when I removed to Pittsburg.

Q. Who was your partner in the law business there?—**A.** My first partner was Mr. S. C. T. Dodd, now of the Standard Oil Company of New York. I was afterwards in partnership with Mr. George S. Chriswell, now judge of the county, and Mr. Hastings.

Q. Have you ever held any public office?—**A.** Only two. I was mayor of the city in 1875, and served two terms, of 4 years each, in the State senate of Pennsylvania, beginning in 1879.

EARLY HISTORY OF THE OIL BUSINESS.¹

Q. Had there been any attempts at legislation in regard to free pipe lines, or unjust discrimination, before you were elected, and had you any part in such legislation while in the senate?—A. If you will permit me, probably it would be interesting to the commission to have a very brief statement as to the beginning and growth of the oil business, especially that branch of it that relates to transportation.

Q. We should be pleased to hear you.—A. The first oil was discovered, as is generally known, by Col. S. L. Drake, who drilled directly for it in 1859, and ever since—

Q. (Interrupting.) On Oil Creek?—A. On Oil Creek, which is a tributary of the Allegheny River. The first well was probably about 18 miles distant from the river. Then oil was developed along Oil Creek to the south. A production of 200,000 barrels was reached in 1861 and 1862. The means of getting it to market at that period was by loading it into bulk boats on Oil Creek, building temporary dams and cutting them, thus producing an artificial flood, and running the boats out on the flood into the river, and then by the river to Pittsburg, where the refineries were.

THE FIRST PIPE LINES.²

The first pipe line, I think, was constructed in 1865 or 1866. It ran from Pit-hole, on the left of Oil Creek, down Oil Creek about 5 miles to the Allegheny River. It was built to carry the oil to the river; there it was loaded into boats and so conveyed to market. From that time the business of transporting oil by means of pipe lines increased. The oil wells spread first north to Tidioute, in Warren County, then south into Clarion County, then into Armstrong and Butler, and finally into Allegheny and Washington. In 1875 and 1876 they extended north to McKean County, where the largest development of oil took place, and farther north to Allegany County, N. Y. By about 1880 they spread over a region some 300 miles long and 40 miles wide. As the field extended it became necessary to employ pipe lines. They were first built extensively in 1871 and 1872. The capital was very small at first. The company which is now the National Transit was started under another name, with a capital of about \$4,000; and it grew very rapidly until the capital reached millions. By 1877 the number of barrels that it transported reached about 15,000,000 a year, I think. I may not be entirely accurate in these figures, but it was a very large amount. Other pipe lines were started, but the united pipe lines soon came into control of the people who are now known as the Standard Oil Company—the Standard Oil trust. Small lines were built in various parts of the oil field, to convey the oil to the railroads. There were no lines leading to the seaboard till 1883.

THE RAILROADS AND THE STANDARD OPPOSE THROUGH PIPE LINES—LEGAL OBSTACLES.

A pipe-line law had been passed, which limited the laying of pipe lines to certain counties. Efforts were made, from 1870 on, to obtain a general State law, which should allow the laying of pipe lines and give the right of eminent domain to companies organized for that purpose. That was opposed by the railroads, and also by the Standard Oil Company when it came into existence. That bill was introduced in successive legislatures, beginning with 1870. It failed each year until 1883, when it was finally passed. I was present in the legislature in 1879 when the bill failed, and again in 1881 when it failed. In 1883 it was passed only by agitation. The people who were interested in having it passed—the oil people—held mass meetings throughout the agricultural counties of eastern Pennsylvania, and got the farmers to send petitions to their own representatives to vote for the bill. Then it passed in the House by a meager majority.

Q. Were you present in that legislature?—A. I was present in that legislature and attended a number of mass meetings that were held. I remember at one mass meeting small handbills were circulated through the audience, saying that if this bill became a law their orchards would be destroyed, their springs would be polluted, and death would lurk under their doorsills.³ Of course that was a very effective way of frightening people who were not at all acquainted with that means of transportation. But it is a good deal safer and a great deal more economical than any other method of transportation. I do not think that there has been a single life lost in transporting oil by means of pipe lines in twenty years; and there were a great many lives lost in transporting it by railroad prior to that time.

² See Mr. Boyle, pp. 409, 413.

³ Compare Mr. Archbold, p. 513; Mr. Emery, pp. 605, 660, 660.

RELATIONS OF THE STANDARD OIL TRUST TO THE RAILROADS.

Q. (By Mr. NORTH.) Were those the real objections to the passage of the bill?—A. No; the real objections were that it would give to people who desired to enter the business the opportunity of doing so. The real objection was that it would interfere with the Standard Oil Company's exclusive right to operate these lines, and their power to secure unfair advantages over all competitors by combinations with the railroads. If any proof on that subject is desired, I would like to submit it right now. I have heard the statement under oath. Mr. A. J. Cassatt, who was the vice-president of the Pennsylvania Railroad, in his testimony given before the master in a case that was instituted in Pittsburg in the supreme court of Pennsylvania, gave his testimony in regard to that subject. (Reading.) "Q. Did you understand at that time that these railroad companies and the United Pipe Lines had united with the Standard Oil Company in order to force the transportation company out of the refining business?" The Empire Transportation Company was a company which owned a large number of tank cars. The president of it was Joseph D. Potts. Mr. Potts was probably as fully acquainted with the subject of transportation as any man who ever lived in the United States; a man of very great ability and with very wide knowledge of that subject. (Reading.) "A. I believe they did; I believe that was the object of their onslaught upon us." That is the testimony of Mr. Cassatt.

GETTING RID OF THE EMPIRE TRANSPORTATION COMPANY.

Q. (By Senator DANIEL.) Who was prosecuting?—A. The Commonwealth of Pennsylvania, against the Pennsylvania Railroad. The Standard had a combination with three trunk lines to force the Pennsylvania Railroad to exercise its option to buy the cars of the Empire Transportation Company and to stop the refining of oil, so as to give the Standard Oil trust a monopoly of the business. That is on page 177 of a book that was published by the Government.¹ It was an investigation before the Committee on Manufactures in 1888.

Q. (By Mr. NORTH.) Of the Pennsylvania legislature?—A. No; of Congress. (Reading.) "Q. Was it after the Standard had threatened to withdraw its patronage from your road?—A. Well, they had not threatened to withdraw their patronage from our road at the time, but they had protested very strongly against the Empire Line being interested in that New York refinery I spoke of before, and had complained that the Empire Line was giving facilities to that refinery, on account of their interest in it, they did not give to them, and had been endeavoring for several months to get us to insist upon the Empire Line going out of that refining business." That is the testimony of Mr. Cassatt on page 178. Joseph D. Potts testified before the same committee of Congress, on page 261. He was the president of the Empire Transportation Company. (Reading.) "Q. I will call your attention to this subject. Do you not know, and did you not also at that time, through railroad officials or other sources, that the Standard Oil Company complained of the impropriety of a transporting line, upon which they were dependent for their supply of oil, being also engaged at the same time in competition with them in refining?—A. Yes, sir; that was the point that was made." And at that time the transportation company's cars were purchased by the Pennsylvania Railroad, and their refining plant by the Standard Oil Company, and they went out of business.²

METHODS USED TO PREVENT THE PASSAGE OF THE PIPE-LINE BILL.

Q. (By Mr. PHILLIPS.) What methods, if any, were used by the Pennsylvania Railroad and the Standard Oil Company, or either of them, to prevent the passage of the pipe-line bill in 1883?—A. All methods that are usually known, I think, in legislatures.

PRODUCTION OF CRUDE OIL BY THE STANDARD IN 1883.

Q. (By Mr. FARQUHAR.) How much control of oil production did the Standard Oil Company have in 1883, compared with all others?—A. Of oil production?

Q. Yes.—A. I think about 5 per cent.³

Q. Five per cent of all?—A. Yes; you are speaking of production now. They had none directly. I think; it was through companies that were supposed to be, as they term it, affiliated with them, such as the Forrest Oil Company, and probably the Anchor Oil Company, and one or two others.

¹ House Reports, Fiftieth Congress, First Session, Vol. 9.

² Compare Mr. Archbold, p. 513.

³ For recent years, see p. 561.

THE STANDARD'S POWER BASED ON RAILROAD DISCRIMINATIONS.

Q. Then what you say is that the foundation of the strength of the Standard Oil Company, after the passage of the act in 1883, lay in their means of making combinations, particularly of pipe lines, and securing the whole control?—A. Their great power lay in the discriminations which they obtained from the railroads over all other persons. That is found in the testimony before the same committee, on page 191.¹

THE STANDARD'S METHODS OF PREVENTING THE LAYING OF PIPE LINES.

Q. (By Mr. PHILLIPS.) What methods did they take, if any, before the passage of this through pipe-line law, to prevent others from getting through to the seaboard?—A. It was impossible to get the line to the seaboard without having the right of eminent domain. It would be useless to attempt it; because any one owning a little piece of land could absolutely prohibit the pipe line's passing over it. The original pipe-line law only extended to certain counties, and as the oil business grew it went beyond the counties to which the law applied. It was difficult to lay lines even within the oil-producing counties.

Q. (By Mr. PHILLIPS.) Were there other attempts to lay lines to the seaboard; and how did they undertake to circumvent them?—A. I understand that when attempts were made to lay lines to the seaboard tracts of land were purchased—strips in front of the pipe-line stations—so that the line could not be built without crossing them.² By this means the Standard could prevent the laying of any pipe line, and I think did prevent it; so that it became absolutely necessary, in order to lay a line to the seaboard, that a corporation organized for that purpose should have the right of eminent domain.

THE STANDARD'S CONTROL OF TRANSPORTATION.

Q. (By Representative OTJEN.) You said that in 1883 they controlled 5 per cent of the production. What per cent of the transportation did they control at that time?—A. I think they controlled 30 per cent of it.

Q. Even at that time?—A. Yes. A number of smaller pipe lines were laid through the oil country, and these were rapidly absorbed by the National Transit or the United Pipe Lines, which was a Standard organization. So that in 1883 they practically had command of all the transportation of crude oil.

Q. (By Mr. C. J. HARRIS.) Has it been their policy to control all new lines that have been laid since then?—A. Yes.

Q. No matter what the cost?—A. No matter what the cost.

AMOUNT OF THE STANDARD'S REBATES FROM THE RAILROADS.

Q. (By Mr. PHILLIPS.) Did they obtain rebates from the railroads?—A. They obtained rebates from railroads. That is probably quite an old subject, and it is fully gone into here in the testimony of Mr. Cassatt. That is easily accessible to the commission. They got their power by means of rebates. They got a rebate not only on the oil they shipped themselves, but on the oil everybody else shipped; a very excessive rebate. The rebate was so much that nobody could stay in the business.

Q. How much did that rebate amount to in any given period of time?—On page 191 of the report of the Committee on Manufactures Mr. Cassatt said that at that time it was 80 cents a barrel.

Q. In round sums, do you know how much they obtained, in the course of a year or such a length of time, from all the railroads?—A. I should say it would run into the millions; probably as high as eight to ten millions a year.³

Q. In rebates?—A. I think so.

Q. Has there been any testimony taken heretofore on that subject to your knowledge?—A. It is very fully given in this testimony that was taken before the Committee on Manufactures in 1888.¹

Q. Is the precise sum stated in that testimony?—A. The precise sum is stated on page 191 (reading): "Q. I mean the tariff rate?—A. One dollar and ninety cents. Q. What was the actual rate?—A. If shipped to the Standard Oil Company at that time it would be 80 cents a barrel." It was just one-half, and it was even higher than that. I think it was higher than \$1.16 a barrel.

¹ House Reports, Fiftieth Congress, first session, vol. 9.

² See Mr. Emery, p. 651; also Mr. Boyle, p. 486.

³ See p. 287; Mr. Archbold, pp. 514-516; Mr. Emery, pp. 600, 601.

THE STANDARD'S CONTROL OF TRANSPORTATION.

Q. (By Representative OTJEN.) What percentage of transportation do they control now?—A. They control probably about 88 to 90 per cent of it.

Q. About the same as in 1883?—A. Yes. There have been times when they controlled practically all of it.

THROUGH PIPE LINES A BENEFIT TO THE OIL INDUSTRY.

Q. (By Mr. FARQUHAR.) Was the establishment of these pipe lines to the seaboard a positive advantage to the oil industry of Pennsylvania as a whole?—A. I think so.

EFFECT OF TRUSTS UPON THE CONSUMER.

Q. (By Mr. PHILLIPS.) How, in your opinion, do trusts affect the consumer?—A. I think the trusts themselves seek to create the impression that the organization of trusts and the introduction of what they call "the economies of manufacture" reduce the price of the manufactured article to the consumer. I think that is, in fact, wholly erroneous—that instead of decreasing the price to the consumer they increase the price to the consumer until it becomes absolutely extortionate. One would suppose that that would be the case from the mere fact that these trusts are organized for the purpose of securing a complete monopoly of the business in which they are engaged. They permit no one else to engage in the same business if they can prevent it. They pay enormous prices for other establishments in the same line, for the purpose of closing them up and thus obtaining a complete monopoly of the business. When they have accomplished that, or approximately accomplished it, they have absolute control of the prices to the consumer; and I do not believe that any body of men anywhere, and especially when organized for the purpose of profit, can be trusted with the inordinate power of absolutely fixing prices to the consumer. One would expect that they would fix extortionate prices in order that their profits might be high.

PRICES AT COMPETITIVE AND NONCOMPETITIVE POINTS.¹

I believe that it can be shown, in fact, that this has been the effect of the creation of trusts; and especially of the trust which was the first, and to this day is the greatest, the Standard Oil Trust. Now, that they do charge extortionate prices, it will be a very easy matter for this commission to prove, by simply getting the prices at which they sell refined oil at all points where they are without competition, and comparing them with the prices they obtain where there is a competitive market. I think it is always well to deal in the concrete rather than the abstract, and I will give an example which the commission can readily verify. In New York and Brooklyn and Jersey City, in 1895 and 1896—in March, 1896—they were selling oil to the local merchants, and to what are known as the wagon trade as well as retailers, at 9 and 9½ cents a gallon. The Pure Oil Company, having been organized on the 9th day of March, put a wagon on the streets in New York, and sold 10 gallons of oil the first day at 9 cents a gallon. As soon as the Standard Oil Company knew that the Pure Oil Company was doing business in the city of New York and vicinity, they commenced a rapid reduction of their prices, until in July, 1896, they had reduced the price to 5½ cents a gallon for the best quality of water-white oil, in small quantities, at retail, out of their wagons in the city of New York. On March 9, when the price was 9½ cents a gallon, the price of crude petroleum was \$1.30 a barrel. That is a trifle over 3 cents a gallon. Crude oil is always measured by barrels of 42 gallons each. Three cents a gallon would be \$1.26. When they put the price at 5½ cents a gallon, crude oil was \$1.15 a barrel. In other words, they reduced the price of refined oil by \$1.68 a barrel, while crude declined only 15 cents.² Now, 9½ cents a gallon was an inordinate price for refined oil in New York, and 5½ cents was below cost; they could not make the oil, transport it to New York, and sell it for that price and get cost for it. The condition is the same in Philadelphia, where there has been competition for 2 years.

Q. (By Mr. NORTH.) How long did that continue?—A. We put additional wagons on in a small way, and I do not hesitate to say we have lost money in New York every month since we started three years ago last March.

Q. Prices remain the same as they fixed?—A. Practically the same; they are a little better now, although crude oil is no higher. Crude oil was \$1.15 in 1896; it is now \$1.13; yet the prices of refined are a little higher now than then. But I do

¹ See also Mr. Mounett, p. 317; Mr. Westgate, p. 307; Mr. Clark, pp. 331, 337, 350; Mr. Emery, pp. 629, 631, 632.

² Compare Mr. Westgate, p. 305; also Mr. Archbold, p. 528.

not hesitate to say that by the competition which we introduced at least \$3,000,000 has been saved to the people of Greater New York during the last three years.

Q. (By Mr. PHILLIPS.) How about Philadelphia?—A. The situation is the same in Philadelphia. The Pure Oil Company has been doing business in Philadelphia since the 19th day of June, 1896. And prior to that time another company, which our company succeeded, had been doing business there for years. The price of oil in Philadelphia is even lower than it is in New York.¹

Q. (By Mr. C. J. HARRIS.) This saving to consumers would not probably have been made without the competition?—A. Oh, no; I think the price would have been maintained throughout this entire period at 9½ cents.

Q. (By Mr. FARQUHAR.) This commission understands that these prices are carried by both competing companies in New York at a loss?—A. Certainly at a loss. Their purpose is to drive competition out; and unless the company has a considerable capital it will be driven out. No individual can compete with them. They have absolutely destroyed all individual enterprise in the oil business.

Q. Would it not have been a better business method to adopt the price of the opposition company? That would have involved no loss to the company, but simply standing in as a competitor at the real cost price without a profit.—A. If you sold oil at all you had to sell at their price. We did not care to do business at a loss. We should have liked to avoid it if possible.

Q. (By Mr. C. J. HARRIS.) They made the reduction?—A. They made the reduction and they made the cuts, and they did it to make it destructive.

Q. (By Mr. FARQUHAR.) The cut, you said, was made from nine and a half to five and a half?—A. Yes; from March to July.

Q. Were you in competition at the time of the nine-and-a-half rate?—A. Yes; we commenced in March, 1896.

Q. At the nine-and-a-half rate?—A. Yes.

Q. The other company, then, made the first reduction?—A. Yes.

Q. Was the price put down to five and a half at once, or was the first reduction to a middle figure?—A. The first reduction, I think, was to eight, and then to seven and a half, then to seven, and quickly down to five and a half.

Q. (By Mr. NORTH.) Could you state the figure at which the oil could have been sold at that time with a reasonable profit?—A. Seven cents would have given a very handsome profit both to them and to us.

Q. (By Mr. KENNEDY.) I would like to ask the Senator to say something about the price of the same quality of oil in the States where the Standard has not this competition.—A. The prices are very high. When you get entirely away from competition they get what prices they please.

Q. Can you name a case in any city?—A. No; I can not give you the figures in other cities from memory; I know the figures here because it was my business to know them.

Q. (By Mr. PHILLIPS.) These figures will be obtained and presented to the commission, no doubt, in satisfactory shape?—A. And it is true that wherever there is no competition their prices are high.

Q. We are still on the question how, in your opinion, do trusts affect the consumer?—A. Give the trust the absolute power to fix prices, and they always fix them high. That is the only way they can get their inordinate profits on their watered stock, and the consumer, of course, must suffer. There is no question about it. No government should allow the power of absolutely fixing prices for the consumer on a given product to be lodged anywhere if it can be prevented.

THE NUMBER OF COMPETITIVE POINTS.

Q. (By Mr. NORTH.) Are there many competitive points in the United States?—A. Yes; there are a number of competitive points in the United States where the independent people have stations for distributing points for oil, but usually, I think, at a very great disadvantage in their rates.

Q. Is the number of these competitive points increasing or decreasing?—A. I think they are increasing as the independent interest is increasing. If that should diminish, they would correspondingly diminish.

THE INDEPENDENT COMPANIES MAKING LESS MONEY THAN THE STANDARD.

Q. (By Mr. FARQUHAR.) In proportion to their capital, are the independent companies making as much money as the Standard?—A. I think not, if we are to judge by their declared dividends. I see that the Standard recently declared, for the last 8 months, a dividend of 3 per cent and a special dividend of 9. That would make 12 per cent in 8 months on a capital of \$100,000,000, if the statement can be relied upon.

¹ See Mr. Emery, pp. 629, 631.

REFINED OIL FIRST TRANSPORTED IN PIPE LINES BY THE INDEPENDENTS.

Q. Through how many States did this pipe line need to go before it reached the seaboard?—A. Pennsylvania and New Jersey. Probably it would be interesting for the commission to know that the independent interest first undertook the transportation of refined oil by means of pipe lines. The Standard people said that it was impossible to transport refined oil long distances by means of pipe lines. The independents laid a pipe line to transport refined oil from Oil City through Titusville and Warren, Bradford, and Wilkesbarre, Pa., to Hampton Junction, N. J., for the purpose of reaching New York Harbor. That line has been in operation 4 years, and has transported millions of barrels of refined oil, without the condemnation of a single barrel; and it was the only means that enabled the independent refiners to live. Without that they would have been driven out of business by the railroads.¹

OBSTACLES PUT IN THE WAY OF THE INDEPENDENTS' PIPE LINE.

Q. (By Mr. FARQUHAR.) Did these pipe lines find any trouble at all in getting their right of way?—A. Oh, yes; certainly. Even in Pennsylvania they were hindered and delayed and stopped in a great many ways in reaching Wilkesbarre. Men went in advance of them and took options on the right to lay a line at very high rates, for the purpose of establishing rates for this line that was coming. They would offer to take an option for the right of way over a farm at very much more than the value of the entire farm.

Q. Is not that the usual way with a railroad or with a pipe line, that the second customer is the one that is very apt to pay an enormous rate?—A. The first person that went through was not intending to lay a line, but simply to fix the price for the one that did lay the line.

Q. (By Mr. PHILLIPS.) Will you give an account of the start made with the United States Pipe Line, the double line, to ship both refined and crude? Will you state to the commission what adverse circumstances you met in the State of New Jersey in trying to get to New York?—A. The line was projected by way of Hancock, on the Delaware River, and through New York to the Hudson River. When we reached a place near Hancock, on the Delaware River above New York, we found the Erie Railroad there with cannon and every appliance necessary to prevent the laying of the line. We also found that it would probably take us some years to get the land for that line through to New York, because the pipeline law of New York had been so amended as to make it very difficult to lay another pipe line. The law was not arranged to develop that plan of transportation, but to prevent the laying of additional lines. So we gave up the project of going to New York by way of Hancock, and started from Athens south to Wilkesbarre.

Q. That is Athens, Pa.?—A. Athens is in Pennsylvania, about 4 miles from the New York line. We intended to lay the line directly across through New Jersey to the bay at New York, where a company with which we are associated, the Columbia Oil Company, has loading facilities. We reached the Delaware River and crossed it. Then we met the first objection, from the Belvidere Railroad, owned by the Pennsylvania. Although we owned an acre of land at the crossing, they enjoined us from crossing that by means of a bill in equity filed before the vice-chancellor. His decree was reversed by the Court of Errors and Appeals, the highest court in New Jersey, and we crossed the road; but they kept us back a year. Our line was complete to that point, but we were delayed a year in getting that link. Then we met our next difficulty in crossing the Delaware, Lackawanna and Western Railroad. We owned a line there. They undertook to take that line out. We maintained our position by force, but we had a delay there, and some of our men were hurt. We retained the line, and it is still there; it is still in litigation. We crossed under the Essex Canal at a culvert, owning that crossing, and reached Hampton Junction, which is 12 miles from the Delaware River, in the State of New Jersey, and 51 miles from the harbor of New York. There are two lines from Bradford, Pa., to Hampton Junction, one for crude oil and the other for refined.²

THREE GRADES OF OIL IN ONE PIPE LINE.

Three different grades of oil are transported through the same line. They push out a poorer grade with a better, and it is turned into its own tank by means of a valve. They run that second grade until they have transported the amount desired; then put in a third grade until they have transported the amount that is desired of that, and then repeat the process.

¹ See Mr. Emery, p. 651; Mr. Lockwood, p. 298; Mr. Boyle, pp. 413, 445.

² Compare Mr. Archbold, p. 523; Mr. Emery, pp. 650-655; Mr. Boyle, p. 486.

Q. (By Mr. PHILLIPS.) Explain how you have been transporting these mixed grades to your markets.—A. In pumping the oil along the line it does not mix for a distance of 50 feet; though of course that poorer grade mixes with the better for a short distance in the line.

Q. (By Mr. FARQUHAR.) Does the Standard use that same system?—A. No, I think not.

Q. (By Mr. PHILLIPS.) Are you the first to pump refined oil to New York?—A. The first company that ever pumped refined oil any distance by means of the pipe line. I think the Standard is pumping distillate from the fields in Ohio for treatment.

NO FEELING AGAINST SENDING OIL AWAY TO BE REFINED.

Q. (By Mr. FARQUHAR.) Was there not a feeling in Pennsylvania, and the oil district, against the transportation of crude oil, as withdrawing the benefits of refining from the localities?—A. No, I think not; there is a pretty liberal spirit on that subject; they are selling oil to be refined wherever it can be refined cheapest.¹

REFINING DONE CHEAPEST IN THE INTERIOR.

Q. (By Mr. FARQUHAR.) Then you state that there is advantage in getting to the seaboard for your refining?—A. No; I think the oil can be refined cheaper in the interior, and transported as refined by means of pipe lines.¹

Q. Giving employment to the locality where the oil is produced?—A. Yes. I think so. I think so for several reasons: Land is cheaper, labor is cheaper, and fuel is cheaper, and water is abundant and of a good quality.

Q. And living is cheaper?—A. Living is cheaper.

Q. And it tends to diversify labor?—A. Yes.

Q. Is there a better market at the seaboard for what you call the by-products or residuum than there is at your local refineries in Pennsylvania?—A. I am not competent to answer fully. I think that the market for the by-products is all over the country, and probably one part of the country is as valuable a market as another.

THE STANDARD BELIEVED TO GET RAILROAD FAVORS IN PRICES FOR LUBRICATING OILS.

Q. (By Mr. PHILLIPS.) Does the Standard have the monopoly of lubricating oil, especially as to the railroads of the United States?—A. I want to mention something that I do not positively assert to be true. I do not know it to be true, but it is a matter of belief with me. I believe the Standard is getting as great advantages and discriminations from railroads as ever; but I think they get them in an entirely different way, and in such a way that I do not see how the matter can be reached. The purchasing of oil for a great many of the railroads has been largely taken out of the hands of the purchasing agents and put into the hands of the president or some managing director. I think that the Standard get their rebates from the railroads by means of the prices at which they oil those roads.²

Q. By lubricating oil?—A. Yes.

Q. Does that require a large amount? Is it a very large item of expenses?—A. I think the railroads of this country can be lubricated for one-half the amount which they pay to-day, and a large profit made out of it; but the railroads are simply giving rebates in that way.

Q. (By Mr. FARQUHAR.) As a business proposition, does it make any difference to a man selling oil to a railroad whether he goes to the president of the railroad or to a purchasing agent?—A. Yes, I think it makes a difference: because the purchasing agent is supposed to buy his oil at the very lowest prices. It is different in the case of the president.

Q. (By Mr. FARQUHAR.) Is there any proof by which you know that the purchasing agent gets competitive prices on oil?—A. No.

A REFINERY WITH \$500,000 CAPITAL CAN GET ALL THE BY-PRODUCTS.

Q. (By Mr. JENKS.) The statement has been frequently made that, owing to the very large capital of the Standard, they get the refined very much cheaper than the independents do, because they are able to get more by-products. Can you tell us whether you, for example, have as good facilities for refining as the Standard?—A. I presume that in refining a large quantity of oil there would be

¹ See Mr. Emery, p. 649.

² Compare Mr. Archbold, p. 516; Mr. Davis, p. 359; Mr. Rice, pp. 9, 700; Mr. Page.

a slight difference in favor of the large refinery ; but I think it would be so slight as to make no real difference. I think the independent people make just as good oil as the Standard Oil Company, and better.

Q. Do they get also substantially the same by-products?—A. They can get also the same by-products if they have the facilities to make them.

Q. Does it require anything like the capital the Standard has to get an establishment big enough to make use of these by-products?—A. Oh, no.

Q. How large?—A. I suppose a capital of \$500,000 would make a complete refinery, with a perfect division of labor, so as to get out every by-product at the very lowest possible cost.¹

THE STANDARD HAS NO ADVANTAGE IN COST OF PACKAGES.

Q. Would the same thing hold with reference to the materials they use in shipping? With reference to the cost of tin cans and barrels?—A. The making of tin cans is a very simple process; it is all done by machinery, and they are made very rapidly. I think others can manufacture them just as cheaply as they do. Barrels can be manufactured just as cheaply as the Standard Oil Company can make them. I judge they can not manufacture these things any cheaper than other people, because they do not do the other parts of the business any cheaper than the other people. They are not any better producers than the independent producers, nor as good; and they do not transport the oil any cheaper through a given size of pipe line than we do.

THE STANDARD'S ADVANTAGE IS NOT IN PRODUCTION BUT IN DISCRIMINATIONS.

Q. When you say that they are not as good producers as other people, do you mean that they do not take as good care in their refining as the others do?—A. I think very possibly they do not. If an oil company is in the business of producing oil individually, they are giving their own personal attention to that specific thing. In the case of the Standard Oil Company, all their production must be under the supervision of paid agents, who are not as skillful in the business as the men that have been in it for thirty years themselves.

Q. In your judgment, then, any advantage they have comes from some special discriminations or through monopoly, and not from any legitimate advantage they have through large capital?—A. I think you are entirely correct; they have not much advantage, so far as the actual doing of the business is concerned, except through discriminations.

THE STANDARD MAKES A HUNDRED PER CENT ON ITS REFINED OIL.

Q. (By Mr. C. J. HARRIS.) You said the price of oil was 9½ cents in March, 1896; that would give them at wholesale rates a profit of 50 or 60 per cent, would it not, according to their own figures?—A. It would give them a profit of 100 per cent; the cost of oil would be —

Q. (Interrupting.) I do not mean on the crude but I mean after it was refined?—A. It would give them 100 per cent. They could buy the oil so as to make the profit very close to 100 per cent.²

Q. That is a pretty big profit for a wholesale business, is it not?—A. I think so.

COMPETITIVE POINTS.—THE RAILROADS PREVENT COMPETITION ON THE PACIFIC COAST.

Q. (By Representative OTJEN.) I understood you to say there are about a hundred competing points; where are they? In what part of the country?—A. I can give you a good many of them: New York, Philadelphia, Pittsburg, Chicago, Milwaukee, Rock Island, Evansville, Memphis, St. Louis, Des Moines, Kansas City.

Q. Any on the Pacific coast?—A. They have such a great advantage, by means of rules the railroads have adopted, that it is almost impossible for independent companies to sell large quantities of oil on the Pacific coast. The Interstate Commerce Commission has assessed against a number of railroads, in favor of the independent refineries, the sum of \$86,000, which it has found that the railroads should pay to the independent refineries by reason of discriminations; and suits are pending for that sum in the United States Circuit Court at Pittsburg.³

Q. (By Mr. C. J. HARRIS.) Does not the Standard Oil control the country trade almost exclusively?—A. Very largely they control trade which only railroads reach. The competitive points are where you can get away from railroads and get water transportation.

¹ Compare Mr. Archbold, p. 570.

² See Mr. Phillips, pp. 591, 592.

³ See Mr. Archbold, p. 516.

EFFORTS OF THE STANDARD TO BUY OUT THEIR COMPETITORS.

Q. (By Mr. KENNEDY.) Has the Standard Oil Company been making attempts to secure control of these independent companies?—A. In 1894 and the beginning of 1895, they had conferences with some of the independent refineries. They proposed to buy all the independent lines and all the independent refineries. The independent pipe lines declined to sell. A number of refiners declined to sell; but they did, at that time, purchase oil refineries along our pipe line, which were under contract to take oil from us; and although they were in good condition, and one of them was practically new, they tore those refineries down and destroyed them.

Q. Did they offer much more than the properties were worth?—A. Yes; they offered more than the properties were worth.

Q. (By Mr. PHILLIPS.) What other methods did they take to get control of the independent pipe lines?—A. They reduced the price of oil at the seaboard, so that oil was sold at the seaboard for a long period below the cost of the crude in the oil region, and the refineries had to suffer a large loss.¹

THE STANDARD BUYS STOCK IN INDEPENDENT COMPANIES AND GETS A DIRECTOR IN ONE.

Q. Did they or did they not purchase stock in any of these independent pipe-line companies? If so, how much and in what companies?—A. The first company we organized was the Producers' Oil Company, Limited, with a capital of \$600,000. There were 1,095 subscribers to the stock. They were scattered over about 300 miles, in territory widely separated from each other and from the officers, and the Standard Company started to get control of that company. They had a bank cashier working for them in nearly every town throughout the whole region where the stock was owned, and they had agents in the field. They commenced purchasing that stock at par, and before they got through they paid as high as 220. They secured a majority of the stock—\$1,000 over one-half. Then they brought suit to get into the company. They were beaten. The stock was put in the name of John J. Carter. He claimed to be the owner. It was owned by the National Transit Company, and they transferred it to him on the 16th day of January, 1896. He brought suit to become a member of that company without being elected to membership. It was a limited partnership, and the law provided that no one who purchased stock could become a member without being elected by a majority in number and value of the interests. He alleged that he was one of the original subscribers to the stock, and that by buying additional stock he was entitled to vote such additional stock at the meetings, and he asked for a transfer to him. That was denied by the company. He lost in the court below and in the supreme court. That was one of the means they were taking to get control. He told me he had purchased stock for the purpose of getting control of the company and changing its policy from one opposed to the Standard to one in harmony with it. They bought stock in the United States Pipe Line; and in order to prevent their getting control of that stock the majority was put in the name of three trustees who could vote it at all meetings of the company.

Q. About how much stock did they purchase in the United States Company?—A. Some \$350,000 to \$400,000 out of the \$1,300,000 paid-up capital. We refused to recognize them as stockholders in that company. They brought suit to get in, and they won in the court below. The case was taken to the Supreme Court and, on a technicality, the appeal to the Supreme Court was quashed.

Q. Have they or have they not a director in that company?—A. They have one director in that company now.

Q. How did they obtain that director?—A. They obtained that director by the purchase of stock, and through the decree of the court that they should be entitled to vote it at the election.²

THE INDEPENDENT COMPANIES ARE SEPARATE, BUT OWNED PRACTICALLY BY THE SAME PEOPLE.

Q. (By Mr. KENNEDY.) Have the independent companies found it necessary, in order to protect themselves against the encroachments of the Standard, to enter into a form of combination?—A. Only as to control; combination of interest. They are practically owned by the same people. They would be much stronger, undoubtedly, if they were welded into one organization.

Q. Then, practically, they are not independent, but independent of the Standard Oil Company?—A. They are independent of each other and also independent of the Standard.

¹ See Mr. Archbold, p. 571; Mr. Westgate, p. 365; Mr. Emery, pp. 629, 631.

² See Mr. Westgate, pp. 370, 382; Mr. Boyle, p. 442; Mr. Archbold, pp. 577, 578; Mr. Phillips, pp. 589, 590, 595, 596; Mr. Emery, p. 656.

Q. Did you say whether they were controlled by the same people?—A. By way of illustration, the refineries are all owned by different people, individuals or companies; each man owns his own refinery, and each company owns its own refinery. They take oil from the pipe lines and pay us the 15 cents pipeage, while the Standard pipeage is 20 cents. We have always maintained a uniform price of 15 cents for local pipeage. They sell their oil where they please; bid against each other, and bid against the Standard. They are entirely independent.

INDEPENDENT COMPANIES ABSORBED BY THE STANDARD.

Q. (By Mr. A. L. HARRIS.) How many independent companies have been absorbed by the Standard Oil Company?—A. I should say over a hundred in the last twenty years.

Q. Is there such a thing as a list of those companies and the amount of capital of each?—A. Yes; there is a list of the refineries that were obtained and dismantled in the testimony of Senator Emery before the Committee on Manufactures in 1888.¹

WHY THE REMAINING INDEPENDENTS REFUSE TO SELL.

Q. (By Representative LIVINGSTON.) What stands in the way of absorbing the remaining companies? The fact that they produced enough to meet the demand, or are they trying to work at lower figures because they are not willing to sell?—A. Because they are not willing to sell; that is one reason.

Q. (By Mr. FARQUHAR.) Do you mean by that that there is so much profit in the independent lines that they can ask two prices and will not sell?—A. No; we refused to sell at 112—that is, 12 per cent above cost—when we expected to go into the hands of the sheriff and be sold out. We maintain those companies largely as a matter of sentiment, and as a protection to the independent producing interests.

Q. Do they stay out of sentiment or feeling toward the consumer, or is it because there is a large profit, present and prospective, in keeping them out of the Standard Oil Company?—A. No; men naturally want to remain in the business that they have selected and with which they are acquainted; they are satisfied with moderate profits, and they do not like to be driven out of their business. There is an American pride in being able to maintain a place in a business that a man feels that he is entirely competent to carry on, and has adequate capital to carry on if he has a fair chance.

Q. (By Mr. FARQUHAR.) Is it not a fact that the independent companies of this country are making money, and making a sufficient percentage on their capital, and is not that one of the reasons why they do not sell?—A. That is true just at present; but this proposition to purchase them was made after they had been doing a losing business continuously for twenty months, and in that twenty months had lost \$200,000 among them in actual money. Then they declined to sell.²

PRACTICAL EXPERIENCE OF MEMBERS AND MEN OF THE STANDARD OIL COMPANY.

Q. You mentioned the fact some time ago that you thought those who were interested in the independent companies, and had been brought up in the business, and had long experience in it, are better managers than the agents that the Standard Oil Company employ in refining, or transportation, or selling. Is it or is it not a fact that in their acquirement of these plants, the Standard Oil Company has usually taken the expert mixers and refiners of those concerns into the working force of the Standard Oil Company itself? In other words, under the controlling spirits of the Standard Oil Company to-day, have not the men in the field had as wide experience as any independent company can have?—A. No, I think not. I think, with the exception of one trustee, none of the trustees have had any experience.

Q. What is the experience of Mr. O'Day?—A. He has had experience as a pipeline man. Mr. Archbold, I think, has had quite a large experience as a refiner. I think he is a competent man in that business.

Q. When they absorbed the Galena Company, did they not take the best operatives of that company into the employment of the Standard Oil Company?—A. What Galena do you refer to?

Q. The Ohio.—A. That is located at Franklin. I think the same men are in that company that have always been in it.

¹ Page 226, vol. 9, H. R., first session Fiftieth Congress, 1887-88.

² See pp. 292, 293; Mr. Phillips, p. 563; Mr. Archbold, p. 580.

PRESENT CONDITION OF REFINERIES THAT WERE REPORTED AS INDEPENDENT IN 1888.

Q. (By Mr. A. L. HARRIS.) Please turn to page 488 of that report.¹ How many of those companies in that list are in existence at the present time?—A. I can not speak of Cleveland. Of New York, Borne, Scrymser & Co. have been absorbed by the Standard, and I think Lombard, Ayres & Co. They are marked there, though, as affiliated with the Standard then. Pittsburg: Bear Creek Refining Company is a Standard works now, I understand; Iola Oil Works is a very small works; and the Globe Refining Company, I think, is Standard. Oil City: The Keystone Refining Company was wrecked and torn down; Standard became the purchaser of it at sheriff's sale, I think. The ground is bare now with the exception of a few tanks.

Q. (By Mr. PHILLIPS.) By whom was it torn down?—A. By the Standard.

Q. (By Mr. A. L. HARRIS.) As you go on please state what has become of the different companies that have gone out of existence and how they went out of existence, whether acquired by the Standard Oil Company, etc.—A. Reno: The Mutual Oil Company was purchased by the Standard in May, 1895, wrecked and torn down; nothing left standing but a chimney as a monument of disaster; I am not sure but the chimney is down now. Franklin: Those are small refineries; they are not running, I think; I think the most of them are shut down. I do not know anything about those at Buffalo, Toledo, Findlay, Lima, Bradner, Smith's Ferry, Boston, or Baltimore. Bradford: Those are not in existence now; I do not know what became of them. Parkersburg: One of the refineries that was in existence at that time has been absorbed by the Standard. Marietta: I am not informed as to those refineries. Titusville: Rice, Robinson & Witherop are running now as an independent company. John Schwartz's refinery was practically destroyed by the flood. He then united with the National Refining Company in the Union Refining Company. That was bought by the Standard in 1895 and torn down. The International Works (J. P. Thomas) was absorbed and purchased by the Standard in 1895. It was practically a new works and in fine condition, but it was torn down. The National Oil Company was united with the Union, and the Union was purchased and torn down by the Standard. The same is true of the Western Refining Company; they went into the Union; they united those refineries, leaving but two practically of that number now in existence at Titusville, and one that has been erected since by the Manhattan Oil Company, known as the Oil Creek Oil Works. Clarendon: I am not familiar with those; they are small works; I think one of them is still operated by the independents; I think the other is not in operation now. San Francisco: I am not informed as to that. Philadelphia: Bosshart & Wilson are not in business. As to the others I am not informed. Florence, Colo.: I am not familiar with them. This list was made, I see, in 1888.

BONUSES FOR IDLENESS.

Q. (By Mr. PHILLIPS.) Have you any information in regard to the paying of a large bonus or premium for refining works to remain in idleness, or have you any information in regard to their paying sums of money to persons to stay out of the business?—A. I know that within the last five years, and prior to that, they leased a number of refineries, and simply shut them down and allowed them to remain idle. As to persons receiving money to remain out of business, I have no personal, absolute knowledge of that subject; only common rumor.

Q. Do you know as a fact that they have leased works that have been shut down for a period of years?—A. Yes, I know they have.

Q. And paid large sums of money?—A. Yes, I know that has been done.

CONSUMERS WOULD PAY LESS IF THE STANDARD OIL COMPANY DID NOT EXIST.

Q. (By Representative LIVINGSTON.) What, in your opinion, would be the price of oil to the consumers if the Standard Oil Company should be abandoned?—A. I believe that the average price to the consumer, all over the United States—all over the world—would be very much less than it is to-day, at the same price for crude oil.²

Q. Why?—A. The reasons are that anyone who is permitted to take whatever he chooses is never moderate in his taking. They have the ability and power to take from the consumer just what they please, where there is no competition; and

¹ House Reports, first session Fiftieth Congress, 1887-88, vol. 9.

² See pp. 275-277; Mr. Monnett, p. 317; Mr. Westgate, pp. 371, 372, 366-370; Mr. Archbold, p. 531; Mr. Emery, 629, 631, 632; chart of prices in Introduction.

I do not think that anybody would be moderate under such circumstances. I do not believe that anybody should be trusted with unlimited power to fix prices.

Q. You think, then, that competition would so rule and control the independent companies that they would be forced to sell oil for a lower price than the Standard now charges?—Yes; I have not a bit of doubt about it.

PROFITS OF THE INDEPENDENTS AND OF THE STANDARD.

Q. That being true, what interest has the independent company in forcing the disintegration of this company?—A. Just this interest: they stand always in mortal dread of being entirely wiped out. They do not know whether they can live six months or a year; they always have to fight for their lives, and they do not make fair profits even now; they have not made what would be called fair manufacturing profits at any time in the last five years.

Q. (By Mr. NORTH.) What do you call fair manufacturing profits?—A. They would be entirely satisfied to do this business at 10 cents a barrel on the oil that runs through their refineries. I think the Standard makes \$1.50 to \$2 on every barrel that goes through its refineries.

Q. About what per cent?—A. That would be about 10 cents a barrel on the amount the independents refined.

Q. What per cent of profit on the investment?—A. With oil at \$1 a barrel, that would be about 10 per cent.

Q. Which you call a very good manufacturing profit?—A. Yes, I should say so. I have heard independent refiners say they would be entirely satisfied to enter into a contract for any number of years, to make 10 cents a barrel on every barrel of crude oil they refined; and with oil at \$1 a barrel, that would be about 10 per cent profit.¹

THE FOREIGN MARKET—THE PURE OIL COMPANY.

Q. Have you any knowledge of the price at which the Standard sells its product abroad?—A. The Pure Oil Company was organized in 1895 for the purpose of aiding the independent refiners—organized in an open meeting held at Butler, January 24, 1895. The purpose was stated to be to organize a company that would take the oil from the refineries at cost; they were willing to refine oil at cost if they could live that way. They were willing to say they would continue in the business and give it to the new company at cost, without making a cent. This company was organized for the purpose of taking that oil at cost and marketing it abroad.

Q. (By Mr. PHILLIPS.) Please state what means the Standard had taken to destroy the market abroad that these independents were working on?—A. They had made the market abroad so bad that oil was sold in New York for a number of months below the cost of the crude at the refinery, without anything for refining it and without anything for transporting it from the refineries to New York. The refiners had lost large sums of money. Then they said they could not continue unless they were aided by the producers. We formed the Pure Oil Company for the purpose of taking the oil at cost, in order to enable them to stay in the business and not be driven out by the Standard Oil trust. There was an open meeting, held in the opera house at Butler, and the stock of that company was subscribed there to the amount of \$65,000 in a few minutes. It went on until it now has a capital of \$375,000, with an authorized capital of \$1,000,000, and that company has been buying oil from the independent refiners and marketing it abroad. They have a station erected at Hamburg, Germany; their own tankage, their own tank cars. They have one at Rotterdam, Holland; their own tankage, barrel houses, pumping outfits. They are erecting one at Mannheim, on the Rhine in Germany, and they rent a plant at Amsterdam, Holland. Those plants were established, one of them two years ago last October, the other a year ago the 1st of April, and the third is in process of erection. The oil is transferred to those plants by means of tank steamers, pumped out and distributed just as the Standard distributes it throughout Germany.

DISCRIMINATION PREVENTED IN GERMANY.

I want to say here, and I say it with a blush for this country, that everyone can do business in Germany on an equal footing, and nobody has any advantage over another. It ought to be true in the United States. It is a sad thing.

Q. (By Senator DANIEL.) Please explain that a little.—A. They do not permit any discrimination; they will not allow it.

Q. By whom?—A. The Government will close up an establishment and keep it from doing business if they enter into discrimination.

¹ See Mr. Boyle, p. 441.

Q. (By Representative LIVINGSTON.) You mean to say they prevent trusts and combinations?—A. I think they do: at least they prevent trusts and combinations having any advantage over an individual.

Q. (By Mr. NORTH.) Or fixing of prices?—A. They will not permit that; they will not permit anybody to do business at a loss.

Q. For the sake of destroying a competitor?—A. Yes. They will not allow that.

GERMAN BUSINESS OF THE INDEPENDENT REFINERS—COURSE OF THE STANDARD.

Q. You have not quite answered the question I originally asked you.—A. What was that?

Q. I wanted to know how the foreign prices of the Standard Oil Company compared with the domestic prices. A. Prior to that time the independent refineries sold nearly all the oil they marketed in Germany to a man by the name of Poth. He frequently said he could not do business in Germany at a loss—which we have found to be true—and of course that gave him a right to say what he could pay for oil. He got rich out of the purchase of oil from the refiners in a period of a few years.

Q. (By Mr. PHILLIPS.) Independent refiners?—A. Independent refiners; and finally he sold out to the Standard Oil Company. After he had done it he was overwhelmed with grief when he found the refiners had stood by him. He went home and died within three days. He is dead, and his business is carried on by the Standard Oil Company.¹

Q. Did they take any means to buy tankage?—A. They would often tie up all the tankage at a given point, and they sold oil abroad at low prices for a period.

Q. (By Mr. NORTH.) At lower prices than they were selling for in this country at the same time?—A. Yes.²

QUALITY OF EXPORT OIL.

Q. (By Mr. JENKS.) What is the quality of export oil compared with what is used here?—A. The oil for export, while it is called a second-grade oil, is really about as good a burning oil as the very highest quality. The refiners tell me they would as soon burn what is called export oil as "water-white." It does not burn quite as white, but it is a good quality of oil.³

MARKET CONDITIONS IN GERMANY AND ENGLAND.

Q. (By Mr. NORTH.) Are you able to carry on competition in foreign countries without those disadvantages which you encounter at home?—A. A great deal better in foreign countries than in America. Competition is preserved in Germany to a very much greater extent than in the United States. It is in England, too.

Q. (By Mr. PHILLIPS.) Is the Pure Oil Company making a profit?—A. The Pure Oil Company is making a profit; doing a profitable business.

Q. (By Mr. NORTH.) Selling at market rates abroad?—A. Selling at market rates and doing a good business.

DIFFERENT RESULTS OF PURCHASES OF INDEPENDENT PLANTS BY THE STANDARD AND BY OTHERS.

Q. (By Mr. RATCHFORD.) You stated that 100 or more of these companies were absorbed by the Standard Oil Company. Has there been any such thing as transfer of property or plant from one of these independent concerns to another at any time?—A. Very frequently; that is, interests will be sold.

Q. They have bought and sold to each other?—A. They change ownership to some extent.

Q. The reason that others have not sold to the Standard Oil Company is because they are unwilling to sell?—A. Yes.

Q. If these independent concerns have bought and sold and changed ownership, have they not been absorbed by each other in the same sense in which the Standard Oil Company has absorbed some of them?—A. No. A works is not absorbed in changing ownership. The business is carried on just as it has been carried on before.

Q. When an independent company buys another company or plant or property it continues to operate it?—A. Yes.

¹ Compare Mr. Westgate, p. 381; Mr. Emery, p. 617.

² See Mr. Lockwood, pp. 394, 398; Mr. Westgate, p. 372; Mr. Emery, p. 616; chart of prices in Introduction.

³ See Mr. Emery, pp. 625, 626.

Q. The only difference, then, between them and the Standard is that in the one case the plant is bought for the purpose of operation, and in the other for the purpose of destruction, laying it waste?—A. Very frequently it is bought for the purpose of destruction.

Q. I should think the term "destroyed" or "laid waste" would be a better term than "absorbed."—A. I would say absorbed—dismantled—which means destroyed.

THE STANDARD'S PRODUCT HAS DETERIORATED.

Q. Has the quality of the product of the Standard Oil Company improved during the past twenty years?—A. I think it has deteriorated in quality. I would like to give a reason for that: Prior to twenty years ago they did not use any Lima oil, or oil that has sulphur in it; within the last twenty years they have used a very large proportion of Lima oil. Therefore, I think their manufactured oil generally is not as good as it used to be.

Q. (By Mr. PHILLIPS.) For what reason is the Lima oil mixed?—A. The Lima oil is said to contain arsenic and sulphur; one clouds the chimney and the other makes a bad odor.¹

Q. (By Mr. BATHFORD.) How about the by-products?—A. No doubt they make their by-products very lucrative to themselves.

THE PRICE OF REFINED OIL HAS FALLEN ONLY WITH THE PRICE OF CRUDE.

Q. Have their prices been materially reduced during the past 20 or 25 years?—A. I read a statement made before this commission by a gentleman who, I think, was not at all familiar with the oil business, Mr. Thurber, of New York. The prices have not been correspondingly reduced with the cost of the material employed. In other words, there has not been a relative reduction in the price of refined, as compared with the cost of the crude. I think they had nothing to do with the making of the cost of the production of the crude. All improvements in drilling the oil wells and in producing the crude have been made by the people who were actually engaged in that business; many of them workmen.

Q. Are you prepared to say whether or not the cost of, say, half a dozen other articles of common use has or has not fallen proportionately with that of the products of the Standard Oil Company?—A. Yes; I think nearly all staple articles have been reduced within the last 20 years in larger degree than the price of refined oil.

Q. (By Senator DANIEL.) Has not the price of the crude article fallen much more in proportion than the price of the refined?—A. Undoubtedly. I am going to speak of that hereafter.

THE STANDARD'S PROFIT PER GALLON HAS INCREASED.

Q. (By Mr. JENKS.) You suggested that Mr. Thurber had brought up some figures. I think this chart here² [pointing to chart on the wall] shows the figures that have been quoted so frequently by the Standard Oil Company, and that were quoted by Mr. Thurber. This upper line [indicating] shows the price of refined, the lower, the cost of the crude; the perpendicular distance between them shows the cost of refining plus the profit. These figures are often quoted by the Standard to show that they have very largely reduced the cost; these are the dates here [indicating]—the Standard Oil started about 1872—up to the time of the formation of the trust in 1882. Can you tell us whether or not these average figures show definitely the way in which the Standard fixes its prices?—A. Your dots there between your lines indicate the cost of refining plus the profit.

Q. Plus the profit, because this, the lower line [indicating], is the price of the crude, and this, the upper line [indicating], is the price of the refined. The third line drawn with reference to the base line shows the difference between the two.

Mr. FARQUHAR. Would not that diagram show that since the Standard came into the trust they have run the refined and the crude almost parallel?

Professor JENKS. There has been a slight reduction all the time, and of course the Standard men will say, as anyone would, that when you get the price of crude down to less than a cent a gallon there is not any probability of getting it reduced much below that. I thought Senator Lee would explain that, because those are the figures often quoted.

¹ Compare p. 278; also Mr. Archbold, p. 532; Mr. Emery, pp. 624, 625; Mr. Gall, pp. 673, 681.

² See Introduction.

A. I am told by the refiners that in 20 years the cost of refining has been reduced from 2½ cents a gallon to less than one-half cent.¹ Of course those lines, being parallel, show a very much larger margin of profit.

THE STANDARD'S PRICES FOR REFINED OIL HAVE NO RELATION TO COST.

Q. (By Mr. JENKS.) Also state further, with reference to the way they fix their prices, whether their price for refined oil is based definitely on the cost of refining, or whether it is merely arbitrary?—A. I do not think the Standard Oil Company fixes its prices on the basis of the cost of refining and cost of crude at all. They rather try to avoid doing that. They do not want the public to understand how they fix their prices. They are entirely arbitrary. They have had very low prices for refined oil when crude was very high, and very high prices for refined oil when crude was very low.

Q. (By Mr. PHILLIPS.) Does not that come about through their selling and supplying the market for a number of months ahead?—A. Probably through their selling ahead, and then putting up the price of crude, so that their competitors may have to pay a high price for the crude, while they themselves are manufacturing the crude they have already purchased, to make refined which they have sold at a high price.

THE BETTER CONDITIONS IN GERMANY AND ENGLAND HAVE ENABLED THE INDEPENDENT COMPANIES TO LIVE.

Q. (By Mr. KENNEDY.) You stated that the conditions of competition in Germany and Great Britain have been such that you could make a profit there, and the Standard Oil Company could not drive you out; and in this country their methods have been ruinous to you, so that you could not make a profit. Has the profit you have been able to make in Germany and Great Britain in years past been the means of enabling your companies to live, notwithstanding the methods of the Standard in this country?—A. Yes.

Q. How long have you been operating in these countries?—A. In Germany for three years next October. The price of export oil, which is a second-grade oil, has been almost as high as "water-white" oil. The cost of drilling the oil wells and obtaining oil is very much greater within the last three or four months than it was last year on account of the advance in our materials and the prosperous condition of the country; but they have kept the water-white oil, the oil sold in this country, very low during this last year.²

SELLING BELOW COST TO CRUSH COMPETITORS NOT PERMITTED IN GERMANY OR GREAT BRITAIN.

Q. I understand that the Standard has in some instances almost given away oil to drive out competition. Is it true that they could not give away oil if they wanted to in Germany or Great Britain?—A. No; I do not think they would be allowed to do that there.⁴

Q. The Government would come in and say, "You can not sell this oil a cent a gallon less than the other people?"—A. I do not think they would be permitted to do that.

Q. (By Representative OTJEN.) I presume that would be with the understanding that they were doing it with the object of crushing somebody else out?—A. Yes; that would be the object.

Q. (By Mr. KENNEDY.) The Government would be the judge of their motive?—A. I do not think they would be permitted to do it.

Q. (By Mr. FARQUHAR.) Is there any act of Parliament that would prevent their giving away oil or selling it at half price?—A. The Government is simply mildly despotic.

Q. How do you reconcile that with the fact of American meats coming into competition with the German, and cutting the English price probably 33 per cent?—A. I suppose those are sold at a profit. They do not prevent the selling of the goods, but they will not allow one company to have an advantage over another, and they will not permit business to be done at a loss.

Q. (By Mr. KENNEDY.) I would like an explanation of how they would prevent a company from doing business at a loss?—A. They will close you up.

Q. (By Mr. NORTH.) You mean to say they guarantee that every man who goes into business shall make a profit?—A. No. He can quit when he pleases.

Q. (By Senator DANIEL.) Are you speaking from an examination of the German laws on the subject?—A. Speaking from a knowledge of business done there in the last ten years.

¹ See Mr. Westgate, p. 371.

² See chart of prices in Introduction.

³ Compare Mr. Archbold, p. 532; Mr. Emery, pp. 616-618.

Q. Give us some item of your own knowledge.—A. In regard to business with Mr. Poth, he said to us that he was not permitted to do business at a loss. Their books are open to inspection under some law.

Q. Where was that?—A. In Germany.

Q. What place?—A. He was doing business at Hamburg and Mannheim and a number of other places in Germany. He said he could not do business at a loss; therefore he must do business at a profit. Since we have gone in there, our agents say they are not permitted to do business at a loss. They will not allow us to sell goods at a loss and do a losing business. We can close up and quit.

HOW THE STANDARD MAKES PRICES HIGH TO CONSUMERS AND YET RUINS COMPETITORS.

Q. (By Mr. JENKS.) You said the prices were considerably higher in your judgment than they would be if there had been anything like free competition, and yet that it was very difficult for these independent refiners to get along and make a living. Please tell us a little more accurately what the methods of the Standard are that make those two things consistent.—A. In any market reached by independent oil they will put the price down so low that there is no profit in marketing oil; and at points not reached by the independent refiners they will put the price up so as to recoup their loss at the competitive point. They have accurate information as to every shipment. For instance, a shipment will be made by an independent refiner, and before that oil reaches its destination they will land a cargo of oil in the same place, to be sold at a very much reduced price. They will reduce their prices two or three days before that oil arrives, so as to prevent the man who bought it from selling it again. If he buys it once he is to lose on it, because he has paid a higher price than he is able to sell it for. Then they send some one to him to tell him, "You can not buy independent oil. You must buy from us." That is the method of every trust.

Q. (By Senator DANIEL.) Have they done that in Germany?—A. No; they are not allowed to do that in Germany.

THE STANDARD HAS THE BUSINESS IN FRANCE.

Q. (By Mr. JENKS.) Now, you will perhaps add a word with reference to the way they get along in France.—A. I do not know much about the French, except that the Standard Oil Company does most of the business in France.

EXPORT OIL—TESTS REQUIRED BY STATE LAWS.

Q. (By Representative LIVINGSTON.) Can that oil be sold in the States?—A. In some of the States. It can be sold in Pennsylvania. Generally it is not up to the standard required in the States here, or not considered so. It is probably as good oil in fact as is burned in the United States, but it is excluded by reason of statutes that have been passed.¹

Q. What is the gravity of the oil you send over there?—A. It is called 78 Abel test. I am not familiar practically with the specific gravity.

Q. What does the State law of New York require, or of any other State—110?—A. Yes; 110, or about 120 to 150. One hundred and fifty is the highest grade of water white, and about 48 gravity. I have heard them use that expression in connection with water white. One hundred and fifty, 48 gravity, is considered the best oil.

AMOUNT OF OIL EXPORTED.

Q. (By Mr. JENKS.) What proportion of the refined product is exported and what proportion is consumed here?—A. About 40 per cent of all the crude manufactured is exported in the shape of refined—that is, besides lubricating oils.

LIMITATION OF PRODUCTION IN 1887.

Q. Along a good many lines of industry it has been found necessary, where the competition was sharp, to export large quantities. Has this large export business, perhaps, on the whole, enabled the Standard to keep prices higher than they could otherwise? Has there been any special attempt to limit production here in order to keep prices up?—A. There was at one time a movement to limit the amount of crude produced; that was in 1887. They reduced it about 17,500 barrels a day in that year. That is fully entered into in this book (referring to "The Derricks Handbook of Petroleum").²

¹ See p. 274; Mr. Emery, pp. 825, 826.

² See p. 234; Mr. Archibald, p. 540; Mr. Boyle, pp. 422-423, 430-432, 432-434; for earlier attempts, pp. 420, 427.

AMOUNT OF OIL EXPORTED.

Q. (By Representative LIVINGSTON.) I have been furnished with the statement of the statistics for last year, to the effect that about 52 per cent of all oils were exported.—A. I said 40 per cent of the amount manufactured from the crude is exported in the shape of refined. In addition to that 40 per cent, if whatever lubricating oil was sent abroad were added, it would probably make it about 50.

COMPETITION AND PRICES ABROAD. PENNSYLVANIA OIL, LIMA OIL, RUSSIAN OIL.

Q. Abroad, where the oil of the independent refineries goes, which is not of such a grade as can be consumed in the States here, does it come into competition with oil sent there and sold by the Standard?—A. Yes; the Standard is doing a very large business in Germany. Germany is the largest oil market in the world. Although the population is about the same as France, it uses probably twenty times as much oil as does France. I think I am not far wrong in that.¹

Q. Does the sale of the oils from the independent refineries bear down the prices of the Standard Oil Company's product there?—A. No; they sell at very fair prices. Even for the last two years abroad the prices have not been excessive, and they are reasonable all round.

Q. You mean the Standard Oil Company's?—A. The Standard prices and the independent prices.

Q. What if you should withdraw or be forced out of the market?—A. We think their prices would be very much increased.

Q. (By Mr. FARQUHAR.) Is there any difference between the grade of standard oils sold by the Standard Oil Company generally in Germany and that of the independent companies?—A. We think we sell a very much better oil than they do, for the reason that we do not manufacture any but Pennsylvania oil, while they do manufacture and export some Lima oil that we believe is mixed with the other. I do not speak positively about that, for I do not know.²

Q. (By Mr. KENNEDY.) Do you meet much competition in Germany from the Russian oil fields?—A. The Russian oil has not been largely used in Germany because it does not climb the wick as well as Pennsylvania oil or American oil, and the Germans have their own lamps and they do not change them readily. It has not been largely used, although the Standard has been pushing the introduction of Russian oil. It is said it has bought a large amount of Russian oil, and has been trying to push that in the German markets as against American oil.

THE STANDARD HAS NO APPRECIABLE ADVANTAGES IN PROCESSES.

Q. (By Mr. JENKS.) The Standard Oil Company has often claimed that it has had a decided advantage by virtue of the patents it has succeeded in getting with a large number of establishments that have been purchased. In your judgment does it have much advantage along that line?—A. No; I think their process of manufacture is very similar to that employed by the independent refiners.

Q. (By Mr. FARQUHAR.) Suppose you add "formula" to patent in that question?—A. I do not believe they have much advantage in that regard, if any.

OUT PRICES FOR COAL—EFFECT UPON THE MINERS.

Q. (By Mr. JENKS.) Do they have any advantage in the matter of getting fuel cheaper?—A. Yes; I think that all large consumers have an undue advantage in securing fuel. I think that has served to very much depress labor. In other words, when they want an amount of coal they practically fix their price. They say, "We will take this coal if you will furnish it at a certain price; if you do not furnish it at that price we will not take it." As they use a large amount, the coal companies must furnish it, and in order to get even they cut the men. That is why the miners have been cut down from good prices to poor prices—by the demands of these large companies for coal and other raw material at too low a price. The operators must furnish it, and in order to furnish it they must cut their men.³

The commission took a recess from 1 p. m. to 2 p. m.

EFFECT OF TRUSTS ON PRODUCERS OF RAW MATERIAL.

Q. (By Mr. PHILLIPS.) The question is, How do trusts affect the producer?—A. The reason why I desired to state first why, in my opinion, the effect of trusts upon the consumer is to make him pay a higher price for the manufactured

¹ See Mr. Archbold, p. 532; Mr. Emery, p. 623.

² See p. 275; Mr. Archbold, p. 532; Mr. Emery, pp. 624, 625; Mr. Gall, pp. 672, 681.

³ Compare Mr. Archbold, p. 533.

article is because in doing so it is their aim and object to get a complete monopoly of the business. When they have once gotten a complete monopoly of marketing a certain manufactured article, they have the producer of the raw material as absolutely in their power as they have the consumer. They can fix for him whatever price they please and compel him to take it, and the only thing they do consider is whether he will remain in the business and produce that raw material for them at a given price. They simply allow the producer of the raw material to get about cost out of it, or a very little margin, if any, of profit. Now, speaking of the Standard Oil trust, prior to the time when they virtually obtained a monopoly, the price of crude oil was very much higher than it has been at any time since.

PRICES OF CRUDE OIL, 1869 TO 1897.¹

In 1869 the price was as high as \$7 a barrel: in 1870, \$4.90; in 1871, \$4.75; in 1872, \$4.10—no, higher than that, \$4.55; in 1873—now their power began to be felt, not as the Standard, but as the South Improvement Company²—in 1873 the price declined; the highest price in 1873 was \$2.75 and the lowest was \$1.05. In 1874 the highest price was \$2.07½ and the lowest was \$0.82½. In 1875 the highest price was \$1.82½ and the lowest price was \$0.97½. In 1876 the highest price was \$4.23½ and the lowest was \$1.98½. In 1877 the highest price was \$3.69½ and the lowest \$1.96½. In 1878 the highest price was \$1.63½ and the lowest \$0.95½. In 1879 the highest price was \$1.28½ and the lowest \$0.70½. In 1880 the highest price was \$1.24½ and the lowest \$0.86½. In 1881 the highest price was \$1.01½ and the lowest \$0.80½. In 1883 the highest price was \$1.37 and the lowest \$0.61½. In 1883 the highest price was \$1.24½ and the lowest \$0.97½. In 1884 the highest price was \$1.15½ and the lowest \$0.75. In 1885 the highest price was \$1.12½ and the lowest \$0.75½. In 1886 the highest price was \$0.91½ and the lowest \$0.66. In 1887 the highest price was \$0.90 and the lowest \$0.65½. In 1888 the highest price was \$1 and the lowest \$0.82½. In 1889 the highest price was \$1.12½ and the lowest \$0.86. In 1890 the highest price was \$1.07½ and the lowest \$0.72½. In 1891 the highest price was \$0.81½ and the lowest \$0.61½. In 1892 the highest price was \$0.63½ and the lowest \$0.53. In 1893 the highest price was \$0.80 and the lowest \$0.54½. In 1894 the highest price was \$0.95½ and the lowest \$0.80½. In 1895 the highest price was \$2.60 and the lowest \$1.00½. In 1896 the highest price was \$1.50 and the lowest \$1.05. In 1897 the highest price was \$0.96 and the lowest \$0.65.

RELATIONS OF THE STANDARD TO THE PRODUCERS OF CRUDE OIL.

These are the quotations for the open market. In January, 1895, the Standard Oil Company quit paying the market price for oil, as it was bid upon the oil exchange, and simply hung out the price they would pay for what are known as credit balances, amounts standing to the credit of each individual producer upon their books. They would pay that price and no other.³

Q. (By Mr. NORTH.) What effect did that have on the market?—A. It enabled them to fix absolutely the price of oil. Speculation, the general trade in oil, had no effect upon the prices. They controlled the price absolutely by determining what they would pay.

Q. (By Mr. PHILLIPS.) Did this shut up buyers and the oil exchanges?—A. Well, it almost entirely killed speculation, and drove brokers in oil into doing business in other lines. You will observe, from the figures I quote, that, prior to the time of the Standard Oil Company combination, competition largely controlled the industry. The prices of crude were very much higher than they have been since. Beginning with 1895, they averaged about \$1.05 a barrel. During the ten years prior to that the average of crude oil was below 80 cents. That was generally an unprofitable price. Men could not produce oil and get cost for it, and maintain the production.

Q. (By Representative OTJEN.) Still some men could?—A. Yet the general industry could not do it at the price that prevailed for ten years prior to 1895. So I say the effect of the trust upon the producer of the raw material has been to compel him to take an unremunerative price for the oil product. You might ask why he did not sell his product elsewhere. The pipe line runs to the well, the oil is taken into the pipe line, and as they had absolute control in the refining business, or almost so, they were able to fix the price at which they would take that oil. There were no outside purchasers of that oil; if they produced it there was no other place to put it.⁴

Q. The pipe led to the lines connected with the refineries of the Standard Oil Company?—A. Yes.

¹ See p. 547, and Introduction.

² Compare Mr. Archbold, p. 533.

³ See p. 436.

⁴ Compare Mr. Lockwood, p. 408; Mr. Archbold, pp. 533, 538-540, 553.

Q. (By Representative LIVINGSTON.) You had no other connections?—A. There were no other connections. There were some few independent refineries; but they bought all their crude from the Standard Oil Company and paid them 20 cents, local pipeage rate.

OVERPRODUCTION DID NOT DEPRESS THE PRICE OF CRUDE OIL.

Q. Prior to 1895, for 10 years, you say the oil averaged about 80 cents.—A. Less than 80 cents.

Q. Since that about \$1.05.—A. Yes.

Q. What had overproduction and underconsumption to do with those prices during that period?—A. I think, nothing. There was a time when there was an overproduction. In 1881 the Bradford field was opened. The production in McKean county, known as the Bradford field, averaged very close to 81,000 barrels a day during 1881. That created a heavy stock of oil, until, in August, 1884, there were 39,000,000 barrels of oil in stock.

Q. That must have depressed the price.—A. The price of oil was higher in 1884, as you will see by the tables, than it was subsequently, when the stock was reduced one-half and the production was smaller.¹ Take the year 1884 and compare it with 1897.

Q. In 1880 it was \$1.24 and 1884 it was \$1.13 or \$1.15; there was a decrease between 1880 and 1884 of 10 cents a barrel?—A. The average was higher in 1884 than in 1880, as given by months in this table. Then take 1887; the production was not as great in 1887 as it was in 1884.

Q. And yet the price was lower?—A. The average price in 1887 was about 66 cents a barrel. The stock was then 31,000,000; it had been 39,000,000 in 1884. The production was, I think, about the same in 1887 as in 1884; I can tell in a moment by looking.

RESTRICTION OF PRODUCTION IN 1887.

Q. (By Mr. JENKS.) Was there not an effort made to restrict production at about that time?—A. There was an effort made, and it succeeded. By arrangement with the Standard Oil Company, in 1887 the producers purchased from the Standard 6,000,000 barrels of oil at a fixed price of 62 cents, and shut in their production to the extent of 17,500 barrels a day.²

Q. (By Mr. PHILLIPS.) Reducing it that much?—A. Reducing it that much.

THE CONDITIONS THAT MADE THE HIGH PRICES OF 1870.

Q. I would like to bring your attention to the price of 1870, \$4.90 a barrel; in 1890 you got \$1.07 highest and 72 cents lowest. What was it that enabled the producers of that oil to live at \$1.07, when in 1870 they got \$4.90?—A. In 1870 the producers made a great deal of money. They had a good market. Buyers came into the field to seek the producer, and to buy the oil directly from him and pay him. Some days it would go up half a dollar a barrel when there was competition for it. Many people were getting it for independent refineries. They would go right to Oil Creek to meet the producers, and say: "How much petroleum have you—a thousand barrels? I will give you \$4 for it;" and make a contract right on the spot. Open competition for the oil made that price.

THE COST OF DRILLING WELLS HAS DIMINISHED, BUT NOT THE COST OF TRANSPORTATION.

Q. Has the cost of production been very greatly lessened since that?—A. Yes; they are drilling wells at very much less cost than in 1870.

Q. The pipe system reduces the cost of transportation?—A. No; transportation has not lessened.

Q. I mean from the line out?—A. The line runs to the well. The price of local transportation has never been changed since the Standard Oil Company introduced their lines. When they laid their first lines 2-inch pipe was worth about 85 cents per foot; last year it was worth 6 cents per foot. They charged 20 cents then, and they charge 20 cents now; there has never been any decrease in the cost to the producer, or to any one who desires to have oil transported by local pipe lines.³

Q. What is the surplus in barrels at present?—A. The surplus stock of oil is a little over 11,000,000 barrels in Pennsylvania oil and about 14,000,000 barrels in Lima oil. A year ago Lima had more than 22,000,000 barrels surplus. Pennsylvania has increased its surplus about a million barrels the last year.

Q. The market is not glutted with that oil?—A. No; the stock is not more than should be carried for safety.

¹ See p. 547, for average prices and stock at the end of each year.

² See p. 277.

³ See p. 284.

CRUDE OIL HAS BEEN PRODUCED AT A LOSS, ON THE WHOLE.

I want to say one thing in regard to the producers. I have been intimately acquainted with them since I was a boy; I have lived among them; they have been my clients; I have been familiar with their business. I have never known a more energetic, able, and determined lot of men than the producers of petroleum, and yet, as a body, they have not grown rich, but rather poor. There were individual instances of producers becoming wealthy—many of them—but they were engaged in a speculative business, in which there are always chances of certain persons becoming rich. I believe the great body of producers have put money in rather than taken it out.¹

THE TOTAL PRODUCT IN 1870, 1890, 1891.

Q. What was the total product of the oil wells in 1870 and the total product in 1890?—A. The production of Pennsylvania oil in 1890 was about 35,000,000 barrels; I think the production in 1870 was not over 5,000,000 barrels.² That is from recollection. I am a little way from the exact fact, but not far. I think the production was about 90,000 barrels a day in 1890. In 1891 it ran up above 100,000 barrels a day by the discovery of the McDonald field, which was very prolific.

CAUSES OF CHANGES OF PRICE OF CRUDE OIL.

Q. I want to get a basis for an opinion as to what produced this rapid decline of prices from 1870 to 1890; that is the reason I asked this question.—A. That was entirely arbitrary; there was nothing to reduce prices so destructively as that.

Q. Did the consumption increase as fast as production?—A. I think consumption kept pace with production.

Q. Is there any way of showing that?—A. The export tables will show that it is true as to export oil, and I think it is certainly true as to home consumption.

Q. (By Mr. FARQUHAR.) How do you account for the abnormal prices of 1876 and 1877?—A. There was an open competitive market, and the Standard Oil Company was not really a factor in it yet. Those prices were the effect of speculation in the open exchanges.

Q. You mean to say those prices were entirely speculative prices, and not product prices?—A. People bought oil for manufacture as well—

Q. (By Mr. PHILLIPS.) Had not the discovery of fourth-sand oil under third-sand deposit something to do with lowering the prices very materially about 1873? Were the very high prices of 1876 and 1877 the result of a reaction from the very low prices that preceded?—A. I think the discovery of the Butler field, which was a very prolific field of oil, had something to do with the lowering of the prices in 1873, 1874, and 1875. Then there was a reaction. Oil went as low as 46 cents in 1873 or 1874.

Q. I have known it to be sold as low as 40 cents.—A. Yes; since.

A MANUFACTURING COMBINATION CAN DEPRESS THE PRICE OF RAW MATERIAL.

Q. You said a moment ago in your opening remarks that the refineries controlled the producers of the raw material; is that not true with all refining and manufacturing? Take flax, take cotton, take hemp, anything you please; does not the manufacturer, in the last analysis, control the price of the raw product just as these refineries control the price of crude oil?—A. But if there are a great many persons in the manufacture, there is competition between them, and that affects prices.

Q. Provided there is no combination there?—A. Yes; but where there is a combination the price is fixed arbitrarily. The combination simply fixes the price and the producers must take it.

REFINING BY PRODUCERS—OWNERSHIP OF OIL WELLS.

Q. If these producers should refine their own oil, what would be the result?—A. Then they would have to meet the Standard Oil Company in the refining markets.

Q. Would the Standard Oil Company have to go out of existence if the producers should refine their own oil?—A. If they refined it all, certainly; but the Standard people are producers.

Q. (By Mr. NORTH.) To a considerable extent?—A. About 23 to 25 per cent, I should say, of the entire production.³

Q. (By Representative LIVINGSTON.) Will you please tell us how many independent wells there are?—A. I think there are from fifty to sixty thousand wells

¹ See pp. 279, 282, 283; Mr. Boyle, pp. 415-417, 419.

² See p. 561.

in existence. Over one-half the production is owned by men who own less than 10 barrels a day apiece, so you can see the extent of the independent production.

Q. There is no way for those independent producers to refine oil, is there?—A. They are attempting to do it in the companies that I represent. They are attempting to transport it, and their independent refineries are attempting to refine it. The stock of the Producers' Oil Company, Limited, and the Producers' and Refiners' Oil Company, Limited, is owned chiefly by producers.

Q. (By Mr. KENNEDY.) It seems to me this independent question is becoming a little bit mixed. When you say "independent producers of oil," do you include these individual companies?—A. I include all companies that are not under the control of the Standard Oil Company.

Q. Then you say the Standard Oil Company produces only about 25 per cent of the oil that is produced?—A. Twenty-three to 25 per cent.

Q. That is, these independent producers produce 50 per cent of the oil?—A. Probably 75.

THE EXPORT TRADE—CONDITIONS AND EFFECTS.

Q. (By Mr. FARQUHAR.) In what form were your first exports to Europe? Was it refined petroleum or crude?—A. Both refined and crude were exported.

Q. In what year was oil exported first?—A. I think oil was exported to Europe as early as 1870; probably before that.

Q. What effect does the export trade in oil have on the market?—A. It gives a market for just the kind of oil they use, and to that extent widens the market.

Q. (By Mr. NORTH.) You get a drawback on tin plate?—A. We have never transported any oil in cases.

Q. Does the Standard Oil Company transport any oil in cases?—A. To some extent, but I think largely supplying their Eastern market from Russia and making tin cans¹—

Q. Drawback has at one time been a large source of revenue to them?—A. It has enabled them to manufacture their cans here, getting a drawback on the tin they use in the manufacture.

Q. (By Mr. FARQUHAR.) Has not this export trade equalized the profits between the producers in this country and the sales in their home market and Europe more than ever in the prices there?—A. It has helped to do it.

Q. Suppose you were in a measure restricted to prices that you would call not living prices, would you not have the export market in Europe with equal prices there, as you say? You could not live if you had to sell 60 per cent of your product at a loss and made a small profit on the other 40 per cent?—A. It would not take long to waste our capital at that.

Q. So you say you must hold a place in the home market as well as the European?—A. I think that the foreign markets do help the independent interests to maintain their foothold, and the Standard seems to have a greater facility in crowding out independents in America than there.

Q. Does this foreign market tend to maintain the domestic price?—A. I think it does.

Q. This foreign consumption seems to be enlarging all the time; does that not go against the idea of a monopoly on the part of the company which produces only 25 per cent of the whole crude product of America?—A. They produce only 25 per cent, but they virtually control 50 per cent more, because they fix the price on that additional 50 per cent. Therefore I do not think the foreign market does minimize the effect of the Standard Oil Company monopoly.

WHY THE PRODUCTION IS KEPT UP, THOUGH MOST PRODUCERS LOSE.

Q. You wish to say that the producers of this country do not receive a fair price for their product?—A. They certainly have not. I do not think that the countries which have produced oil are as well off as they would have been if they had never produced a barrel of oil; yet about 800,000,000 barrels of oil have been taken out of those countries.²

Q. (By Mr. KENNEDY.) At an average cost of what?—A. I think the average cost of taking it out has been about \$1; and for ten years, when production was great, they got very much less than that.

Q. (By Mr. PHILLIPS.) Perhaps you might explain to the commission why the production could keep up under these circumstances.—A. It is a speculative business. One man would come in and drill a well, get a thousand-barrel well and grow rich. The hope of that sort of thing led men to put a great deal of money into drilling these wells. They all hoped to get large wells; they did not find them. More money has been put into the business in ten years than has been taken out of it.

¹ See Mr. Archbold, p. 538.

² See pp. 281, 283; also Mr. Archbold, pp. 538, 539.

Still people make money often, though prices are low. There are wells that run as high as 15,000 barrels a day. Of course a man who has a well of that kind will make a large amount of money.

CAUSES OF CERTAIN FLUCTUATIONS OF PRICE.

MR. JENKS. I want to see if you have made clear the causes for three or four of the most important fluctuations. I understood you to say that the South Improvement Company was formed in 1872, and that within the next two years there was a great fall in price. What influence did the South Improvement Company have in the way of forcing those prices down, if any?—A. I think it had the effect of forcing prices down, because they had combined with the railroads and controlled transportation to a very great extent, and the producers became frightened.¹ Eighteen hundred and seventy-three was the panic year. You will remember the panic had some effect on prices. At that time, also, there was a new discovery, in Butler county. That promised to be a very prolific field; and it proved to be.

Q. Those two factors worked together?—A. Yes.

Q. Then in 1876 and 1877 there was a decided increase in price. You state that was partly due to speculation?—A. Principally to speculation, and partly to the fact that the Butler oil field had been largely worked out and the Bradford field had not yet been opened.

Q. There was in the year 1883 quite a decided rise. Do you remember about that?—A. While that was quite a decided rise, yet it was limited. I think the highest price was—

Q. It was not so high as it had been before?—A. \$1.24½ per barrel.

Q. What time was that in the year?—A. I don't recollect just now. It was the average for the year. That was largely due to the giving out of the field known as the Cherry Grove field, which was opened in July, 1882. The wells were very large, but they did not last a great while. In the fall of 1882 they commenced to decline, and because of that decline the prices went up.

Q. (By Mr. PHILLIPS.) Did not the Bradford field decline at that time very materially?—A. A great many people thought the Bradford field was giving out. I think that was owing to the decline of the Cherry Grove field and also the decline of the Bradford field.

Q. In the years 1888, 1889 and 1890, did that increase come largely from the limitation of the production by the Standard Oil Company?—A. My recollection is that the stock of oil was reduced from 31,000,000 barrels in August, 1887, to about nine or ten million in 1889. That, of course, would account for that rise, although it ought to have been much greater.

Q. There is another decided increase in 1895.—A. In 1893 the price was decidedly low. The McDonald field ran as high in 1891 as 81,000 barrels a day, and at one time 91,000. That caused quite a reduction in price; that was a natural reduction.

Q. In 1894 the prices were \$0.95½ highest, and \$0.80½ lowest; in 1895 it went up to \$2.60. That was a tremendous rise.—A. That was entirely arbitrary. The Standard advanced the price 25 cents per day for a period of about seven days, running the market from \$1.12 to \$2.60 per barrel.

Q. (By Mr. FARQUHAR.) Was that helpful to producers?—A. It helped the producers that had oil on hand to sell.

Q. Still, in the succeeding year, it only went down to \$1.50, so that was but a year's holdings of oil.—A. It went lower than that, I think—to \$1.05 at the lowest.

THE COST OF PRODUCTION OF CRUDE OIL.

Q. (By Mr. NORTH.) Are we to infer from your testimony that the Standard Oil Company arbitrarily fixed the price of crude oil at a figure which it knew to be below cost of production?—A. Yes; that is undoubtedly true, for in 1887 the price was maintained at 65 cents for months. Everybody knows it can not be produced for that. That is away below cost of production.

Q. (By Mr. PHILLIPS.) As a whole?—A. As a whole, I mean, it can not be produced for that.

Q. (By Mr. NORTH.) Will you state your judgment as to the cost of production at the present time?—A. It would, of course, be only an opinion. I think it can be produced now, and the amount of production maintained, at from \$1 to \$1.20 per barrel; but without much profit.

Q. The cost would vary according to local conditions?—A. Yes.

Q. (By Representative OTJEN.) And the flow of the well?—A. Yes. Over one-half of the wells now being operated produce less than half a barrel of oil per

¹ Compare Mr. Archbold, pp. 540, 553.

day; over 25,000 wells produce less than half a barrel a day, wells actually working every day.

Q. (By Mr. NORTH.) Are not all those wells producing at a loss?—A. In some places, where they couple them up, one man will operate probably thirty or forty wells; then there is some little profit at the present price of oil, but very little. In some cases they operate them at a loss. I have asked some of them why they continue to do that, and they said, with the hope that prices will advance so that these wells will become profitable.

Q. (By Mr. JENKS.) These prices that you give are prices at the wells?—A. At the wells.

THE COST OF PIPING.

Q. Piping is still 20 cents?—A. Yes, local piping.

Q. Could you give any estimate as to what the cost of piping is now?—A. I think the cost of pipage would be between 7 and 8 cents a barrel.¹

THE SHUT-IN MOVEMENT OF 1887.²

Q. (By Mr. PHILLIPS.) Senator Lee has referred several times to what was called the "shut-in" movement in oil, or limiting the production. It might be interesting and profitable if he would state what led up to that "shut-in" movement, and what action, if any, was taken in regard to the labor employed throughout the oil fields?—A. The price of oil was below the cost of production during the year 1887. The average price that year was about 66 cents a barrel. The Standard Oil Company said that they wanted to treat the producers fairly, but that they had an excessive stock of oil on hand—31,000,000 barrels—deteriorating in value, and that if we wanted to have a better price production must be decreased, so that they could use up that stock of oil, and take it off the market, and save loss by wastage. A number of the leading producers met a number of the Standard people at Niagara Falls and, after discussing the subject, the producers agreed to limit their production, in order that the Standard might dispose of that excessive stock of oil. I met with them, and I remember the contract by which the producers purchased from the Standard Oil Company 6,000,000 barrels of oil, to compensate them for limiting the production, and also to compensate the labor they employed: because it would cut off the revenue of the men who were engaged in that industry. Mr. Phillips, who was in that movement, insisted that we should set aside 2,000,000 barrels of oil to compensate the laboring men who were in the industry, and who would be thrown out of employment by cutting off the drilling of wells.

Q. The executive board of the Producers' Protective Association?—A. Yes; it was the executive board of the Producers' Protective Association that took that action, and the reason for doing so is well expressed in the preamble of this contract. I will read that. It is on page 69 of that same book—Committee on Manufacturers, 1888:

"Whereas there has accumulated, in past years, an excessive stock of crude petroleum, which is deteriorating in quality, and a portion of which each year becomes sediment, valueless for any purpose, and the carrying of which excessive stock requires the expenditure of vast sums annually; and whereas in consequence of the existence of said stock the price of crude petroleum has for the past year been largely below the cost at which the same was produced; now, in order, as far as possible, to preserve the said stock from further waste and to conserve the public interest and our own, this agreement witnesseth: * * *

Then the producers agreed to reduce their production 17,500 barrels per day, and purchase 6,000,000 barrels of oil from the Standard Oil Company at 62 cents. They were to give the profit of 2,000,000 barrels of it to the well drillers and pumpers who would be thrown out of employment, and to keep the profit on 4,000,000 barrels. That oil was sold separately; and the laboring men actually realized about \$50,000 more profit for their share than the producers did out of the 4,000,000 barrels.

Q. How was the money distributed?—A. That was distributed through their organization, the Well Drillers Union. They were allowed \$1 a day for the time they were unemployed by reason of this movement.

Q. (By Mr. JENKS.) The Standard Oil Company was itself in this movement?—A. The Standard Oil Company put up a million barrels and the independent producers put up a million barrels for the laborers.

Q. (By Mr. PHILLIPS.) Have you anything else to say in regard to production?—A. No; I have not. I believe that if there had been fifty concerns engaged

¹ See Mr. Phillips, p. 594; Mr. Emery, p. 606; Mr. Rogers, pp. 581, 583, 589.

² See pp. 277, 280; Mr. Boyle, pp. 423-425, 460-462; Mr. Archbold, p. 540.

in the manufacture of petroleum, just as wide markets would have been obtained, and that while the consumer would not have paid any more for his oil, the producers would have realized a much better price and would have had a handsome profit. As it is, I think they have not made any profit.¹

Q. (By Representative LIVINGSTON.) Where is the balance of that money now?—A. I think the Standard Oil Company could explain that. I think they have realized in the neighborhood of five hundred millions in profits or more.

THE PIPE LINE COMPANIES—CUSTOMS OF THE BUSINESS.

Q. (By Mr. JENKS.) Will you explain to us briefly the system of the pipe-line service and the use that the producers can make of the pipe lines? Tell how they give a ready market.—A. The oil is gauged by gangers, who run it into the line for the oil company and give the producer a ticket showing the amount of oil that is run in that day. That is telegraphed to the pipe-line office, and they keep books showing the amount of oil due each producer. Any day a man can call at the pipe-line office and sell whatever amount of oil stands on the books to his credit at the price that the pipe-line company fixes. If he desires, when he gets a thousand barrels, he can take out a certificate. That is, a certificate saying that he is entitled to 1,000 barrels of crude oil from such and such a line.

Q. (By Mr. NORTH.) That certificate is negotiable?—A. Yes. It can be sold on the open market.

Q. (By Mr. JENKS.) Then it practically amounts to this, that any producer can every day receive cash for what he has put in?—A. Yes, that is it; and it is true of all pipe lines. They must buy whatever is offered to them; not by law, but as a custom of the business.²

LIMITED ACTIVITY OF THE INDEPENDENTS IN FOREIGN MARKETS.

Q. (By Mr. KENNEDY.) Have the independent companies followed the Standard into the Eastern markets?—A. Only in a very limited way. The independents have not sold oil to any extent in India or China or South America or Africa.

Q. The Standard Oil Company has worked up the markets in all those countries, has it not?—A. They do sell oil in all those countries, yes. That is so far away from home that with our limited amount of oil it would be unsafe to enter into competition with them there.

OIL EXCHANGES—NEW YORK AND OIL CITY.

Q. (By Mr. FARQUHAR.) Do you care to say anything about the New York Oil Exchange? A. No; I think not. When the exchanges were in existence and doing business, the Oil City Exchange always fixed the prices.

EFFECT OF THE STANDARD'S ENTERING THE PRODUCING FIELD.

Q. (By Mr. PHILLIPS.) What effect, if any upon the production of oil, has been produced by the Standard's having entered the producing field in recent years?—A. On production?

Q. On producers or production.—A. I think it has tended to reduce the price of crude. They were very able competitors, and they could go into very deep fields to drill by means of their money, and could drill very deep wells and help keep the production high.

Q. Have they or have they not monopolized a large amount of the prospective oil territory under lease?—A. They have leased it in very large blocks in West Virginia, paying an annual rental and holding it for future development.

Q. Has that in any material way prevented producers from obtaining leases?—A. Undoubtedly, to whatever extent they secured the territory and kept others from coming into it; and with their large means they have been able to secure and hold very extensive blocks of territory.

THE STANDARD PAYS GOOD WAGES, BUT NO BETTER THAN THE INDEPENDENTS PAY.

Q. (By Mr. NORTH.) Are you familiar with the course of wages among the workmen in the main?—A. Yes.

Q. Will you tell the commission how their wages compare to-day with those prior to the organization of the Standard Oil Company?—A. I do not think wages are as high as they were before the Standard Oil Company began business, but I do not think it is owing to that fact. It was a new industry, and in a new indus-

¹ See Mr. Archbold, p. 540.

² See Mr. Boyle, p. 424.

try of that kind wages are always high. They have paid, and do pay, very good wages.

Q. The Standard Oil Company?—A. Yes; but not any better than the independent producers pay; in some cases not so good. But they—I want to do justice to them in that regard—I think do pay good wages.

Q. (By Mr. RATCHFORD.) The claim has been made by the Standard Oil Company that they pay the highest rate of wages to all branches of labor employed, including pipe-line men, traveling salesmen, etc. Is this claim, in your judgment, correct, or otherwise?—A. I think they pay a certain class of men in their employ very high wages. To men that are looking after departments of their business I believe they pay very high salaries. To ordinary labor I think they pay just what the independent producers pay, and others engaged in the same industry.

Q. Traveling salesmen?—A. I have no knowledge on that subject.

THE STANDARD OIL COMPANY MANUFACTURES 90 PER CENT OF THE OIL.

Q. (By Mr. A. L. HARRIS.) Can you furnish this commission with a list of the independent refineries now doing business?—A. Yes.

Q. With the amount of output, substantially?—A. Substantially.

Q. You have not that amount?—A. No.

Q. Can you furnish the commission with the list of refineries now operating either by or with the Standard Oil Company?—A. No; I could not do that.

Q. What changes have been made since April, 1888, as defined on page 350 of the book from which you have quoted?—A. You mean what refineries have gone over to the Standard?

Q. Yes.—A. I think that they control 90 per cent. They manufacture 90 per cent of all the crude oil manufactured in the United States.¹ If they do that, there is only 10 per cent left for others; and controlling 90 per cent, they can absolutely control the price. They are able to sell at a loss until they have driven their competitors out of the business; they have done that repeatedly.

A COMBINE IS HARDER TO DEAL WITH THAN AN INDIVIDUAL.

Q. (By Mr. LIVINGSTON.) Suppose there was no Standard Oil Company. Suppose that I, as an individual, manufactured 90 per cent of all the crude oil produced in the United States. Would not I, as an individual, just as emphatically control the price as the Standard Oil Company now does?—A. Yes; undoubtedly.

Q. The trouble is not so much that the Standard Oil Company are a combine, but rather that they manufacture the crude oil. Does not the simple fact that they manufacture 90 per cent, whether they are in a combine or out of a combine, give them the absolute power to fix the price?—A. Yes; but I think that I would rather compete against an individual owning 90 per cent than against a trust owning 90 per cent, for the reason that when the trust does anything wrong there is always some other wicked person that does it, and not the person who is caught. If you were doing it you would have to be responsible individually for whatever was done. But in a large combination of that kind you never can reach the person that does the wicked thing—it is always somebody else.

THE STANDARD OIL COMPANY A MONOPOLY IN RESTRAINT OF TRADE.

Q. (By Mr. NORTH.) Do you regard the production of 90 per cent of refined oil as constituting a practical monopoly of that industry?—A. Certainly.

Q. Then you think the Standard Oil Company is a monopoly in restraint of trade?—A. I do, undoubtedly.

Q. And that it exists in defiance of the laws of the United States?—A. Yes.

PRICES PAID BY THE STANDARD OIL COMPANY AND BY THE INDEPENDENTS.

Q. (By Mr. A. L. HARRIS.) You stated that after 1895 the Standard Oil Company ran down their price. I desire now to know whether the independent companies made any effort to increase the price fixed by the Standard Oil Company?—A. The companies with which I am connected have at times paid from 1 cent to 9 cents a barrel more than the Standard Oil Company was paying; at times they have paid the same price. They never paid less, except that once by accident, for half a day, we paid half a cent less, I think.²

Q. Did that have any effect on the price offered by the Standard Oil Company?—A. I question it. We had a better price; I do not know what brought it about.

Q. If it made no impression on the price they offered, it is very good evidence that they control the price of crude oil?—A. They would hold their price at a fixed point, no matter what we paid.

¹ Compare Mr. Archbold, p. 580.

² See Mr. Boyle, pp. 442, 444; Mr. Phillips, pp. 598, 599.

RAILROAD DISCRIMINATIONS.

Q. (By Mr. FARQUHAR.) You said that the Standard Oil Company had been able to secure discriminating rates from railroads for the transportation of their products. Can you state to the commission any cases in which it has been proved in open court, or before the Interstate Commerce Commission, that they did receive discriminating rates from railroads?—A. Yes; in the case of a bill in equity filed in the supreme court of Pennsylvania, on page 191 of the report of the Committee on Manufactures, 1888,¹ you will find the testimony of Mr. Cassatt, that they had received 80 cents a barrel from the Pennsylvania Railroad.

Q. Was this a sporadic case, or was it general?—A. It continued until the Standard wiped out all the refiners between Titusville and Pittsburg at that time.

Q. At that time?—A. Yes.

Q. How long did that last?—A. It lasted probably about a year.

Q. Would you say now that they still receive a discriminating rate from the roads?—A. That I have no proof of; but I was attorney in a case brought against the Pennsylvania Railroad by Logan, Emery and Weaver, when the general freight agent of the road said there had been no discrimination; the president of the road said the same, and a number of their chief officers; but when we subpoenaed their auditors, they came and testified that there had been discriminations. Those discriminations ran from 3 cents a barrel up to 28 cents a barrel. The amount of them in one year, as against Logan, Emery and Weaver, was something over \$24,000. They were testified to by both auditors, and the auditors' statements were brought in showing the exact amount.²

Q. (By Mr. JENKS.) When was this?—A. My recollection is that the suit was tried in 1889 or 1890. They compromised the suit and paid \$30,000 for these discriminations.

Q. (By Mr. FARQUHAR.) Do your independent companies own tank cars?—A. Yes; the independent refiners own tank cars. The Producers' Oil Company, Limited, own 48.

Q. Has there been any discrimination on the part of railroads in hauling these cars?—A. Yes.

Q. As between the independents and the Standard?—A. Yes.

Q. State as explicitly as you can where it has occurred and when.—A. It has occurred on nearly all the roads, and those questions are in litigation. The Interstate Commerce Commission assessed against the Pennsylvania and other roads a sum equal to \$86,000. Suits brought by the independent refiners against the railroads, for the recovery of that money, are now pending in the circuit court at Pittsburg.³

Q. You spoke some time ago about the rebate. Will you state the average price of the oil when the 80-cent rebate was given?—A. It fluctuated, of course; but it was from \$1.50 to \$2.50 a barrel.

Q. (By Mr. A. L. HARRIS.) What was the character of the rebates at the time you speak of in the Pennsylvania oil district? What I mean is this: What was the amount of the rebate, and whom did that rebate go to in that district?—A. That rebate was in the shape of checks, I suppose, or cash, and it has been estimated to have amounted to ten millions of dollars. It went to the Standard Oil Company chiefly, I suppose. I do not know how it was divided.

Q. (By Mr. PHILLIPS.) Is it or is it not in the testimony of Mr. Cassatt—was it not given, and the length of time, with the receipts of amounts?—A. It is in testimony on pages 242 and 243 of the work on trusts.⁴

Q. Can you give the commission the exact amount in dollars?—A. It is estimated to be, from October 17, 1877, to March 31, 1879, \$10,155,218.⁵

Q. For how many months?—A. From October 17, 1877, to March 31, 1879; a year and five months.

Q. (By Mr. A. L. HARRIS.) Was it paid to the railroad and then paid back to the Standard Oil Company?—A. The independent shipper would ship his oil and pay the open rate—we will say, \$1.80; and 80 cents of this freight that he paid was handed over to the Standard Oil Company. They got the rebate not only on the oil they shipped, but on the oil he shipped. No one could stand that. I do not say that 80 cents is the amount, but they did that in some instances.

Q. (By Mr. JENKS.) Governor Harris has asked you if you could furnish a list of the refineries that are in your company. Would you be willing to add to the list of those establishments also the capital stock of each one and the market value of it before it came in? Do you think you could get it?—A. Yes.

Q. I presume it may be a matter of record—and the capital in case any firms

¹ House Reports, Fiftieth Congress, first session, vol. 9. See the text.

² See p. 202; also Mr. Archbold, p. 516; Mr. Westgate, pp. 379, 380.

³ Compare Mr. Archbold, p. 514; Mr. Emery, pp. 660, 661.

came in that were not corporations. Were any of them bonded?—A. I think they were principally out of debt.

Q. So that there would be no bonds to put into a list of that kind. Did any of them have preferred stock as well as common stock?—A. I think not; not any of the refining companies.

Q. Would you be willing to give the details in reference to their stock?—A. I think they would be entirely willing to submit them to the commission.

Q. You will be kind enough to add that to the list?—A. Yes.

Q. You said this morning that you knew of a number of refineries that had been purchased by the Standard and dismantled?—A. Yes.

Q. Can you give us a list of those?

REASONS FOR DISMANTLING REFINERIES.

Q. (By Mr. FARQUHAR.) What are the usual reasons for dismantling a plant?—A. Those plants were under contract with the Producers and Refiners' Oil Company, Limited, to take oil from them. I can conceive two reasons for dismantling them: First, to prevent them from being in the trade as competitors; second, to injure the Producers and Refiners' Oil Company, Limited. The Standard declined to sell any of the material to the other independent refineries. They paid large prices for them and wasted the material; at least, they dismantled them, and refused to sell them to other independent refineries.¹

Q. When the commission hears representatives of the Standard Oil Company, that question of the commercial and legitimate reasons for dismantling may come before us. I should like your position on it.—A. I think it was done to take them out of competition, and to injure the only competitor that was in that field. I know of no other reason. They were good plants, well located. There would certainly be no reason for paying a high price for a plant and merely tearing it down, unless there was some design of that kind.

ONLY A MODERATE RISE OF PRICE WHEN PRODUCTION OF CRUDE OIL WAS LIMITED.

Q. (By Mr. LIVINGSTON.) Seventy-five per cent of this oil is produced by independent oil companies outside of the Standard Oil Company. If they could by consent and agreement reduce the production of oil one-half, what effect would that have on the independent companies? Would it largely increase the price of crude oil?—A. They did enter into an agreement to reduce the production 17,500 barrels a day, and it did not largely increase the price of crude, though it reduced the stock from 81,000,000 to 9,000,000.²

Q. It did not?—A. It did not; it increased it to some extent, but not to the anticipated extent.

DISADVANTAGES TO EMPLOYEES OF HAVING ONLY ONE POSSIBLE EMPLOYER.³

Q. (By Mr. PHILLIPS.) Have you any further remarks to make or information to give in regard to the effect on labor?

Q. (By Representative LIVINGSTON.) Do you mean to say that it is lessening the price of labor? Is that the idea?—A. I am not speaking so much of what has been done by trusts, but my opinion is this: That when all the people that are skilled in any branch of industry come to be employed by a single concern, and there is nowhere else to go to seek that kind of employment, they are largely under the control of that one institution, both as to their wages and as to everything else, and that such a condition is hurtful to labor, because there is no competition then for labor in that given line. Suppose all the men that are skilled in refining, for instance, are employed by one institution, and a man is discharged by that institution for some fanciful reason; there is nowhere for him to go to get employment. Now, I think that is a positive injury to labor. If fifty concerns were in the business, when a man ceased for any reason to be employed by one, he could go to another. If there is only the one employer, that man is driven out of that industry altogether, and must seek something new. He can not be as profitable either to himself or to the public in any new capacity as he would be in a capacity in which he is highly skilled. Maybe he has attained such an age that he can not go into any new business; then that man's labor is lost to the world. I know of instances where a trust has discharged a man because he had had some difficulty with, we will say, the general manager of a particular plant, and the manager immediately reported that man to all the other institutions and said, "This man is not to receive employment." For a year—in the case I have in mind; I do not care to give names—he was out of employment and could not get it. That was his business; he knew it; he had been in the business for ten years;

¹ See Mr. Archbold, p. 572; Mr. Westgate, p. 370.

² See pp. 277, 280, 284; also Mr. Archbold, p. 540.

³ See Mr. Archbold, p. 542.

and he could not get employment in any other institution connected with that trust. Now, I think that all these questions come in: and that the trust is always hurtful to labor because, just as it controls the price of the crude product, it will absolutely control the labor in that given industry. Suppose you have a trust with regard to all industries; then there is no place for a man to go. If he is thrown out of employment, where will he go to get work? Every man ought to be able in this country, rich as it is, to have a chance for employment. So I think that in that way it affects labor. There is another way. Under these conditions men are made subservient; their manhood is to some extent destroyed. They are not the same independent class of Americans that they would be if they felt that, if they were discharged by this employer, they could go to some other and get employment. It belittles men and injures them in every way. Therefore, I think the trusts are hurtful to labor.

LABOR ORGANIZATIONS. THE STANDARD OIL COMPANY AND ITS MEN.

(By Mr. KENNEDY.) Do you believe that combinations such as you have been talking about make the organization of labor more logical and necessary to the welfare of the working men?—A. If they do not organize and keep organized I do not know what will become of them.

Q. (By Representative OTJEN.) Are the men employed in the oil industry generally organized?—A. There is an organization known as the Producers' Protective Association, organized for the purpose of protection. They have not had any meetings in recent years because they have been devoting their time to the business part of the defense of their industry. They have not had any time to look after anything else.

Q. (By Mr. NORTH.) Are the employees of the Standard Oil Company organized into a trade union?—A. I do not know. I want to say for the employees of the Standard Oil Company that, as far as I know them, they are competent, polite, and a good class of men. So far as the producers are concerned, they have no fault to find with the class of men they employ to do their business. They are really good men. They have to employ that class of men.

Q. (By Mr. KENNEDY.) Is it a fact that the Standard Oil Company's employees are comparatively well paid and well treated, and are always loyal to the Standard Oil Company?—A. I know nothing about the question of loyalty. We have never attempted to inquire into that, but I think they are reasonably well paid.

POWER OF TRUSTS OVER THEIR MEN. THEY HAVE PAID FAIR WAGES THUS FAR.

Q. (By Mr. RATCHFORD.) It is claimed by a great many laboring men and labor organizations that a trust which controls a number of establishments, by reason of that large control of industry, is able to close down one or more of them in order to reduce wages or to lengthen the hours of labor or to bring about some undesirable condition for the working people, and at the same time suffer no loss in their product, because they can transfer their business to some other establishment for the time being. What is your opinion on that phase of the question?—A. I should think that would be true, for the reason that if they have a complete monopoly of the business, it does not make any difference what their output is. They can close half their establishments, and put out half the product, and double the price on it. They can put the price where they please; their is no power to control them anywhere.

Q. Have you any recollection of any instances in which that took place, or in which there is reason to believe that it was the cause of the trouble?—A. No. I do not recollect any at present. Trusts have not been long in existence, except in a few instances. It was necessary for these trusts to have the good will of their employees; and they have paid them fairly good wages and have not been in trouble with their labor.

Q. It is claimed by the friends of trusts pretty generally that they treat their workmen better, pay them higher wages, and grant more agreeable conditions generally than do individual employers or smaller companies. What is the truth about that?—A. I think there is nothing in that.

Q. Generally speaking?—A. Taking them all into consideration, I do not believe that is true.

STABILITY OF EMPLOYMENT.

Q. (By Mr. FARQUHAR.) Does a trust usually give more stable employment than individuals and smaller corporations?—A. I think that the length of the period that they have been in existence has not been long enough to determine

¹ See Mr. Boyle, pp. 428, 429, 441-446, 449; Mr. Phillips, p. 589, bottom.

that question. A great many individuals and companies have had employees for ten to fifteen and twenty and thirty years. The trusts have not been in existence so long as that.

Q. Is it not usual among the employees of the Standard to say, "As long as you behave yourself and attend to your business you will stay?" Is not that always the inducement held out to foremen and others in the Standard to keep their men?—A. Oh, they follow the business rule. When the exigencies of the business require it, they cut their employees without giving much reason for it. I do not know that they do that very thing; I do not charge them with that.

TRUSTS DISPLACE LABOR.

Q. (By Mr. C. J. HARRIS.) When they dismantle a factory, what becomes of the men that have worked there?—A. They find some other employment if they can.

Q. (By Mr. RATCHFORD.) To what extent, if any, does the operation of the trust displace men—traveling salesmen, foremen, or superintendents; labor of any kind?—A. I think it very largely displaces labor, but I do not know that it decreases the cost, because I think they add to the salaries of men that are in charge. They pay very high salaries to leading men. I think that the liberal payments, instead of being given to a number of men, are given to one or two, and they cut the laboring forces. I think it would do away with a great many traveling men, because the trust can fix their own price, and people must come and pay it.

Q. You seem to be pretty positive that labor is displaced in the operation of a trust?—A. I have not a bit of doubt of it.

Q. (By Representative LIVINGSTON.) Has the Standard Oil Company done any reducing of the wages of their employees in years gone by?—A. They did, during the depressed period, reduce wages.

Q. During what period?—A. During the panic of 1893, and subsequent to that. Probably not more than others; I do not know about that.

THE INDEPENDENT REFINERIES ARE INDEPENDENT.

Q. (By Mr. JENKS.) Do the four different companies of your organization work together in harmony?—A. Yes.

Q. Have you been able in your organization, since you came together and are working in harmony, to dispense with the labor or services of many of your higher priced men, your traveling men, and so on?—A. We never have employed any traveling men in this country. The refineries are all independent; they are not at all connected with our companies. Each refinery is an entirely independent concern. They simply buy oil from us, and we buy oil from them, just as we would buy it from anybody else.

Q. (By Mr. PHILLIPS.) Do they own stock in these pipe lines?—A. They own stock in the various pipe lines, and also in the Pure Oil Company. While they own stock, they own their refineries independently. There are the Independent, the Penn, the Continental, the Germania, the Crystal, the America, the Emery Manufacturing Company, the Columbia, and the A. L. Confer; they all own their plants. Sometimes two or three persons own one. In the Independent Refining Company, I think, there are only three persons; in the Continental I think there are but two. There are several others owned by one or two persons, and they are all independent.¹

RELATIONS OF THE REFINERIES TO THE INDEPENDENT COMPANIES.

Q. (By Mr. C. J. HARRIS.) Your companies do not pretend to be a trust, do they?—A. Oh, no; we are trying to keep away from trusts as far as we can.

Q. (By Representative LIVINGSTON.) If I understand, each of these independent companies owns stock in the general company?—A. Yes; in the United States Pipe Line Company, and also in the Producers and Refiners' Oil Company, Limited.

Q. And you view that pipe line as the agent of those other companies?—A. No; as an independent company in which various persons own stock. The companies stand each on its own footing as to dividends.

Q. Who pays the incidental expenses of this independent pipe line?—A. The company itself. It charges 15 cents for local pipage to the refiners. They have 15 cents pipage to pay the expenses, and if anything is left, that is the profit.

Q. (By Mr. PHILLIPS.) Was there or was there not a movement on foot to unite the various pipe-line companies and the refineries?—A. There have been sug-

¹ See pp. 270, 271; also Mr. Emery. p. 656.

gestions of that kind. It has been thought that we should be stronger if we were united into one organization.

Q. (By Representative LIVINGSTON.) You charge 15 cents for piping, and out of that you pay all your current expenses?—A. Yes.

Q. You have a monopoly on that; you are a kind of a trust, are you not?—A. No; the Standard is competing with us in the fields we are in: they rob us of that feature, I should think. Ten per cent could hardly be claimed to be a monopoly, and we are not 10 per cent even; we are about 5.

Q. (By Mr. PHILLIPS.) If these various companies became united, should you be willing, as an officer in each one of the four, to submit to thorough inspection of the books and accounts, and the profits that such an organization might make? A. We should be very glad if the Government would inspect us and everybody else; we should be glad to suffer an inspection in order to have some other people inspected.

SOME REFINERIES HAVE AGENCIES. THE MOST OF THEIR OIL IS SOLD THROUGH MERCHANTS.

Q. (By Mr. FARQUHAR.) How do these independent companies put their burning and lubricating oils on the American market?—A. Each refining company markets its own oil. They get orders, and some of them have stations. For instance, one company I know has a station at Rock Island, Ill., and one in Chicago; and through these stations it markets almost all its refined product.

Q. Have these independent companies permanent agencies for the sale of their oil?—A. Some of them.

Q. Or do they drum for their custom?—A. Some of them have permanent agents in certain places, shipping the oil to them and having facilities for storing it.

Q. Do you know whether the greater part of their product is put into the field through their own agents or through other oil houses in those cities?—A. I presume that the greater part of their product that is marketed in the United States is sold through merchants or others who are in the business.

QUALITY OF THE PRODUCTS OF THE STANDARD OIL COMPANY AND OF THE INDEPENDENTS.

Q. That being the case, the Standard Oil Company and your independent companies come into open competition there for the market?—A. Certainly.

Q. Do you know of any better qualification for the sale of oil, independent of monopoly, than the quality of the oil and the prices?—A. The quality undoubtedly should affect the price.

Q. The Standard Oil Company, coming in with a better quality of oil and selling at an equal price with the other, would limit the field?—A. If they made a better quality of oil.

Q. I say, presuming that they do; I made the question in that way.—A. Well, they do not.

Q. Is it not a fact that no company, whether a monopoly or not, can hold the American market unless it sells a better oil at an equal price?—A. No; I should not say that would be true, absolutely.

RAILROAD FAVORITISM.

Q. You said this morning¹ that some of the railroads have taken the buying of lubricating oil out of the hands of the purchasing agents, and that the oil is bought by one of the officers—the vice-president or the president of the road. Is it not a fact that in the economy of the equipment of the railroad, if you ran a poor lubricating oil you would lose by it more than the little cent or two that you might save on the gallon?—A. Undoubtedly.

Q. Would it not ultimately ruin the machinery and ruin the road?—A. Yes.

Q. Without any favoritism question to speak of in the selling between these people?—A. I would not say that.

Q. Do you not think that years ago, while favoritism did prevail in purchasing lubricating and burning oils on railroads and among large consumers, there was a favoritism and a large one, and that now the economy of railroads is such that even in their stationery and printing, where management used to be left with local agents and division superintendents, it is now concentrated in one head or function in the management of the road? Isn't it the same with the purchase of oil?—A. No; I think oil is made an exception.

Q. You do?—A. Yes.

¹ See p. 288.

Q. Can you deny that while temporarily the advantage might be given, for personal reasons, to the men who canvass, or to the company that offers to sell the oil, in the course of a year or two, the best product will stick—that is, at an equal price with any other?—A. That would be true if they were looking solely to the interest of the road; but if they had some ulterior purpose in purchasing, it would not be true.

Q. I am discussing the purely business proposition.—A. As a purely business proposition that would be true; and if a man was doing it for himself, it would be all right.

Q. So there is no monopoly that can be held in any product, in the United States or anywhere else, as long as you put the product or article on the market at an equal price?—A. I do not think that is true.

Q. Why is it here, in textiles and things of that kind that this country produces, that the product is the finest? And will they not hold the market for years against all other producers?—A. That may be true. It ought to be true always, but I am afraid it is not.

Q. (By Representative LIVINGSTON.) Do you sell your oil in States where they have an oil inspector?—A. Yes.

Q. You have no trouble with the laws of Georgia? They have an inspector, and you sell your oils there without let or hindrance?—A. Yes.

Q. Does the Standard?—A. Yes.

Q. They are supposed to stand the same test?—A. All have to. I think that with the general public they are on an equal footing. So they are to a large consumer that is purchasing for himself; but in the case of an officer of a railroad, there may be some reason why he wants—

Q. To shut out?—A. To shut out competitors in favor of them.

Q. But that is a good business reason, isn't it?—A. Not always, I am afraid.

Q. Usually?—A. I do not think it is usually.

Q. Would you not try to gain the European market, to shut them out of it by putting down the prices in Europe?—A. I think they could purchase just as good oil for one-half the price they are paying. If that is the case, your argument would not hold.

FREIGHT REBATES.

Q. In reaching the market—I use the State of Georgia as a mere illustration—in reaching the market of Georgia, what advantages are granted to the Standard Oil Company over your companies? Any?—A. Yes, we think so.

Q. In the way of rebates?—A. We think so.

Q. Have you established that?—A. It has been established in a number of cases; yes.

Q. Brought to your attention?—A. In Georgia? No, sir.

Q. Well, I only used that as an illustration. Has it been brought to the attention of the Interstate Commerce Commission?—A. Oh, yes; and they have assessed damages for that freight discrimination.

Q. They have collected it?—A. It is in process of collection now; they are still fighting.¹

Q. (By Mr. FARQUHAR.) I think the commission would be much obliged if you would furnish it with the names of these cases that have come into court, where there was sworn evidence to sustain these allegations, where they occurred, the defense made, and whether cases are now in process of litigation.—A. I will do that.

NONE OF THE PRINCIPAL RAILROADS BUYS LUBRICATING OIL FROM THE INDEPENDENTS.

Q. (By Mr. PHILLIPS.) Do any of these independent refiners secure a market for lubricating oil on any of the principal railroads of the United States to-day, or could they if united?—A. They do not now, and I doubt whether they could if united. It is a very doubtful question.

THE INDEPENDENTS REFUSE TO SELL OUT TO THE STANDARD OIL COMPANY. THE REASON.

Q. (By Mr. KENNEDY.) Would you state as your belief, judging from the experience of the past, that the Standard Oil Company would, if it could, to-morrow purchase all these refining companies, paying for them more than their real value?—A. I do not know whether they would do that now or not. They have offered to do it in the past. They made that offer in the fall of 1894 and in January, 1895.²

¹ See p. 287; Mr. Archbold, p. 516.

² See p. 271; Mr. Phillips, p. 593; Mr. Archbold, p. 530.

Q. Do you believe that if such an offer should be made the independent companies would refuse it?—A. I think they would. They have done it.

Q. So then the public must suppose that the independent companies have a good thing in the way of business?—A. No, that doesn't follow. The people who are interested in these pipe lines have a very large interest at stake in their producing properties. They own about 75 per cent of 80,000 barrels of oil a day; in other words, 60,000 barrels of oil a day. That amounts in a year to about 20,000,000 barrels of oil. We believe that the price of that oil is largely dependent upon having an open competitive market for refined oil. Their pipe lines will give them an open competitive market, and therefore they would not give them up. They had rather have them wiped out, if they must be. We were at a point where we expected them to be wiped out; but we were willing to suffer that rather than to sell them. We passed an act of the legislature that we could not sell them, and nobody could sell them, but they got that repealed. The Standard had that repealed, and a little while afterwards it purchased the Crescent pipe line. That law, prohibiting independent pipe lines from consolidating, was passed in 1883, at the same time when the free pipe line law was passed. That continued to be the law until 1895, when the Standard Oil Company secured its repeal. They had got a bill passed to repeal it two years before, but the governor of Pennsylvania at that time vetoed the bill. They got the repeal bill through again in 1895, and the governor signed it. So that the independent people who secured the passage of this bill were like Cortez when he went to Mexico. They were willing to burn their ships, and either stay in Mexico and fight it out or fall.

THE INDEPENDENT ORGANIZATION INCLUDES THE OWNERS OF 40 OR 50 PER CENT OF THE CRUDE OIL PRODUCTION.

Q. (By Mr. JENKS.) Did I understand you to say that about 75 per cent of the producing capacity of the Pennsylvania oil field was in your organization?—A. No; about 75 per cent is owned by independent producers, not affiliated or associated in any way with the Standard Oil Company; some of them are not our stockholders.

Q. About what per cent of the oil-producing fields do you have in your organization?—A. I think possibly about 40 or 50 per cent.

Q. (By Mr. PHILLIPS.) That is, stockholders?—A. Yes.

Q. But the lines themselves do not own anything?—A. No, the lines themselves do not.

IN THE LONG RUN, THE PRICE MUST BE HIGH ENOUGH TO PAY THE LEAST FORTUNATE PRODUCER WHOSE OIL IS NEEDED TO SUPPLY THE MARKET.

Q. (By Mr. RATCHFORD.) Speaking of the advantages of the larger concern, I want you to make a comparison as to the large and small producers. We will suppose, for instance, that A has oil wells producing 10 barrels per day, B produces 10,000 per day; how can A compete with B in the open market?—A. He cannot; but he ought to have an equal chance, for that very reason.

Q. The cost of developing a well is about the same whether it flows or whether it is dry?—A. Yes.

Q. Is not the advantage of B over A as great as the advantage of the Standard Oil Company over B?—A. You are comparing the manufacturer with the producer.

Q. Admitting that A produces 10 barrels per day and B produces 10,000, are the advantages of B over A as great as the advantages of the Standard Oil Company over B, as the larger producer of the two?—A. I do not see how you can make that comparison. You are comparing two entirely different things; you are comparing the manufacturer with the producer and one producer with another.

Q. The point I wish to bring out is simply this: Inasmuch as the cost of boring a well is the same, or nearly the same, whether it yields much or little, the individual who is fortunate enough to make a good strike, with a few additional laborers to run it, can handle 10,000 barrels as cheaply as the man who is not so fortunate, handles, perhaps, only 10 or 100 barrels; and because of his greater output he can, if he will, sell at a smaller margin of profit.—A. He can; but the price is usually fixed by the man who has the smaller well, for this reason: If he does not get a price that returns him at least the cost of production, he must quit. The price may not be fixed, if it is fixed arbitrarily, at a price which enables him to live. But if it enables a man who produces 10 barrels a day to live, the man who produces 10,000 per day from a small number of wells is simply getting a fortune.

Q. I understand you to say the small producer fixes the price.—A. No; but the price must be fixed so that he can produce, or the small well must be abandoned.

Q. Is that price fixed by mutual arrangement?—A. No, it is fixed arbitrarily by the Standard Oil Company.¹

MOST OIL COMES FROM VERY SMALL WELLS.

Q. (By Mr. PHILLIPS.) Is it or is it not an ascertained fact that the greater part of the production is coming from small wells and the great number of small producers?—A. Over a majority of that production is from wells that produce less than a half barrel a day.

THE REMEDY: FORBID DESTRUCTIVE COMPETITION.

Q. What is your idea as to the remedy?—A. That is a very difficult question. I want to be understood as giving simply my own view about it. The most difficult thing is to find a remedy for the evil.

Q. (By Representative LIVINGSTON.) It is no trouble for a man to know he is sick.—A. No; you can diagnose the case a great deal better than you can apply the remedy. I suppose the real evil ought to be reached. The real evil is not so much in the aggregation of capital. No one objects to a man's being rich, if he acquires his money honestly. No one objects to his engaging in business. We object to his driving others out of business, and doing it by the use of unfair methods. No one objects to large aggregations of capital engaging in business, if they do it fairly and honestly, and are willing to enter into fair, honest competition. I would try, if possible, to prevent them from abusing their power. I would make it a criminal offense, say, in a few words, that any person or corporation that engages in destructive competition shall be guilty of a misdemeanor and be punished with fine and imprisonment both.

Q. (By Mr. FARQUHAR.) You mean that as a national law or a State law?—A. We could not apply a national law, except to interstate commerce. It would have to be a State law where it concerned commerce within the State.

Q. How would you define "destructive"?—A. I would leave that to the courts and juries; they will find a way out. That is a question of intent; and that always enters into a criminal offense. If a man starts to sell a product, not for the purpose of getting a market for his own goods, but to drive somebody else out of the business, that is destructive competition. Let the jury find that intent from the evidence. Let them find it from the price, if they please. If the price is away below the cost, and they maintain that price for a long period, not just for a single sale, that is destructive competition. That is a crime—one of the highest crimes; nothing in this country has done so much damage in recent years as destructive competition, entered into deliberately. It is one of the most deliberate offenses that can be committed. No man need engage in it; he can easily avoid the penalty by avoiding the crime. That is one way.²

LIMIT THE CAPITAL OF MANUFACTURING CORPORATIONS TO \$1,000,000.

If I had the doing of it, I would never charter a corporation, except for public purposes, with over \$1,000,000 capital. That is large enough in any business to secure a perfect division of labor. I think that ought to be the limit of commercial companies. There is not much danger in this country from a company with \$1,000,000 capital. One man said to me: "This is our business. I can lose \$100,000 and spread it over half a million and not feel it. Your company can not lose \$100,000; it does not have it to lose; we will drive you out of business."

AS TO QUASI-PUBLIC COMPANIES, REGULATE THEIR CHARGES.

Q. (By Mr. A. L. HARRIS.) Would you include transportation companies in that bill also?—A. No, I would call that business public or quasi-public. I think that all telegraph companies, all electric-light companies, where they are in cities or where they deal directly with the public, all traction companies, should be put under severe regulation. The price of those goods can be regulated because they have a fixed unit. Fix the price of the thousand cubic feet of gas. Fix the fare for the carriage of passengers. You have no way of getting at a commercial company. If you can limit their capital to \$1,000,000, you will have a remedy. If you do not do that, you must do something else, or else the country is going to be ruined by these large aggregations of capital.

¹ See p. 436.

² See Mr. Archbold, p. 543.

NO ANTITRUST LAW CAN BE OF SERVICE, UNLESS IT LIMITS THE SIZE OF CAPITALS,
OR MAKES DESTRUCTIVE COMPETITION A PENAL OFFENSE.

Q. Would you reach the trouble better by what is commonly called the anti-trust laws, or in the corporation acts of the different States?—A. They would have to be real anti-trust laws; you would have to say that no company should have more than \$1,000,000 capital. You can have a perfect division of labor with \$1,000,000 capital; and all political economists say that is all that is desired by the aggregation of capital. That is not what the trust desires. The trusts desire to get into position to squeeze somebody; drive somebody out of business; whereby they can levy tolls on the public generally. That is what the trusts are for.

Q. (By Representative LIVINGSTON.) You recommend State laws controlling and regulating trusts; what would you recommend us to do with the State of New Jersey, that starts them?—A. I do not know what you could do with the State of New Jersey. I do not suppose any legislation could be secured in New Jersey. This will probably have to be reached by securing a healthy public sentiment first.

Q. If one State in the Union is allowed to issue charters just as she pleases, and do as she pleases, and those charters are operated in all the other States, how are you going to legislate?—A. You could say in the State of Georgia that no trust should be possible in that State. Suppose a dozen States should pass laws that no trust should be possible or no corporation should do business in those States with a capital of over \$1,000,000; that would enable independent companies to go in and do business in those lines. I do not object to the amount of capital. I only limit it to \$1,000,000 because a company with \$1,000,000 capital can not engage in destructive competition. It might be mean in a small way, but it could not do much damage. A company with \$100,000,000 or \$500,000,000 capital can drive everybody out of that business; and the question is, Will they not do it? There is no way of curbing their power except by restricting their capital, or else making it a penal offense to engage in destructive competition.

THE DUTY ON OIL IS PERHAPS MEANT TO PROTECT THE FUTURE.

Q. Have we any import duties on oil?—A. Yes, there is an import duty of 10 cents a barrel.

Q. How does that help?—A. There is no oil imported into this country. It does not help anybody, because there is no oil imported.

Does not keep anybody out?—A. No one.

Why is it put on?—A. I do not know; for the protection of the future, perhaps.

OVERCAPITALIZATION LEADS TO EXCESSIVE CHARGES.

Q. In addition to large aggregations of capital, is not the public also in danger on account of overcapitalization?—A. Undoubtedly. Having overcapitalized these trusts, they will want to show an earning power to the holders of stock; and in order to do that they must collect extortionate profits from the consumer if they have a monopoly. That will tend to drive the directors or trustees of these trusts into obtaining from the public excessive profits.

Q. (By Representative LIVINGSTON.) Do not all overcapitalized organizations go into bankruptcy inevitably?—A. I think a great many of them will.

TRUSTS KILL INDIVIDUAL ENTERPRISE.

(By Mr. RATCHFORD.) What effect, in your judgment, has the organization and operation of trusts and the large moneyed corporations upon the personal ambition, the individual enterprise of the American people?—A. I think it is very rapidly stifling it.

Q. Could you state whether or not, in your judgment, large numbers of individuals are kept out of business by reason of those things?—A. No question about it.

Q. You spoke of destructive competition; can you conceive of any way in which that destructive competition could be brought about more forcibly and more fully than by the tearing down and destroying of the rival establishments?—A. No; I do not know a more flagrant means of destroying competition than by paying exorbitant prices for competing plants in good condition and tearing them down. That is a notice to everybody that they do not propose to have competition.

Q. That probably works great hardship to the communities in which these plants are torn down?—A. Undoubtedly; it is a waste of that much capital, which it has taken years to build up. If a man burns his own house he is guilty of arson; if he destroys a new plant out of mere animosity and desire to injure somebody else, I do not know why he should not be guilty of an offense.

INCOME TAXES AND INHERITANCE TAXES.

Q. (By Representative LIVINGSTON.) Instead of preventing combinations of over a million dollars, as you suggested, suppose you levy an income tax of 50 per cent on the profits?—A. I am afraid they would lie about the profits.

Q. Would not that be a fairer way to do it?—A. I would be willing to do anything to wipe them out and give the people a fair chance. I think that would do the work if you could enforce it.

Q. (By Mr. FARQUHAR.) Would any State court regard that as constitutional, or any European court?—A. I have no hostility to any individuals. I simply would like to see some limitation put upon the powers of trusts in the interest of the people themselves.

Q. (By Representative LIVINGSTON.) It would not be class legislation if Congress should lay a tax on the incomes and profits of all trusts and combinations?—A. I should dislike to see any law passed that would recognize their existence.

Q. (By Mr. PHILLIPS.) What would you think of an inheritance tax, levied in some graded proportion to wealth?—A. I am afraid that would be open to objection unless it was uniform; and if it were uniform it would be avoided very largely, would it not, by people making gifts prior to their death?

GOVERNMENT VISITATION DESIRABLE, BUT NOT SUFFICIENT.

Q. (By Mr. FARQUHAR.) Have you any other remedy for destructive competition than the limitation of capital to \$1,000,000?—A. Government visitation might alleviate the evil, but that would only result in publicity. They do not seem to care much about that: they are largely defying public opinion.

Q. (By Mr. PHILLIPS.) Would you be in favor of Government inspection of corporations?—A. I think that ought to be done; the power of visitation was a common-law right in England to the founder of a corporation. He had the power of visitation, and as the State creates the corporation it certainly should have the power of visitation. It has an undoubted right to do it.

PRACTICABILITY OF PUNISHING DESTRUCTIVE COMPETITION.

Q. (By Representative OTJEN.) If you make destructive competition a criminal offense, how would you enforce the penalty against corporations?—A. I would make it apply to any person, corporation, or agent of a corporation. You cannot imprison a corporation, but the fine would apply to it.

Q. You would simply have to enforce the penalty in the shape of a fine?—A. Make all officers guilty of the offense. They are willing to risk anything, violate any moral obligation or rule; but there is one thing they do not like to do—they do not like to take any risk of imprisonment.

Q. It would be competent to fine a corporation found guilty of destructive competition, but would it also be competent to imprison the president or directors?—A. The law can say that any corporation, and all the officers thereof, and all the agents or employees connected with the corporation engaged in the destructive competition, shall be guilty of a misdemeanor, and on their conviction shall be fined \$500 and undergo imprisonment of one or two years in the penitentiary.

Q. (By Mr. RATCHFORD.) Do you believe the law should define exactly what destructive competition means?—A. Leave that to the courts and juries.

THE SHERMAN ANTI-TRUST LAW. THE INTERSTATE COMMERCE COMMISSION.

Q. (By Mr. A. L. HARRIS.) Have you any suggestions to make as to amendments that would make the Sherman anti-trust law more effective than it is now?—A. I have not, at this time; I would like to look that over again.

Q. Will you please do that and see whether it can be made a basis for a future remedy?—A. I think the law has had some good effects.

Q. Is it possible to bring it under the jurisdiction of the Interstate Commerce Commission in any way?—A. That is a pretty difficult question. That is a question a great many people have considered; I have been thinking of these questions for perhaps thirty years. I have been brought into pretty close contact with them for that period.

THE OIL TRADE IN CANADA.—RAILROAD DISCRIMINATION THERE.

Q. (By Mr. JENKS.) Do we export oil to Canada?—A. Yes; we sell a great deal there.

Q. Does your company sell any in Canada?—A. Yes.

Q. Have you come in contact there in any way with discrimination in railroad rates?—A. There has been conflict there. There has been some trouble about railroad rates there recently.¹

Q. Has your own establishment come in contact with that?—A. Yes, I think they have.

Q. Can you give the facts about that?—A. No, I do not believe I can now.

DISTRICT OF COLUMBIA, *County of Washington*, ss.:

I swear that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

J. W. LEE.

Sworn and subscribed before me this 9th day of September, 1899.

WM. CALVIN CHASE,
Notary Public.

WASHINGTON, D. C., *May 16, 1899.*

TESTIMONY OF HON. FRANK S. MONNETT.

Attorney-general, State of Ohio.

The commission met at 10.50 a. m., Vice-Chairman Phillips presiding. Hon. Frank S. Monnett, attorney-general of the State of Ohio, testified.

Q. (By Mr. JENKS.) Will you be kind enough to state your full name and address?—A. Frank S. Monnett, Columbus, Ohio.

Q. You hold the position of attorney-general of the State of Ohio at the present time?—A. Yes.

Q. In the carrying out of your official duties have you found it necessary to bring suits against some of the great industrial combinations?—A. Yes.

SUITS FILED BY THE STATE OF OHIO AGAINST INSURANCE COMPANIES.

Q. What ones in particular?—A. We filed the first suits against eleven insurance companies, which included British, Canadian, and American companies, charging them with being in a state combination through local boards, or through a communication between local boards, amounting to a state organization; and also with being in an interstate combination at Chicago through a state organization. These cases have been pending, and are now in the hands of the court with 800 pages of printed testimony of the various witnesses. If the members of your commission care to have any of them, we can furnish you with the official copy of the testimony, and from that you can get the names of such witnesses as are available on the lines you want.

SUIT AGAINST THE STANDARD OIL COMPANY OF OHIO.

The next suit that we had was the State of Ohio *ex rel.* attorney-general against the Standard Oil Company of Ohio, which, I believe, has been pending since 1891. A decree was rendered March 2, 1892, against the Standard Oil Company of Ohio, it having been charged with being a member of the Standard Oil Trust, or being one of the constituent companies of the Standard Oil Trust. By an order of the supreme court of the State in November, 1897, I was directed to bring it (the Standard Oil Company of Ohio) before the court for contempt, charging it with having violated the decree rendered March 2, 1892, in not withdrawing from the trust in good faith, but in simply shifting or modifying the former system of doing business, so as still to get the benefits of the trust combination or arrangement. In accordance with that order from the supreme court I filed a complaint in contempt, a copy of which I will furnish your commission,² to which com-

¹ See Mr. Westgate, pp. 375, 378, 379; Mr. Gall, pp. 675-677, 680, 682-685.

² State of Ohio *ex rel.* The Attorney-General, plaintiff, v. The Standard Oil Company, defendant. History of the case, p. 81.

plaint the court gave an order for service upon the defendants, and the defendants thereupon came into court with an answer attempting to justify their conduct subsequent to the decree, to which answer we filed a reply with some twenty-nine interrogatories addressed to the president of the Standard Oil Company, who is also the chairman of the liquidating trustees, and also the chairman of the former nine trustees of the Standard Oil Trust, Mr. John D. Rockefeller, of New York, formerly of Cleveland, Ohio. Mr. Rockefeller answered these printed interrogatories under oath in part and demurred to part, which, under our code, he had the right to do, and part he refused to answer on the ground that they were irrelevant.

The court overruled the demurrer or the refusal to answer the main interrogatories; that was objected to, and they then came into court with a supplemental list of answers. Thereupon we took additional—rather, Mr. Rockefeller's—testimony in the way of depositions under a master appointed, and of that testimony I will give such data as your commission desires. In their testimony, as disclosed by the interrogatories, and by Mr. Rockefeller in person, and the secretary, F. B. Squires, of Cleveland, we were able to find data that warranted the State in filing suits against such constituent companies of the original trust as were doing business in Ohio.

SUITS AGAINST CONSTITUENT COMPANIES OF THE STANDARD OIL TRUST.

We filed independent suits against The Buckeye Pipe Line Company, a constituent company, which is the transporting company of the crude product; against The Ohio Oil Company, known as the "producing" company, which makes leases or contracts with the owners of oil in the rock, usually farmers; against The Solar Refining Company, which has functions substantially the same as the Standard Oil Company of Ohio, which is a refining company; and against The Standard Oil Company of Ohio, anew.

FOUR CAUSES OF ACTION.

In these suits substantially four causes of action were made. In the first instance we charged them with violating the public policy of the State, our procedure being based upon the constitutional right of the attorney-general to institute proceedings in *quo warranto* against any corporation that offends against the existing statutes of the State or against the public policy of the State, and with confederating and attempting to evade the decree of the supreme court in the decision of March 2, 1892, against the Standard Oil Company proper.

DOING A TELEGRAPH BUSINESS.

The second cause of action was based upon what is known as our "antitrust act," the Valentine-Stewart act, which was passed a year ago and took effect July 1, 1898. On taking the testimony at Lima, Ohio, in the case of the Buckeye Pipe Line Company, it was disclosed that they had a telegraph system, which, from a lawyer's standpoint, it was conceded, a company, doing a business of the nature they were, might have as an incident to their business, being a means of communication between their different posts; but in the testimony it was disclosed that they were exchanging business with the Western Union Telegraph Company, had stated monthly balances, and were acting as common carriers of telegraph messages in Ohio for whosoever applied to them. It was testified that they had produced election returns and other news in advance of the regular system. As they were exercising this franchise outside of their corporate authority, we made it an additional cause of action against them, charging them with exercising this *ultra vires* power. We have taken testimony to establish this, which I can furnish the commission. Under the Ohio law it would be necessary for them to have a special charter for that class of business.

It was disclosed and is in evidence, as claimed by the State, that in the relationship existing between the constituent companies (to which I will refer later), there were separate telegraphic contracts for the Ohio Oil Company, the Buckeye Pipe Line Company, and the Solar Refining Company, differing from the contract they had with their customers or the public generally. They used the Western Union blank contract for the ordinary telegraphic service, but had a separate contract and a separate account with each of these constituent companies, raising the legal presumption, as we claim, from the evidence, that they have a system organized about as follows:

THE ORGANIZATION OF THE BUSINESS DESCRIBED.

They have a purchasing or "producing" company, the Ohio Oil Company, which makes the original contract with the owners. The oil is then turned over to the Buckeye Pipe Line Company, known as "the crude product" company, which, in conjunction with the other pipe line companies, owned by Standard people, makes a complete system, and which, as we understand it, constitutes a single system, the Buckeye Pipe Line Company having the Ohio field, but doing business in Indiana also, which, subsequently to this suit, they turned over to the Indiana Pipe Line Company, also one of the constituent companies of the original trust combination. Then from the "crude product" or transporting department, with its telegraphic system, connected with all departments and all pipe lines, the oil is transferred to the respective refineries which are at Whiting, Ind., a suburb of Chicago, at Cleveland, Ohio, at Lima, Ohio, and at Parkersburg, W. Va.

The Buckeye Pipe Line Company delivers the crude oil to the refineries. The refined product, the kerosene and the gasoline, is transported to dealers and customers through another constituent company, the Union Tank Line Company, which has a system of tankage stations, i. e., distributing points, such as county seats, and cities of from 3,000 to 5,000 inhabitants and upward. They have contracts with railroads, which you can go into more fully than we have, and which will disclose the nature of the relationship to the railroads. This company gets a rate for their tank line, in shipping to the tank stations by the carload or train load, with an allowance for loading and unloading their own product, while for barrel lots and part carload lots the rates vary. According to the trust investigation of Ohio the charges for shipping by part carload lots are as much as 400 per cent of the charges for shipping in carload lots and delivering at tank stations by the Union Tank Line.

THE POWER OF THE TRUST DEPENDS UPON ITS CONTROL OF THE TRANSPORTATION SYSTEM.

The State claims this whole system of transportation to be an advantage which the Standard Oil Companies have as shippers, and by means of which they defeat competition. In other words, the secret of the power of the Standard Oil Trust will be found to be the discriminations or favors that they secure by controlling or monopolizing the transportation of the crude product and the discriminations they receive by various devices in transporting the refined oil, e. g., the discriminating rate in favor of carload lots and train loads, with allowances for loading and unloading their own product. When other shippers adopt similar methods, the Standard invents still other methods to evade fair competition.¹

Q. You understand this discrimination to be, in spirit at any rate, a violation of the interstate-commerce act?—A. The interstate-commerce act applies to interstate commerce; I refer to State commerce, namely, to Ohio and Ohio roads. On examination you will find the railroads are permitted to give a different and more favorable rate for carload lots or in tanks than in barrels. The argument that they adduce is that the return of gasoline barrels contaminates all other shipments; that they can not ship any other freight in such cars. If you examine the freight charges in cases where a competing pipe line has been constructed along a railroad, that formerly had a fixed rate, you will find that instead of the competitive pipe line which parallels the railroad lowering the price, it has absolutely raised it, showing that the independent shipper is discriminated against. He can not compete because rates have been raised, and he must pay their price if he ships through the pipe line.

ORGANIZATION OF THE TRUST.

Starting with the Standard Oil Company of Ohio, shall I explain how it entered the trust, and give the names of the other constituent companies, with the capital stock of each?

Q. Have you also the dates of the organization of these different companies, with the names of the leading officers?—A. Yes; I can furnish them. The Standard Oil Company of Ohio was organized originally the 10th day of January, A. D. 1870, and is commonly known as The Standard Oil Company. It had \$1,000,000 stock. It increased that stock the 12th day of February, A. D. 1872, to \$2,500,000. On the 18th day of March, A. D. 1875, it increased its capital stock by State authority to \$3,500,000. It remained in this condition from 1875 to the 2d day of January, A. D. 1883. It had 35,000 shares of stock at a par value of \$100 a share, which would make the par value of the total \$3,500,000.

¹ Compare Mr. Archbold, p. 543.

Mr. Rockefeller's testimony is ambiguous as to whether they transferred the stock directly to the Standard Oil Company of Ohio first, or whether, as owners of the stock, they transferred that to the trustees of the Standard Oil Trust; but in any event all the stockholders agreed to the trust contract of 1882. Two days afterwards they modified it. The company in Ohio had originally 9 directors of the Standard Oil Company and they were afterwards reduced to 7; the 7 continued to vote the 9 shares. The theory of the Standard Oil Company was that a corporation could maintain its existence by 7 directors holding each a share of stock. They did this to comply with the statute. Seven directors could elect a president and secretary and necessary officers, and the remaining stockholders would be at liberty to assign their stock to trustees. Other companies did the same, thus organizing and maintaining a trust. In other words, they argued the corporation would not be responsible for the acts of the individual stockholders, and that theory ran through the entire organization of the trust; viz, that stockholders could act independently of the corporation. The suit was begun by my predecessor, General Watson. The 84,998 shares had passed out of the hands of the stockholders into the hands of the 9 trustees.

THE CONSTITUENT COMPANIES.

There were three classes of companies that entered into the combination. First, they had all the stockholders and members of the following 14 companies; The Acme Oil Company (New York); Acme Oil Company (Pennsylvania); Atlantic Refining Company of Philadelphia; Bush & Co., Limited; Camden Consolidated Oil Company; Elizabeth Acid Works; Imperial Refining Company, Limited; Charles Pratt & Co.; Paine, Ablett & Co., Limited; Standard Oil Company (Ohio); Standard Oil Company (Pittsburg); Smith Ferry Oil Transportation Company; Solar Oil Company, Limited; Stone & Fleming Manufacturing Company, Limited. All the stockholders and members of these corporations and limited partnerships were required to sign an agreement to turn in their stock (except enough to preserve State organizations), as I have explained to you. A second class of companies consisted of the interests of W. C. Andrews, John D. Archbold, and a long list known as the individual owners, who signed the original trust agreement. A third class consisted of corporations, 25 in number, which assigned a controlling interest in the companies to the trustees. They were: The American Lubricating Oil Company; Baltimore United Oil Company; Beacon Oil Company; Bush and Denslow Manufacturing Company; Central Refining Company, of Pittsburg; Chesebrough Manufacturing Company; Chess Carley Company; Consolidated Tank Line Company; Inland Oil Company; Keystone Refining Company; Moverick Oil Company; National Transit Company; Portland Kerosene Oil Company; Producers' Consolidated Land and Petroleum Company; Signal Oil Works, Limited; Thompson & Bedford Company, Limited; Devoe Manufacturing Company; Eclipse Lubricating Oil Company, Limited; Empire Refining Company, Limited; Franklin Pipe Company, Limited; Galena Oil Works, Limited; Galena Farm Oil Company, Limited; Germania Mining Company; Vacuum Oil Company; H. C. Van Tine & Co., Limited; and Waters-Pierre Oil Company. These 89 companies, with the long list of individuals, are all that entered into the original Standard Oil Trust; The respective stockholders, partners, and individuals, on an appraisement agreed upon, received new trust certificates for their proportionate interests in the stock or assets transferred to the trust.

APPRAISEMENT OF THE BUSINESS OF THE CONSTITUENT COMPANIES.

Q. Will you tell us, first, how this appraisement was made and what its basis was?—A. Well, the consideration for the transfer and conveyance of the money, property, and business of each of the Standard Oil Companies was trust certificates of the Standard Oil Trust, issued by the trustees of the trust, equal in par value to the appraised value of the money, property, and business so transferred. The stock was to be delivered to trustees provided for in the trust agreement and their successors, and no stock was ever to be issued by any of the contracting companies except for money, property, or business equal at least to the par value of the stock so issued, nor was any stock issued by any of said companies for any purpose, except to the trustees herein provided for, to be held subject to the trusts hereinafter specified. There was not any watered stock. They entered the trust at the actual appraised value; the appraisers were interested men, and it would have been of no advantage for them to inflate it. They attempted to get actual value, and on that basis they issued trust certificates.

Q. Probably the selling value at ordinary sale?—A. It was placed on the income value—its selling value. The trust agreement provided for 9 trustees to be elected. The first three were John D. Rockefeller, O. H. Payne, and William Rockefeller, and they were elected to hold office until the first Wednesday of April, 1885. The next three were J. A. Bostwick, H. M. Flagler, and W. G. Warden, to hold office until the first Wednesday of April, 1884; and the next three, Charles Pratt, Benjamin Brewster, and John D. Archbold, to hold office until the first Wednesday of April, 1883. The trustees were thus a continuous body. In the beginning there was one-third for 3 years, one-third for 2 years, and one-third for 1 year, who held office until their successors were duly elected and qualified. The 39 original companies were subsequently merged into 20 companies. A list of the 20 companies and the capital stock, the nominal capital stock as they now exist, is about as follows:

Companies.	Appraised value.	
Anglo-American Oil Co., Limited.....	\$6,913,639.49	\$5,000,000
Atlantic Refining Co.....	8,631,373.87	5,000,000
Buckeye Pipe Line Co.....	7,941,088.15	10,000,000
Eureka Pipe Line Co.....	1,547,055.16	5,000,000
Forest Oil Co.....	8,528,813.11	5,500,000
Indiana Pipe Line Co.....	2,014,053.91	1,000,000
National Transit Co.....	25,796,712.97	25,455,200
New York Transit Co.....	4,999,300.00	5,000,000
Northern Pipe Line Co.....	707,067.00	1,000,000
Northwestern Ohio Natural Gas Co.	1,386,760.00	3,273,500
Ohio Oil Co.....	8,260,373.04	2,900,000
Solar Refining Co.....	711,793.87	500,000
Southern Pipe Line Co.....	3,279,018.23	5,000,000
South Penn Oil Co.....	3,021,654.87	2,500,000
Standard Oil Co., Indiana.....	1,036,518.61	1,000,000
Standard Oil Co., Kentucky.....	3,604,800.78	1,000,000
Standard Oil Co., New Jersey.....	14,983,943.30	10,000,000
Standard Oil Co., New York.....	16,772,186.29	7,000,000
Standard Oil Co., Ohio.....	3,423,014.72	5,000,000
Union Tank Line Co.....	3,057,187.41	3,500,000
Capitalization twenty corporations.....	121,681,312.63	
Excess.....	102,233,700.00	
	19,397,612.63	

The capitalization of these 20 companies is \$102,233,700; the excess of value over and above their capitalization at the date of this inventory was \$19,397,612.63.

THIS INVENTORY BASED UPON THEIR OWN TESTIMONY.

Q. Will you make it clear what you have based this inventory upon and who took the inventory?—A. It was taken by the representatives of the trust certificate holders, I think.

Q. (By Mr. NORTH.) On what basis was that appraisal made; do you know that?—A. I asked Mr. Rockefeller the following question: "Give the surplus money in the hands of each and every constituent company, corporation, and limited partnership as represented by trust certificates of the Standard Oil Trust on or about January 1, 1892, and how much after the payment of their last dividends, stating when such dividends were declared and paid and the total amount of each, and whether said dividends were turned over in each and every case to an official representing the Standard Oil Trust." And this was the answer he gave:

"I have not in my possession or power data showing the surplus money in the hands of each and every constituent company, corporation, and limited partnership, as represented by trust certificates of the Standard Oil Trust on or about January 1, 1892, nor the amount of such surplus money in their hands after the payment of their last dividends. During the year 1892 a careful inventory and appraisal was made of all the assets of said companies, and the result was found to be as follows:" (The above figures are taken from this complete answer.)

Q. That was their own appraisal?—A. That was their own appraisal. We were obliged to take that, as they refused to produce their books. There is a matter now pending before the courts of Ohio whether or not it invades constitutional privileges if they are required to disclose their books for such purposes. We have asked for the books, or original testimony, so far as it bears upon our litigation.

DIVIDENDS AND THE VALUE OF THE TRUST CERTIFICATES.

I then asked for the last dividends of said companies, prior to November, 1897. The copy of the record of the Ohio supreme court proceedings, that I leave with you, will give you the list of the companies and amount of dividends paid by each. Some of the companies pay quarterly dividends, some annual, and others, apparently, have declared no dividends for the last year.

LIST OF DIVIDENDS.

The last dividends of said companies prior to November 9, 1897, were as follows:

Anglo-American Oil Co., Limited, June 15, 1897.....	\$506,480.00
Atlantic Refining Co., Mar. 15, 1897.....	1,999,600.00
Buckeye Pipe Line Co., Sept. 15, 1897.....	3,999,780.00
Eureka Pipe Line Co., Sept. 15, 1897.....	599,868.00
Forest Oil Co., Oct. 30, 1891.....	287,100.00
Indiana Pipe Line Co., Mar. 15, 1897.....	999,450.00
National Transit Co., June 15, 1897.....	2,545,475.00
New York Transit Co., Mar. 15, 1897.....	1,999,600.00
Northern Pipe Line Co., Sept. 15, 1897.....	232,244.25
N. W. Ohio Natural Gas Co., Sept. 15, 1897.....	29,497.50
Ohio Oil Co., June 15, 1897.....	999,887.50
Solar Refining Co., June 15, 1897.....	147,234.50
Southern Pipe Line Co., Sept. 14, 1892.....	300,000.00
South Penn Oil Co., June 15, 1897.....	2,498,900.00
Standard Oil Co. (Indiana), Mar. 15, 1897.....	699,300.00
Standard Oil Co. (Kentucky), Mar. 15, 1897.....	1,998,000.00
Standard Oil Co. (New Jersey), Sept. 15, 1896.....	2,499,775.00
Standard Oil Co. of New York, June 15, 1897.....	1,740,725.00
Union Tank Line Co.—no dividends declared.	

No dividend, the company claims, has been paid by the defendant company since the distribution of surplus made on March 17, 1892. Prior to August 5, 1891, the defendant company was the owner of a large number of tank cars, most of which had accumulated under the management of the trustees, which were rented to other companies. Its stockholders and directors determined that it should discontinue the transportation business, and on August 5, 1891, the defendant company sold its tank cars to the Union Tank Line Company, and received in payment therefor the sum of \$3,500,000. Of this sum, on March 17, 1892, it handed over to the trustees \$3,219,540 for distribution by them among the holders of trust certificates, this being the distribution referred to in the answer filed by this company, and, the company claims, the only distribution or payment made by the defendant company to the trustees since the former decree of this court. This sum, or the balance remaining thereof after settlements of contracts, agreements, and accounts by said trustees, as shown in their resolution of May 16, 1892, was distributed to the holders of the trust certificates. The surplus since accumulated in the hands of the defendant company amounts to \$700,000, which is invested in Government bonds.

The answers to the preceding interrogatories are all we have to show to whom, in every case, dividends were paid. They were paid in each case by the company declaring the same to its stockholders of record, the liquidating trustees receiving dividends from companies other than this defendant upon that portion of the capital stock of the said several companies which is held by them, awaiting reissue to the dividend owners thereof on surrender of trust certificates.

Q. (By Mr. JENKS.) They are not all quarterly?—A. No.

Q. Can you give the distinction?—A. I can not give you the distinction. I will furnish you with a list of the entire dividends, at the last payment, including the quarterly, which amounts to something over \$24,000,000. According to that, the value of trust certificates is to be estimated at about 480 or 500 per cent, and since they have it in their power to control the retail price of oil, they can, by raising or lowering it, make a dividend at about what they please. They have raised the retail price of gasoline and oils at noncompetitive points since this suit was instituted, and it has the effect of increasing the value of their trust certificates. I can give you the dividends that have been declared since 1892.

Q. Could you furnish us the prices at competitive and noncompetitive points?—A. Yes; I will do that later. Just prior to the date of General Watson's decree they organized a Union Tank Line Company, and they took out of the business

of the Standard Oil Company of Ohio the assets formerly used in the transportation of the refined products, amounting to \$3,500,000, so that these constituent companies now have their respective departments. As I narrated in the opening of my testimony, although substantially the same men are in control, the companies have different functions. On March 17, 1892, they turned over to the trustees of the trust for distribution, after the decree of the court against the trust (which is one of the things we claim to be a violation of the order of the court) the \$3,500,000 assets so acquired; and that was distributed among the holders of the trust certificates after the courts ordered them to withdraw from the trust. They were interrogated further as to what they have since done with the accumulations of the Standard Oil Company. They have attempted to account for their accumulations by charging off in profit and loss accounts by way of depreciation in the plant. These figures I can furnish you. Mr. Squires claimed (he refused to produce the books) and gave as his conclusion February 7, 1895, that \$230,019.96 was charged off for depreciation of plant December 31, 1894, and on or about May 13, 1896, they charged off \$1,200,000 more for depreciation of plant. They hold \$700,000 in Government bonds.

Q. Is that amount charged off for depreciation supposed to include the dismantling of any plant they had purchased and put out of operation?—A. No. The Standard Oil Company, as a "going" concern, had accumulated assets all these years, according to our theory. They only redeemed 51 and a fraction per cent of trust certificates, or enough to have the control, and they continue as they always have.¹ These Standard Oil trust certificates are still on the market, and are nourished in some way, or they would not be paying these trust-certificate dividends. The other 19 companies must at least be nourishing them. The Standard Oil Company of Ohio had to account for the distribution of its income. It had this theory, viz, that it has earned nothing since the decree, but will not produce the commercial books to corroborate it.

BOOKS BURNED BY THE TRUST.²

Q. How about the charge of burning their books?—A. We adjourned on the night of February 15, on Thursday, and they were required to appear before the court on the following Tuesday to show reason why they should not abide by the order of the master and the decree of the court and produce their commercial books. We received an anonymous communication that they had burned their books. We subpoenaed certain parties and had them testify as to the fact. The information to the State, after following up the matter, was that they had burned 16 boxes of books. I give you Mr. McNirney's testimony touching upon the subject.

Attorney-General Monnett then read extracts from the testimony of Mr. John McNirney as to the burning of the books. The direct examination of Mr. McNirney in full is as follows:

JOHN McNIRNEY, of lawful age, being by me first duly sworn, as hereinafter certified, deposes and says as follows:

Q. (By Mr. MONNETT.) State your name and residence to the notary.—A. John McNirney, 85 Oregon, Cleveland, Ohio.

Q. What is your business, Mr. McNirney? What company are you working for?—A. The Standard Oil Company.

Q. How long have you been working for them, and what time?—A. Three years next September, as car builder and repairer.

Q. On what street is their car-building works?—A. On Broadway, I believe.

Q. Where are the general offices of the Standard Oil?—A. As I understand, on Euclid avenue, what they call the Standard block; and they have got another general office for the shop on Broadway.

Q. Then part of the works is on Independence street, is it not?—A. I believe it is. Now, I don't know anything about that. I know that the works where I work is on Broadway.

Q. In the car shops?—A. In the car shops; the hill shop.

Q. You may state whether or not you were called, on or about Saturday the 19th of November, to the general offices to do any work in the way of removing boxes or books, or anything.—A. Yes; I was.

Q. You may state just what that work was, and commence with the first. What time of day did you get there?—A. We got there about 11 o'clock in the forenoon.

Q. What was the first thing you did? What did you help do?—A. The first thing we did was to lower a lot of books from the fifth story to the ground floor.

¹ See Mr. Archbold, p. 574.

² Compare the testimony of Mr. Archbold, p. 543.

Q. Lower them?—A. I didn't say books; I say boxes. I don't know what was in the boxes. To lower a lot of freight boxes—supply boxes. We call them supply boxes.

Q. Did you help pack the boxes or anything?—A. No, sir.

Q. Whom did you lower them to? What teamsters, if you know any of them?—A. There was a teamster there, but we was going to take the books—I say boxes—out in front; but, as I understood, the janitor objected and said we must not take them out in front; we must take them out in the rear of the building.

Q. You lowered these boxes with a tackle from the rear window?—A. No; on the passenger elevator.

Q. You lowered them with that?—A. With that; yes, sir.

Q. What was done with them after that? What teamster?—A. We took them up again. When they objected, we took them upstairs again.

Q. Then what was done with them?—A. Then we lowered them from the back window down in the yard in the rear.

Q. What kind of a device did you use to lower them with?—A. A tack¹ e.

Q. What teamsters, if any, got them?—A. I could not tell you. I could not swear to the name of the teamster. I know him, but in our capacity we don't come in contact with the teamsters very much.

Q. Was Edward O'Hearn one of them?—A. I could not swear that was his name. I would not swear that was his name. I know him personally, but I don't know his name. I meet him every day, but I don't know what his name is.

Q. You would know him if you saw him?—A. Yes.

Q. A black-mustached man, about your age?—A. An Irishman.

Q. A little heavier set?—A. Yes, sir; I would know him if I saw him again. I see him every day. I don't know his name.

Q. Was there any other man assisting?—A. Yes, sir.

Q. Who assisted you?—A. Moran.

Q. Moran; what is his business?—A. He is a car builder and laborer.

Q. Do you know a man by the name of Gabeline?—A. Yes; I know him.

Q. Did he assist you?—A. I believe he was at—

Q. Where was he; at the offices or the carworks?—A. At the general offices.

Q. Do you know a man by the name of Shafer?—A. Yes.

Q. Was he assisting in any way?—A. I believe he was there, too.

Q. At the general offices?—A. At the general offices.

Q. What did they do?—A. They assisted to lower the boxes.

Q. After they were removed and taken down the tackle, then where were they taken to?—A. I believe they went to the warehouse.

Q. Did you ever afterwards see them; and if so, what did you do with them? Did you after that see the same boxes?—A. I saw the books; I don't swear they are books, because I don't know what was in the boxes.

Q. Where were they when you saw them the next time—the same boxes?—A. In the warehouse.

Q. You may state, then, if you had anything to do with the opening or burning any books about that time.—A. Yes, sir; we did burn some of those books next Monday. No; we didn't burn them all; I don't think we burned all we took out. I did not keep no track, and wasn't interested, and don't know how many books we burned.

Q. Did you have more than one burning; were you at it more than once?—A. Yes, sir; twice. The first lot we burned in the car-shop furnace.

Q. What sized books were those?—A. Large and small.

Q. Give the size of the biggest ones, the thickness.—A. That high [indicating].

Q. That would be 2½ feet high?—A. Well, I don't know. I say about 20 inches.

Q. The books were about 20 inches?—A. The chest about 20 inches, and they come up to the top.

Q. About how thick were they?—A. All sizes; I didn't pay no special attention. We burned some big boxes and some small ones. I wouldn't swear how big they were.

Q. You held this way: about 8 inches high and 6 inches wide.—A. We didn't pay much attention, because we had to get them in there quick. I know they were large, heavy books, almost as much as a man could lift, some of them; what I call ledgers—large books.

Q. Did you burn up loose papers?—A. Yes, sir; we burned papers and letters in a sack.

Q. How many were left to burn the next night or on Monday night, you say?—A. I think we burned 9 chests and 6 sacks. Those sacks were all letters; copying books, I should think, or something like that. Loose papers, waste paper, I say.

Q. Letter-press books and letters and waste paper?—A. I should say waste paper.

Q. How many chests were there originally, about; do you remember how many made a load?—A. Sixteen, I believe, made a load; 16 chests.

Q. At the furnace, who helped you throw them in?—A. Moran.

Q. What is his position?—A. Car builder and repairer.

Q. What is his first name, do you know?—A. I couldn't tell that; you know, although I know him 2 or 3 years, yet I don't know his name. We work with them every day and don't know their first names.

Q. Is he your boss?—A. He is a young fellow; he used to cut bolts; he was a kid, about 20 years; he used to cut bolts.

Q. Were there any of the books that were not burned that were concealed down there in that package or hid away?

(Objected to.)

A. What I know—I don't think we burned all the books, because we took more than we burned, as far as I know. I don't know anything about that.

Q. Who else about the offices up there—at the general offices—assisted in this in any way besides Moran; do you know?—A. In the burning of the books;

Q. Either at the offices or in the burning of the books; what other parties?—A. I don't know their names.

Q. What part did Gabeline—did he help take them out of the boxes?—A. No; he didn't help to take anything out of the boxes. He did not know what was in the boxes.

Q. He just helped move the boxes up at the offices?—A. Yes, sir; we were short-handed, and they sent a party from the car shop to assist us load the boxes at night.

Q. Were the boxes themselves loaded at night, after they were taken down by the tackle?—A. The boxes were locked when we went there—all nailed up and locked, securely locked; I don't know whether they were securely locked; some of them had no locks on.

Q. You described, if I understood you, as having taken them down, or a part of them down in the elevator first, and then the elevator man—.—A. The janitor objected, and we had to take them up, if I understood that.

Q. The reason you had to take them back again and he would not let you come down the front way, you had to take them out of the back window?—A. Yes, sir; that is the reason we had to lift them to the third story and lower them out of the back. We could have done very quickly if we could have taken the boxes in the front.

Q. What street, then, was the wagon backed up on?—A. There is no street there; it is a yard.

Q. How many different teamsters do you think had a hand in hauling the stuff?—A. Now, I think there was about three; I don't know the name of the teamsters; the first load I don't know anything about. They took the first out on Friday—took that up to the offices, and we destroyed that load in the morning. I don't know who brought that load up.

Q. Was it Saturday morning that you destroyed them?—A. Yes; Saturday morning, and O'Hearn, I guess, was the man's name that took the 2 loads on Saturday night.

Q. Were they the same boxes each time, and return the empty boxes?—A. No, I would not say the same boxes; they have lots of boxes—any amount of them, hundreds of boxes.

Q. What kind of sacks were those?—A. Gunny sacks; common ones.

Q. About how high would they be when they were full?—A. About that high [showing].

Q. About 2 feet high?—A. Potato sacks; what commissioners use for potatoes.

Q. Gunny sacks, such as commissioners use for putting potatoes in?—A. Yes, sir.

Q. The first time you burned them, about what hour did you commence burning them down there in the car shops?—A. I don't know about the hour; probably 8 o'clock.

Q. Saturday morning?—A. Half past 7 or 8.

Q. On Saturday morning was the first?—A. Yes, sir.

Q. Then when did you commence on the second time?—A. We commenced then about—Monday we commenced about 10; maybe half past 10.

Q. The same parties present each time?—A. Yes, sir. Now, not all the parties, because only 2 of us fired the pump-house boilers.

Q. Why did you change from the car-shop furnaces to the pump-house boiler?—

A. As I understood it, because they put the steam down—the books would not burn.

Q. How do you mean—putting the steam down?—A. In the car shops they fire with shavings from the cooper shop and car shop; there is nothing but bones and shaving and small stuff goes in there.

Q. It don't keep a steady fire?—A. Yes; the shavings keep a steady fire; but when books went in they didn't burn rapid enough to keep steam up, so the steam went down.

Q. And then you had to go over to the other shops. What kind of furnaces have you at the second shop?—A. Just a common—I guess Sterling boiler; I don't know the name of the boiler. I know we fired the boiler from about 10 o'clock, I guess, till half past 1—we put these books in.

Q. Large, solid books burn fast or slow?—A. I judge they burned kind of slow. Paper burned all right and kept up good steam.

Q. But the heavy books in the first furnace practically put the fire down so low that you could not run?—A. I don't know; but that is what I understood.

Q. How far is the second furnace from the first one—the same building?—A. No; there is the pump house on the river, and the car shop is on the hill.

Q. The last books were burned by the river in the pump house?—A. Down by the river.

Q. Who all did you see up there at the general offices besides the two you have given? Moran is one you have given and Gabeline is another.—A. He don't know anything about the burning of those books.

Q. Moran helped you at the general offices; Moran helped you each place at the general offices?—A. Through the whole transaction.

Q. Through the whole transaction?—A. Yes.

Q. From whom did you get your orders to go up to the general offices and do the burning?—A. The car-shop foreman.

Q. That is this Mr. Moran?—A. No.

Q. Who is the car-shop foreman?—A. His name is George Fields; he is the car-shop foreman, or was at that time, because the master car builder was away at that time, and he was acting as master car builder.

Q. When did he give you these orders, with reference to the first that you started out; on the same day, on Friday?—A. What orders?

Q. To go after these books, or to go up to the general offices?—A. Yes, he gave me orders to go up to the general offices and get these books.

Q. About what time of day was that on Friday?—A. On Friday, I should judge, about half past 9 or 10 o'clock in the morning. We got up here about 11. I should say, as near as—I would not swear to the exact time, because I don't know, though it was before dinner time when we got up there; the clerks were all there yet.

Q. The clerks were all in the office yet?—A. When we got up there.

Q. Was anybody in the office when you were moving these boxes out?—A. They were all in there—all the clerks.

Q. Did anybody up there give you directions about getting them out other than Moran? Who gave you directions about where to get the boxes up at the offices?—A. They had the boxes tagged for distribution.

Q. What places were they tagged to—to what places were you to take them?—A. Well, now, I couldn't tell that; I don't know whether they were tagged for the car hill shop, or just Charles Hogan, for distribution.

Q. Who is Charles Hogan?—A. He is general superintendent, as I understand.

Q. Tagged to him. Where does Charles Hogan hold forth?—A. What is that?

Q. Where does Charles Hogan have his headquarters, at the Broadway or Independence street shop?—A. I believe his headquarters is at Broadway.

Q. What kind of a looking man is he?—A. A fine looking man.

Q. Black-moustached man?—A. No. He is a young man; he has got no moustache at all; smooth-shaven, clean-faced; not a very oldish man. He is superintendent. He can tell you more about those books than I can.

Q. That is Charles Hogan?—A. Charles Hogan.

Q. I was informed he could, but we were not able to subpoena him yet.

Q. (By Mr. JENKS.) You believe these books that were burned were the ones you required Mr. Squires to produce?—A. That is the fair legal presumption from the testimony, considering the size of the books, the size of the boxes, the number, the circumstances, and the refusal to produce them afterwards, although Mr. Kline in open court stated that they had not destroyed them, that they had them yet, and that they would not produce them on the request of the chief justice of the court. They absolutely refused to produce them, and relied upon

their constitutional privilege to refuse to answer. The exact testimony as to the burning of the books I will furnish you for your own conclusions. The only purpose in bringing it in here is to show you we are adopting their explanation as to their profits, the way they distribute them, etc., the reason being that we do not have the substantive evidence which they keep from the public.

Q. You have spoken of the trust certificates—perhaps you can furnish us a copy of those.—A. Yes; I also hand you this list of dividends declared by the Standard Oil Trust and the amounts. It is part of Mr. Rockefeller's testimony.

DISTRIBUTION OF THE TRUST CERTIFICATES—SALARIES.

Q. (By Mr. PHILLIPS.) For what period?—A. Covering from 1892 to date, if you wish them. If you care to have it, I will furnish you a copy of a share of trust certificates that were issued to the original stockholders, Mr. Rockefeller receiving more than any other man. He received, January 1, 1892, for his stock in the Standard Oil Company of Ohio alone, 191,700 trust certificates. His interests in the Standard Oil Company of Ohio netted him in trust certificates alone, at that time, a par value of \$19,170,000. Mr. Rockefeller receives \$30,000 a year salary, as I understand it, from the Standard Oil Company of Ohio, which was the amount he received originally as chairman of the trustees of the Standard Oil Trust. The trustees of the trust held 466,280 shares. They also held more than half of 85,000, about 23,814. Mr. Rockefeller seems to have held the majority of these, or the balance of power—that is, of the 17,500 shares he holds 9,585 shares.

MR. ROCKEFELLER HAS ABSOLUTE CONTROL.

Q. That gives him, individually, absolute control?—A. Yes: it is a scheme whereby, when these 20 companies were once in the trust under the control of the 9 trustees, Mr. Rockefeller could control the trustees. It is practically a 1-man power for the whole organization, and when you look at it, he, as an individual stockholder, assigned to himself as a trustee, and then as a trustee assigned to himself as liquidating trustee, which he is still. He has, with his henchmen, the power to fix his own salary and those of the trustees, and when sifted to the bottom I think it is a fair deduction to say that he has control.

Q. (By Mr. JENKS.) If I understand you, he does not need the aid of his "henchmen"?—A. Not for part of these companies. Before a man could have his trust certificates reconverted into constituent stock and get out of the trust he would have to hold \$86,000 worth. In other words, the men who hold the larger amounts and who are the trustees, are able to convert their certificates and still hold the balance of power in the 20 constituent companies, having the voting power now as they had before. They have, to all intents and purposes, the opportunity, at least, to absolutely control the 20 companies as much as they had before the decree; the decree has not bothered them except in bookkeeping.

Q. Will you make it a little clearer how the organization of this company brings that about?—A. I understand that the owners of the original constituent stock, in turning it all over to the 9 trustees, got in return a fractional part of the stock of every one of the other companies. When they came to convert their trust certificates back into constituent stock they did not own a distinct portion in any one company, but a portion in all the 20. They might have enough trust certificates to secure, we will say, 2 shares in a large company and but 3 or 4 in any others, but not enough to secure more than fractional shares in the small companies, from which they could receive no dividends, fractional shares not paying dividends.¹ Therefore, there is no inducement to persons holding trust certificates to turn an investment paying 85 per cent on their original purchase into something for which they can get nothing, viz, scrip or fractional shares. Such persons are forced to stay in the trust, or hold trust certificates; but the larger owners can get theirs reconverted, and they, being so few in number, and being trustees, are still in command.

AMOUNT OF DIVIDENDS PAID BY THE TRUST.

Q. You stated that the holders of the trust certificates were receiving 85 per cent on these certificates.—A. I will give you the exact figures. I should say that the 972,500 original trust certificates only represents a part of them, for they had it in their power under this contract to issue practically what they pleased. December 15, 1898, the liquidating trustees, that is, Mr. Rockefeller, representing

¹ See Mr. Rogers, pp. 582, 587.

² See Mr. Archbold, p. 542.

the Standard Oil Trust certificates, held their meeting November 8, 1898, at 26 Broadway, and December 15, 1898, adopted the following resolution:

NEW YORK, December 15, 1898.

At a meeting of the liquidating trustees of Standard Oil Trust, held November 8, 1898, the following resolution was adopted:

Resolved, That there be divided, from the income of the stocks still remaining in the hands of the liquidating trustees, a sum equal to three dollars (\$3) upon each share of said trust; also a further special sum equal to four dollars (\$4) upon each share of said trust, payable on and after December 15, and that the transfer books be closed from 3 p. m., November 16, to 10 a. m., December 16, 1898.

Enclosed please find check on National City Bank of New York for your proportion of the distribution, in accordance with the above resolution.

No acknowledgment.

(Signed) WM. T. WARDWELL,
Assistant Treasurer.

The following is the form of the check:

No. A B 2528.

NEW YORK, December 15, 1898.

NATIONAL CITY BANK.

Pay to the order of Geo. Rice forty-two dollars.

TRUSTEES TO LIQUIDATE STANDARD OIL TRUST.

By H. M. FLAGLER,
Treasurer.

\$42.00.

Being quarterly payments, these dividends would be at the rates of 12 and 16 per cent per annum, which would be nearly 30 per cent for that year on the original basis of value. According to this, 35 per cent would seem to be a fair deduction. In 1892, after distributing \$3,121,725 surplus, which they had on hand, among the holders of 972,500 shares, they distributed \$3.21 on each \$100 of surplus. On March 15, June 18, and September 15, 1892, they paid \$3 a share upon the trust certificates. On May 20, September 15, and December 15, 1893, they paid \$3 a share, and on March 15, June 15, September 15, and December 15, 1894, \$3 a share.

Q. (By Mr. PHILLIPS.) Is \$3 a share generally a quarterly payment on \$100? That amounts to \$3,000,000 per quarter, \$12,000,000 per annum.—A. Their dividends at one place were given at \$24,000,000. That included the dividend on stock, 51 per cent of the trust certificates having been turned back into stock, while 49 per cent are still held as trust certificates. That is the dividend annually on the trust certificates.

Q. Three dollars per share each quarter?—A. Yes. On March 15, 1895, they paid \$3 a share, less the income tax, which, I suppose, was returned to them; on June 15, 1895, they paid \$3 a share, less 6 cents per share, in anticipation of the income tax, the income-tax case being then in the hands of the court; on August 21, 1895, they paid \$3 a share, and on November 20, 1895, they paid \$3 a share and \$5 extra. The next quarter, March 17, 1896, they paid \$3 a share and \$10 extra.

Q. That would be \$18,000,000 in that quarter?—A. Yes; that quarter. On August 4, 1896, they paid \$3 regular and \$7 extra; on November 5, 1896, \$3 regular; on November 18, 1896, \$3 regular and \$2 extra; on February 17, 1897, \$3.07 extra; on May 19, 1897, \$3 regular and \$7 extra; on November 17, 1897, \$3 regular and \$5 extra. That takes it up to the time for which I asked data. I have summarized here somewhere the total dividends paid up to that date. I think I can get that for you. I have summarized it in a statement to the court.

SALARIES, ETC.

What the 20 constituent companies paid out to directors and their respective officers we have no means of ascertaining, except for the one Ohio company. It is probable their salaries run from \$40,000 to \$50,000 for the president of the larger companies. Of course, under the decree of the court, they have to pay these salaries through some other device than the trustees. They must now pay them through the constituent stock companies. Mr. Rockefeller, on cross-examination, said he receives his income or dividends from his holdings, just the same now as he did when they were in the trust, but in a different form. He receives them as holder of a certain number of shares in the 20 companies, which he says are now resolved into constituent stock, while before that he received it in dividends on

¹ See Mr. Archbold, p. 574.

trust certificates. Mr. Corrigan's testimony and the pleadings set forth that Mr. Rockefeller held, since 1892, a large block of these trust certificates as collateral security and was the beneficiary of the income for his protection. As I said, that was in a separate suit, and will be found in the testimony of Mr. Corrigan.

VALUE OF TRUST CERTIFICATES BASED UPON INCOME.

The present value of the certificates based upon income is 500 times \$72,500. As a prominent judge puts it: "There is no expert who is better qualified to testify as to the value of a plant than the shrewd manipulator and buyer in the open market," for he gathers all the information that governs the market. Considering the fact that three-sevenths of the trust certificates have not been reconverted, in connection with Mr. Rockefeller's testimony that he gets his interest just the same now as he did before, the present value of the aggregate stock of the companies and the trust certificates may be fairly estimated at \$480,250,000, provided they have not issued, as they could under the trust agreement,¹ more than the original amount of trust certificates. If that is all of the trust certificates that are out, they would now be worth, instead of \$97,250,000, their original estimated value, at least 5 times that amount; and if the constituent stock is worth, in the hands of the trustees or the holders, the same, being in a different form only, that would be the stock value.

Q. (By Mr. JENKS.) Have you anything further in regard to evasions or profits that you can furnish?—A. No; you can make your deductions from these figures, I guess.

THE PURCHASE AND DISMANTLING OF COMPETING PLANTS.

Q. Can you give us any information on the question of the purchase by the Standard Oil Company of competing companies and the dismantling of their plants?—A. The refining plant at Whiting, Ind., has absorbed the business of the plant at Cleveland since 1892, making a fair deduction from Mr. Squires's testimony that they charged off the 2 items I have heretofore given you. They have reduced their men more than two-thirds in Cleveland and transferred them to other fields. If you will call Mr. D. W. Brown, of Cleveland, and Scofield, Shurmer & Teagle, you will get the data on this subject. I am only giving the conclusions. After establishing the new plant at Whiting, they got a freight rate to southern fields, e. g., New Orleans, of 23 cents a barrel, as against one of about 33 cents and a fraction from Cleveland; in other words, Scofield, Shurmer & Teagle, competing from Cleveland, were handicapped by the difference between 33 cents and 23 cents in freight rates, almost 50 per cent more freight in sending to a distributing point in the South. The commercial wisdom of their establishing a plant at Whiting and shipping at a lower rate over the Illinois Central is very apparent, for no other competitor could start from Whiting or ship from there. While they would not dare, under the interstate-commerce law, have a different rate for different people from Cleveland or from distributing points, they managed to get different rates by changing their refineries to noncompeting points.²

As to the dismantling of the plants at Marietta, I think I can give you the data from Senator Davis's testimony. They practically dismantled all the competing concerns there and at Parkersburg, and left nothing but a burnt-out crater. The last one to go was the Argan Refining Company, which they could not dislodge because its owners, Mr. Rawn and Mr. Peabody, were the directors of the Baltimore and Ohio Southwestern Railway, and the oil trade was a source of large profit. One of the opportunities for discrimination in freight rates consists in the bookkeeping arrangements between the Standard Oil Company and the railroads concerning the price to be charged up against the roads for lubricating oil furnished by the Standard. As they did not furnish the lubricating oil to the Baltimore and Ohio Southwestern under Mr. Rawn, they could not freeze out or exterminate the Argan Company; hence they bought the plant, paying \$12,000 a year to remain idle, and are now dismantling it.³ They have taken up the pipe line leading to the plant. Although the Argan continued selling oil, apparently in competition with the Standard Oil Company, it was in fact the Standard Oil Company's own plant. The Argan people get \$12,000 annually, besides a bonus that was paid down. I think the plant is to remain idle for 10 years, but at the end of 10 years, at the rate of the present disintegration, it will continue to remain idle. I advise you, if you will allow the suggestion, to get ex-Senator Davis, of Marietta; he is a very intelligent gentleman and can give you the data with reference to the destruction of competing plants at that point. Mr. Peabody was the other

¹ See p. 542.

² See Mr. Westgate, p. 376, middle; Mr. Rice, Mr. Page.

³ Compare Mr. Davis, pp. 351, 361; Mr. Archbold, p. 544.

man who had an interest in the Argan. They furnished the lubricating oil to the Baltimore and Ohio Southwestern from the Argan. The Argan was able, with that advantage, to compete with the Standard, which could not destroy them.

Q. Have you any information in reference to the prices paid by the railroads to the Standard for lubricating oil?—A. No; I can not give you correct data; you can get railroad men on that point; if you call Ira Rawn, of Cincinnati, you can get the information; Mr. Peabody died about 6 weeks ago. After the Corning field was opened up, above the Macksburg field, they raised the transporting price of the pipe line to 17 cents. At 17 cents it was unprofitable for the owners of those fields to ship oil to Parkersburg or Marietta.¹ In gaining control of the transportation department, you will find, gentlemen, lies the secret of the maintenance of discrimination in favor of commercial trusts.

TRANSPORTATION COMPANIES EXERCISE PUBLIC FUNCTIONS, AND COULD BE CONTROLLED.

If Congress would enact laws, or if the executive officers would bring these companies before the courts, they could be punished, for it is to be remembered that the right of eminent domain can not be exercised by corporations except as granted to them. The right of eminent domain is authority for a corporation to take private property for public purposes. If, after it is once so taken, the corporation having that governmental function vested in it were held down to the same strictness in its exercise that the Government holds all other officers exercising similar functions, there would be very few of these industrial combinations. It is a plain proposition that these trusts must necessarily link themselves with sovereignty, and it is entirely inconsistent with the fundamental principles of the Government that corporations so obtaining private property should use such property in any other manner than for the public good. If an assayer, or a man commissioned to coin money, who is only exercising a governmental function, should clip the coin and make it light weight, and profit by the difference, he would no more be violating the principles of the franchise he is exercising, in a moral or commercial sense, than these men who take public property, as a pipeline company or a railroad company, for the purpose of a common carrier, which they can get only through power from the State, and afterwards use it for private ends. The remedy is simple; it is one in which the courts have never once faltered when it is presented to them. When a corporation exercising governmental functions, such as the right of eminent domain, does not return the contractual relation to sovereignty required of it, viz, that of a common carrier, its charter should be taken from it, or, if that be too drastic, the franchises it is now exercising should be taken away. Whenever a common carrier or railroad company undertakes to water its stock or to discriminate between one town and another, or whenever it undertakes to get advantage through a tank-line freight rate as compared with a barrel rate or other means of shipping, it could be easily made a ground for forfeiture; it is all under legislative control. It is a violation of the fundamental contract they made when they accepted the charter. It is not true that it is due to a difference in talent and ability that such men as the trustees of the Standard Oil Trust have been able to defeat their competitors; it is a matter of a criminal abuse of the commercial privileges they have received. The railroad company or the pipe-line company has no more right to abuse the power granted it by the State in its charter than the man who is coining money on contract for the Government has to coin 50 cents of metal into a dollar; it is just as much a crime as the violation of any other governmental function exercised by an executive officer.

GOVERNMENT SHOULD MAINTAIN COMPETITION.

Q. Would you favor the regulation of rates by the Government itself?—A. I have answered that. While I am not a believer in Government ownership, with the present limited civil service, I do say that the remedy is for the Government to maintain competition. The competition of giants with one another will regulate their conduct, but a pigmy can not compete with a giant. There is no one man so strong that, if the Government does not assist him, he will not find a competitor.

Q. Is it your idea that the pipe line companies should be forbidden to discriminate, or that the Government should hold the rates down to what is reasonable?—A. If a pipe-line company charges 20 cents, when it costs less than one-tenth of a cent a barrel per mile for shipping, it is an abuse of a governmental function, and the

¹ See Mr. Davis, pp. 352, 353.

company ought to have its charter taken away for excessive charges. Persons obliged to compete under such circumstances are like farmers who should have to pay \$3 to \$5 a load for hauling their wheat, while someone else has the public right of hauling his for a dollar.

Q. Have you any specific suggestion as to how that rate could be held down?—A. The Cudahys, at Chicago, would run a pipe line; they have been for years trying to get a pipe-line privilege in Indiana and Ohio. One of the independent men, of New York, said he would give \$42,000 for 3 miles of line to connect up his lines with the seaboard. Wherever a common carrier is undertaking to thwart a competitor the Government ought to interfere. If the owner of a public utility is obliged to submit his rates to open competition there will be no more oppression in that department than in any other.

GROSS RECEIPTS AND PROFITS FROM THE BUSINESS IN OHIO.

To illustrate, the Buckeye Pipe Line had a gross income in 1898, ending May 1, from the Ohio fields, as I understand it—and this is the sworn report of Mr. Theodore M. Tole—of about \$6,763,094.64.

Q. What is Mr. Tole's official position in connection with the organization?—A. He is called the tax agent of the Buckeye Pipe Line Company. He is of New York. You will find him also making reports for the other Standard companies, although these companies claim they are not a trust and have no connection with the trust. They have a faculty of having the same tax agent and the same attorneys and the same telegraph companies and other common agents, that give it a colorable union, to say the least. The gross receipts were \$6,763,094.64. The universal rate everywhere, except on oil right from the field at Corning, has been 20 cents a barrel. In 1897 their gross receipts, at 20 cents a barrel, were \$6,800,833.19. Their gross receipts for 1896 were \$5,941,567.85. The total gross receipts for these 3 years are \$19,495,495.68 for the Ohio business. Counting the shipping price at 20 cents a barrel, the total amount received from the Ohio fields for 3 years would be 97,472,475 barrels, or over 30,000,000 barrels a year. This, based upon the gross receipts returned for taxation, is the amount shipped through the Buckeye Pipe Line. The leasor gets 60 cents a barrel for one-sixth of the oil, and at that rate the landowners received out of their Klondike of wealth, for the 3 years, \$9,747,000. We have no means of knowing what additional royalties or sub-contracts they make. At the rate of \$4 a barrel, the noncompetitive price of oil, the gross receipts for Ohio would be about \$120,000,000 a year.

Q. This is refined oil you are speaking of?—A. This is the refined oil at their noncompetitive price of selling. They get 8 to 11 cents. I will assume in this that when the Buckeye Pipe Line Company give us the gross receipts for Ohio business their oath is correct, and that they get 20 cents a barrel for all the Ohio oil shipped. The Ohio landowners, for the 3 years, receive a little over \$3,000,000 annually. It takes about 4 barrels of crude oil to make 3 of refined, and the shrinkage of 1 barrel, or one-fourth, is made into by-products, such as paraffin, axle grease, etc., for which they get as much as the refined oil,¹ so that they practically average, as experts tell me, \$4 a barrel, making, at this time, about \$120,000,000 gross from the Ohio product.² Figuring it in round numbers, all over 3½ to 4 cents per gallon is net profit; it can be delivered at that price in Ohio. In fact, they cut it down to 4 cents a gallon whenever they have competition. They get 8 to 11 cents when there is no competition. The value of all the farm products of Ohio (I mean by farm products wheat, wool, oats, barley, live stock, etc.) taken from the tax-return valuations is between \$52,000,000 and \$53,000,000. The oil combination's profits, if our deduction is correct, are about equal to the combined incomes of the farms in the State. In other words, by their system of non-competition, consumers, on the one hand, pay that much more, and the producers, on the other, receive that much less than they should. They drive the producer and consumer that far apart. There is no secret in the refining of oil; there is no patent on shipping; it is simply in stealing the powers of the Government, thereby controlling transportation. The State is now seeking to take away the charters of such companies as abuse their powers and franchises in this way.

BASIS OF THE LEGAL PROCEEDINGS IN OHIO.

Our action is based upon the statutes of Ohio and upon the cases of *Darcy v. Allein* (Coke's Reports), and *Richardson v. Buhl et al.* (77th Michigan, 632); the *Salt Company against Guthrie* (35th O. S., 666), and *Emery v. Ohio Candle Company* (47th O. S.). It is no new principle. That will be the remedy. Under our Ohio law, when a corporation violates its charter by *ultra vires* acts, or is exer-

¹ See Mr. Archbold, p. 570.

² See p. 315, and Mr. Archbold, p. 544.

cising a franchise contrary to the statutes, the State revokes the charter, the courts appoint 2 trustees, who have the functions and powers of a receiver, who take charge of the business and wind it up and sell it to law-abiding investors. The iniquity of the Oil Trust in Ohio is for the owner or the one producing the oil and getting barely the lowest competitive price for it to be paying at the same time a trust price for the refined product; and it is no answer to say that a small number of people get the best wages because they are hired by the trust, when the great body of the people are contributing in receiving a mere pittance for crude oil.

EFFECT OF THE STANDARD OIL COMPANY ON WAGES.

Q. Can you give us any data regarding the effect of the Standard Oil Company on wages? You called attention to the fact some time earlier that it threw a great many people out of employment through the destruction of competing plants.—A. That you will get from men who have the actual data. It necessarily throws all the men out of employment when they dismantle a plant.

Q. The specific data on this point you have not yourself?—A. I can give you the original testimony later, when it is printed; but if you will get Mr. Davis and Mr. Butts, of Marietta, and Mr. Rice, formerly of Marietta, they can give you the exact data and the losses. I have given you the facts concerning the Argan Company. The trust shuts out all competition in the payment of wages, because while men may go into the oil field and buy oil they can only ship it through the trust's transportation department. There is no competition in selling, for there can be no competition where the Standard is the sole buyer. If you select an oil field anywhere in Ohio, you can not get to a refinery except through their pipe lines. It is true they furnish you a market, but if you do not take their price you can not start up; you can not refine; the moment you refine and go to ship you find yourself blocked; they will destroy your plant by reducing the value at a given point and raising it at noncompetitive points, so that they will be no losers themselves. I have a few statistics on the prices of oil at competing points and noncompeting points which I will leave with the commission if they care to have it.

RELATIONS OF THE STANDARD OIL COMPANY AND THE PRESS.

Q. Can you give us any information with reference to the influence of this company on public sentiment? It is asserted, is it not, that they control the press more or less completely?—A. Well, in view of the fact that some newspaper reporters are here, I presume it would not be a very wise thing to discuss that. The Standard Oil Company of Ohio, after this suit was begun, through Henry M. Aphorpe, of Cleveland, and Mr. Jennings, of Columbus, organized what is known as the Jennings Publishing Advertising Agency. At the time we took our testimony at Marietta we found several men who had received marked copies of certain papers in Ohio making a fervid defense of the Standard Oil Company; and while they did not try to abuse the court, they were abusing the attorney-general and other officers of the court, which meant, in fact, the court. It was said that capital was being driven out of the State; that the Standard Oil Company was liberal in wages; that they had given largely to charity, and that they were also about to donate something to one of the State universities. I was handed a contract while I was examining a witness at Marietta, a typewritten contract, that they had negotiated the week before for one of the Marietta papers.

Q. That is, to purchase the paper outright?—A. No; the earlier part of this contract referred to advertising the paraffin and other by-products of the company, and then they had 6 or 8 lines which contracted for space on the editorial page, where their matter was to appear as news, and if it did not so appear, or there was any mark of advertising about it, the papers were not to receive any pay. For such matter as would be furnished them, by boiler plate and other means known to the newspaper world, they got from 20 cents in the larger cities down to 4 cents a line in the smaller ones, for news items; and then if the county papers were assiduous in defending the merits of the trust's charitable undertakings they would take thousands of copies of them and send marked copies to proper parties. If you have run across some of your constituents who are being oppressed by the price of oil, they should be satisfied thoroughly by marked copies of Gunton's Magazine and the Sandusky, Ohio, papers.¹

Q. (By Mr. PHILLIPS.) You do not mean to say that Gunton's Magazine is in favor of trusts, do you?—A. If you want to get the best, get Gunton; I think Mr. Tole's speech was there. A leading daily in the State has been having a great many articles in favor of trusts on one page, while on other pages appeared articles demanding antitrust legislation, although Ohio has perhaps as stringent a law as any State in the country. They were demanding more legislation and

¹ See p. 321; Mr. Lockwood, p. 330; Mr. Rogers, p. 587; Mr. Boyle, pp. 404, 487.

investigation. Now, you might say they imagined our trust investigation last winter was done to put off ultimate action. We find that investigations similar to this are very useful in enabling a legislature to get down to bed-rock facts, as in the short session of legislatures no committee can do what you are doing, and when legislation is backed up by public sentiment the law can be enforced. I have aimed not to be partisan in this matter, but I feel that the operation of some of the trusts in Ohio has been so against the average citizen that anything that can be done to relieve them ought to be speedily done.

STANDARD OIL COMPANY AND POLITICS.

Q. Have you any information as to attempted influence of the Standard Oil Company in politics, aside from what you have already explained and aside from any connection with the press?—A. Well, I expect it would not be advisable for me to discuss that. Mr. Harris lives in Ohio; he may give you the names of contributors; I suppose we could all give names of people we suspect collect these funds, but I do not want to testify on that.¹

Q. It may be that you can file official papers with us or give us transcripts of testimony in the case of the alleged attempt at bribery of the attorney-general of Ohio?—A. I can give you just what I file with the court, when the testimony is through. I shall be glad to give you an official transcript of whatever is taken.

METHODS OF DRIVING OUT COMPETITION.

Q. Can you give us any official information with reference to any other trust organization in the State of Ohio besides the Standard Oil Company? You have already spoken briefly with reference to combinations of insurance companies; can you tell us with reference to any others?—A. Before I leave the Standard Oil Company it might be interesting to the commission to speak of the means which they adopt for driving out competitors. Mr. W. H. Clark,² of Newark, Ohio, for 7 years an employee of the Standard Oil Company in their retail department, would give, I think, full information to the commission on the subject. After he left their employ they arrested him, charging him with embezzlement; they only found this charge against him, as his testimony showed, after he commenced selling independent oil for an independent company. He has had the same experience as the testimony before our trust committee showed that all competitors have. His sworn testimony is that he sold 4 grades of oil for the Standard Oil Company out of 1 tank; that he turned the faucet to the right for 1 kind, to the left for another; and that if that did not suit the customer he went to the front end of the wagon and switched the faucet there a little.³ The Standard Oil Company corroborated that a little, except that they said they gave a higher grade of oil than that called for, if they did not have the grade desired, at the same price. That was their defense to it.

They have a plan of sending agents around—I think competitors call them buzzards—where there is competition, to follow up the competitor's wagon, take the name of the customer and the amount of oil sold, and mail it to the central office of the division. A special agent of the Standard Oil Company is then sent out who follows up the competitor, making tests. He will clean up the lamp of the customer of the competitor, make a test, and then leave their own oil of as high a grade as the competitor's. If they can not succeed in that way they then commence cutting rates, and the rates are cut until they are below a living price or until they have driven out the competitor. Then the man who is inspecting and following the competitor goes to another town where they have competition. When they have driven out competition in a given town the oil goes back again to the old price. They sold oil for 4 cents at Dayton, where they had competition, while at Urbana it was 8. These towns are but a short distance apart. You will find when you get experts upon it that they have not only had the same grade of oil at different prices in the same town at the same time, but that they have had as much as 50 and 60 per cent difference in towns 30 miles apart.

THE TRUST PROBLEM STATED BY LORD COKE.

The experience has been substantially, I think, as Lord Coke put it in that original proposition. I would like that to go into my testimony. He laid down the proposition that every court from that day to this has substantially followed. I cite that case, which is approved, and which is a very good analysis for a commission or a court to go by. It is the old case of *Darcy against Allein* (Coke's Reports, Part XI, 84 b). He says: (1) "That the price of the same commodity

¹ See Mr. Archbold, p. 544.

² Compare testimony of W. H. Clark and B. A. Mathews. See also Mr. Archbold, p. 544.

³ See Mr. Clark, pp. 331, 332, 338; Mr. Mathews, pp. 432-434.

will be raised, for he who has the sole selling of any commodity may well make the price as he pleases." (2) "The incident to a monopoly is, that after the monopoly is granted the commodity is not so good and merchantable as it was before, for the patentee, having the sole trade, regards only his private benefit and not the commonwealth." (3) "It tends to the impoverishment of divers artificers and others, who before, by the labor of their hands in their art or trade, had maintained themselves and their families, who will now of necessity be constrained to live in idleness and beggary."

Q. (By Mr. NORTH.) What is the date of that case?—A. It is an old case, two centuries old; it has been cited by all our authorities. It is an analysis of the effect of trusts; you have the benefit of all the courts in England and this country who have followed that decision.

POSITION OF THE ENGLISH COURTS.

Q. Are there any analogous English cases?—A. Oh, yes; they commenced in Queen Elizabeth's time by the sale of franchises, by which one person could buy and sell exclusively all of one commodity; and in the case of salt and iron, where court favorites having exclusive control had become so rich and arrogant in dividing with sovereignty, the courts, independent of parliamentary acts and independent of precedent, revoked their charter, or individual franchise, for it was then called a franchise. Since then, if you look down through the reigns of the Georges and Victoria, you will find that they have had parliamentary legislation and court decisions down to date against monopolies. Under some parliamentary acts they have sustained a limited monopoly. In transportation you will find England has sustained what we call pooling, but under our decisions pooling is as obnoxious as any trust. The steamship companies have succeeded in getting a parliamentary act relating to pooling in rates that has been sustained.

Q. (By Mr. JENKS.) In the Mogul Steam Navigation Company case?

Q. (By Mr. NORTH.) Have you any knowledge of the methods of the German Empire in that case?—A. No; nothing more than a text-book knowledge, the same as you have access to. You have access to all that.

Q. (By Mr. JENKS.) Can you take up the case of some of these larger companies that you have brought suit against?—A. Well, I have brought suit against the brewery trust of Cleveland.

PRESENT STATUS OF TRUST LITIGATION IN OHIO.

Q. (By Mr. PHILLIPS.) Before passing to that, would you be willing to give to the commission the present status of the litigation against the Standard Oil Company in your State?—A. The Standard proper of Ohio, as I said in the beginning, has a decree against it; it is an adjudication that it is a trust in Ohio; that it is a scheme or system whereby the stockholders or a majority of them entered into this combination, and that their act is the act of the company. The corporate fiction will be ignored when the acts of the stockholders accomplish corporate oppressions, and so far as this company is concerned, which was only 1 party to the original contract, it is a denounced contract. The violation of the decree, their failing to withdraw from the trust, is what the contempt proceedings were instituted for under the order of the court. We have taken the testimony of Mr. Rockefeller by interrogatories, also parol testimony of about two days, and the testimony of F. B. Squires and that of John D. Archbold. We took the testimony of numerous other witnesses outside of this suit. The company refused to give substantive testimony from their commercial books, and the officers so refusing are now before the court under a charge of contempt. The evidence is being printed and submitted, and the case will be heard probably in the second week of June. The punishment for violation of the original decree can amount to any fine that our supreme court sees fit to inflict commensurate with the wealth of the client or the defendant. It could amount to \$700,000 if the court chose to inflict so much of a penalty. I think it is deserved, and I am maintaining that the punishment in contempt, besides a fine, could extend to taking the charter away without any further action. But as there is no precedent for taking a charter away as punishment in contempt, we have an independent action for that purpose against the Standard Oil Company of Ohio, charging them with additional offenses. Now the later suits were commenced for the purpose of forfeiture of the charter and the testimony taken in those proceedings is quite voluminous. We have a suit pending against the Buckeye Pipe Line Company under the charges I have related to you, with a large amount of testimony taken, and witnesses are before the court for contempt for refusing to answer questions submitted to them. So that the executive department, the attorney-general's office, has presented the testimony up to the point where the court will have to decide what they can be compelled to answer. Their defense is that it is

violating the Federal Constitution as well as that of the State to compel them to disclose their acts of a private nature. We contend that when the sovereignty inquires into the acts of its creatures it does so in accordance with the visitatorial power which is reserved to the State, and that it is simply a legal anomaly to say that the government can create a creature and then not control it, just as the national banking act permits the National Government to investigate the banks. So that if the contempt proceedings are heard in June—and I think they will be—and if we are successful and the officers of the company are held in contempt, they will incur the penalty. Mr. Rockefeller's testimony has disclosed the amount, more than half, of the trust certificates that the stockholders have redeemed up to the filing of the petition, in November, 1897.¹ We should then be in this condition: We should have the transportation department for the crude petroleum of all the other companies that do business in our State under control, and it should be in the hands of a company that would permit competition and an open and equal chance to all producers.

Q. (By Mr. NORTH.) As a result of winning your pending suit?—A. Yes; the Standard Oil Trust or the Standard Oil Combination could not exist without the control of the transportation of the crude petroleum; and this suit aims at the very heart of the trust, namely, the transportation department. It would effectually control it. It needs no further legislation. The National Congress can not regulate it so far as Ohio is concerned, because it is an Ohio creature, but so far as interstate business is concerned you would have jurisdiction over that. The remedy is primarily with the attorneys-general of the various States where the charters are granted. The attorney-general of New Jersey could solve this question in sixty days if he would take the charters away from New Jersey companies that are violating the public policy of the country, viz, that no creature of the government can use its power to the injury of the government or to the injury of the people.

Q. Do you believe that the Federal Government can accomplish anything through the jurisdiction over corporations created by one State and doing business in a great many others?

WITNESSES IN TESTIFYING SHOULD NOT BE HELD TO INCRIMINATE THEMSELVES.

A. You have been having that fought out in the Supreme Court of the United States in the Stock-yard Cases. They held they could not. The Addyston Steam-pipe Case, that is now being argued, is on the same point; but all corporations, like the Union Pacific, that have been created by the Federal Government and are doing interstate business, are reached by the Sherman antitrust act. Michigan, I think, has adopted an antitrust act similar to ours this year, but introduced a clause like that in the interstate-commerce act, which provides that any witness testifying concerning a trust shall not be held to criminate himself, and the testimony so given can not be used against him. The United States Supreme Court has said that this exemption can be given to a witness, and that any testimony that he has given is a privileged communication, the same as it would be before a Congressional investigation like this. That will prevent a witness from stating, as they do in case of material testimony, among other objections, that it tends to criminate them. The Standard Oil Company refuses to give testimony now in Ohio because the testimony would tend to criminate the officers.² But that Michigan clause will forbid the witness from using that constitutional prerogative by making it a privileged communication, and all trust laws should contain that clause.

Q. (By Mr. A. L. HARRIS.) Which State report is that oil case in?—A. Forty-nine, O. S.

Whereupon the commission took a recess until 2 p. m.

WASHINGTON, D. C.,
Tuesday, May 16, 1899—p. m.

Hon. FRANK S. MONNETT again on the stand and examination resumed:

Q. (By Mr. PHILLIPS.) Does any member of the commission desire to ask any questions?

Q. (By Representative OTJEN.) What did I understand to be the income, the profits, of this trust in Ohio during the year?—A. The gross receipts from non-competitive prices would be 120-odd million dollars; and, taking the best information as given before our various investigations that the refined oil could be delivered in Ohio for less than 4 cents per gallon, it would make a net profit on the Ohio oil, which is about 40 per cent of all the oil produced in the United States, in the neighborhood of \$50,000,000—\$50,000,000 to \$53,000,000.³

¹ See Mr. Archbold, p. 574.

² See p. 307, top.

³ Compare p. 311, and Mr. Archbold, p. 544.

OIL CAN BE RETAILED IN OHIO AT 4 CENTS.

Q. Did I understand you to say that it is your opinion that the oil could be sold in Ohio at 4 cents a gallon; that that is about the cost price of oil?—A. It can be retailed at 4 cents in Ohio at a profit.

Q. At 4 cents?—A. Yes; 4 cents. There is testimony placing it at a point even below that. Is that too low a price?

Q. That is the refined oil?—A. That is the refined oil. There was testimony that the cost was lower than that; but that is for the refined oil.

Q. In places outside of Ohio there would simply be in addition the cost of transporting it?—A. Yes; the cost of transportation depends usually upon the arrangements from the distributing centers with the Union Tank Line Company.

Q. Of course in some places it would be higher than in others?—A. At water points like New Orleans and New York, where they meet the competing water lines, the rates are much lower than they are e. g., 150 miles north of New Orleans.

Q. Is that true of such places as Detroit, Chicago, and Milwaukee?—A. Yes; as compared with such points as Duluth, Detroit, Milwaukee, Buffalo, and Cleveland, you will find, if you investigate any transportation department, that the rates on all commodities at inland points are much higher, as a rule. In other words, the low through-freight rate is made up by charging excessive local rates; and that is true of oil as well as of other commodities. The competition—from testimony before our railroad commission last winter—of the Canadian Pacific, a subsidized government road, compels our roads, in order to compete, to make a cheaper rate per ton per mile than they have had where they did not come into direct competition with the subsidized railroad, and when they are practically below cost at a competing point they must make that up at inner shipping points, so that there is discrimination against inland States like Ohio, Indiana, and Illinois, so far as the local shipping is concerned, to keep up the general average.

THE CHARGES OF BRIBERY AGAINST THE STANDARD OIL COMPANY.

Q. (By Mr. KENNEDY.) I should like to ask the witness whether he has any knowledge of attempts by the Standard Oil Company to interfere with judicial proceedings against them by resorting to bribery?—A. As I said to the commission this morning, the bribery charges made against them are made officially in a complaint in the Supreme Court, beginning with General Watson, naming the parties, and bringing the case down to myself. I will furnish the commission the data that we have alleged and set forth therein, with their answer and motion and my supplemental complaint, and when the testimony is taken, which will no doubt be kept in record, I will furnish the commission that also, if it is desired. To go into the merits of the pending case I do not believe advisable.¹ It is a matter purely with the court—a contempt matter—and will be furnished from our office just as it transpired. Mr. Watson, I suppose, will be ordered to testify before the commission at an early date. I can give you the testimony that was adduced, showing that they purchased competitors' clerks at times to furnish them, clandestinely, information as to the working of their competitors. At Cleveland, Ohio, a Scofield, Schurmer & Teagle man was to get so much a month for furnishing their rivals information. He was to furnish the amount of oil shipped, the names of the customers, the cost price, and all the details every evening to the Standard Oil Company. These arrangements were made by John Squires and afterwards by F. B. Squires, according to sworn testimony.²

Q. Were they successful?—A. The one I have described was partially successful. The man who was bought up in some way—I do not know how—was found out. At least, he gave up the information to his employer. Testimony might be furnished to you of the witnesses in reference to Jennings's advertising agency. That system is in vogue all over the State; wherever they can successfully do so, they employ an agent or employee of a rival company. There is one instance where an employee at the railroad station was to leave the information at a given saloon near the depot, where the Standard Oil agent gathered it. They jump onto the wagons that are hauling oil and ascertain the destination of their rivals' oil. This information is all furnished to the Standard Oil offices. They get such information free from the agents of the railroads, if they can, and if they can not they get it from others. I do not know whether you call it proper, and whether a man is at liberty to sell his time and inform the Standard Oil Company of what is going over his railroad. I suppose there is no criminality about that; yet it would be bad ethics in a postmaster to permit such information to be furnished through his employees. The Squires's bribery of a clerk was the only case of hiring rivals' clerks to furnish the data. This was brought out in court in a contest between Scofield, Schurmer & Teagle and the Standard Oil Company. Mr. Brown, of Cleveland, can give you the names and further details on that subject.

¹ See Mr. Archbold, p. 544.

² See also p. 356; Mr. Archbold, p. 573.

EFFECT OF PIPE LINES ON FREIGHT RATES.

Q. You spoke this morning about railroads in Ohio which have pipe lines paralleling them, and which are in league with the Standard Oil Company, to the detriment of independent small producers. I do not understand that you were specific in regard to these railroads. Can you be now?—A. I did not put it in that way. I said that only as a deduction, viz, that where a pipe-line company had been run parallel to a railroad company—I was speaking of the conducting of the whole business—that the records would show that the freights for shipping oil were raised after they had a competitor in a pipe line. The natural result would ordinarily be that severe competition by the pipe line would bring railroad rates down lower than they were before. You can draw the inference from this that through some arrangement the rates, instead of being lowered by competition in these particular cases, were raised. I am basing that, of course, upon testimony.

Q. Do you care to say what railroads?—A. I think when that came out that the Erie was spoken of; the C. & M., down by the Maxburg oil field, was one of the companies; and the Lake Shore, I think, was charged with that in a contest in which Virgil P. Kline was fighting the Lake Shore for discrimination in rates.

REDUCTION IN THE PRICE OF OIL NOT DUE TO THE STANDARD OIL COMPANY.

Q. (By Representative OTJEN.) It is claimed by the Standard Oil people and their advocates that by their combination and improved business methods they reduce the price of the oil product. What is your information upon that subject?—A. That is the favorite argument of Mr. Dodd and others. Calico ran down from 75 cents to 4½ cents per yard, and they might as well have credit for it; and we used to haul wheat by wagon for \$10 a load across Ohio, where they now ship it for a small fraction of a cent per ton per mile. I think that they, like every other producer, had to keep within reasonable bounds in their prices, but they have been profiting at the rate of millions out of noncompetitive rates, notwithstanding the price was reduced. I think they are not entitled to the credit of the reduction because of improved methods or the great amount of oil discovered, any more than of the reduced price of any other commercial commodity. I present here a table which shows the Standard Oil Company's prices of kerosene and gasoline from tank wagons on the same day in different towns in Michigan and Ohio, where they had competition and where they had not. The figures for towns in Michigan are taken from the sworn testimony furnished our trust commission last winter. The figures for Ohio towns were prices in 1896.

Names of towns and State.	Conditions of trade.	Price of kerosene.	Price of gasoline.
		Cents.	Cents.
Detroit, Mich	Competition	5.5	7
Adrian, Mich	No competition	8	—
Ann Arbor, Mich	do	7.75	—
Clifford, Mich	do	8	—
Howell, Mich	do	8	—
Grand Rapids, Mich	Competition	5.5	6.25
Monroe, Mich	No competition	7.5	8.75
Kalamazoo, Mich	Competition	5.5	—
Bay City, Mich	No competition	7.75	—
Lansing, Mich	Competition	6	7.25
Coldwater, Mich	No competition	8.25	—
Jackson, Mich	Competition	6.5	7.75
Saginaw, Mich	do	6	—
Mount Clement, Mich	No competition	8	8.5
Marlette, Mich	do	8	—
Muskegon, Mich	do	8	—
Battle Creek, Mich	Competition	6.25	—
Benton Harbor, Mich	No competition	7.25	—
Cleveland, Ohio	Competition	4.75	6
Sidney, Ohio	No competition	8.75	10
Dayton, Ohio	Competition	6.5	6.5
Xenia, Ohio	No competition	8	—
Hamilton, Ohio	do	7.5	—
Oberlin, Ohio	do	7.5	—
Troy, Ohio	do	7	—
Youngstown, Ohio	Competition	6	—
Canton, Ohio	do	6	—
Warren, Ohio	do	5.75	—
Galion, Ohio	No competition	8	—
Newark, Ohio	do	8	—

Since this table was first published, at Newark, Ohio, and since we took testimony exposing the Standard Oil Company's practice of charging 3 or 4 different prices for oil out of the same tanks, competition has come in and the price of oil has been reduced to 4 cents.

Q. It is your opinion, then, that the lowering of prices has been due to other causes than any which could be attributed to the Standard Oil Company?—A. The Standard Oil Company has taken advantage of each improvement for refining or handling oil. There was an advantage in getting an increased profit out of the by-products. They seized upon, as every other commercial institution would, the improvement that would bring profit out of the by-products. Then there has been a great improvement in methods of boring for oil, and the pipe-line system, which was originally introduced by other parties than the Standard Oil Company, has simplified the method of transporting the crude product. The tank-car system has been a big improvement in saving the use of barrels. If the Government protects these giants, it must keep competition open so that they will compete with one another just the same as small men compete with one another. The eternal law of competition will prevent the excessive profits and greed that the Government does not seem able to prevent when a monopoly is fostered through exclusive grants in the transportation department.

COMPETING COMPANIES IN OHIO.

Q. (By Mr. A. L. HARRIS.) What companies are competing with the Standard Oil Company in Ohio now?—A. There is only a limited competition: I think Scofield, Schurmer & Teagle; and a man by the name of Peter Shull, at Mansfield, has an independent agency, but only a limited territory. Scofield, Schurmer & Teagle originally had a contract whereby they were limited in the amount they were to sell to what would enable them to live.¹

Q. They have competition with more than that?—A. They have competition, but it is not a successful competition either with regard to the pipe lines or the tank line. Neither is competition in rates successful, according to the claims of competitors.

Q. How do they get clear of the competition of the small companies in Ohio?—A. If you take the testimony of Senator Davis, you will get more accurate information on that question. I have to do more with the legal phases. One way is that which I have narrated. They have what their competitors call "buzzards," who follow up competitors, as I have explained; and they have had for a long time several rates, or various favorable rates, with the railroad companies. They soon became strong enough through this means to control a part of their territory and to sell at a noncompetitive price, or a price high enough to enable them to establish a competitive fund. In this way and through their advantage in the transportation department they were able to undersell and run out small men.

Q. Have they followed up the fields in Ohio?—A. Yes; I understand they have, which is perfectly logical so far as that enterprise is concerned. They have expert prospectors who are always on the ground the minute that a field is discovered. With their system of transportation, under their own control, they determine the value of the well and can get pretty nearly the lion's share for their portion.

STANDARD OIL COMPANY CONTROLS THE PRICE OF THE CRUDE PRODUCT.

Q. Even in the new field they substantially control the price to the producer of the crude oil?—A. Certainly, certainly; Senator Davis will give you an account of the plan whereby they shut out the producers in the Corning field by raising the freight rates 17 cents per barrel.² They ship and condemn oil according to their own methods and fix the price according to their own standard. The oil market price, which is under the combination's control, is sent out from Oil City every morning to the oil fields.

Q. Is there any indication at present of the old system of rebates that they once had?—A. On the Lake Shore? No; they have various freight rates. You will find, when you get into the transportation department, that favorite railroads get some advantages. They do not need to resort to the old-style rebates. They can charge their own prices, which amount to rebates, when they own the pipe line or own a controlling interest in the railroad.

Q. (By Mr. FARQUHAR.) What portion of the crude product of the United States does the Standard Oil Company itself own?—A. Well, according to the testimony, they control, either directly or indirectly, from 90 to 97 per cent of all the crude product. That, of course, I get only from the testimony; I have no means of gathering the data.

¹ Compare Mr. Archbold, p. 545.

² See p. 352.

Q. Of that 90 per cent, do you know how much they own?—A. How much they own?

Q. Own.—A. No; I do not personally know. Ninety per cent is the estimate; e., 90 per cent is the lowest estimate of the amount they control.

Q. That is, you mean by the expression "control" that they have control in purchasing the crude oil from others. But the question I asked was, Do you know, can you approximate, how much the Standard Oil Company directly own of the crude-oil product?—A. No; I can not furnish you with that data.

Q. Would you think it was half?—A. I should think it was a great deal more than that.

Q. (By Mr. PHILLIPS.) That is, in the Ohio field?—A. I know it is a greater per cent than that in the Ohio field. If they have control of the transportation from a new field, they do not need to own any of it, so far as the producer is concerned. If they determine how much they are going to pay for it and are not satisfied, they can fix the producer's price at whatever it costs to produce, simply living wages, and let him bore and worry over the cost of getting it from the rock.

Q. (By Mr. FARQUHAR.) As a business proposition, is it not in testimony that they only own 75 per cent of the whole product?

Q. (By Mr. PHILLIPS.) Does not that refer to the Pennsylvania and the Virginia fields—to what is known as the white-sand oil—and not the Ohio?¹

RELATION OF THE STANDARD TO INDEPENDENT COMPANIES IN FOREIGN MARKETS.

Q. (By Mr. FARQUHAR.) I understand that, but you speak of their control. Is it not true that the independent companies, independent pipe lines and others, have and exercise a certain freedom in selling their oils in foreign markets and otherwise, independent of the Standard or independent of its practices?—A. When you come to the question of their relationship with the steamship companies, the interests they have in them, the arrangements they are enabled to make through acts of the British Parliament, the way they head off the Russian oil, etc., you will have to get witnesses that know. All you can observe is the result. There is a little book, recently published, which will explain the way they manipulate the English oil market and give you the details more accurately than I can give them.²

Q. (By Representative OTJEN.) What is that?—A. It was handed to me while Mr. Archbold was on the stand in New York. I do not remember the name now, but can furnish it to you.

Q. (By Mr. A. L. HARRIS.) Is Cook the author?—A. No; it was a little red book, a pamphlet about 4 by 6 inches, and contained all the testimony as to how they managed to control the Russian oil market, i. e., I mean prevent the Russians controlling the English market.

Q. (By Representative LIVINGSTON.) Whose testimony is it; I do not understand?—A. It is simply a pamphlet, prepared by someone, that is circulating in England. It gives the history of the Standard Oil Company's control of the English market.

Q. I would like to know something official. Of course we can not receive that book as an official statement.—A. I can not give you that book's source of information.

Q. Which line of steamers is the Standard Oil Company interested in?—A. You can get hold of all the information relating to their entire system of water transportation, as well as their system of land transportation. There are witnesses that can furnish you that. If you get some of the independent oil dealers in New York that are competing by water (there are 8 or 4 firms down there), they will inform you.

Q. (By Mr. PHILLIPS.) Are they all independent refiners?—A. They are independent refiners; they have not their pipe lines quite through to seaboard. They have been able to have their system of pipe lines, like the Standard, but they have competitors there. Of course there is no way of controlling a water highway except through the methods of shipping, viz, classification of freight.

Q. (By the CHAIRMAN.) Does any member of the commission care to ask anything further?—A. It would be impossible by means of my investigation to reach anything outside of what we came in contact with ourselves, but you will find it all. There are people, or witnesses, who will furnish you that.

Q. (By Representative LIVINGSTON.) Do the independent refiners have any arrangement with the transportation companies by which they can compete across the water with the Standard Oil Company?—A. That I can not furnish you; you can get that, however. I understand they ship oil "camel-back" and

¹Compare Mr. Boyle, p. 499; Mr. Archbold, pp. 560, 561; Mr. Lockwood, pp. 408, 409.

²Compare Mr. Archbold, p. 546.

almost every other way in the old country. In some places they have a fair competition, and in others, we think, they do not. So far as Ohio and the United States are concerned the secret of the difference between their success and that of the others lies in their gaining control, as the testimony has shown, through the powers they receive from the Government and through the transportation companies. That is my theory of it.

COPIES OF STOCK AND TRUST CERTIFICATES.

Q. (By Mr. JENKS.) You said this morning that you could furnish a copy of the trust certificate issued to the certificate holders under the old trust form. Can you also furnish us a copy of the stock certificates that they issue at present to the stockholders?—A. I think so. [Showing book.] Here is a lithograph copy of the Standard Oil Company's capital stock certificate after they increased to \$3,500,000. Do you care to have it read? That is one of the stock certificates.

Q. Make that a part of your testimony with one of these other similar forms.—A. There are two of these here, and then I have here also a printed form of the trust certificate. They do not always put the exhibits in connection with the testimony, and you have to look for them at the close of the testimony. Here it is on page 51 of Part II of the Record in the case of the State of Ohio *ex rel.* the Attorney-General *v.* the Standard Oil Company. Well, Mr. Rockefeller's own personal one is here, and that will give you an idea. (Reading)—

STANDARD OIL COMPANY.

No. 301.

Capital, \$3,500,000.00.

1244 shares.

Incorporated under the laws of the State of Ohio.

This certifies that J. D. Rockefeller is the owner of ninety-two hundred and forty-four shares of the capital stock of the Standard Oil Company, transferable only on the books of the company in person or by attorney on surrender of this certificate.

Witness the seal of the Company and the signatures of the President and Secretary, at Cleveland, Ohio, this 28th day of November, 1892.

(Signed)

J. D. ROCKEFELLER,
President.

(Signed)

F. B. SQUIRE,
Secretary.

[SEAL.]

[Standard Oil Company,]
[Cleveland, Ohio.]

(Reading.)

Know all men by these presents:

That we, John D. Rockefeller, Henry M. Flagler, William Rockefeller, John D. Archbold, Benjamin Brewster, Henry H. Rogers, Wesley H. Tilford, and O. B. Jennings, trustees for winding up the Standard Oil Trust, by W. H. Tilford, our attorney in fact, and John D. Rockefeller, of _____, do hereby constitute and appoint John Bensinger, of New York City, our true and lawful attorney for the purposes following, to-wit:

Whereas John D. Rockefeller has placed in the hands of said attorney assignment No. A 365 for ~~the~~ of the amount of corporate shares held by said trustees on the first day of July, 1892, in each of the companies whose stocks were so held.

Now the said attorney is hereby authorized to secure from each of said companies transfer upon their corporate books of said stock and stock certificates for whole shares, and scrip for fractional shares thereof, and when the said certificates and scrip are received from all the companies referred to the said attorney shall deliver the same to John D. Rockefeller, and the said assignment No. A. 365 shall at the same time be delivered to the said trustees.

And the said attorney hereby agrees to obtain the said certificates and scrip and to deliver the same and the said assignment as above specified.

(Signed in print.)

JOHN D. ROCKEFELLER.
HENRY M. FLAGLER.
WILLIAM ROCKEFELLER.
JOHN D. ARCHBOLD.
BENJAMIN BREWSTER.
HENRY H. ROGERS.
O. B. JENNINGS.
WESLEY H. TILFORD.

(Signed in ink.)

W. H. TILFORD, Attorney in Fact.
JOHN D. ROCKEFELLER, per GEO. D. ROGERS.
JOHN BENSINGER.

Q. This is the form of the stock certificate in lieu of the trust certificate?—A. They authorized him to transfer that, and then he received from the constituent companies, the 20 companies I mentioned to you this morning, his share of each of those. All those forms are here, if you care for them. The correct trust certificate is here also. I do not suppose you care to have the legal intricacies; they show how they get out of the trust and how they got into it. On page 125 there is a copy of the Standard Oil stock certificate. (See p. 306.)

That was the original trust certificate, or copy, then, of 34,993 shares, or 35,000 shares less the 7 shares.

THE CONTRACT WITH THE NEWSPAPERS.

Q. That will be sufficient, I think, along that line. You spoke this morning also with reference to the contract that was made by the Standard Oil Company or its representatives with some of the newspapers. Can you furnish us with a copy of that contract or give us its substance?—A. Mr. Cook gave the first testimony at Marietta on this point. The testimony that was afterwards given was in reference to the Xenia Herald's contract. George W. Cooke, of Marietta, has given the essential parts of it here, I notice, in his testimony; and I think I can furnish it to you from this record.

Q. Will you be kind enough to quote that accurately as it was given in the testimony?—A. I thought I had the page showing some of the publications for which he received pay. Here I see his exhibit (reading): "Whether the Standard Oil Company of Ohio is in a trust or out of a trust is a question for the courts to decide; but whether the consumers of oil are getting a better quality at less cost and handling with greater safety than formerly is a question for the people to decide. In the commercial affairs of life it is things, not words, that count in making up the balance sheet of loss or gain, of benefit or injury. Monopoly and octopus, combines and trusts, are haughty words, but the best goods at lower prices are beneficial things. It is much easier to say harsh words than it is to make good things cheap."—Lima Times Democrat.

Q. This material was furnished by the company?—A. Furnished him by the company. I see here on page 82 of the typewritten copy of Mr. Clark's testimony (reading): "The publisher agrees to reprint, on news or editorial pages of said newspaper, such reading notices set in the body type of said paper and bearing no marks to indicate advertising, as are furnished from time to time by said Jennings's agency, at a rate of — per line, and to furnish such agency extra copies of paper containing such notices at 4 cents per copy, or to mail the same to a list of subscribers furnished by said agency at 4 cents per copy." To be fair to the company, a little bit of newspaper controversy arose. They claimed that in that there were 2 words left out, and it proved to be so, for afterwards when we obtained the original contract the words "acceptable to the publisher" were left out; in this testimony here those words do not appear, and therefore it was claimed in the Jennings suit that this contract was not correctly copied. But although the printed form did not contain the words "acceptable to the publisher," it made no difference in effect, for the subject-matter published must have been acceptable or it would not have been published.¹

COMPETITION WITH THE STANDARD (RESUMED).

Q. (By Mr. PHILLIPS.) Some time after the discovery of the limestone rock, or what is denominated as Lima or Trenton limestone rock oil, did or did not the price settle to 15 cents per barrel, more or less, for a year or so after it was discovered?—A. That I do not know. As to such details the active dealers can give you them. The temporary glutting of the market would reduce the profits until it became regulated again.

Q. During the time of the Standard Oil Company's control independent pipe lines have frequently been built in the different fields, have they not?—A. Yes.

Q. Do you know by what methods they undertook to compete with these independent pipe lines? Was it by reducing the pipage of the oil, or by putting a premium on the oil piped, or both? Do you know?—A. Sometimes they temporarily raised the price to producers so that in the producing field the competing pipe line company could not pipe the oil temporarily at the price; and in other cases they would watch that pipe line company's refining customers and would break them up when they sold the refined product. Mr. Davis has had sad experience in that line; he can give you the details of that.

OTHER COMBINATIONS' PROFITS NOT SO GREAT AS THE STANDARD'S.

Q. Do you know of any other company, corporation, trust, or monopoly in recent years that has made such a vast sum of money as has been made by the Standard Oil Trust?—A. The nail trust ran up the price of nails, until the company cleared a large amount of money in a few months.

Q. I mean, made it in hand, accumulated the fortune?—A. The nail trust ran up nails from 86 cents to \$3 and something, and they cleared \$7,000,000 in a shorter time than the Standard would have made a similar sum.

Q. I have alluded to the larger accumulations.—A. Oh, no; none that I know of.

¹ See p. 312; Mr. Lockwood, p. 309; Mr. Boyle, p. 457; Mr. Rogers, p. 537.

Q. Can you summarize briefly what methods they have pursued? You have passed over a number of them. Could you summarize to this commission what methods they have pursued to secure this fabulous sum of money?

Q. (By Representative LIVINGSTON.) You mean the nail trust?

Q. (By Mr. PHILLIPS.) No, no; the Standard.—A. You will have to obtain those facts from the men who come in contact with their methods; beginning with the Pennsylvania road and the freight blockades and the pipe line fighting, and coming up to the fights they now have in the courts. It would be impossible for me to give you accurate data. I expect Mr. Phillips here can give you some points on that fight. There are several witnesses you can get upon that point. I suppose Mr. Lee could have given you something; I understand he has testified.

STANDARD OIL COMPANIES IN DIFFERENT STATES.

Q. (By Mr. A. L. HARRIS.) In what State did the Standard Oil Company get the charter under which it is operating now?—A. The Standard Oil Company of Ohio is chartered under Ohio laws; the Standard Oil Company of Indiana is chartered under Indiana laws. There is also a Standard Oil Company of Pennsylvania. The Buckeye Pipe Line Company is of Ohio. The Union Tank Line Company, a more recent incorporation, operating in combination with the others, is a New Jersey corporation. I suppose there are ten or twelve States represented. If you want to know why we let the trust live in Ohio, it is because we can not help ourselves.

Q. (By Mr. FARQUHAR.) You proceeded against the company under the Ohio law?—A. The Standard Oil Company, not the trust. I will write out a list of the companies for you. They are in different States but all act together to accomplish a common result, viz, to make the trust certificates valuable. The original contract was denounced by the court, but it still bears fruit in dividends collected by holders of trust certificates.

DISCRIMINATIONS IN FREIGHT RATES WITHIN A STATE.

Q. (By Mr. A. L. HARRIS.) I thought they were incorporated in the different States?—A. On page 26, in this report, Mr. Harris, there are some tables in reference to the advancement of freight rates growing out of the competition in oil. This is our Ohio trust investigation report and shows where they increased the freight before and after a certain period from 16½ cents in 1888 to 19 cents in 1898. On the Rock Island road they increased the rates from 18½ in 1888 to 29½ in 1898. These tables can be furnished you, and they will show you the discrimination against independent shippers. The freight was increased for the independent companies, when compared with the rates in force when the Standard was shipping by railroad.

Q. (By Mr. FARQUHAR.) In your investigation of these affairs did you ever find that the railroad charter regulates freight charges?—A. We have a statutory freight regulation; a maximum rate.

Q. Maximum rate?—A. They can not charge more than so much per ton per mile for certain specified commodities; in that sense, I mean.

Q. In what sense?—A. The fixed rate is as high as 5 cents a ton per mile. The competitive rate for coal to Duluth has been as low as one-seventh of a cent a ton per mile, so that the statutory rate of many years ago has practically given no protection to the shipper in recent years.

Q. If an Ohio road delivers coal at Lake Erie at a lower rate for a long haul than for a short one, provided it must do this to get the extra tonnage needed in order to pay dividends and make profits for the road, if it still keeps under the maximum rate, do you call it discrimination?—A. What I referred to especially may be illustrated by facts. The town of Nelsonville, which is perhaps 60 miles below Columbus, has received the same kind of groceries or freight from Baltimore at a rate no greater than they were charging from Columbus. In other words, the wholesale grocers of Baltimore were able to compete with those of Columbus because of the discrimination in the transportation of freight. By means of through freight rate discriminations like this great terminals such as New York and Chicago are placed upon a competitive basis with the inland cities. That is the most extreme case that we have. There was another case where the total charge for shipping coal from the Hocking field to the Dayton asylum was the same as the rate, over a road controlled by the same company, to Sandusky city, and through, I think, to Duluth. But these figures on coal discriminations can be furnished you from freight-rate tables, i. e., within the State; there is no law against discriminating on long and short hauls. We contended, by a bill

before the legislature, which was defeated by a strong lobby, that the rate for State roads ought to be based upon the interstate rate, and that we ought to have the same rate per ton per mile on our State business that the Interstate Commerce Commission requires on interstate business. We fought for that very strongly, but were defeated. Our theory is that while it is necessary to maintain corporations by an income sufficient to bring proper return for investment, and while it is conceded by everybody that corporations are a necessity and that we should not be hostile to them, the State commerce should not be levied upon in short hauls in order to reimburse companies for their losses in competing at waterway terminals. Or, in other words, they ought so to distribute their charges as to equalize them between the inland cities and the terminal points.

Q. Can a railroad, chartered in Ohio and under an Ohio maximum freight-rate law, make rates independent of the interstate-commerce rates themselves?—A. Yes.

Q. The same as the constitution of New York with the New York Central?—A. Yes.

Q. (By Representative LIVINGSTON.) I suppose the Standard Oil Company and independent refiners get special rates on the oil that they ship?—A. That is a pretty severe charge to make against any railroad.

Q. I am not making any charge; I am asking you a question.—A. I suppose the independents do not get the same rates as the Standard does.

Q. Which do not get as much?—A. The independents do not get as favorable classifications of freight. The Standard is always getting rates through some special classifications, or allowances for loading and unloading, or in contracts for lubricating oil, etc.

Q. Oh, yes; they could get all the oil facilities. I believe the independent refiners are fighting the Standard Oil Company?—A. That may be, but at many disadvantages. I do not think they have an opportunity to fight; it is not a fair contest.

Q. It is a contest of some kind?—A. Yes.

PRICE OF OIL WOULD BE REDUCED WERE IT NOT FOR THE STANDARD OIL COMPANY.

Q. If the Standard Oil was destroyed would the price of oil to the consumer be reduced?—A. Most assuredly.¹

Q. Would not that reduce the price from the independent refiners to the consumer also?—A. I presume it would.

Q. What interest have the independent refiners in fighting the Standard Oil Company?—A. Because there is a legitimate profit to be made in the business, and all they ask is that the government keep its hands off, and not use its power to assist the Standard people.

Q. You are against the protection of the Standard Oil Company by the government?—A. I am against any corporation getting assistance from the government to the exclusion of others. Everybody is entitled to the same privilege.

TRUST FOSTERED BY THE GOVERNMENT.

Q. Do you call that protection or subsidy? Or what would you call it? Is it help?—A. It amounts to this: Does a sovereign State have the right to delegate governmental functions to a transportation company, be it a railroad company or a pipe-line company, and when such a company has received such powers through its charter and by exercise of the right of eminent domain has condemned private property for public uses, ought the State to permit it to devote that property to private ends? It is manifest that this contract with sovereignty requires such a corporation to give every man the same opportunity to use the railroad or pipe line. There are no powers delegated by a government such that one man can take advantage of another, if the governmental functions so granted are fairly exercised. The board of directors of a railroad who are exercising the right of eminent domain have no more right to give you or me a rebate, to the injury of another shipper, than the county treasurer would have to charge us 1 mill or 2 mills and in turn give me back half my taxes. It is just as much an offense for men to exercise these governmental functions wrongfully as it would be for a taxing officer to give rebates in taxes. That is our position.

Q. Your position is that, it being a public franchise given by the State, all the cities of the State are equally interested?—A. That is it exactly. The board of directors of a railroad company is exercising governmental functions as much as a Congressman is. As I said this morning, if a man is coining a dollar for the

¹ See p. 317; also Mr. Archbold, p. 543.

government he has no more right to cut it in two and put half in his pocket than a board of directors has to organize a railroad and exercise the right of eminent domain over private property and then afterwards abuse the right thus granted by fostering a monopoly. And there is where, if you allow me, the modern remedy that is being advocated of absolute government ownership is a mistake, because the government owns them now in the sense that the government can control. They get their life from the government; they have sovereignty breathed into them by the government; they can not exist without the government; they can be destroyed by the government at any time.

Q. Is the only wrong which you charge against the Standard Oil Company that of discriminating against some of the cities of your State as compared with others? Is that the only wrong they are guilty of in seeking discriminating freight rates? Is that all the wrong?—A. Oh, no; that is the basis of their getting the advantage. We say they get the advantage from the government by charters, the powers of which they abuse. That is one of the wrongs, but that is not the only offense committed by them.

THE REMEDY FOR THE EVILS OF THE TRUST COMBINATION.

Q. How would you remedy that wrong if you were on this commission and were asked to suggest a remedy?—A. If I were on this commission, I should say that so far as State charters are concerned, that is a matter for State control; an offense against a State charter is a subject for State punishment. The States originally ceded to the Federal Government certain powers only, and reserved unto themselves all that they did not so cede. One of the powers reserved to themselves is that of granting charters to incorporated companies, and this is peculiarly within their rights. When you come to corporations that are doing interstate business, then your commission can step in, and you have the right to investigate that and Congress to control that by Federal legislation. Attorney-General Griggs was right, and so were President Harrison and President Cleveland, when they enunciated the doctrine that the remedy is peculiarly a matter within the State's control.

Q. I have brought you right down to the point again. Would you do that by levy and sale, or by condemnation of the stuff when you catch it on the train, or how would you reach it? Suppose, in interstate commerce, that a Standard Oil tank was going across from New York to Virginia, and we knew it and seized it in Pennsylvania, and that, after that, the tank of oil, being in possession of the marshal or sheriff, was condemned or confiscated. Would that be your remedy?—

A. The Sherman Act was pretty nearly that drastic; it would be a good remedy. The Sherman Act has been sustained, and it has gone that far. If a desperate remedy is required for a desperate case, and that proved to be hard, and you enforced it on the dealer, the roads would get a modification of the law; but I do not think anything is too severe to stop the abuse that is going on.

Q. Suppose the tank was condemned and the engine and cars hauling it were all condemned and confiscated; would you think it would break up the evil?—A. I should think it would break it up, but I do not believe it necessary to be that severe. I would not interfere with all innocent shippers on the train. You may have mail and express and through freight. Here a punishment of an especial character is needed; take the property that is involved in the offense. If it is the buyer, why, stop the buyer; if it is his oil, stop the oil.

Q. That would be a punishment upon the party that owns the oil, but none on the railroad?—A. Then, where you have your through railroads or interstate roads, take the charter away.

BETWEEN THE FEDERAL AND THE STATE GOVERNMENTS AN ABSOLUTE REMEDY IS EVER PRESENT.

Q. That goes back to the State authority?—A. It goes to the United States if you have a Federal charter. The Union Pacific has a Federal charter. Between the Federal Government with a Federal charter and the States with a State charter there is an absolute remedy ever present and never divested from the people; it is constitutional; the legislature can not take it away. In our State private property is ever held inviolate by the constitution. The attorney-general, to illustrate, is a constitutional officer, and it is his duty to appeal to the courts to forfeit every charter the powers of which are abused, independently of the court's ordering him to do so. That is, he does not have to get a form of written order from the governor, or the legislature, or the court. By the constitution the power is vested in him to bring before the highest tribunal any corporation so offending, as much

as the prosecuting attorney is vested with power to bring a criminal before the grand jury. We have many such cases now pending before the courts. I take it that the Supreme Court of the United States and the supreme courts of the States will do a corporation no harm when doing right, and if they are in the wrong they will be punished. It is the legal and constitutional way to try these matters, and they should not be subject to mob rule.

Q. (By Mr. FARQUHAR.) Are the independent producers chartered corporations in your State?—A. Why, the Argan was. I do not know, but I think Scofield, Schurmer & Teagle are a partnership. I do not know of a single independent one that is alive.

Q. You spoke of the remedy. I don't think it is clear to the commission exactly what you may call the gravamen of the complaint of the independent producers?—A. The Standard, by means of controlling transportation, causes the producer to receive always less than the true value for his oil. This is effected by discrimination in rate tariffs. The Standard has been able to determine the price of crude oil and the rates for shipping it, and the independent producers of the State demand protection so that they can obtain equal shipping facilities, which they do not now get.

Q. What more protection can they get than the farmer who is selling 50-cent wheat in the West? Do not these independents with their oil sustain the same relation to the railroads as the farmer with his wheat?—A. When the wheat shipper is at a noncompetitive point on a railroad and when the company, in order to meet competitive rates at a point like Duluth, charges such a price that he can only receive 50 per cent of the value of his product in the markets of the world, he is injured in just the same way as the oil producer by excessive charges for transportation.

Q. (By Mr. FARQUHAR.) And without remedy?—A. He has his remedy.

Q. What is his remedy?—A. The Federal court held last year that the interstate commercial rate can not be so low that tribute must be levied upon State commerce in order to maintain traffic; or, take the converse of the proposition, you can not make the State traffic so high and the interstate so low that the State shipper is contributing to the interstate shipper. The remedy that I suggest must be finally adopted is this: That the State and interstate rates must be so adjusted that the burdens will be equalized. Whenever you have accomplished that you have demonstrated the fundamental principle that the public highway is controlled by the public; the railway is a substitute for the highway. The public owns these highways, and there must be an honest classification of freight rates, and a fair allowance for loading and unloading, and the roads must not abuse this principle in order to grant favors to certain shippers. There can be an absolute destruction of vested interests by classification of freights and by charging exorbitant local rates. Four hundred per cent more on a ton per mile basis is required to carry freight from Columbus, Ohio, to Cardington, Ohio, than from Columbus, Ohio, to Cleveland, Ohio.

Q. (By Mr. RATCHFORD.) I should like to have you revert to the subject of the proposed law in Ohio and explain the main features of it a little more fully to the commission. You were touching upon it a little way back and then went to another subject.—A. You have the Ohio statute here; I can take it up briefly. We have passed an antitrust law, and it went into effect July 1, 1898. We have quite a number of cases pending under it. There are the cases of the beer trust, the Standard Oil Company, the Buckeye Pipe Line Company, the Solar Refining Company, and others.

PROPOSED LAW FOR THE REGULATION OF FREIGHT RATES IN OHIO.

Q. I have reference to the law looking to the regulation of freight rates.—A. The general proposition was to amend our maximum freight rates, bring them down somewhere near the commercial competitive rate, and then make the interstate rate per ton per mile the basis or measure of the per ton per mile rate for Ohio business; in other words, to apply the long-and-short-haul clause of interstate commerce to Ohio business, and not permit discrimination against inland noncompetitive towns and in favor of competing towns like Cleveland and Cincinnati. That is all there was of it. It was a per ton per mile for local business the same as a per ton per mile on through business, exactly. Just to make it perfectly clear to the commission, the bill proposed that the same tonnage rate per mile be charged for a 10 or 20 mile haul as for a 50 or 100 mile haul. It allowed a variation of 10 per cent only for a shipment of less than 20 miles.

Q. Did the railroad companies oppose that?—A. They opposed that violently.

Q. What was the position of the coal companies?—A. I do not think they appeared before the commission. Mr. Rend was there on the trust investigation; he was an unwilling witness; we caught him and subpoenaed him.

Q. Do you know whether the coal men of Ohio ever complained against this discrimination in freights?—A. Yes; they have now filed complaint in my office; I think Collins and Fahy are among them; they are now out gathering testimony on this. In order to maintain the coal trust, coal cars of the independent coal producers were side tracked. That is the complaint. I will furnish you testimony here from the gentlemen who were discriminated against. While they told us they were getting the same rate they said they did not get the same conditions. They could not get their coal delivered in time to fulfill their contracts with customers. By such means the independent coal producers' customers were destroyed. I have given Mr. Jenks the names of the gentlemen; I think that they will testify on these points, and give you a little data, because one of them was an employee, at the time, of one of the leading railways involved in the matter.

Q. What were the principal objections raised by the shipping companies against that law?—A. The most intelligent reason given was, I think, by the gentleman representing the Erie or the Lake Shore; he stated that if the freight rates were all adjusted on that basis he believed it would be exactly fair, but that certain manufactures were now built up, and certain centers prosperous on the other system, and it would demoralize and derange towns and industries, and that it would create panic in one place and flush times in another, before it would be possible to get back to the normal condition of affairs. The Pennsylvania Company has a gross income of \$15,500 per mile; if it could distribute that gross income in that way it would make no difference to the company; it has to have that much—\$15,500—to pay dividends on its stock and pay for repairs, taxes, and employees. It makes no difference to the railroad company itself where that comes from, and they would just as lief distribute it equitably between local and through shippers, but the moment they attempt that trouble arises on account of the great competing centers like Chicago and Duluth, where the companies come in contact with the Canadian Pacific and the water ways; and they can not undertake it, because, when they meet water, they have to make water rates.

Q. Have you any reason to believe that the producers of coal in your State were induced by any coercive means to keep their hands out of that fight?—A. Well, the ways of the lobbyists are so mysterious we do not have an opportunity to find out.

Q. However, you are of the opinion they favor equalization of rates?—A. I think so, yes. I think every independent producer would favor equalization of rates. We do not want Baltimore to compete with Columbus in shipping groceries to Nelsonville; we do not want the wealth of Ohio poured into New York or Chicago; we want our share of it; and we would have it if we had no discriminating rates. By discriminating in transportation you can dry up the most fertile valley on the face of the earth; you can reduce all the little cities along the line of a railroad to villages, and give this wealth to the great centers, by discriminating in railroad rates alone.

Q. (By Mr. PHILLIPS.) Are there not a number of chartered companies in Pennsylvania controlled by producers that are operating in your State, for instance, the Empire Oil Company and perhaps the Victory Oil Company? They may have been chartered in New York State; but are there not a number of chartered companies controlled by producers doing business in your State?—A. As far as the oil business is concerned my opinion is based purely upon conclusions of testimony taken; they do not practically compete in their respective territories; for instance, the Standard Oil Company of Ohio has its territory and the Pennsylvania Oil Company sells in a portion of Ohio, but practically they do not compete, because they are all one system, although they claim they are acting independently. They never wage a war between any of these different companies. I never heard of one.¹

WHAT WILL BE THE EFFECT OF PRESENT INDUSTRIAL DEVELOPMENT ON GOVERNMENT?

Q. (By Mr. KENNEDY.) I should like to ask you if it is your opinion that the evolution which is now going on, if unchecked, will lead to a control of the industries of this country and to control of the Government by a few hundred or a few thousand men?—A. Well, that is mere conjecture. I feel as though we are under a republican form of government. We have as socialistic a form of government as man has ever been able to invent; and as soon as the people have an opportunity to control matters in the way I suggest—to take away charters, as well as grant charters—a condition of affairs will never rise whereby the monarchical

¹ See Mr. Archbold, p. 545.

institutions you suggest will be substituted for our republican form of government. Monarchies represent primogeniture and the principles of tying up property in a few hands. All this is what brought on our Revolution. I do not think we will drift back into these abuses, although we have made rapid strides in the last 2 years toward these monarchical ways. I believe it has gone about as far as it will go. Commissions like your own honorable body are getting the facts impartially; Congress and the people will know of the evil; you will diagnose the disease. There have been a good many patent medicines advertised to cure governmental ills, but they do not reach the disease. I think when you go through with this investigation and procure data you can give us more light on these questions. I know this from 3 years of experience in my office. I know, so far as the State is concerned, that it has absolute power to regulate many of the abuses you refer to, namely, the abuses of governmental powers exercised by creatures of the State.

Q. Would not the result which I suggested be realized if other industries were controlled in the way that a few men in the Standard Oil Company control the oil production of the country?—A. Yes; that would be the result. The socialists are advocating that this abuse be continued, and claim that it will demonstrate the possibility of Government ownership. When a few men get possession of all public utilities the socialists propose taking them away. That is their theory. The Government ought to own all public utilities, and ultimately the only way to demonstrate the possibility of such a system will be to allow a few people to demonstrate it first. Men with power, like Rockefeller and others, will demonstrate the feasibility of central ownership and control, and then the Government can take their place.

Q. That is the point I wished your opinion on.—A. If we always had men like Rockefeller to run such things it might be better for the public than governmental ownership.

GOVERNMENT OWNERSHIP OR CONTROL AT PRESENT WOULD BE DANGEROUS.

Q. Would it be preferable to have the Government control these public utilities or to have a few men, the representatives of the corporations, run the industries pertaining to them and run the Government too?—A. The Federal Government has 100,000 employees now and it almost raises a panic every time we have a Presidential election, so great is the demand for spoils. I do not know what would happen if you added any more to that. It looks to me as if, under the present civil-service rules, the Government ownership of any or all these utilities would create such a public disturbance that our institutions would be in danger.

LOCAL GOVERNMENT OWNERSHIP SUCCESSFUL.

We have a great many instances of public ownership in Ohio; 76 per cent of the waterworks plants are owned by cities, and many electric-light and gas plants. Local powers are granted to cities, giving them the opportunity to buy street railways; that can be followed up by rights to maintain interurban roads. The experiment has been successful, as no doubt you know, in the old country. Glasgow, Vienna, and other cities owning their public utilities.

I have been converted to that theory, viz, that cities should be given the right to determine for themselves what public utilities they desire to own or control. It will furnish a check to further abuse of municipal franchises operated by private companies.

FRANCHISE TAXES IN OHIO.

Q. (By Mr. FARQUHAR.) I suppose you have in Ohio a law the same as the Ford franchise bill of New York, taxing that class of property?—A. We are pioneers on that principle, you know. We have the Nichols law, where we take the stock valuation as the tax valuation, and not the value of physical tangible property. Other States have been following our law. Michigan has been following it, even extending it to railroads; we have not proceeded that far. We substituted the excise tax—one-half of 1 per cent for an additional tax upon railroads. Since I have been in public office we have had a fight on that, but the law passed. We drew from the Pennsylvania Company \$96,000 additional tax under the excise law; we collected \$450,000 under the excise law, the one-half of 1 per cent on gross receipts. That is what New York is doing now, except that New York proposes to make it 1 per cent.

SUIT AGAINST THE BREWERY TRUST.

Q. (By Mr. JENKS.) Take up the suits against some of these other combinations, outside of the Standard Oil Company.—A. Yes; we have other suits; one against the Cleveland and Sandusky Brewing Company, which is now operating a trust; some 10 brewers have placed their property in a pool and paid a promoter \$30,000 for mortgaging their property back to themselves, and attempting to raise the price of beer over their competitors. The trust is on the same plan as the other trusts; we have testimony that 1 man asked \$5,000,000 for his plant which was only worth two and a half million; they would not buy, and then undertook to destroy his business. They would not cut the prices of beer; but wherever there was a competitor with a long established business and possessing the good will of the business, they would buy him out. If the plant was worth \$10,000, they bought it for fifteen or twenty thousand, if it could not be obtained for its true value; and then put their beer in the place of the independent dealer's beer. They went out and bought up his customers, and almost raised a commercial and industrial war among the saloon men in the barrooms of Cleveland. We commenced suit 3 weeks ago against this brewery trust, under the Valentine-Stewart act.

THE TRUST PROMOTER.

Q. You raised one point that you did not bring out clearly, viz, the question as to the power of the promoter.—A. The Standard Oil Company trust is not run by a promoter. Other trusts will take a firm of attorneys and draw up one of these contracts and start out and get options on the leading industries that are making a profit in any one craft or business. The owners will sign options to sell their plants for a given amount to an individual, who becomes in fact a trustee. When he gets all the options he can on competing plants they then organize a corporation, usually in New Jersey, and this individual turns these plants all over to the trust, and claims it to be an absolute sale to a new company. The courts in Missouri have recently walked right through that fiction and held that trusts can not be disguised by one corporation buying the plants for the purpose of deeding them to one man, who deeds the same to a company formed for the purpose of buying in competing plants. A promoter works it up; the new company issues bonds—first-mortgage bonds—and sells them, and the promoter pockets the profits. In this particular case he received \$30,000.

Q. That is a matter of evidence?—A. That is a matter of evidence. It is from a statement gathered by attorneys preparing the testimony for our contest. It is the testimony of men who have made affidavit. It amounts to this: 10 companies are paying a man \$30,000 to get them to combine their interest into one company. It is a mere myth, it is a South Sea bubble scheme; but there are always men glad to try it.

Q. In the case of the brewers' combination that you have spoken of what was the amount of stock they issued, as compared with the valuation of the plants?—A. They issued preferred stock, usually for about the amount of the actual value of the constituent plants.

Q. That is true in this specific case?—A. Yes; and the common stock may be from three to five times that, and represents nothing except speculative value.

Q. Do you recollect how it was in this specific combination?—A. No; I can not give that. I know they issued mortgage bonds enough to pay for the actual property purchased. They have not transferred a single share of trust stock in 4 weeks, since the suit was filed. A great many of the interested parties are German, and they expressed a desire to settle—to have the investments put back into competing companies.

THE CRACKER TRUST.

Q. Can you mention any other combinations in Ohio that have been prominent?—A. Well, we have a suit pending now against the cracker trust. Under their promise, so far as the Ohio territory is concerned, they agreed not to violate any State laws. Although we have not taken testimony, we have filed interrogatories. They have a system of bonuses that they give back to the customer if he buys exclusively of them, and the only evidence we have of their violating the tacit understanding with the State is in the case of a new cracker firm which recently leased grounds and buildings in Columbus and bought machinery. When it was found they were leasing a building and buying machinery, the president of the cracker company sent for them and told them that if they undertook to go into business (that is their statement to me) the cracker company would

ruin them. The reply was that contracts were out for cracker machinery and the construction of buildings, and that suits for damages would follow if proceedings stopped. Thereupon the trust agreed to take the plant off their hands whenever it was completed. Those trusts are not so dangerous, because I do not believe that when competition can enter any trust can long thrive. The New York trust could not; the whisky trust could not. Only when they get some private advantage in the transportation department do they ultimately thrive.

Q. Have you any information of still others in the State of Ohio?—A. We have the tobacco trust, but we have not filed a complaint in that case as yet. The next suit filed was that against the tin plate trust, ten days ago, in Cincinnati, by the prosecuting attorney.

SUIT AGAINST THE CENTRAL PASSENGER ASSOCIATION.

Q. That is substantially all that you have direct evidence against so far?—A. We have a suit pending against the Central Passenger Association.

Q. (By Mr. PHILLIPS.) Is that the American Tin Plate Company to which you referred earlier?—A. Yes. He said he had evidence now to start the suit; I do not know what the name of it is. The Central Passenger Association has grown up since the decision in the Joint Traffic Association case of the United States. We base our suit on the strength of that decision. So far as Ohio business is concerned, we claim that the Ohio courts have jurisdiction over railroads in the State and can prevent them from pooling their issues through the Central Passenger Association and issuing thousand-mile tickets with rebates, holding up \$30 and giving back ten after the mileage book is used up, in case it has not been transferred. It is questioning their power to pool rates for the purpose of selling thousand-mile tickets. We insisted that since that joint-traffic decision we must have competition between railroads so far as Ohio business is concerned.

Q. (By Mr. JENKS.) If I understand you, the different railroads of the State of Ohio have agreed to issue thousand-mile tickets for \$30 and give a rebate of \$10 when the ticket is used up.—A. The Central Passenger Association is made up of different railroads. They sign the tickets individually. They have an executive committee located at Chicago; and they have by-laws and a constitution that we have had furnished us through interrogatories that were attached to their pleadings. They sell a thousand-mile ticket which connects over the different railroads that are in the combination, and then return \$10 in case the ticket is not transferred. It is really a scheme to prevent scalping. It is aimed at the scalper, but is really a scalping system. The railroads themselves furnish directly to scalpers thousand-mile tickets that are good over a number of roads. This system destroys the competition that small travelers used to enjoy. The Central Passenger Association is organized to prevent competition.

Q. Are there other combinations concerning which you have information?—A. That is all.

TRUST LEGISLATION.

Q. Have you further suggestions to make as to remedial legislation?—A. Here is a copy of the Ohio statute. We collated different trust statutes last year very carefully when we drew this act, and based it upon the trust investigation. We find that if we had to do it over we would add that clause I spoke of in this morning's testimony, exempting any witness testifying from incriminating himself. That has been approved by the United States Supreme Court. That clause should be added to the statute. Texas has this year added a special amendment to this act that has substantially the same features. At least, they have an act reaching directly the insurance companies; but as we had an antitrust insurance law in our State, we did not incorporate it here. They suggested State confiscation—merely duplicate damages—while the Sherman Act made it triplicate.

Q. (By Mr. A. L. HARRIS.) How many States have similar laws?—A. Twenty-six States have antitrust laws, if I have the facts correctly, and this winter there have been quite a number of bills pending. I do not know what finally passed.

Q. (By Mr. RATCHFORD.) Have you studied the measure pending in the Michigan legislature on this subject?—A. Yes.

Q. What is your judgment of it?—A. They have adopted ours; we forwarded them a copy; they put in the amendments we suggested. We are not entitled to the credit of our bill. It is a composite bill of the New York, Illinois, and Texas laws. We did the same last year; we took the latest acts for a guide; and they are doing the same now.

Q. (By Mr. NORTH.) Would a law of that kind in three-fourths of the States be a sufficient remedy?—A. It would correct all but the interstate features.

Q. Would not it practically compel suspension of business on the part of trusts?—A. It would; yes.

Q. (By Representative OTJEN.) You have indicated how the trusts might be run by the State, but supposing these corporations are organized in New Jersey, as many of them are, how would you reach them in Ohio?—A. We have reached them in nearly all the States under the insurance legislation, or what is called offense against the comity of States. A State can legislate and impose conditions upon which a foreign corporation can come into it. We have, under our trust law, reached them; a foreign corporation is reached the same as a domestic corporation so far as they do business in Ohio contrary to trust laws.

Q. There would then be very little distinction between companies organized in any other State and in your own State?—A. There is no distinction. States have more power and control over a foreign corporation than over a foreign individual; a corporation must do business in a foreign State upon such terms as the State authorizes.

Q. (By Representative LIVINGSTON.) Do you consider section 11 of the Ohio law a very practical one, where it authorizes the recovery of damages to twice the amount, to protect the State? I mean to ask this question: Are a great majority of the people so situated that they can take advantage of that clause?—A. No; the average man is not; the small dealer is not damaged enough to warrant him in doing so. They baffle him by wearing him out with vexatious litigation. He can not litigate as a large rival concern might do. For instance, a poor girl in Chicago took a contract for laundry and the laundry trust there followed up her customers. She sued the combination and recovered a verdict of \$5,000, which has been sustained; but litigation of that kind is expensive, and in this case the attorneys took it through. They bore the expense to get it through, so that ordinarily it is not an effective remedy. It is well to have them in cases where the damages are enough.

Q. Have you any suggestions to make to the commission concerning interstate regulation?—A. No; I am not conversant with that at all; I have given my attention entirely to the State feature.

AFFIDAVIT.

STATE OF OHIO, *County of Franklin*:

I swear or affirm that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

F. S. MONNETT.

Sworn and subscribed before me this 20th day of September, 1899.

[SEAL.]

GEO. C. BLANKNER,
Notary Public.

WASHINGTON, D. C., *June 8, 1899.*

TESTIMONY OF W. H. CLARK, NEWARK, OHIO.

The commission met at 2 p. m., June 8, 1899, Vice-Chairman Phillips presiding. Mr. W. H. Clark testified.

Q. (By Mr. JENKS.) Will you kindly give the commission your full name and address?—A. W. H. Clark, Newark, Ohio, 208 North Fifth street.

Q. Have you been engaged in selling oil for the Standard Oil Company?—A. Yes.

Q. At what different places have you been engaged in this business?—A. Marietta, Urbana, Springfield, Columbus, and Newark.

Q. For how long a time?—A. I went to work in 1898.

Q. And have been working all the time between 1898 and now?—A. Solidly, up to February 7.

METHODS USED IN BREAKING UP THE BUSINESS OF COMPETITORS IN MARIETTA, OHIO.

Q. What kind of work have you been doing at these different places? What has been your experience with the Standard Oil Company and what are their methods of doing business?—A. I was first employed at Marietta, Ohio, as office boy.

Q. At what time?—A. In the fall of 1898, I think. I went there as office boy and was later promoted to warehouseman or cooper. There we had quite a time. We had the Producers' Refining Company, the Argan Refining Company, the George Rice Oil Company, and the Marietta Oil Works to contend with. While there Mr. Curtis, an oil driver, a colored fellow, was buying of the Argan. We got Mr. Frank Davis to compete with him, i. e., with the Argan price; we had Mr. Davis put his oil down cheaper than the Argan Oil Company.

Q. Was Mr. Davis an oil dealer before?—A. No; he was furnished a horse and wagon and I hired him by the week. Things went on that way for a time. After awhile Mr. Curtis got tired of his business and came to us and told us that if we would make some arrangement so that he could buy oil of the Standard Oil Company he would. We made the arrangement and took a mortgage on Mr. Davis's wagon. We put up a bluff, foreclosed the mortgage, and let him go.

Q. As soon as Mr. Curtis came to terms with you, did you stop the business of Mr. Davis?—A. Yes, and the price went up.

Q. Can you tell us about the price at which you sold, while Mr. Curtis was selling the oil of the competing companies, and then what the price was afterwards?—A. The oil was 7 cents while Mr. Davis was selling, and when he quit oil went up to 12 cents.

Q. And further?—A. After Mr. Curtis bought of us a little while he went back to the Argan again: I forget the name of the man who managed the Argan, but he went back again. Mr. B. A. Mathews, Columbus, Ohio, sent down Mr. Ebricht under a salary, and we played the farmer racket. We went out and got a big cart and barrel with a faucet in it, and went around selling cheap oil.¹

Q. Who was Mr. Mathews?—A. He was manager of the Standard Oil Company stations of the Ohio Southwestern.

Q. And was Mr. Ebricht a man that had been sent down by him to do this work for you against Mr. Curtis?—A. Yes.

Q. About how long did Mr. Curtis keep up competition, the first time, before he yielded?—A. I think it was about three or four months.

Q. What was the result of the competition, the second time, by Mr. Ebricht?—A. Why, we cut the price again and Mr. Curtis had to come back to the Standard Oil Company again. After I left Marietta I went to Springfield, Ohio, and took a country tank wagon. While at Marietta we sold our oil all over the surrounding country. We had probably 15 or 20 towns; we sold up the Muskingum as far as Beverly, up the Ohio as far as Newport, and down the Ohio as far as Frost, on the B. and O. Railway. We had two storage tanks, besides our gasoline, and we sold 8 grades of oil.

DIFFERENT GRADES OF OIL SOLD OUT OF THE SAME TANK.

Q. Two storage tanks from which you sold 8 grades of oil?—A. Yes; we had 8 different prices. We sold O. S. T., i. e., Ohio State Test, the Prime White, the Water White—

Q. Can you give us the prices of these different grades?—A. I can not remember them now; there was about one-half cent difference. We had to change the prices to suit the customer. We had the Red Star, the Water White, the Crystal Light, the Eocene, the Hyperion, and the Silver Light, while at Marietta.

Q. Do you say the difference of price between these different grades was about one-half cent on an average?—A. Yes; we would begin about 6 cents a gallon and run as high as 10½ cents.

Q. If you were selling a man this oil at 10½ cents and he thought that price too high did you agree to sell him a lower grade at 9 or 9½ cents, and furnish it out of the same tank?—A. Yes; and furnish it out of the same tank under a different name.¹

Q. Was that generally by the orders of the Standard Oil Company?—A. Yes.

PUTTING GASOLINE IN TURPENTINE.

Q. What men, for example, gave you the order to do that?—A. Mr. Hollingsworth and Mr. Mathews. They said that people did not know what they wanted, and that we should give them what we thought they needed. If a man came in there and wanted to buy a good oil for 10 cents we gave the best oil we had, of course, and charged him 10 or 10½ cents. We sold turpentine at Marietta to W. H. Stryer and Siler Brothers, druggists there. We would often get a barrel of turpentine and to increase the profit we would put 3 or 4 gallons of gasoline in the turpentine. Gasoline is worth 7 cents and turpentine 38 or 40 cents. We poured the gasoline right in the hole of the barrel.²

¹ Compare Mr. Mathews, pp. 491, 492, 493.

² See p. 493.

Q. Was that also under instructions from the Standard Oil Company's manager?—A. Yes; the boss was there, and said he would teach us a trick in turpentine, and he taught us.

Q. Have you anything further concerning the price of oil while you were in Marietta?—A. I think of nothing in particular.

Q. (By Mr. PHILLIPS.) Do you mean to tell the commission that you sold the same quality of oil from the same tank under different names and at different prices?—A. Yes.

Q. The oil was of the same quality and yet different in price?—A. Yes.

Q. (By Mr. JENKS.) After leaving Marietta, where did you go?—A. To Springfield.

Q. And what position did you hold there?—A. I was country tank-wagon man.

METHODS AND PRICES AT SPRINGFIELD, OHIO.

Q. Can you tell us something of your experiences there?—A. When I went to Springfield I had 21 towns outside of that place, and after awhile the trade became so heavy I could not hold it. I could not take enough oil to satisfy the trade. Finally, Mr. Mathews and Mr. T. L. Cragin, his brother-in-law, came over there. They shipped in another wagon from the Milburn Wagon Company, Toledo, Ohio, and Mr. Foley, the agent at Springfield, went out and hired George Blazer to go to work. Mr. Blazer came down, and on the first trip went to Cedarville. While down there he found the prices were mixed up; he did not know what to do, and I think brought most of it back. Mr. Cragin was there and told Foley to explain to him about how to sell the different grades out of the same tank, by turning the faucet one way for one kind and a different way for another. Foley did not want to tell him, and said: "You tell him yourself." Finally, between the two, they told Mr. Blazer how it was.

Q. Did you overhear this yourself?—A. Yes; and Mr. Blazer said: "If I can not work for an honest company I will quit." He quit that day. This was George Blazer, Springfield, Ohio; he lives near the East street shops.

Q. Is that something you know from having heard it all yourself?—A. Yes.

Q. Go on from there.—A. While at Springfield I sold George H. Bell, at Cedarville, Water White at 6 cents and Silver Light at 6½ cents. I have often sold as many as 4 grades, the same as the rest of them, but out of the same tank at 4 different prices.¹

Q. Were the prices uniform to different customers?—A. No.

REBATES; ANYTHING TO HOLD THE TRADE.

Q. Not even when the grade was named the same?—A. No; we gave them the same and made a ticket out for the same; but we rebated them.²

Q. That is, you would rebate to some customers and not to others?—A. Not to the others.

Q. Did you have any principle with reference to these distinctions; or, if anyone objected, did you just simply provide for him?—A. We always had to do something for a kicker. Anything to hold the trade; that was what we were there for; to keep other companies out.

Q. Was there much competition there?—A. We had the Charles Ludlow Oil Company and a Cleveland company, but I do not remember the name.

Q. Did you at any time cut prices below cost against some of these other companies?—A. Why, we would cut in case we had to; we would sell as low as 4 cents, and still charge other customers 7 cents.

Q. You said that, in order to drive the Argan out of business, you sold to Mr. Curtis at Marietta cheaper than they could furnish oil to him?—A. Yes.

Q. Were you doing the same thing here?—A. Yes. Our instructions were: Get the trade regardless of prices.

Q. Had you much opposition in Springfield?—A. Yes.

Q. Do you know who were the independent companies selling there?—A. There was only one in Springfield, the Charles Ludlow Oil Company; but afterwards it was consolidated with the Standard Oil Company.

Q. Can you tell anything else of your experience on the tank wagons?

Q. (By Mr. KENNEDY, interrupting.) How long were you engaged in that work, selling several different grades of oil out of the same tank?—A. About 7 years.

Q. Did you feel that you were engaged in dishonest work while doing that?—A. I spoke to them about it; they said it was not for me to say what to do, but to do what was said. That is the reply they gave me.

¹ Compare p. 493.

² Compare p. 494.

Q. Did the Standard Oil Company pay you well, while in their employ?—A. Not very well.

Q. (By Mr. JENKS.) What wages did you get in these different positions?—A. When in Springfield I got \$35 a month, but went to work in the morning at 4 o'clock, and many a night worked until 9, 10, or 11, before getting in.¹ I had 1 trip through Lawrenceville, North Hampton, Tremont, Terre Haute, and Bowlesville.

Q. (By Mr. KENNEDY.) Did you leave the employ of the Standard Oil Company because you felt you could not engage in this dishonest practice?

MANY GRADES OF OIL ONLY NOMINAL.

Q. (By Mr. FARQUHAR, interrupting.) You speak of selling different grades of oil out of 1 tank. How do you construe the word grades? Is it a title or a condition?—A. It is a brand on the barrel.

Q. And that is all it was?—A. Yes.

Q. So you men were selling different names instead of different grades, with only 1 grade in the tank?—A. Yes. We called it a grade, but still it was only a name.

Q. (By Mr. PHILLIPS.) There are different grades of oil sold, are there not?—A. Yes; the Standard Oil Company, I believe, makes 3 grades altogether.

Q. (By Mr. JENKS.) There are 3 grades of refined oil. You have not known of any more?—A. No.

Q. And how many different grades do they pretend to have which they sell at different prices? I think you named 8.—A. Yes; I have seen a dozen grades sold at different stations.

Q. And you think they sell at as many as a dozen different prices at different stations from these 3 actual grades?—A. Well, there was just about one-half to one-fourth cent's difference in the price sometimes: Silver Light was always one-half cent more than Water White; Red Star was one-fourth cent more than Water White; but they all came out of the same tank.¹

Q. Would they sometimes be selling under as many as a dozen different names at one station?—A. They sold under 8 names at each station; but when we got to Columbus and Urbana we dropped Hyperion and the southern names, and put in the new names. There were about 8 grades at each station.

Q. Out of 3 real grades they sold about 8 nominal grades on an average?—A. Yes.

Q. (By Mr. PHILLIPS.) What are the 3 grades that the Standard Oil Company makes, to which you refer? Can you name them?—A. I think the correct names are Diamond White, Water White, and Eocene.

THE TEST OF DIFFERENT GRADES.

Q. Can you tell what the test of these different oils is?—A. The Diamond White is 150 degrees open cup and 120 closed cup. The State test is 120 degrees, and 120 degrees is what we test it ourselves. There is about 10 degrees difference in each one. The fire test of the State will run 120 degrees on each one. Of course, the cheaper the oil the lower the test; the better the oil the harder it is to ignite.¹

Q. How did you happen to leave your position at Springfield, Ohio?—A. Mr. Mathews came there and raised my salary and sent me as cashier to Columbus, Ohio.

Q. What salary did you then get?—A. I was getting \$35; he raised me to \$40 and sent me to Columbus.

COMPOUNDING OILS AT COLUMBUS, OHIO.

Q. What was your business at Columbus, cashier at the works?—A. While I was there I had charge of the works and all the shipments.¹ I took care of all the money, received orders, and sent out bills. We did considerable mixing in Columbus. When a person wanted a barrel of boiled linseed oil and we had none, we had an agitator heated up to 125 degrees and put in 3 gallons of Japan dryer; that made boiled linseed oil. When a person wanted miners' oil we would get 3 barrels of cottonseed oil and mix it with 2 barrels of miners' stock and make miners' oil out of it.¹

Q. Then in this Columbus establishment instead of selling merely refined petroleum, you also sold other kinds of oil?—A. That was the habit over all that district; the oil was shipped from there; all paraffin oil came from Cleveland in blank heads. If a person wanted rubbing oil for furniture, ozone, paraffin,

¹ See p. 494.

¹ See p. 495.

diamond paraffin, golden machinery, or a good straight machinery, we got it in blank heads; turned out whatever they wanted and charged prices accordingly.

Q. In connection with the sale of these different kinds of oil, do you mean to say you regularly manufactured linseed oil there or sometimes had the genuine boiled linseed oil?—A. No; we never had any of that.

Q. (By Mr. PHILLIPS.) Was the genuine linseed oil worth more per gallon than that which you manufactured?—A. In boiling and handling the oil a certain per cent is lost. We took a low oil with a little Japan dryer, but the dryer being thicker than the linseed oil, does not mix, so we put it in a range that held 5 barrels and heated it up to 125 degrees, when the dryer would come to the top and we would mix it; that would make it a dark color and it would go off for linseed oil all right.

Q. Was it as valuable as boiled linseed oil?—A. No.

Q. (By Mr. JENKS.) How much money was saved by this mixing process, do you suppose?—A. Any where from 5 to 6 cents per gallon.

Q. Besides boiled linseed oil, what others did you make in this same way?—A. To make the miners' lamp oil we took 8 barrels of cotton-seed oil and 2 barrels of miners' stock and mixed them.¹

Q. Was that for the purpose of saving on the cost?—A. Certainly; paraffin was worth 10 cents, extra golden machine 12 or 13 cents, and light rubbing oil was worth 14 cents. We just branded the oil to suit the customers, and gave them what they wanted.¹

Q. And gave substantially the same thing?—A. The same thing in every barrel.

Q. (By Mr. RATCHFORD.) I should like to get to the process of compounding the miners' oil. Do you say it was 8 barrels of linseed oil and 2 of other oil?—A. Three barrels of cotton-seed oil and two of miners' stock.

Q. What did the oil generally sell for after the mixing took place?—A. Miners' oil varies. Sometimes it is as low as 22 cents and goes up to 34 cents. The miners' stock, I think, costs about 6 or 6½ cents; the price of the cotton-seed oil depends, of course, on the market; the American Cottonseed Oil Company, of Cincinnati, regulates the market.

Q. What do you understand by miners' tar? Do you handle any paraffin wax?—A. We handle it only in pound cakes and 20-pound slabs, but we do not use it for that purpose at all—it would not do.

Q. (By Mr. JENKS.) In the position you held at Columbus as cashier you know, of course, about the details of the business, i. e., how this mixing was done; but did you yourself take part in it?—A. No; but every day I would have to go out in the warehouse and make a report for the time. Mr. Adam Paulus would come to me and say he wanted to mix up some miners' stock and would like a number of barrels; I would deduct them from my stock report each day so that the report showed what we sold and what we had left in stock; it showed every empty barrel left at the station at night.¹

Q. To whom did you make your report?—A. I made it to the general office in the Wheeler Building. A boy would come down and get it every day.

Q. Did I understand you to say that the mixer did that work as his regular business?—A. No; he mixed oils, but when he did not have that work to do he would take care of the machinery.

Q. Was it your business to furnish the different kinds of material he wanted?—A. He would order so many barrels and I would see that he got them. These barrels were dumped into the kettle and he sat there and stirred it up. I would stay there to see that he dumped it in. I would charge him up with so much oil, and give him credit for the empty barrels he had taken.

Q. After this oil had been mixed did it come into your hands again, being the different oils of the stock you had to sell?—A. Yes.

Q. (By Mr. FARQUHAR.) Have you had any experience outside of your work for the Standard Oil Company in compounding oils?—A. No.

Q. Do you know any of the other formulas of the compounders of oil in the United States?—A. Well, I have been around refineries, but I never noticed that they compounded at all.

Q. Are you aware there is such a business in refineries?—A. In my talk with other people I find they never compound as we did.

Q. But you don't know anything about compounding outside of what you saw in the works of the Standard Oil Company?—A. I do not.

METHODS OF MEETING COMPETITION AT COLUMBUS.

Q. (By Mr. JENKS.) Have you anything further to say with reference to your experience as cashier in Columbus?—A. We had our secret process there as at other places. We had our rebates at Columbus, which made oil about 1 cent a

¹ See p. 406.

gallon cheaper, on account of the Cleveland Refining Company being there as a competitor.¹ When they came there it was pretty hard work for the Standard Oil Company, so they hired Mr. E. W. Shoemaker to start the Shoemaker Oil Company. Mr. Shoemaker came up and the Standard Oil Company had painted on Charlie Carr's wagon in big letters, "Shoemaker Oil Company." We often got orders, the same as Down & Milliken, at Washington Court House, for carloads of oil; they had to buy cheaper, so the Standard cut the old prices at Washington Court House; that is, they cut prices and sent it to Shoemaker at reduced prices, and branded it Shoemaker Oil Company.

Q. That is, it was supposed that they bought from the rival of the Standard Oil Company when they were buying from the Shoemaker Oil Company?—A. Yes.

Q. (By Mr. PHILLIPS.) And was that used by the Standard Oil Company to supply both?—A. Yes; Mr. Mathews said that he stood their share of the loss, and if there was any loss the Standard Oil Company stood it on these cut prices. Mr. Shoemaker drew a straight salary and loaded his wagon at the Standard's warehouse. Mr. Clarence Tolan, who was his bookkeeper, boarded with me at Mrs. Dickson's, on North High street. He was bookkeeper and cashier at the Shoemaker Oil Company and I was cashier and bookkeeper down at the Standard Oil Company's works. We were together all the time, boarded together, and went together.

Q. Were both of you receiving pay from the Standard Oil Company?—A. Yes.

Q. Did you say that Shoemaker was paid a salary?—A. Yes.

Q. Do you know that for a fact?—A. Mr. Mathews swore to it as a fact before Mr. Monnett, in Columbus.

Q. (By Mr. PHILLIPS.) About what was the magnitude of the business while you were cashier there? What would your footings show each day in a month?—A. Well, lots of days it ran up to \$700 or \$800. I have known one wagon, that of Mose Gradwohl, to take in \$200 in 1 day.²

Q. Have you anything further with reference to the work at Columbus?—A. I do not think of anything more.

Q. (By Mr. PHILLIPS.) Do you know about how much the competitors of the Standard Oil Company sold in Columbus?—A. Clarence Trimble told me that we were about on an even basis. Mr. B. A. Mathews hired a boy to go and see how much oil they were shipping out each morning. He would go down to the station every day and watch the tank cars which they got, and watch their business, too.

Q. (By Mr. JENKS.) Did he report to you every day?—A. He would take account of the tank cars and give us the number and we would send the report to Columbus.

Q. (By Mr. PHILLIPS.) Were the competitors driven out of business in Columbus while you were there?—A. Well, they cut prices so that those people came and arranged with the Standard Oil Company to hold prices up to a certain point. Prices remained the same excepting what few rebates we had.¹

Q. Do you not know how much they were permitted to sell?—A. No, I do not.

Q. Or what proportion of the trade they obtained under that arrangement?—A. No, I do not. They had an arrangement; they went from one to the other; if the Standard Oil Company telephoned down there to raise prices, they would raise them.

Q. (By Mr. KENNEDY.) Did the other companies in Columbus also sell many different grades of oil out of the same tank?—A. They never handled but three grades that I knew of.

Q. Three?—A. Yes. They handled Penoline, Safety Light, and Electric Light.¹

Q. Do you mean they had 1 grade of oil in a tank and sold 3 different grades out of it?—A. No; they had 3 storage tanks; we had 10 at Columbus; we had our cotton seed, linseed, turpentine, and 2 water tanks; we had 10 tanks, and they had, I think, 4; 1 held 5,000 barrels and 1 held 10,000 barrels; and we had another one that held 1,000 barrels.

Q. Do you know of their having deceived the public in the same way the Standard Oil Company did?—A. Not that I know of.

AGENT'S SPECIAL COMPETITION REPORT.

Q. (By Mr. JENKS.) Were you in a position to find out? Were you in a position where you would have been likely to find out if they were deceiving the public the same way as the other people did?—A. We always made it a point to go around and see what they got; that was always our instructions, just the same as though it was our business. I probably have got some of the Columbus letters with me now. I have one here dated May 29, 1896 [reading]: "W. H. Clark, Urbana, Ohio. Dear Sir: Herewith inclosed please find competition list to be filled out by you the 1st of June. Please fill out carefully and return, and add

¹ See p. 426.

² Compare affidavit of Moses Gradwohl, p. 409.

to this list any parties you know of who are buying all or portions of their goods outside. Yours very truly, B. A. Mathews."

Here is another letter dated July 8, 1896 [reading]: "W. H. Clark, esq., Urbana, Ohio. Dear Sir: Inclosed please find competition sheet to be filled out very carefully and returned to me as soon as possible after you receive it. Please give full information with reference to parties on list, and where names do not appear of parties who are buying outside, please enter them, giving full information. Yours very truly, B. A. Mathews."

Q. Have you a copy of the competition sheet with you?—A. I think I have one; the competition got a little fast on us, and this was sent to me: "May 25, 1897. W. H. Clark, Newark, Ohio. Dear Sir: I forward to you to-day a supply of blanks same as sample herewith inclosed, which is to take the place of the little slip that has formerly been used for reporting daily competitive oil. Will you kindly fill out one of these blanks weekly, commencing with June 1, and whenever the month ends in the middle of the week, make out one on the last day of the month for the portion of the week not covered in the last week you report. Enter upon this report all competitive oil or gasoline that you have been able to locate during the week, and if during the week you have been unable to locate any competitive shipments, then write across the face of the blank 'Nothing to report' and mail it to this office. Be sure to mail it whether you have competitive receipts to report or not. If there is anything about this report that you do not understand, please confer with me at once, as it is very important that it should be made out promptly and forwarded regularly. Trusting that I will have your hearty cooperation, I am, yours very truly, B. A. Mathews." I have not one of these blanks.

Q. Have you not one of those competitive lists?—A. I have not, but I can get one.

Q. Were you ordered to fill up the competition blank regularly or not?—A. Yes; we filled them out; first on the blank was the producer, then name of the town, and the price he bought at.

Q. How did you find that out?

Q. (By Mr. PHILLIPS.) From whom he bought?—A. We would get around him and talk to him to see if we could get out of him what he paid for the oil.

Q. (By Mr. JENKS.) You spoke of having a boy for that?—A. Yes; it was his business to notice every tank car that came in for the competitors.

Q. Was that boy paid regularly by you to do that work?—A. He was regularly paid for that work.

Q. By you?—A. Yes; he drew \$15 a month; his name was Clarence Trimble.¹

Q. (By Mr. PHILLIPS.) After sending in these reports, what instructions did you get about meeting this competition?—A. Well, in some cases we were not ordered to do anything, but the next time we had any business transactions we were to attempt to get their trade; and even if it cost us a dollar or two we were to try to get hold of it.

Q. (By Mr. JENKS.) You say if it cost you a dollar or two. Do you mean that you were to cut prices that much?—A. Sometimes we would buy empty barrels, but we would cut that much sometimes. If we had to pay more than market prices for them, we would say that we would take them in at so much apiece. I do not mean barrels of oil, but empty barrels.

Q. That is, if they would take your oil instead of that of your competitors you would take the barrels at an exorbitant price?—A. Take them all; yes.¹

Q. Do you recollect any other methods you employed in order to crush competition?—A. There is nothing that I think of at Columbus.

Q. (Mr. PHILLIPS.) Do you know of any other instances of selling under assumed names excepting the ones you mentioned at Columbus?—A. Only at Columbus.

Q. (By Mr. JENKS.) How long were you at Columbus?—A. I went the 20th of March and staid until the 16th of December.

STANDARD OIL COMPANY'S METHODS AT URBANA, OHIO.

Q. Then what change did you make?—A. Then I was promoted to be manager of the Standard Oil Company at Urbana, Ohio.

Q. You say you were promoted. What increase of salary did you get?—A. They did not increase my salary at first, but paid my board until March; then they raised me \$15 a month.

Q. That is, you had had \$35, then \$40 and board, and then you were raised to \$55?—A. Yes.

Q. Will you tell us with reference to your experience at Urbana? As manager you really had full charge of all their business?—A. Full charge; yes.¹

¹ See p. 406.

Q. Did you receive instructions directly from Mr. Mathews?—A. I received instructions directly from Mr. Mathews; and when any business around there had to be seen to I was the one to look after it. Everything fell to me; but things ran along smoothly. I had no competition. Charlie Ludlow did not come out. He bothered us once in a while, but we did not pay any attention to him. Finally Mr. William Helmick, who had formerly been in the oil business there under his father, Mr. John Helmick, but who, after his father died and left him some money, bought a farm and went to farming, came there. When he saw he could not do anything farming he sold his farm and invested his money in the oil business for the Cleveland Refining Company.

Q. Do you know how large an investment he made?—A. I do not know the amount. I know the first shipment he got in was \$300 and some dollars, and I remember he told me his bill. Finally Mr. H. S. Hollingsworth, of Columbus, came over. He takes care of a good deal of the business for Mr. Mathews at present as well as then. He came over there, and he and I went out to Mr. Helmick's house and tried to scare him out of it. We told him we were going to cut prices and everything, and Mr. Helmick was kind of nervous. Finally Mr. Welsh, of Springfield, came up.

Q. Was Mr. Welsh another employee of the Standard Oil Company?—A. Yes; he was a cooper man, and worked at the cooper shop in Springfield. All three of us talked with Mr. Helmick about oil, and about selling us the oil at the price he paid for it. He refused to do that at first. Finally we worked a bluff on him about cutting the price, and did cut it a little in one or two places where he was selling. He had to dispose of his oil the best way he could.

Q. In these places where you cut did you cut below what he had been paying for the oil?—A. Yes.

Q. Then I suppose you threatened to cut still further?—A. Yes; to cut still further if he stayed in the business.

Q. How much did you say you would cut?—A. I think oil was selling at wholesale in Urbana for 8 cents, and I believe we cut to 6 cents, or about that. I know it went down about 1½ to 2 cents.

Q. And you made threats to cut it still further?—A. Yes.

Q. How low?—A. We told him we would go 1 cent a gallon further. Finally he quit the business and went to the poorhouse. His sister from Iowa came and took him out, and he is out there now.

Q. (By Mr. PHILLIPS.) Was that caused by the purchase of \$300 worth of oil?—A. He had most of the trade; he was a citizen there and the people liked him. He could have handled the trade there and made an honest living. When he came he put up a building. We would not take the building off his hands, and would not help him out any at all. We just closed in on him like any other person; and when you close in on them pretty hard, you know what happens.

Q. (By Mr. KENNEDY.) Did you not say you started up there and had no competition until he came?—A. Yes; we had no competition to speak of until he came in.

Q. (By Mr. JENKS.) And when he came, he put up this building and began buying oil, and you agreed, if he would quit, to take his oil off his hands?—A. We were willing to agree to do that, but he would not do that. We worked a bluff on him. His wife was on the stair steps in the hall and stayed there and cried. We had quite a time when we were there.

Q. You did not, then, take any oil off his hands?—A. I think we got about 4 or 5 barrels. We just painted those over and shipped them out in the name of the Standard Oil Company.

Q. But he must have disposed of the oil he had at some price?—A. He disposed of it all over town; wherever he could drop 5 barrels he dropped it.

Q. He must have sold his building for something?—A. No; he did not get anything out of his building. The council of Urbana does not allow over 1 barrel of oil or gasoline at any one place; more than that must be 200 feet from any building. He had to build his building away out of town, so that it was no good to him.

Q. So you think that, owing to your competition and threats, he practically lost all his money?—A. He lost it all.

Q. (By Mr. KENNEDY.) In other words, you think the Standard Oil Company drove that man to the poorhouse?—A. I think that is what caused it.¹

Q. (By Mr. FARQUHAR.) Had this man had any experience in buying oil before that?—A. His father had been buying oil for 20 years of the Standard Oil Company, and had their tanks there. He was in the business probably 20 years.

Q. Did this son have experience?—A. He worked for his father all the time and drove his wagon.

Q. Did they come in opposition to the Standard Oil Company?—A. They came

¹ See pp. 426-429.

there and the Standard Oil Company bought them out. Finally the old man died, leaving his money to his son who then started up.

Q. But he did not know his business?—A. He knew the oil business.

Q. (By Mr. KENNEDY.) Did you not say this man had failed as a farmer just previous to his going into the oil business?—A. Well, his wife did not like the farm. He did not make much money, and was not doing much on the farm. His wife did not like it and was in town all the time. He could not stand it, and so he sold his farm.

Q. (By Mr. PHILLIPS.) And put the money into the oil business?—A. And put it into the oil business.

Q. You spoke of his going to the poorhouse. How did he come to go to the poorhouse? On account of failing in health, or from not getting any employment?—A. You see Urbana is a kind of a little town; it has two strawboards there, and Barley, Kent & Co.

Q. (By Mr. JENKS.) What is their business?—A. They make furniture. There is not much work, so he did not get anything to do. That is all he could do.

Q. Was the man strong, so that he might have worked?—A. He could have worked. I do not suppose he was stout enough to do hard manual labor, but he could do work, like driving around and waiting on the trade.

Q. Probably he could not go into this furniture establishment, or any place like that, to get regular work?—A. No; it was too heavy for him.

Q. Have you anything further with reference to your experience as manager in Urbana?—A. No; I stayed there until fall, then I went to Newark, Ohio.

Q. (By Mr. PHILLIPS.) How much did the Standard Oil Company's trade amount to, in Urbana, a month?—A. We would run by the month, I suppose, about 40,000 or 50,000 gallons; our line went as far as Mechanicsburg on the east, West Liberty on the north, Tremont on the south, and St. Paris on the west, making quite a scope.

Q. (By Mr. KENNEDY.) Did you also sell several grades of oil out of the same tank in Urbana?—A. Yes.

Q. (By Mr. JENKS.) Were the general methods there the same as at other places?—A. Yes.

MANY DIFFERENT PRICES FOR OIL AT NEWARK, OHIO.

Q. Then you went from there to Newark?—A. Yes.

Q. Was that in the nature of a promotion also?—A. They promised me a raise when I went to Newark; they changed my salary to \$2.25 per day; that made more money than what I was getting, on account of the days.

Q. So you did get an increase in salary there?—A. Yes.

Q. What position did you take at Newark?—A. I was manager at Newark.¹

Q. Was your business the same generally as it was in Urbana?—A. Yes; but Newark was a larger station than Urbana.

Q. How much more business did you have to oversee there?—A. Our Newark business ran about 80,000 gallons per month.¹

Q. Can you tell us with reference to your experience there?—A. At Newark the business was much harder than it was at Urbana on account of the fact that we had from 20 to 25 prices. We sold J. P. Lamb & Co. gasoline at 7 cents; Mr. J. M. Brown, in the store beside them, we charged 9½ cents. We charged Mr. Rankin 6 cents for oil, and drove right down to Showman Brothers and charged them 7½ cents.¹ We then drove to Mr. Hagmeier and made him a ticket out the same as the others, but we always rebated him. I think I have his receipts here now. Here is one.

Q. Will you read it?—A. (Reading.) "February 28, '99, Mr. Clark, when agent of Standard Oil Co., has paid me a great many rebates on goods which were receipted for when given. Geo. J. Hagmeier."

Q. About how much of a rebate did you make Mr. Hagmeier?—A. One cent on gasoline and 2 cents on oil that he picked up.¹

Q. When you were selling to others at 7 cents you billed him at 7 with a rebate, so you really sold him at 5?—A. Yes.

Q. Did you make that to Mr. Hagmeier on direct instructions from the office?—A. Mr. Mathews himself was in the office in November; he told us in Newark; he told me to give it to him.

PRICES FIXED BY THE MANAGER AND NOT THE AGENT.

Q. How much discretion did you have with reference to making rebates and making special prices? You, of course, were under general orders, as you have just said, to get the trade and keep the trade.—A. Yes.

Q. Were you at liberty without instructions from Mr. Mathews to make a rebate of 2 cents a gallon wherever you thought it was necessary?—A. No; I would write

¹ Compare Mr. Mathews, p. 490.

him that some customer, or somebody, was buying outside oil, and then he would either come over or send Mr. Hollingsworth, his secretary. They would tell me to go and make the arrangement—authorize me to go and make the arrangement.

Q. You did not have authority to make any special price yourself without direct instructions in each separate case?—A. No; I could not change the price to anyone; I had to sell at the price they told me. If any customer was buying outside oil, I would write them to come over, and they would come over or tell me to make the arrangement.

Q. So all of this change in prices was always under special instructions for each particular case?—A. Yes; I always wrote those letters to Mr. Mathews personally; I did not write them to the office.

Q. Were your letters to Mr. Mathews always marked "personal"?—A. I would write to Mr. Mathews personally.

Q. That is, you did not dare to write to anybody but Mr. Mathews?—A. I would write Mr. Mathews personally; i. e., put his name on the letter so that nobody but him would open them.

Q. (By Mr. FARQUHAR.) Were those changes in rebates or prices made by your suggestion to Mr. Mathews?—A. If I lost a customer, if a customer went to buying outside, I would write to Mr. Mathews about it, and he would come over, or write to me to make that customer a certain price.

Q. Then it was your representation to Mr. Mathews that caused the change in price?—A. No; he always told me to go and make the price.

Q. How did you know what price to make if you did not write him?—A. I did not know what price to make and he would come there and tell me what to do; sometimes he would say: "Cut half a cent, or 1 cent, or 2 cents." I just reported to him on a slip of paper. I met the competition if the customer was buying somebody else's oil.

Q. (By Mr. JENKS.) It was on your report that Mr. Mathews made these cuts?—A. I sent in a report every week just like the one I read; he read those slips and wrote me a letter and asked if I could not get those people in line. Then, if the name went in a couple of times and I told him I could not get them in line, he would come over and authorize a cut.

Q. (By Mr. PHILLIPS.) He did not authorize you to make the cut?—A. No; I could not cut at all.

Q. (By Mr. FARQUHAR.) In other words, in your business as canvasser for trade, you could easily find a customer at a certain price or a certain rebate, and you suggested that to Mr. Mathews and then the cut was made?—A. No; I could not do that.

Q. I did not say you could. That is the reason you misconceived my question; I want to find out if a suggestion was made to Mr. Mathews. Would they have to be buying the outside oil?—A. As long as it was one of our customers buying our oil, I could not make any suggestion to him because I never paid any attention at all; but if any person bought outside oil and I would report any outside oil, then he would go to looking it up.

Q. In getting new customers, and in getting customers certain rates, how else could you? How could Mr. Mathews know anything at all about it without you informed him?—A. I sent him in a report every week.

Q. Yes; certainly. So that all these cuts and suggestions, there, were on the part of the Standard Oil Company?—A. Yes; Mr. Mathews made them himself.

Q. Did you have any positive orders from the Standard to make cuts—any suggestions?—A. No; I reported each week the customers that were buying outside oil, and he would wait about 1 week and write a special order to do the best I could. If I could not do anything, I would go ahead the next week and say, "I am not selling any oil." Then he would come over there himself and say, "you make them a cut of a cent a gallon and see if you can not get them to come in again." He might say half a cent or 2 cents, and whatever he says, goes; I could not change the price; I could not guarantee a man any price.

Q. As the agent of the Standard Oil Company you were just as anxious to get a customer as the Standard Oil Company was?—A. Certainly; I had nothing to do with the price.

Q. (By Mr. JENKS.) The only discretion you had was with reference to the fact that you could give the name of the oil you sold him; and if he asked for a high grade, you would sell him a higher grade out of the same barrel and for the same price?—A. Occasionally, if a man wanted a little better oil, or something, I could brand it Silver White, or Red Star, and give it to him out of the same tank.

Q. Did he get it at the price that had been fixed for that brand?—A. I would tell him I would give him some of this oil and a little better price on it, and he would not know. It was just the same as Capitol Cylinder and other oils we sold there in Newark.¹ We charged the Newark Ice and Cold Storage 82 cents for

¹ See pp. 502, 504, 505.

Capitol Cylinder, and went up to the Newark waterworks and charged them 31 cents. Those prices were made by Currier, a special man.

Q. Was Currier a special agent of the Standard Oil Company?—A. Yes.

Q. Also in the office at Columbus?—A. Yes.

Q. A man who came up to give you those instructions?—A. Yes; he came around and made those prices; that is, I did not have anything to do with it. He would come around and cut the prices where he thought it was necessary.

Q. And you just delivered the oil?—A. I just delivered the oil; and I would deliver it to them at the price he sold it to them for a year. If he sold it to them at a certain price and gave them a contract for another price for a year, I would look to see what the price was and charge them that price.

PROCEEDINGS AGAINST THE AGENT OF SCOFIELD, SCHURMER & TEAGLE, OF CLEVELAND.

Q. Did anything come up at Newark besides driving these competitors out?—A. Nothing except that Mr. Al. Donaldson started there for Scofield, Schurmer & Teagle, of Cleveland. After he had been in business awhile and seemed to be doing pretty well, I went down and bought his building while he was away. I had a man, Mr. Retburg, break a lock off, and we went in and threw his tanks and barrels out and loaded the building, the whole thing, on a dray, and hauled it off. When he came back he had no warehouse.¹

Q. Had he leased this building?—A. Yes.

Q. (By Mr. PHILLIPS.) Had his lease expired?—A. No; the lease was on yet, but I had the man sign a contract that no oil should go on that lot.

Q. Would he not have recourse on this man for the oil and the damage done him?—A. He just got scared and sold us his wagon, all the oil he had, the desk in his office, and everything. We got the whole shooting match.

Q. Who fixed the price? You say you went down there and bought it. Did you have the discretion to fix the price, or was it done under orders from Columbus?—A. I suppose the man wanted \$5; Mr. Mathews did not say just what he wanted to pay. He wanted to know what price I could buy it for. Finally Mr. Hollingsworth said if I would get him out he would give me 2 weeks' vacation on salary.

Q. So that you had discretion to get rid of a rival?—A. It cost \$2.50 and the Standard Oil Company paid for the building.

Q. Did Scofield, Schurmer & Teagle establish a new office?—A. No; they dropped it. His writing desk is now in the Standard Oil Company's office in Newark.

Q. How much did you say you paid for the building?—A. I paid \$2.50. It was just a shed warehouse. It was a poor thing, but it was worth more than that.

Q. (By Mr. KENNEDY.) Did you ever in any of these cities sell oil to any customers below the usual rate except for the purpose of driving out competitors?—A. No.

Q. Did you ever bestow favors on any individuals?—A. No.

Q. (By Mr. JENKS.) What inducement did you give the owner of this shed to sell it for \$2.50? One would not suppose that that was enough to induce a man to enter into any such business as that.—A. Well, I got to talking around him, and kept around him.

Q. Was he a special friend of yours?—A. Yes; we had a lot of repairing of oil tanks. The wholesale storage tanks got to leaking and I gave him all the work. The Standard Oil Company always paid for the work, and I gave him what work I could and helped him out.

Q. So that he did not merely get this consideration of \$2.50 for his shed, but also, practically, a promise of work from time to time. He was also a good friend of yours and he did it for friendship's sake more than anything else?—A. Yes; for friendship; but it was not what the building was worth; the building was worth a dozen times that.

Q. (By Mr. PHILLIPS.) Did he know you were going to take possession of this building the way you did, when he was out of the city?—A. Who, Donaldson? No; he did not know anything about it until he came back and found everything gone. Besides, he had Mr. Charles Sessor working for him. He stayed in the office and Mr. Sessor drove the wagon around town. Finally, Mr. Hollingsworth and I made arrangements to hire Mr. Sessor at \$10 a week, and put him around right on Al's trade. Mr. Sessor had worked for him, and knew his trade and where to go to. We told him that if he could not get the regular price at any time to take what he could get, and keep the cans full all around while he could.

Q. (By Mr. JENKS.) What pay did he get before? He got 75 cents a day to fol-

¹ See pp. 502, 503.

low the oil wagon on a bicycle. Then I hired Roy Jones at 75 cents to follow Al around and see where he stopped. Then the next day, Mr. E. G. Mathews, our canvassing agent, would go to those houses and explain to them how good the oil was and clean their lamps and fill them up, and have them send our wagon around there to let them try this oil at the reduced price.

Q. Did you have any instructions to pay this boy 75 cents per day to go around and follow up competitors?—A. Yes; and I had to bring the boy around to Mr. Hollingsworth, who had a talk with him before we hired him.¹

Q. Who went with you to take this building when you bought it?—A. I went down the street and got a crowd of fellows and brought them up.

Q. What did you pay them?—A. A dollar, I think, for the whole bunch.

Q. Cash or drinks?—A. Both, I think; I gave them a dollar and went with them.

Q. Did you get your vacation?—A. I have not got it yet; yes, I guess I have got it now.

Q. They said you were to get 2 weeks' vacation if you got rid of the competitor. Why did you not get your vacation; you got rid of him?—A. They said I was too busy. The man at Washington Court-House rode out on his bicycle and got hit by a train. We had to send Mr. Milliken down there until they could order a man from Zanesville. I did not have any extra man.

Q. They did not express any disapproval of your methods at all?—A. Oh, no; they were well pleased with it.

Q. Did they express positive approval?—A. I have a letter here from Mr. Mathews complimenting me on the way I got rid of him. This is a special punishment they award, that they have for their friends.

Q. (By Mr. KENNEDY.) I suggest that the witness state the substance of the letter, if he can not find it.

Q. (By Mr. JENKS.) If you can not find it, will you state what the letter said.—A. (Quoting:) "I wish to compliment you on the way you got him out of business." It was a very short letter—just a little short piece on the top of it.

Q. If you can hand me the letter afterwards, will you do so?—A. Yes, it came to me typewritten afterwards; it was just a short quotation.²

Q. Now, in reference to this business in Newark?—A. He complimented me on pipe fitting. I did some pipe fitting under Mr. Paulis's supervision. I got the compliments both at once. I was surprised.

Q. Have you any further instances in mind of driving out rivals or any other special methods employed at Newark?—A. No; we never used any methods except our cut.

Q. Except what?—A. Except having different prices for different people. We used that more in Newark than anything else.

Q. Do you recall how many grades of oil you were selling there—that is, nominal grades?—A. Three; that was all. We had 3 storage tanks, one 14,000-gallon tank, one 18,000, and one 4,500.

Q. You did not pretend to have more than 4 grades of oil?—A. No; we had 1 gasoline and 3 grades of oil.

Q. I understood you to say a little while ago that in most places where you were selling oil you had as many as 8 different grades?—A. We had three grades; that was all we had. We sold Diamond White, Prime White, O. S. T., Water White, Crystal Light, Silver Light, Eocene; and when we had a man who wanted oil from Cleveland we painted the barrels red and branded them, I believe. I know they sent us a stencil from Cleveland.

Q. They sent you a stencil from the Cleveland office?—A. And it was marked Standard Oil Company, Cleveland, and we had those barrels painted red. I forget what name we put on for him.

Q. And you filled those barrels out of the same tanks and put the Cleveland brand on and sold it with that brand?—A. Oh, yes; each of those brands. Some had the same brands and some different brands.

Q. (By Mr. PHILLIPS.) Did you sell the same brands at Newark as at the other places?—A. We dropped the Hyperion at Newark and put the Diamond White on the cheap list.

Q. (By Mr. JENKS.) Will you tell us again with reference to the amount of trade you had at Newark as compared with the amount at Urbana?—A. We had about a third more, I suppose. At Urbana they ran about 50,000 and at Newark it was 80,000.³

Q. (By Mr. PHILLIPS.) That is, 80,000 gallons per month?—A. Eighty thousand gallons.

Q. (By Mr. JENKS.) When you left Newark where did you go?—A. I went back to Urbana.

¹ See p. 505.

² See p. 502.

³ See p. 499.

Q. Was the change in the nature of a promotion this time?—A. No; Mr. Hurst, who had been agent at Newark, wanted his place back, and Mr. Mathews gave it to him.

Q. He had been manager there before, and you took his place?—A. I took his place. He went away somewhere, but he returned and wanted his place back. I got my place back at Urbana.

Q. You went back as manager at Urbana?—A. Yes; I went back as manager at Urbana.

Q. Were your wages cut down?—A. No; they remained the same.

Q. As you had at Newark?—A. Yes.

Q. Was there anything different in carrying on the business at Urbana the second time? Did you have any new experience?—A. No; not during the time I was there. I went back and staid 6 weeks.

Q. Only 6 weeks that time?—A. Only 6 weeks, and everything went along quiet.

Q. Then where did you go?—A. I went back to Newark again.

Q. To what position?—A. Manager of the Standard Oil Company.

Q. Had Mr. Hurst left again?—A. He went on the mail force, carrying mail.

Q. Working for the United States Government?—A. Yes.

Q. Were your wages the same the second time at Newark?—A. Yes, but they paid board for me for 6 weeks when I came back.

Q. So there was a little increase for a time?—A. Yes.

Q. How long did you stay this last time at Newark?—A. About 2 years.

Q. And up until last February?—A. Yes.

COMPANY'S METHODS ADOPTED BY OWNERS OF TANK WAGONS AT NEWARK.

Q. Did anything new happen during your last residence at Newark with reference to the methods of business? Are there any special instances that you have in mind?—A. Nothing, except that the tank wagons occasionally made a little kick, and we would give a little reduction and then cut it off again.

Q. Explain a little more in detail what you mean by that.—A. When one of the customers would kick, we would cut the price to him half a cent a gallon; in fact, we cut the price to all the wagons a cent a gallon. We sold them gasoline cheaper than we sold the stores. Oil sold at the same price.

Q. The tank wagons were not owned by the Standard Oil Company; you sold a little directly to the wagons?—A. We simply sold to them.

Q. And they would retail it out?—A. And get what they could for it.

Q. These tank wagons had how many grades?—A. They had 8 spaces.

Q. They would have that many grades of oil?—A. No; they had 2 spaces for oil and 1 for gasoline.

Q. Do you know whether they were in the habit of giving different names in the same way you had done when you ran the oil wagons?—A. My man there, Mr. King, was, you might say, the head of these fellows. More of them paid attention to whatever he said than to any one else. He was an employee of the Standard Oil Company for a year and a half or 2 years. Through him they got to selling any kind a person wanted. If you wanted 15-cent oil you could get it; if you wanted 10-cent oil you could get it.

Q. They adopted the methods they learned from the company?—A. Yes.

Q. I suppose that is a method any one might develop for himself?—A. Mr. King said that if he could work it for other people he could work it for himself.

HOW WITNESS CAME TO LEAVE EMPLOY OF STANDARD OIL COMPANY.¹

Q. Will you tell us how you came to leave the employ of the Standard Oil Company?—A. Well, I came in one evening when Mr. E. C. Lockwood was there.

Q. Who is Mr. E. C. Lockwood?—A. He is a kind of general man from Cleveland.

Q. Standard Oil Company manager?—A. Yes. He goes around and inspects the stations and property; he looks over everything about a station and makes a report on its condition, whether the yard is clean, etc.

Special inspector. Is that about it?—A. Yes.

Sent about?—A. He has 3 States that he travels over.

Is this blank form which you have here on which he makes his report, so far as you know, the general one he sends from each station?—A. Yes; that is the one sent from each station.

Q. Will you offer this in evidence here?—A. I will leave you the copy. We had one taken every 2 or 3 months at that station. When he came there to make the inspection, I came in at night and had worked a little hard and was tired,

¹ See p. 504.

and I suppose cross. Anyhow, he came in there all dressed up, and I was not in a very good humor. He began to tell me how to do things; how to do this and that thing in the yard.

Q. How to do what?—A. He wanted to tell me how to blue barrels, count staves, weigh oil, and all that sort of thing. I had done that for 7 years and I did not think he could tell me.

Q. Did you know who he was?—A. I did not know at all that he held a position, so I told him he could not. He said I might lose my position by it, and I told him I did not care about that. I gave him a good jawing and never thought all the time that he was a person connected with the oil company. I did not know who he was. In consequence I got a lay-off. I never got a discharge, and I never have gone back.

Q. How was that done? By Mr. Mathews?—A. Yes.

Q. Have you a letter?—A. I have the letter in my pocket.

Q. Will you be kind enough to read it?

Q. (By Mr. PHILLIPS.) Give the date of it, please?—A. (Reading inspection report.)

EXHIBIT 1.

INSPECTION REPORT.

Station —, Newark, Ohio.

Date, OCTOBER 3, 1896.

No. 1: Is date received written or stamped on each empty barrel? Old stock of Hurst's on hand not dated.

No. 2: Are shipping tags, also date, left on until barrel is used; and if no shipping tag, is shipper's address written on barrel? See above.

No. 3: Are oldest barrels worked up first? Demand has been such that all new and most of old stock has been used.

No. 4: Are all cripples worked up currently? Same cripples on hand as when Hurst left. Mr. Clark states that he has worked up cripples coming in while he has been here.

No. 5: Are light machine barrels steamed out as soon as received? Yes.

No. 6: Are barrels bunged properly?

No. 7: Are barrels properly filled?

No. 8: Are all bung staves removed when weak at the bungholes? } None filled or prepared by hand account yesterday. Busy shipping day and all barrels used.

No. 9: Are barrels painted good color? Paint dull account, I think, of paint, as Hurst had some trouble.

No. 10: Are barrels neatly stenciled? } None prepared. See above.

No. 11: Are barrels properly glued? }

No. 12: Are tank wagon or warehouse buckets and gauges on filling tanks correct? Verified by Mr. Cragin and Mr. Henderson.

No. 13: Are same buckets or measures on tank wagons or at warehouse used for both oil and gasoline? No.

No. 14: Are tank-wagon faucets in a leaky condition? No.

No. 15: Are the tank wagon and dray kept clean? Were as clean as weather past week would permit.

No. 16: Are the horses properly cared for? Had not been curried this a. m. Stables not cleaned.

No. 17: A. What is their average feed? 6 to 89 to oats. B. Cost of oats, 82 cents; corn, 35 cents; hay, \$9. C. Cost of new shoes, \$1; resetting, 50 cents. D. Have you been able to get any better prices on hay, feed, or shoeing? Price is 60 cents better on shoeing. E. What check is there that full quantity of feed purchased is received? City weight; Hurst has been paying \$1.50.

No. 18: Any leaky valves around plant? No.

No. 19: Any leaky joints or pipe around plant? No.

No. 20: Any leaky tanks around plant? No.

No. 21: Is glue trough and kettle and vicinity kept clean? Yes.

No. 22: Is sawdust on hand to dry up any oil that might leak or spill on the floor? Yes.

No. 23: Is ground kept dry around tank-car unloading place? Grounds were wet, due to a leaking connection on a car being unloaded. Had Mr. Clark throw dry dirt on ground and place a bucket under tank.

No. 24: Is ground kept dry around tank-wagon loading place? Yes.

No. 25: Are shovels kept over all sand barrels? Yes.

No. 26: Are gates and doors properly locked up when agent is absent? Yes.

No. 27: Is pump room in good condition? Yes.

No. 28: Are pumps well packed and in good clean condition? Yes.

No. 29: Any unfilled orders on hand that should have gone out? No.

- No. 80: Any deliveries on previous days that have not been reported? No.
 No. 81: Does tank wagon, dray, or any of the buildings or tanks need painting or repairs? No.
 No. 82: Is the warehouse, office, and yard kept in orderly and clean condition? Warehouse much cleaner than kept by Hurst. Yard and office clean.
 No. 83: What time did the agent get around in the morning? 6 a. m.
 No. 84: How much time does he take for dinner? 30 minutes.
 No. 85: What time does he leave at night? 5.30 to 9 p. m.
 No. 86: Are they keeping sample of each tank car received properly labeled and kept in the dark three months before dumping? Samples on hand not labeled. Instructed Mr. Clark that they should be.
 No. 87: Is oil inspected before tank car is dumped? Yes.
 No. 88: Is there any old lubricating oil or specialties on hand. If so, give us memo. showing filled dates on barrels. See inventory, a decrease over last inventory. Mr. Clark has sent out some of the old boarders.
 No. 89: Any barrels not properly gauged? Test at least ten barrels and give agent's gauge and correct gauge of each. None prepared or gauged. Account yesterday being shipping day.
 No. 40: What prices paying for coal? \$1.25, grade nut. Have you been able to get any better figures? Not on quantities purchased.
 No. 41: How many barrels of each grade prepared? None. How many filled of each grade? None.
 No. 42: Are weeds cut down in the yard? Yes.
 No. 43: Is agent sending in competition report? Yes.

General remarks.

Make a careful and personal inventory of all stock and material on hand and return attached to this report. See inventory.

H. S. HOLLINGSWORTH.

It is just a check, you know. I will leave that.

Q. We will put it in the testimony then and make it a part of the record, so you need not read it all over.—A. When he came there to make the check we got on the outs. I would not help him at all, and I kind o' threw things in his way. Every time I could I would do it, either the oil or the barrels or anything, so that he could not inspect it. Finally I got a letter from Mr. Mathews at Columbus.

EXHIBIT 2.

FEBRUARY 4, 1899.

W. H. CLARK, Esq., Newark, Ohio.

DEAR SIR: Owing to the difficulty in getting matters checked up at the Newark station, we have decided to discontinue your services for the present. Immediately upon receipt of this please turn over all papers, keys, and everything belonging to the company to the bearer, Mr. W. W. Hughes, who will take full charge of the station for the present.

I do not wish you to consider this as a discharge, for the reason that if everything is in proper condition after we have thoroughly checked up the station there will be no difficulty whatever in having you reinstated.

Yours, very truly,

B. A. MATHEWS.

So I am not discharged at all.

Q. How long was this after you had had the inspector there?—A. I think it came in about 2 or 3 days, just long enough for him to write after I had told him what I thought. He said he could not check up the account of the barrels while I was there.

Q. Have you had any further suggestions from the Standard Oil Company that you might be taken back into their employ again?—A. They have been talking around. My brother-in-law worked for them at the same time I did. He had charge of the office there, and they were down there to see him the other day and wanted to know what I would work for them for.

Who was that?—A. Fouts.¹

Who is he?—A. I think, Mr. B. A. Mathews's man.

Q. A man who works with Mr. Mathews?—A. Yes.

He wanted to know what you would work for?—A. I told him I would work for \$500 a day, with six months' pay in advance, and that I would work one day and quit.

Q. What is your objection to working for them now?—A. If the report which

¹ See p. 504.

you send in every month should contain an error of \$2, they just take it out of your pay. They never send for you, but just take it out of your pay. It might be a mistake of a clerk on some bill, or something, or an error in figuring up the accounts of the tank wagons.

Q. If any mistake is made by one of their agents they simply deduct?—A. Or any of them, of the men under me, if any one of them makes a mistake, it all comes out of my wages.¹

Q. Will you put 1 or 2 of these reports and letters in evidence here?—A. Yes. So you see it don't help me so much after all. If there was any mistake made by any of the men they always took it out of me.

TESTIMONY AGAINST STANDARD OIL COMPANY IN OHIO.

Q. (By Mr. KENNEDY.) Did you recently give testimony in Ohio against the Standard Oil Company, showing up its operations so far as you know them?—A. Yes.

Q. That occurred after you left the employ of the company?—A. After I had been laid off.

Q. When was that?—A. I do not know. It was not very long after that. I do not remember the exact date at all. It was not very long afterwards.

Q. You told it freely there just as you tell it here, did you?—A. I could not tell anything else. They asked me the questions, and what could I tell them?

Q. What I would like to know is this: If you had continued in the employ of the Standard Oil Company would you have been apt to give the same kind of testimony?—A. Not in the humor I was toward them just then.

Q. Would this Commission be apt to get testimony similar to this of yours from managers of the Standard Oil Company in other parts of Ohio?—A. Ask any person there, and if they would come out and tell you the truth they would tell you just the same as I do.

Q. Would Mr. Mathews have testified the same?

Q. (By Mr. JENKS.) Mr. Mathews, for example, would he give similar testimony?—A. Mr. Mathews did not know anything when they had him on the stand before Mr. Monnett. I saw by the papers that he did not know anything.

Q. Would you not have been apt to have been in the same position, if they had asked you, provided you had not been discharged by the Standard Oil Company?—A. Well, if I was a Sunday school teacher like him, I do not think I would have said that I did not know, if I did know.

METHODS OF STANDARD OIL COMPANY'S COMPETITORS.

Q. (By Mr. FARQUHAR.) While you were agent for the Standard Oil Company, in those various towns, did any opposition company ever sell below your rate to get a foundation?—A. Why, no; Mr. Ludlow and those gentlemen sold at a cent higher than we did. We always kept below. We were the low people.

Q. Did you regard it as in the line of competition when another company was selling at a cent or a cent and a half a gallon more? Did you call that opposition?—A. They always sold higher. They could not furnish it as cheap as the Standard Oil Company. The Standard Oil Company always sells cheaper than other people can make the oil, and ship it cheaper into the town.

Q. (By Mr. PHILLIPS.) Do they get lower freights?

Q. (By Mr. JENKS.) Better freight facilities?—A. Freight as well. I have a letter here with reference to freights.

Q. (By Mr. FARQUHAR.) You speak of opposition companies coming in. I want to know whether these opposition companies sold at the same rate as the Standard Oil Company, or above or below?—A. Well, it would vary; sometimes they would sell at the same price, sometimes it would be a quarter of a cent higher, and sometimes a quarter of a cent lower, but the average was always higher than the Standard Oil.

Q. What amount of earnings could they get to-day if they had to get customers to pay more to an independent company than they would to the Standard Oil?—A. Lots of them said they had no love for the Standard Oil Company; they treated them all too bad.

Q. In selling oil from the tank or from the store is there any friendship in it at all? Is it not a simple commercial transaction of buying a good oil for a low price?—A. I talked to lots and lots of them. Lots of stores feel that they would be willing to pay more for the other oil than they would for the Standard Oil.

Q. Is there enough of that class of buyers to make a difference in buying and selling oil so that an opposition company can make a living and fight? Do you think any company can sustain itself on that kind of sentiment?—A. The most

of those people have been handling Pennsylvania oil. Of course that makes a difference, while our oil at Urbana and at Columbus came from Lima, from the Solar Refining Company, and had the sulphur in it.

Q. (By Mr. JENKS.) Do you think the oil of your rivals was better than your own?—A. Yes; it was Pennsylvania oil.

Q. (By Mr. FARQUHAR.) Does the high standard of the oil explain the difference in price? For instance, was Scofield's oil of a higher standard than yours?—A. No; Scofield's was not.

Q. Whose was?—A. Charles Ludlow's and the Independent, of Mansfield.

Q. How could you take away their customers if you had a lower standard of oil?—A. Why, we would give it to them so cheap that they really had to take it. If they did not buy it, we would get wagons on the street and sell it so cheap that they could not stand the competition.

PENNSYLVANIA OIL COMPARED WITH OHIO OIL.

Q. (By Mr. PHILLIPS.) Is it not a fact that the Pennsylvania oil, the crude oil, is worth considerably more than the Ohio?—A. The Pennsylvania oil will run 80 cents a barrel more than the North Lima. What is the North Lima worth?

Q. I do not know.—A. Is not North Lima worth 78 to-day?

Q. I do not remember the last quotation?—A. Is not Pennsylvania about 105?

Q. 118.—A. I know it always runs that way. We heard the North Lima got down to 52 cents a barrel during the summer.

Q. Is it not a fact that it is very difficult to deodorize the Ohio oil? Is it not mixed with sulphur and arsenic and very difficult to get a good illuminating oil out of it?—A. Yes; the only thing is to get the sulphur out of it. There is a German who has invented a way of brushing the sulphur out with some kind of a brush, and has patented the arrangement; but, of course, it is awfully expensive. The Standard has bought the patent. It is just like churning milk; it will take the sulphur out, but it makes it awfully expensive to handle.

Q. Do you think any customer will buy what is called Lima oil and Pennsylvania oil at the same price? Will he not prefer the Pennsylvania oil to what is denominated Lima oil?—A. Pennsylvania oil would be the best oil; there is more life to it; the Pennsylvania oil is what we get the paraffine out of, while the Ohio oil has sulphur.

Q. (By Mr. FARQUHAR.) From your experience, will you explain how many customers out of 10 would buy the cheapest oil?—A. If they knew it, the whole bunch of them would buy it.

Q. It is your own experience as a seller of oil that the object of the general run of the customers is to get the cheapest and save a cent or half a cent?—A. I have seen customers that would not buy it if you sold it to them 2 cents cheaper.

METHODS OF MAKING LAMP TESTS OF OIL.¹

Q. I mean the general run of customers. Do customers generally think as much about the quality as the price?—A. Oh, yes; they do. We oftentimes make a lamp test just the same as Mr. Mathews's man. If a man kicks on that Ohio oil and has got the Pennsylvania, we go in and make a lamp test. We turn our Ohio oil low and his Pennsylvania oil high. If we turn the Ohio oil high it would give out more smell of sulphur, but we do not do that. It is just a little trick of ours in turning the wick up. We can fool any person on their oil that does not know. You can take any person and beat them on their oil.

Q. (By Mr. JENKS.) Were you regularly instructed by Mr. Mathews to make your tests in such a way as to beat your customers?—A. Yes, we have 2 lamps for such purposes at each station.

Q. (By Representative LIVINGSTON.) How were your orders given to you to do that—to make those tests?—A. He told us verbally, came and explained it to us.

Q. You got no letters; nothing in writing at all?—A. He never told us anything in writing; he always came and told us just how to do it.

Q. Can not you find something in writing on that line in some way or other?—A. I do not know; I may have something.

Q. Do you think if we put a man on the stand here that he will not contradict you?—A. They can not do it and tell the truth.

Q. Do you know they will do so, and prosecute you for a fraud?—A. Let them do it.

Q. Have you no way of substantiating what you have said?—A. I will tell you this, that the Standard Oil Company does lots of things that they do not let go down on paper in writing. Lots of times they will make a trip that costs them \$2 or \$3 before they will write a letter.

Q. You are sure you have nothing in writing?

¹ See p. 500.

Q. (By Mr. PHILLIPS.) Ask him if he can not support this by other testimony?
 Q. (By Representative LIVINGSTON.) I want to know if you can not do it over their signatures?—A. I have not anything here, I have no letters on that subject at all; I did not think about that.

Q. (By Mr. PHILLIPS.) Are there any other persons that have this knowledge that would be willing to testify to these facts?—A. D. J. Hull, at Urbana, has seen it tested often. W. Hughes, of Newark; H. S. Hollingsworth, and E. G. Mathews, of Columbus; W. O. Reed, of Marietta.¹ In fact, any of the agents; any of the high men.

Q. (By Mr. JENKS.) Are those men all in the employ of the Standard Oil Company now?—A. Yes.

Q. Do you know of any one who is not in the employ of the Standard Oil Company who has had the same experience you have as to instructions for testing oil?—A. I do not know of any, except those that worked around with me.

Q. Do you not think of anybody who is not in the employ of the Standard Oil Company?—A. No; they are all head men and they are all holding their places.

BUSINESS WITH THE RAILROADS.

Q. (By Mr. KENNEDY.) Have you handled lubricating oils?—A. Yes.

Q. Do you know anything about the furnishing of railroads with lubricating oil and the prices charged them?—A. We furnished the railroads lots of refined oil, but I do not know the prices charged. We always made out their bills, so many gallons, and then sent the bill to Columbus, and they put the price on it.

Q. Do you not know anything about the price of lubricating oil?—A. No; the agents never know any thing about it, except the head men at Columbus.

Q. (By Mr. JENKS.) What railroads did you sell oil to in this way?—A. The Baltimore and Ohio Railroad Company.

Q. That is the only railroad company you ever sold oil to?—A. Yes.

Q. And you never knew what price they paid?—A. We billed it to the Baltimore and Ohio Railroad Company, Baltimore, Md.

Q. Where did you deliver the oil to them?—A. To the roundhouse at Newark.

Q. (By Mr. PHILLIPS.) About how much per month did you deliver to the Baltimore and Ohio Railroad?—A. In the summer time about 60 to 80 barrels a month, and in the winter time as high as 150.

Q. What quality of oil was this?—A. It was Water White.

Q. Did you also sell them lubricating oil?—A. No; it was refined.

Q. Where did they buy their lubricating oil?—A. They bought it of the Atlantic Refining Company of Pittsburg.

Q. Is that also the Standard Oil Company?—A. I do not know; I do not think it is; I will not say about that.

Q. You simply sold them refined oil?—A. We simply sold them refined oil, but I do not know about the Atlantic Refining Company. I remember their traveling men used to come to Newark to see us. I always used to bring them up to the station. They talked there so that I do not know; but that is one reason why I thought so. I am not positive.

Q. (By Representative BELL.) I want to ask about the rebates. Did you not speak a little while ago about having some rebates from the railroads?—A. I said I was not allowed to pay freight to the railroads, or have anything to do with that—with the handling of the cars—at all, myself. Here is a letter sent to Mr. Mathews.

EXHIBIT 3.

URBANA, OHIO, 2, 21, 1896.

STANDARD OIL COMPANY,
 Columbus, Ohio.

DEAR SIR: I wish you people would write the New York, Pennsylvania and Ohio Railroad in regard to the way they handle our U T L cars. I have done my best to get rid of them properly as I never hold a car 24 hours. I ordered them to switch out an empty yesterday and it is not done yet and will not probably be switched out till to-morrow. Please write.

Yours, very truly,
 Indorsed as follows:

W. H. CLARK.

W. H. C.:

That is all right. Our people have some sort of an arrangement with the Erie people in regard to tank cars by which they take care of cars.

Yours, etc.,
 2, 24. B. A. M.

¹ See p. 500.

Q. (By Representative BELL.) You do not know anything about their freight arrangements with the railroads?—A. No; I do not know anything about that. They said they had a private arrangement.

Q. That is the letter you referred to a little while ago?—A. Yes.

Q. (By Mr. JENKS.) Is this last part in pencil, signed by Mr. Mathews himself?—A. Yes.

Q. (By Mr. KENNEDY.) Is that the way they do business? Do you send them a letter and they send you back the original indorsed that way?—A. Yes; they do that lots of times, and lots of times write across the end of the letter.

Q. They take the letter and turn it over this way [indicating] and write across the corner some little note—their business, anything they want to have delivered?—A. And send it back to me; some little short note; it is nothing; never kept in the file.

Q. (By Mr. PHILLIPS.) Do you know anything about the pipe-line system of Ohio, whether there have been any opposition pipe lines handling crude oil?—A. I do not know. The pipe line runs from where we used to live by Beverly to Lowell; from Lowell it runs on down and follows the river to Marietta and on to Parkersburg. I knew their line when I boarded there with Mrs. Jordan. Charles Jordan was the agent of the Louisville and Ohio on the west side.

Q. Have you no knowledge of the pipe lines, of the Standard's competition along that line?—A. Not much; I know they would use oil out of a certain place and pump it into the Buckeye pipe line. A certain well is pumping so much, or the Argan refinery, or some refinery, has ordered so much crude oil. He would tell me; I did not hear it; he would just tell me what they said.

Q. (By Mr. PHILLIPS.) Has any member of the commission any other questions to ask the witness?

WAGES PAID BY THE STANDARD OIL COMPANY.

Q. (By Mr. KENNEDY.) I would like to ask him again in regard to his compensation. Do you say that you did not consider your compensation liberal or fair?—A. I worked for \$15 a month and paid \$12 a month board for 6 months; then I got raised to \$25, and then went to Springfield for \$35, and got my breakfast and supper and slept there and got my dinner wherever I was. I had to work from 4 or 5 o'clock in the morning until 9 or 10 or 11 o'clock at night.¹ Would you think that was good wages or not?

Q. When you got \$15 a month, was not that as a boy—you were a boy?—A. I was 19 years old and went into the warehouse and painted barrels and did all the work there was to do there.

Q. Will you state what the wages of the Standard Oil Company are as compared with the wages of other refineries in Ohio? Are they about the same?—A. It is pretty hard to tell about these fellows—the head fellows; they get pretty big money, but the fellows I used to pay at the Standard Oil Company's station and the warehouse never got any more money than they could get any place else.

Q. Do you mean the Standard Oil Company people?—A. Yes.

Q. How about the employees of the independent companies? Did you not know something about their wages?—A. I do not know anything; I do not know what they pay; I never paid any attention to that; I never asked them at all.

Q. (By Mr. PHILLIPS.) About what wages did you pay to persons under you?—A. When I worked in Newark and Urbana, I think I got men for 75 cents a day; I think that is what I paid them. I worked Lee P. Adair, at Beverly, in the yard there, for 60 cents a day; I got Fred Augenstein for 60 cents a day and then for 75.

Q. What did you say was the nature of their employment?—A. They drove hoops on barrels, filled barrels, took care of the team, drove the dray, or anything there was for them to do.

Q. Is that about the same wages as other people pay for similar kinds of work in those places?—A. No; the boys could have got more money in other places, but they wanted to work up.

Q. Did they expect to be promoted by working for the Standard Oil Company more cheaply than they would for some other person?—A. When they hired them they talked to them and promised to promote them as fast as possible. Lee Adair worked 4 or 5 months and got a raise of 15 cents a day; then he worked there over a year and did not get any more money out of it, and quit. I got a boy from Lowell, Fred Augenstein, who worked for a year and did not get any more wages, and quit.

Q. What were the hours that these men worked per day?—A. They got to work about 5 o'clock and worked until dark. Lots of times in the summer, when the gasoline trade was heavy, we had to work every day until after dark. I have

¹ See p. 484.

seen some days when we could get it out at 2 o'clock, but generally we would have to work late to get it out.

Q. You would average 10 or 12 hours a day?—We would average 12 all the time.¹

Q. (By Mr. KENNEDY.) Was your promotion pretty rapid?—A. I was there 6 years and I got \$2.50. I do not know whether you would consider that rapid or not.

Q. (By Mr. FARQUHAR.) Did the men that you have spoken about have steady employment?—A. Yes; they worked steadily; steady work for the company all the while.

Q. All seasons?—A. Yes; they worked pretty steady the year round.

Q. (By Mr. PHILLIPS.) Has any member of the commission any further questions to ask the witness?

Q. (By Mr. KENNEDY.) Will you suggest the names of any men in Ohio doing work similar to that which you did who might be brought before the commission to corroborate your testimony?—A. I do not know of any of them who can not do it; they would all tell you just the same; they can not tell you anything different.

Q. (By Mr. PHILLIPS.) Who, for instance? You have named quite a number.—A. W. W. Hughes, I named; H. A. Day, Newark, Ohio.

Q. (By Mr. JENKS.) What is his position?—A. He has a tank-wagon branch at Newark. James King, Newark, Ohio, Standard Oil Company, is the man that used to paint the red barrels.

Q. (By Representative LIVINGSTON.) Have they numbers to their private residences? You can not reach them in that way.—A. Newark is only a small town and you can reach them in that way. W. H. Donaldson, Newark, and Frank Hurst.

Q. Who is Mr. King?—A. He is the man who used to work for the Standard Oil Company and used to paint the barrels; he was agent for 7 years of the Standard Oil.

Q. (By Mr. RATCHFORD.) You have made a very full statement as to the discriminating policy of the Standard Oil Company, both in the matter of cutting prices and in the matter of selling goods under false names, and also in the matter of unequal prices for the same goods to consumers. Do you believe from the consumer's standpoint that this policy is beneficial or not; is it advantageous to the consumer or not?—A. We did not sell to the consumer.

UNEQUAL PRICES TO DEALERS.

Q. You did not sell to the consumer?—A. We wholesaled; we sold to the trade; we did not sell to the houses or any individual.

Q. Not to private houses; you delivered to the stores?—A. Yes; we delivered it to the stores.

Q. (By Mr. PHILLIPS.) Did you deliver it to the stores yourself?

Q. (By Representative LIVINGSTON.) Did that enable the consumer to buy oil cheaper?

DEALERS' PRICES UNIFORM.

Q. (By Mr. RATCHFORD.) If it reached the retailer by inequality of price, did it necessarily reach the consumer in the same way?—A. No; most of the stores sell at the same price.

Q. Even though they buy at different prices?—A. You see there is often stores that buy different grades and sell at the same price.

Q. Then oftentimes the same articles sell to the consumer for a like price?—A. No; I said the grades. Some stores will buy cheap oil and charge a high price, and some will buy the best oil at a high price and sell at the same price they do.

Q. Did I not understand you to say a little while ago that you sold and parceled it out to consumers from the tank wagons cheaper?—A. Yes; we sold them gasoline 1 cent a gallon cheaper than we sold the stores, under a contract until the 31st day of December. We gave them a contract for last year.

EFFECT OF STANDARD OIL COMPANY'S METHODS ON CONSUMERS.

Q. According to your testimony, then, has not the Standard Oil Company been discriminating in prices very largely?

Q. (By Representative BELL.) Cutting the opposition?

Q. (By Mr. RATCHFORD.) Do you believe that that is an advantage to the consumer or a disadvantage?—A. They generally made it up even when we were

¹ See p. 494.

selling oil at 7 cents. We would have a fight, and after the fight we would get it higher than we had it before.

Q. That is not answering the question.

Q. (By Representative LIVINGSTON.) I do not think he understood it.—A. Of course it is a benefit to the consumer right then. That was certainly true when they took it to the house at 6 cents where the stores had to pay 7. That was a benefit to the consumer.

Q. Yes?—A. When we retailed it around to the houses at 6 cents they had to pay 7.

Q. (By Representative LIVINGSTON.) When they drove their competitors out of the market, was it any better for the consumer?—A. No; it went back to the old price.

Q. (By Mr. FARQUHAR.) Did they go back to the old price?—A. They always said when crude advanced half a cent or a cent, raise oil a cent.

Q. Was it more usual to go back to the old price than to increase?—A. Well, I suppose it would be more likely from time to time to go back to the old price; but after they had that fight at Newark, and sold at 6 cents, oil went up to 13 and 14 cents on the street. During that fight some people sold as low as 4 cents.

Q. Who did?—A. J. P. Lamb. It was all over the windows and grocery wagons around town, "Water White Oil, 4 cents."

PRICES AT COMPETITIVE AND NONCOMPETITIVE POINTS.

Q. (By Mr. JENKS.) Do the regular prices in towns where there is no competition range higher than in towns where there is competition?—A. Last summer we had no competition in Newark, and gasoline retailed, or wholesaled, for 7½ cents. In Columbus they had competition, and gasoline sold for 5½ cents; there was 2 cents difference between Columbus and Newark.¹

Q. Can you give any other instances of the same character?—A. No two stations have the same price. All stations have different prices.

Q. Generally speaking?—A. If I would quit working at Marietta and go to Zanesville, they would have different prices at that place.

Q. (By Mr. PHILLIPS.) What has made that difference—competition?—A. They always said it was the freight rate; that it cost more to handle it. It always seemed to me that where there was no competition they were charging different prices. At Newark last summer oil was a cent a gallon higher than at Columbus and gasoline about 2 cents higher; but at Marietta it was 2 cents cheaper than it was at Newark. That was before they had that trouble at Newark. Newark is generally 1 cent higher on oil and 2 cents higher on gasoline. My folks live at Marietta, and it was 2 cents cheaper than it was at Newark.

Q. (By Mr. PHILLIPS.) Has any member of the commission further questions to ask the witness? Have you any brief statement to make that has not been covered by the questions that have already been asked you?

Q. (By Representative LIVINGSTON.) Do you know of any conduct of this company similar to that which you have related, but which is more public in character?—A. Sir?

Q. Do you know of something of a more public character of which these people have been guilty concerning discriminations such as you have mentioned?—A. I can think of nothing.

Q. That can be supported by evidence of other parties?—A. I do not know of any at present.

Q. Did you ever see a lawsuit in a court-house?—A. I was never in a court-house, except once when I took a deed in.

Q. Did you hear them testify?—A. No; that was the only time I was in the court-house.

Q. What court was that?—A. Oh, there was no court going on; I just took a deed up to the court-house.

Q. Has the Standard Oil Company been prosecuted by anybody, that you know of, in any cases either in a justice's court or a circuit court?—A. I do not know; I am not posted on that. I was in Urbana when they were fighting there before the council. We were just in before the council, but never had any suit, or anything.

Q. You do not know of any court records that you could find?—A. No.

Q. Has there not been any litigation concerning this question of methods you have been talking about?—A. I do not know. If you have the papers of Mr. Monnett, they mention everything I have said here.

¹ See Mr. Monnett, p. 317.

Q. (By Mr. RATCHFORD.) We have that case.—A. Those papers include everything I have said.
Testimony closed.

AFFIDAVIT.

STATE OF OHIO, *County of Licking, ss:*

I swear that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

W. H. CLARK.

Sworn and subscribed before me this 15th day of September, 1899.

[SEAL.]

PHIL. B. SMYTHE,
Notary Public.

WASHINGTON, D. C., *June 9, 1899.*

TESTIMONY OF HON. THEODORE F. DAVIS, OF MARIETTA, OHIO.

The commission met at 10.50 a. m., June 9, 1899, Vice-Chairman Phillips presiding. Hon. Theodore F. Davis, of Marietta, Ohio, testified.

Q. (By Mr. JENKS.) Will you be kind enough to state your full name and address to the commission?—A. Theodore F. Davis, Marietta, Ohio.

LOCATION AND NATURE OF BUSINESS OF WITNESS.

Q. How long have you been engaged in the oil business?—A. I have had producing interests in the vicinity of Marietta for 20-odd years.

Q. And as a refiner how much experience have you had?—A. I have had a large interest in a small refining plant at Marietta for about 6 or 7 years.

Q. Is your refinery running at the present time?—A. It is not.

Q. Will you tell us, in the first place, with reference to your experience as a producer; where the oil fields are that you have an interest in, and what your experience has been in disposing of your oil?—A. I first became interested in what is known as the Macksburg field, about 25 miles from Marietta, as a producer; and upon the basis of that production we established a refining plant, hoping to transport, manufacture, and market our own product. We continued the business for about 2 years, but were finally compelled to give it up. It was not a success.¹

WHY THE REFINING BUSINESS FAILED.

Q. In what way did the failure come about?—A. We were not able to market our product at a margin sufficient to pay us for handling. We were confined to one grade of oil that was better calculated for particular markets which we were not able to reach. We were not able to compound any other grades.

Q. Will you explain in detail about that?—A. The product of some oil fields will make good lubricating oils, that are profitable; you can market them; they are rich in paraffin. Paraffin oil is largely used for lubricants; this particular grade of oil was more rich in that product, and therefore the trade was confined largely to the railroads; they were the large consumers, but we were unable to reach them, because of their connections; that is, we were able to reach them, but not to market our product. All or part of the properties of our competitors were sold to the managers of the railroad.

Q. Was your principal competitor the Argan Refining Company? Was the competition simply local?—A. The Southwestern officials, the managers of the railroad of which I spoke, became owners of a large block of the Argan stock. It made no difference what we would propose in our quotations, we were not able to sell them goods at any price, though our goods were just as good as theirs. We lost a valuable customer.

Q. Had you been selling this product to the Baltimore and Ohio Southwestern Railroad?—A. We had sold some to it, but more particularly to other roads leading out of Marietta, i. e., the Cleveland and Marietta and Zanesville and Ohio.

Q. Was the Standard Oil Company at that time connected with this competing company, the Argan?—A. Not that we know of.

¹ Compare Mr. Archbold, p. 543.

Q. You say that you were deprived of the Baltimore and Ohio Southwestern, one of your most valuable customers, on account of some of the managers becoming stockholders in the Argan Company; but how did you lose your other customers?—A. The other customers were located along the lines of these railroads and their several branches. We lost not only the railroad company itself as a customer, but their handling the product of this one concern enabled the merchants and dealers along the line to get oil at rates that we were not able to compete with.

Q. So that was really the reason of the stoppage of your refinery?—A. That was one of the reasons.

EXPERIENCE IN REGARD TO TRANSPORTATION.

Q. Did you have reason to think they were getting advantage on freight rates?—A. We had no direct evidence of it, but we supposed it; they were acting very strangely; our information was only circumstantial; we had no means of knowing. We believed that we manufactured as cheaply as they did, and our freight rates being equal we ought to have controlled some of that trade, but we were unable to do it.

Q. What was your experience with reference to the transportation of the crude oil to your refinery, etc.?—A. We had our own lines from the wells at Macksburg to the railroad; from there we shipped it in tank cars to the works. I became interested in the Corning field, in Perry County.

PRODUCT OF MACKSBURG OIL FIELD COMPARED WITH THAT OF OTHER FIELDS.

Q. So far as your experience as a producer in the Maxburg field is concerned, did you have difficulties there—trouble with refining?—A. Yes.

Q. (By Mr. PHILLIPS.) Is the Macksburg field product what is commonly known as "white-sand oil"?—A. Yes; the crude is the same as white-sand oil, and commands a similar price in the market.

Q. It is not the Lima field oil?—A. Oh, no.

Q. (By Mr. JENKS.) What were you going to say about the Corning field?—A. The Corning field was developed later; some of the people who owned the Maxburg field opened up the Corning field. Corning is about 40 miles northwest from Marietta, along 2 or 3 lines of railroad reaching Marietta. We undertook to market that oil or get some of our product to our works. We had some wells there.

Q. (By Mr. PHILLIPS.) What kind of oil was that—was it the same as obtained from the Berea or the same as the Pennsylvania?—A. That is a little different grade of oil, or at least there are some products in which it is not as rich as the Macksburg; there is just a little difference. They make a difference of 17 cents a barrel on the price. It is now being marketed for 17 cents less than white-sand oil.

Q. But it is white-sand oil nevertheless?—A. Yes; we finally succeeded in getting a test of 2 or 3 tank cars, and we decided that in many respects it was just as valuable as white-sand oil, but we could not get it to our works by the railway for less than 15 cents a barrel more than we could get the white-sand oil for from the pipe-line company. Then we undertook to gather it up from the fields and take it through their pipe lines.

CHARGES FOR PIPING OIL.

Q. Through what pipe line?—A. The Buckeye Pipe Line; we bought that oil from them delivered to our works through their pipes.

Q. Did they pump the Lima oil through the same pipes?—A. No, the Corning oil; that is quite a long way south; Lima is 75 miles, at least, or 100 miles away.

Q. (By Mr. JENKS.) Do you mean that the pipe-line company buys this Corning oil at 17 cents a barrel less than they would pay for the higher grade of oil that you have in the other field?—A. Yes.

Q. And was this same oil then carried to your refinery?—A. Yes, but instead of charging us 20 cents a barrel for the pipage they charged us 35 cents.

Q. Will you explain the significance of that?—A. It would be 17 cents a barrel less to the producers at their wells. We discovered that the oils in many ways were just as good or better than the oils people were paying \$1.18 for at the well, with 30-cent pipage. We could make a better product from that; but if we had to pay 17 cents a barrel more it would bring it down to where it was more profitable, or just as profitable, to ignore that and take our own product and sell it to

Q. And when they sold it to the refineries, they claimed that it was as high a quality as any that could be gotten?—A. Yes.

Q. And when they sold it to the refineries, they claimed that it was as high a quality as any that could be gotten?—A. Yes.

AMOUNT OF OIL PRODUCTION.

Q. How does the amount of this white-sand oil produced in Ohio compare with the amount of the Lima oil?—A. I am not familiar with that; the pipe-line people make a monthly statement of the oil they produce and the amount in the different fields, and I know only in a general way about it. I suggest that that is a matter which you can get directly from their statistics. They furnish their purchasers or the dealers with a printed statement, as many of you gentlemen know, I presume, which is sent out about this time of the month.

Q. (By Mr. PHILLIPS.) Is not the Lima oil production much the larger?—A. Oh, yes; the production of the Lima fields, according to my recollection, is about 60,000 barrels a day.

Q. (By Mr. JENKS.) Then the high quality of oil from the Corning and Mackburg fields is relatively a small part of the production of oil in Ohio?—A. Yes; I should think our field produced about 10,000 barrels per day, or in that neighborhood.

Q. You spoke of the advantage which your competitors had as producers on account of the pipe-line connections. Will you make this point a little clearer?—A. As producers we were not able to get our own products to our plant without being subjected to all the extra charges which I have already mentioned.

Q. Extra charges of the pipe line?—A. Yes.

RAILROAD CHARGES FOR SHIPPING OIL.

Q. How about charges on the railroad?—A. We were not able to get rates on the railroad at all satisfactory; they would make it no less to us than the higher rate of pipage.

Q. Had you any reason to think there was any special discrimination of rates being made in the transportation of crude oil?—A. We were compelled to get our oil in tank cars from two lines of road. One was the Toledo and Ohio Central, which had a branch running to Marietta. I made application for rates by wire, but I think it was at least thirty days before I got them to give me a rate at all; and when they did, I found it would cost me about 1 cent a barrel more than to ship by the pipe line; i. e., 85 or 86 cents a barrel.

Q. Did you infer from the delay that the railroads were more or less in the control of your competitors in the field?—A. Yes; it seemed so to us. We put our own loading racks and our own lines to the tanks, and paid the same transportation rate as we would have paid if we had bought it direct.

Q. Do you know whether these special appliances required of you in the way of loading racks were also required of the Standard Oil Company?—A. No, I do not.

Q. (By Mr. PHILLIPS.) Were you ever engaged in litigation in regard to freight charges with the Standard Oil Company?—A. No.

Q. Was there any litigation in regard to freight rates in your mother of the company with which you are familiar?—A. Mr. George Rice and Mr. Mackburg and I, and as I remember it, recovered finally from some of the losses which we sustained. But they afterwards became a part of the Standard Oil Company, and I was not engaged in the business at that time with any of the companies which were then in the case. I saw what was published in the Standard Oil Company's report, and I saw what was published in the Standard Oil Company's report, and I saw what was published in the Standard Oil Company's report.

Q. Did you know that the Standard Oil Company at that time?—A. No.

STANDARD OIL COMPANY'S REPORT.

Q. Did you know that the Standard Oil Company at that time?—A. No.

Standard Oil Company; one, perhaps, will be the South Pennsylvania Oil Company, another the Ohio Oil Company, another the Carter Oil Company, and the United States Oil Company, etc.

Q. Are all these companies connected with the Standard Oil Company?—A. Yes; they are all believed to be. I have no positive information as to that, but it is the common supposition that they are.

Q. But you know as a matter of fact that the Standard Oil Company is connected with a large number of producing companies and has organized a large number?—A. I have no positive information, but it is currently believed by all the oil people about Marietta that it is.

Q. (By Mr. JENKS.) Does the purchase of these oil fields by the Standard Oil Company, or the companies associated with them, simply mean that they have plenty of capital and can pay higher prices than their competitors?—A. Yes.

Q. Have you any reason for believing that there is anything unfair in their methods of dealing in this respect?—A. No; I have not. I have seen large properties sold to companies which we believed to be connected with them; they have always paid very fair prices; in fact, almost exorbitant ones in some cases.

Q. Is it simply a question of having a large capital at their disposal, with a willingness to pay well for the property they want to get control of?—A. Yes.

CHARGES OF PIPE-LINE COMPANIES, ETC. (RESUMED).

Q. Let us go back again for a moment to the question of transportation and the charges that are made by the pipe-line companies. Did you pay by the barrel?—A. Yes.

Q. About how much does the barrel contain?—A. Forty-two gallons is the Standard Oil Company's quantity; that amount is delivered or supposed to be delivered for a barrel of crude oil; formerly it was 41, but it has been 42 for a number of years. They have their own experts for gauging the tanks and make out their own gauge tables. Where a producer requests it they will furnish a duplicate, showing the capacity of each tank for each inch in height or depth. The producer can have a representative there when the tank is gauged. The producers soon got used to the system and paid no attention to it. The amount is reported to the pipe-line company and credited on their books, and you can sell your oil whenever you please, 42 gallons for the barrel. I believe, however, they take up $2\frac{1}{2}$ per cent for wastage by evaporation in addition to that.¹

Q. Why is that done?—A. It is claimed by these people that that is about the fair average of the shrinkage or contraction by the leakage and evaporation.

Q. Then there is a waste when oil is handled by barrels or placed in tanks?—A. It is never handled in barrels, but always in tanks and pipe lines.

Q. So this wastage, they claim, exists in the pipe lines themselves?—A. Yes.

Q. If you buy a thousand barrels of oil, will they deliver about $2\frac{1}{2}$ per cent less than that because of this wastage? Is that the idea?—A. No; they will deliver to your credit so many barrels of oil and have the wastage of $2\frac{1}{2}$ per cent estimated or computed from the gauges.

Q. That is, when they are buying oil from you?—A. Yes; when they are buying from us.

Q. Is that practically the universal custom in the case of all pipe lines?—A. We have not had, for a number of years, any pipe line in the country but the Standard.

Q. They buy from you and pay you a certain amount, less $2\frac{1}{2}$ per cent which they claim as wastage?—A. Yes.

Q. (By Mr. PHILLIPS.) Is it a fact that the Standard Oil Company have a large amount of sediment or surplus?—A. Yes.

Q. Do you suppose that is accumulated from this $2\frac{1}{2}$ per cent?—A. Of course I have no definite information as to that. It is supposed that we buy a part of it and that they also charge or assess for insurance on fire losses. It occasionally happens that a tank of oil is burned up.

Q. Is that assessment made on the producer in the particular division or locality?

Q. (By Mr. JENKS.) How is the assessment calculated?—A. By reducing the credit balance. If you have 1,000 barrels, and 1 per cent would take up the total loss, they charge it up.

Q. (By Mr. PHILLIPS.) Have they any legal authority to make an assessment?—A. I think it is unusual; I do not know whether or not it would stand in court; I have never known of anyone objecting to it.

Q. Have you ever known of any person bringing a suit to recover?—A. No; they object, of course, but I have never known of anyone making a claim for it.

Q. The fact is, then, that this is generally quite a small amount on each product, and that they do not feel justified in going to law in regard to it, but there is no law that could assess?—A. No.

Q. But they do do it, nevertheless, generally?—A. Yes; I understand so.

THE NECESSARY CAPACITY OF A REFINERY.

Q. (By Mr. JENES.) How large a refinery did you have? What was the capacity?—A. Well, about 8,000 barrels a week was our capacity; of course we could increase it at any time if the trade demanded it.

Q. Is a refinery of that size, properly built and equipped, able to refine oil as advantageously as one considerably larger?—A. Well, it would be confined to 1 or 2 branches of the refining business—that is, the manufacture of illuminating and lubricating oil. But if one had a gasoline plant connected with the refinery it would add very materially to the profits.

Q. That is to say, in connection with every refinery there are a certain number of by-products which can be used to very great advantage as soon as your plant is large enough so that you can afford it?—A. Yes.

Q. Do you have to have special facilities for that use?—A. Yes.

Q. What do you do with these by-products that you have?—A. We sell part of them to Scofield, Schurmer & Teagle, of Cleveland—paraffins and benzinnes. We have a good market for our surplus there, but never at a profit. We would just about get rid of it without carrying it in stock. We never were able—at least, we never seemed to be able—to get any profits out of by-products.

Q. Can you give any definite idea at all as to how much more profitable your establishment would have been had it been large enough for you to make the best use of the paraffin and other side products which you were compelled to dispose of substantially at cost?—A. I have never made any estimate of that. It would be a mere approximation if I should, not having gone into it. I should have to make some little calculation, which I think would be foolish to attempt, because it would only be an approximation. It might differ quite a little from the real facts, if they were determined.

Q. If you had had double or treble the amount of capital in your plant, with additional facilities for making use of the by-products, do you suppose that, selling your illuminating and lubricating oils at the same prices as before, the added profits from by-products would have enabled you to pay dividends on the capital and keep your establishment running, whereas the experience you did have compelled you to close down?—A. Yes; I think so. I think if such a profit had been secured the business could have been continued successfully.

STANDARD OIL COMPANY'S MONOPOLY OF BY-PRODUCTS.

Q. (By Mr. PHILLIPS.) Is it, or is it not, a fact that the Standard Oil Company has practically a monopoly of all these by-products, so that if your business had been increased you could not have found a market for any of them?—A. The by-products would have gone up to consumers, of course. We should have no occasion to sell by-products if we could manufacture them and put them on the markets. If we were selling crude by-products, with our regular product, to a customer, and we introduced a special arrangement for using these by-products in their crude state, we could not make any profit from their immediate sale, and of course we should lose that customer.

Q. If you had facilities for manufacturing a very large amount of lubricating oil, does not the Standard Oil Company so monopolize that trade with the railroads that it would be practically impossible to market in competition with them?—A. The railroads are large consumers of low-grade lubricating oils, and unless you can get some connection with the railroad companies that consume them in large quantities, it is almost impossible to get around to the small dealer and market at a profit. The Standard companies practically have got such control that you must either get some railroad in with you or sell your by-products to some of their companies, to be compounded into their grades and marketed.

Q. It is not contended by what we call the independent or outside refiners that the Standard Oil Company has practically a monopoly of the lubricating business, especially among the prominent railroads?—A. Yes.

Q. Would any big corporations, independent of the Standard Oil Company, be able to turn out 100,000 or 200,000 in manufacturing lubricating oil?—A. I think it would be possible to get a market for it. I think it would be possible to get a market for it. That is my judgment.

Q. (By Mr. JAMES.) If I understand what you say in that paragraph, it is this: That a very large establishment that has put in the money and is making the best use of the by-products has a decided advantage in the market, but that, owing to the fact that the Standard Oil Company has special relations with the railroads and with the producers of these by-products, it is nevertheless a hazardous investment to make, owing to the difficulty in marketing?—A. We look upon it in that way and have not made such an investment in our concern.

Q. But the advantage in the manufacture itself, you think, undoubtedly exists?—A. Yes; I think so.

THE COMPOUNDING OF OILS.

Q. Can you give us some idea with reference to the way in which the different grades of oils are compounded?—A. I do not know whether I can make myself understood about that. Most refineries have a department of that kind. They have a person who becomes expert in compounding mineral oils with animal oils, and in the filtration and extraction of oils from the paraffin. There is a very great difference in these different grades of oil in the markets. One consumer, in many cases, may pay 5 or 6 times as much for a particular grade of oil as some other consumer. For instance, 15 cents a gallon would be a fair price for some consumers; and for some grades of oil they get 75 or 80 cents, owing to the particular machinery that is used.

Q. If I understand you, then, the manufacture of lubricating oils is very largely a matter of compounding?—A. Yes.

Q. And that is an art in which there is a chance for experience and the development of skill?—A. Yes.

Q. But nevertheless the art of judging accurately the quality of lubricating oils is a somewhat difficult thing?—A. Yes.

VARIATIONS IN THE PRICE OF LUBRICATING OIL.

Q. So that if a person is disposed to get 2 prices, or 3 or 4 prices, for the same quality of oil from different consumers he might be able to do it?—A. Yes.

Q. Have you any reason for believing that any of your competitors were in the habit of getting different prices for the same grade of lubricating oil?—A. Yes; we have become satisfied of it by coming in competition with them. The grades of oil we were manufacturing in the same town would often be selling at 22 and 23 cents a gallon, while they would be selling to the very same people with whom we came in contact for 70 and 80 cents—in a small way, of course.

Q. Who were those competitors?—A. The principal one was the Argan Refining Company.

Q. What was the source of your information on this matter?—A. We were located in the same place and our plants were close together. Our men intermingled, i. e., they would work at one place for a few weeks and then change about, so that we became somewhat familiar with what our competitors were doing, as they seemed to be willing to get information about us.

Q. Your information, then, on this difference in prices came from men working for you who formerly worked for the Argan?—A. Yes, or vice versa.

METHODS ADOPTED BY COMPETITORS TO SECURE INFORMATION.

Q. You intimated just now that your competitors sometimes secured information with reference to your methods of doing business in ways that were ordinarily not considered normal. What were some of the methods employed?—A. On one occasion we had an office boy who became shipping clerk, and attended to shipments of oil by river and by rail. That young fellow was approached by an agent of the Standard Oil Company, who offered to pay him for a report day after day, giving the names of the persons we were shipping to, the points shipped to, and the invoice price of the product.

Q. What was the result of that offer?—A. Well, the young man was very much surprised, but was loyal to us. He came and gave us all the information that we asked for. We advised him to go further and get further information, and he did so. I guess they suspected we were getting confidential information from him, so far as we know, unless it was done without his knowledge. Sometimes in the evening, after we closed up, the shipping clerk would come in there. They had confidential office or home addresses and would come to induce him, for a consideration of a part of their confidential business, or something of that kind, to give them that information.

Q. Did that general case you think they failed to get the information they wanted on account of the secrecy of your business?—A. I think so.
Q. Do you know any other case in which they did get information along this line?—A. I did not have any positive information, but we believed that every barrel of oil shipped from our works either by steamboat or by rail was in some way reported to our competitors. That was only a matter of belief and conjecture, but the circumstances pointed strongly in that direction.

UNDERBIDDING OF COMPETITORS.

Q. What were the circumstances that pointed in that direction?—A. Why, when we would make a shipment of oil and send invoices, their traveling men would frequently come in contact with that particular shipment; the people that we shipped to would write us saying that they had a quotation at a lower price, and in many cases we would have to meet that price or lose the customer. We would have to make a deduction on the invoice, or make an allowance on the next shipment, or something of that kind. Of course, it created a great deal of dissatisfaction. We would have to keep a man on the lookout all the time, traveling from one little town to another to see the small dealers.

Q. That is, then, I infer, practically a universal custom with those people; wherever you had a customer they would follow you up?—A. Yes.

Q. (By Mr. PHILLIPS.) As a rule, did they sell lower than you offered to sell?—A. They offered it, and we ultimately would lose a customer unless we reduced the price.

Q. (By Mr. JENKS.) What was the effect of this operation? Did it reduce the price of oil to the consumer?—A. I think not.

Q. Why not?—A. The dealer would not change his price; he would continue to sell the oil and if he bought it at the same price offered by the Standard he would have advantage of the difference in price. The dealer would get the advantage of the difference in price.

Q. Do you think, then, that the price of oil was lower to the dealers and that they made better profits than they would have made save for this action of the Standard Oil Company?—A. Yes.

Q. (By Mr. PHILLIPS.) Was that only in particular localities?—A. Yes; in localities where we were seeking a market. It may have been so in other localities, of course, but I have no information on that.

GENERAL EFFECT OF THE COMPETITION.

Q. (By Mr. JENKS.) What do you think has been the ultimate effect of this competition which you said finally compelled you to go out of business? Have you any reason to believe that prices have increased?—A. Generally, I think they have been restored to a more uniform condition; in many localities they would get the same increased price.

Q. So that the general average of prices is probably higher?—A. Yes.

Q. This cutting prices was ordinarily to satisfy customers at particular places?—A. Yes.

Q. And was not a general cutting?—A. No.

COMPOUNDING OF OILS (RESUMED).

Q. To go back to the question of mixing oils. Did you say that nearly all refiners have a special department for that work and a special mixer?—A. Yes.

Q. And that a good many different brands are made in practically every refinery?—A. Yes.

Q. In all this to satisfy, so far as possible, the taste and desires of different customers?—A. Yes.

Q. And you were in the habit of making special brands for special customers?—A. Yes.

Q. And you were in the habit of taking oil, but we did in illuminating oil. Some of the best kerosene was used on oil that was manufactured by other refiners, and for the purpose of getting out under our brand. We had a very large quantity of kerosene manufactured by many companies.

Q. And you were in the habit of taking oil that was sometimes used by your competitors?—A. Yes.

Q. Have you any specific instance in mind of an attempt of that kind to attempt to make your customers believe that your oil was not up to the standard?—A. Yes; I think of one particular case, that of the Cleveland and Marietta Railroad. They were customers of ours and we branded all of our oil under the brand that we were shipping it at. We supplied them with lubricating as well as illuminating oil. In one case we were informed by the purchasing agent that their inspector had discovered 5 or 6 gallons of water in some of the barrels of the last shipment we had made. We at once took the matter up and investigated it, and found that every barrel we had shipped out—at least every barrel of that particular invoice—was accounted for by having our brand on it. The other barrels, which it was claimed had water in them, had no brands at all. We had no information as to where they came from, but some one undertook to deprive us of that customer by sending a shipment of spurious oil and then trying to make the particular officials think it was our product.

Q. Did you say there were 4 barrels that had water in them?—A. Yes; I think there were 4 or 5 barrels.

Q. Did you think that somebody stole 4 barrels of your oil and put this spurious oil in the place of it?—A. I do not know; I know ours had all been counted up and distributed along the line, and it was difficult to go to each point and to each agent that distributed it and find the barrel with the shipping mark. The 4 or 5 barrels of spurious oil had no marks to show where they came from. It may have been ours, but I do not see how it could have been unless somebody opened the barrels and put the water in.

Q. So there must have been some fraud in that special case?—A. There was no doubt of it in our minds; we investigated it very carefully, and it resulted in establishing our reputation with that particular road, so that as long as we continued in the business we had their entire trade; the way it happened it turned out fortunate for us after all.

Q. What would have been the effect had you not been able to establish your case?—A. It would have ruined us.

Q. You would have lost that trade?—A. Yes.

THE COST OF PRODUCING OIL.

Q. How does the cost of producing compare now with what it was a few years ago?—A. It is less. Fuel is somewhat less, owing to the locality, of course. Coal has been cheaper for 3 or 4 years than it was 10 years ago; and where natural gas is used the uniform price, I think, throughout the country is 7 cents for each barrel of crude oil. Some of the chemicals that are used in the manufacture of oil are quite a little less. Sulphuric acid was 2½ cents, and is now about 1 cent a pound; but that is not a very material part of the cost.

Q. So that on the whole you think the cost of refining oil has decreased a little of late?—A. Yes.

Q. Do you have any difficulty in getting the material which you have to use at good prices?—A. No; not at all. In the case of the last we bought we had a contract by the year with the Standard Oil Company. We bought our sulphuric acid and other chemicals from them.

Q. Is it generally true that refiners of oil, who are competitors of the Standard Oil Company, have to buy material, for example, sulphuric acid, from them?—A. Yes; generally.

Q. Do you not think they might be put at something of a disadvantage in that way?—A. Yes; possibly. Although the last we bought from the Standard Oil Company was cheaper than people could get it elsewhere.

Q. (By Mr. FARQUHAR.) Is it not generally the case that sulphuric acid and other materials used in refining oil can be purchased from the Standard Oil Company cheaper than in any other market?—A. Yes; I think that is right.

COMPOUNDING OF OILS REQUIRES KNOWLEDGE AND SKILL.

Q. Is the compounding of oil a scientific operation or simply a haphazard one?—A. Well, there is a great deal that is haphazard; it is now becoming more a custom to go into it carefully and scientifically; but from my observation of refiners generally there is as much haphazard work in the compounding of oils as in any other business in manufacturing.

Q. If you were engaged in the compounding of lubricants would it not be your custom to send to the scientific schools for a full analysis before marketing the product?—A. It is sometimes required, but we do not always do it, because it costs an expense that all want to avoid, if possible.

Q. Is it not generally a fact that many refineries have mixers or compounders now? Are mixing and compounding considered scientific attainments?—A. Yes.

Q. Is not the compounding of lubricants and illuminants taught in every scientific school in the country?—A. Yes; and in a great many colleges.

Q. Is it taught at Cornell University, for instance?—A. Yes; and at the Ohio State University at Columbus.

RAILROADS PREVENT FAIR COMPETITION.

Q. In your business with the railroad companies, how close were the prices of the Argan or other competing companies to your own?—A. Well, our experience soon led us to understand that any price we might make to the railroad companies that they had control of would cut no figure; we had no means of knowing what they got; for instance, if they were getting 12½ cents a gallon and we offered it for 6 cents, we could not get that. We knew they were selling at 12½ cents to other people; of course, we do not know just what controlled it, but we were not able to get the trade.

Q. (By Mr. JENKS.) Did you, as a matter of fact, make the price lower to the railroad than to other customers?—A. For a few times, just to satisfy ourselves that that was the condition of things; after that we paid no further attention to that particular trade.

Q. (By Mr. FARQUHAR.) What official of the Baltimore and Ohio Southwestern Railroad controlled the purchase of lubricants?—A. They had a purchasing agent, who was not always the same party, but it seemed that a higher authority controlled their sending out requisitions for the oils they needed. A complete change was brought about in their methods of doing business, and soon after it was known that the officers of the road controlled considerable stock in the Argan Refining Company.

Q. Were the parties interested in the railroad also interested in the Argan?—A. They finally acquired, as we believe, at least 50 per cent of the stock of the Argan Refinery.

Q. The oils, of course, were called standard?—A. Yes.

Q. Do you claim that the Argan was better or poorer oil?—A. It was intended to be substantially the same grade.

Q. Was it left to the purchasing agent to make a decision himself?—A. Oh, yes.

Q. Then do you wish to impress upon the commission the idea that preference was given to the Argan Refinery because the railroad officials were interested in it?—A. Yes; that is my belief.

Q. Have you no knowledge?—A. None whatever, except the circumstance which led us to that belief, the general condition of things, and the fact that we were not favored with a part of their business.

Q. Can you tell the commission, from your own knowledge, whether the Standard Oil Company offered better terms than you did to the railroads?—A. No.

Q. (By Mr. PHILLIPS.) Did you say that you offered to sell at a much lower rate, and that they refused to purchase your oil?—A. Yes.

Q. Is that the reason why you think there was unfair competition?—A. That is it exactly.

Q. Do you believe it or know it?—A. We believe.

Q. Because they would not purchase your oil, of equal quality at a much lower price than they were paying others?—A. The influence did not stop at that particular point; but the fact that it was known along the entire mileage of that railroad and its branches that they were getting their illuminating and lubricating oils from this particular concern we believe influenced the dealers along the line, because they could get it in small quantities and without very much trouble. The same people being interested in the railroad and the Argan Refinery made, we believe, quite a difference in our trade along that line; we may be mistaken about it, but it so appeared to us at the time.

Q. (By Mr. FARQUHAR.) Do you not usually find that it is a pretty common thing to hold a customer where you have competition of that kind?—A. Yes; and especially when the matter is in the hands of a purchasing agent.

Q. Do you have any faith in the old saying that "The purchasing agent is worth an inch of gold"?—A. I do not know. They laughed at the statement, and we did not try to influence our trade in that way. We made a reputation for value for what we value was; and so far as I know, we made no special effort to get the business of any company that dealt with us.

THE STANDARD OIL COMPANY AND THE PRICE OF OIL.

Q. (By Mr. PHILLIPS.) It has been claimed that there has been a great decrease in the price of refined oil in the last 20 years, or since the Standard Oil Company began manufacturing oil. Now, is it or is it not a fact that that decrease is obtained by using quotations from New York, chiefly an export oil? Is it or is it not a fact that benzine, which is now higher in price than refined oil, was, in the early history of the refining business, dumped into the creek, and that the tar was not even used as fuel?—A. Yes.

Q. Are not the by-products as valuable now, in many instances, or even more valuable than the refined oil itself?—A. Yes.

Q. And by-products that were formerly considered useless?—A. That is true, and when that condition prevailed there were great fluctuations in the value of the crude oil. As I remember, oil was at one time down to 37 and 40 cents a barrel, and at another time, when they were manufacturing just one grade of oil, it sold as high as 50 or 50 cents a gallon. There were great fluctuations as to the price of refined and crude oil. That may account for a part of this decreased price.

Q. (By Mr. FARQUHAR.) Do you not think that the fluctuations in the price of oil in 1873 were really due to overproduction, or do you think they were caused by monopoly?—A. No; I think the cause was overproduction and the facilities for handling this crude oil.

Q. It was not a question of monopoly?—A. We knew nothing of monopoly at that time.

Q. It was just a question of overproduction, when everybody was trying to sell and get the market?—A. Yes; that, I think, influenced the price very considerably.

THE PROFITS OF THE STANDARD OIL COMPANY.

Q. (By Mr. PHILLIPS.) Do you believe that the Standard has, in a great many instances during the last 10 or 20 years, made more profit per barrel for every barrel of crude oil handled and manufactured into refined oil than they have paid for the crude oil itself? Is it right to infer, as some do, that they make more profit to-day on every barrel of oil that is manufactured than they pay for producing it?—A. I hardly think that they do, but they do make, as is shown by their statements, a very considerable amount out of their transportation of the oil through the pipe lines; they are very profitable.

Q. Take them together?—A. Oftentimes the entire profit on a barrel of oil will be made on the transportation of it instead of the manufacture.

Q. (By Mr. JENES.) Have the rates for piping decreased?—A. That I do not know about. The Standard system has only been established at Marietta about 10 years, and I knew nothing of what may have occurred before that.

Q. Has there been any change in the charges for piping in your remembrance?—A. Only at particular periods when there has been a contest over the control of a particular field, or something of that kind. I think they are paying 10 cents a barrel more for crude oil at Scioto to-day than they are at Marietta or Pittsburg. The quotations show 10 cents a barrel more.

Q. Is the price of crude oil at Marietta the same it has been for some years?—A. Oh, it has fluctuated some in the last 5 or 6 years, but not so very much.

COST OF PRODUCING CRUDE OIL NOW AND FORMERLY.

Q. What is the cost of producing crude oil now compared with what it was 5 or 10 years ago?—A. It has increased very much. The material, i. e., casing, tubing, and machinery, that goes into the production of oil, has increased in some instances, I should think, 50 per cent.

Q. (By Mr. PHILLIPS.) Since when?—A. In the last 3 or 4 months.

Q. Prior to that was it cheaper than it had ever been before?—A. Oh, yes, very much cheaper. All materials going into the production of oil in the way of casing, tubing, pumps, engines, boilers, and machines were very much reduced.

Q. (By Mr. JENES.) The price of these materials has gone up, and there has been some increase in the price of crude oil?—A. No, no.

Q. Do you know whether the Standard Oil Company itself is interested in the production of these supplies or not?—A. No, I have no information whatever as to the general business of people who are doing these things. I have no way of knowing, except that their business relations indicate that they are not connected with the Standard Oil Company. I have no knowledge of the price of oil to-day.

Q. (By Mr. JAMES.) Do you mean that there are parties interested in the Standard who are also interested in the tubing works, etc.?—A. Yes.

Q. But the Standard, as the Standard, has nothing to do with it?—A. No; I suppose not.

Q. (By Mr. JAMES.) Did you say that your chief competitor in the refining business was the Argan Company?—A. Yes.

Q. Your chief competitor, then, was the Argan and not the Standard?—A. The Standard had a very large plant at Parkersburg that covered part of the same territory that we both covered.

Q. But so far as you knew you were hampered as much by the Argan as you were by the Standard?—A. Yes.

RELATION OF THE STANDARD TO THE ARGAN REFINING COMPANY.

Q. Was the Argan owned by the Standard at that time?—A. No.

Q. But it has since been bought by the Standard?—A. Yes.

Q. What has been the history of the Argan since then?—A. Why, the Argan Refining Company was leased sometime within the year, I should say, by one of the branches of the Standard Oil Company—the Southern Refining Company, I think—on a basis of 6 per cent on \$300,000 for ten years, or, in other words, \$1,000 a month for ten years. They had employed quite a number of people, traveling men and office men, and just recently they left Ohio and went into West Virginia. That was about the time, I think, that Attorney-General Monnett commenced quo warranto proceedings, claiming that they were a part of the Standard Trust. They immediately moved their business office to Parkersburg, which is about 12 miles from Marietta on the Virginia side of the river. Since then it has been understood that the people who owned the stock of the Argan Refining Company had capitalized it and sold out their entire interest to the same people that leased it; so that they have in some way discounted the 10-year lease by cash payments, and the Argan Refining Company has now practically abandoned its office at Parkersburg.

Q. Is it understood that the purchasers of this stock are the managers of the Standard Oil Company to some extent?—A. That is the supposition. I think if you have access to the testimony, taken by Mr. Monnett at Marietta, of Mr. Cram, who was the manager of the Argan Refining Company at the time this lease was made, you will find that he testifies as to just what was done in this leasing process. Since that time it is generally believed that the stock has been purchased by the same parties who made the lease. Perhaps you will not find that in this testimony.

NO SUGGESTIONS AS TO LEGISLATION.

Q. (By Mr. PHILLIPS.) Have you any suggestions to make in regard to legislation regarding trusts and combinations? Do you think it is a question that can be dealt with properly by law?—A. I have not given it the close attention that other gentlemen have, but I realize that it is one of the most difficult things to deal with as control by law. I have no suggestions on that line. I do not know how remedial legislation is possible; vested rights are acquired by innocent holders in different corporations and they are thrown together, so that I can not see how you can possibly separate them. There may be some way of doing it.

Q. Are you at all familiar with the pipe-line business in Pennsylvania and Ohio, and especially in regard to the opposition the Standard has made to independent pipe lines?—A. No; I never came in contact with that except in a very indirect way.

Q. You are not, then, familiar with the early history of the Standard in Pennsylvania?—A. No; I am not.

Q. And their methods there in regard to pipe lines, purchasing refineries, etc.?—A. No; I have no information in that direction.

Q. (By Mr. MONNETT.) To whom do you sell your product now?—A. The

Q. (By Mr. MONNETT.) The oil produced in West Virginia I sell to the Buckeye Pipe Line, and the oil produced in Ohio to the Mackburg division of the Buckeye Pipe Line.

Q. Do you have Standard Oil lines?—A. They are in the same office and the same management, but the check which is given by one of their agents is

Q. (By Mr. MONNETT.) Are both owned by the Standard?—A. Both are in the

Q. (By Mr. MONNETT.) Do they pay you the market price for it?—A. Yes.

REGULATION OF THE MARKET PRICE OF OIL.

Q. (By Mr. FARQUHAR.) How is the market price regulated?—A. When you have oil to sell you go to the agent, who, before he gives you a price, wires to Pittsburg, where the books are kept, to see what your credit balance is; that is, the number of barrels of oil credited to your account and the particular grade. When he gets that information he will give you the price; that is, the price is posted. You may or may not accept his offer.

Q. What influence have the independent producers of this country on the price of crude oil?—A. They have influence only in special cases, and I do not recollect any of those in particular. I do not think they have any influence over it at all in our part of the country.

Q. None at all?—A. Not at all.

Q. (By Mr. PHILLIPS.) Is the price of oil there fixed by the board of exchange or by the Standard Oil Company?—A. By the Standard Oil Company.

Q. Both crude and refined?—A. They do not fix the price of refined, but they do the crude.

Q. They make the quotations in New York, do they not?—A. I think they do.

Q. Do they make the quotations in all the oil fields for the crude?—A. Oh, yes; wherever they have the purchasing agent.

Q. And is it wired to the agents what the price shall be each day or week, subject to change at any time by them?—A. Yes; the holder of credit balances on their ledgers may be a producer in Indiana, Ohio, West Virginia, or Pennsylvania and may sell to any of their agencies. It does not make any difference what one. I have often been in the office when producers from Indiana would come in and ask for their credit balances and get their checks just the same as men who produce oil within a mile of where the business was transacted.

Q. (By Mr. FARQUHAR.) Is it the New York branch or the Pittsburg branch that rules the market?—A. It is the Oil City market; that is the one.

Q. Of the Standard?—A. That controls the price of crude oil. Occasionally it is sold at quotations given by brokers when there is a little fluctuation. I have known it to be so for a few days, within two years, I think. When I would go in to sell some of my crude oil they would say: "If you will allow us to put this on the exchange to-day, you may have the benefit to-morrow of the average exchange price instead of taking the specific or grade price at the time." I frequently would get a cent, a cent and a half, or 2 cents a barrel more by putting it on the exchange. At other times the exchange was lower than the Standard market.

THE POSITION OF INDEPENDENT REFINERS.

Q. Is it your opinion that the independent refiners of this country are making money?—A. I do not know outside of the firm I am interested in myself.

Q. Scofield, Schurmer & Teagle, of Cleveland?—A. Apparently they are.

Q. Do they own oil wells?—A. I really do not know.

Q. They are refiners proper of the oil and the by-products?—A. That is what I understand.

Q. Is it not quite a wealthy firm?—A. Yes.

Q. Has it not always been an independent firm?—A. That has been the supposition.

Q. Do not large profits naturally accrue to a firm like that?—A. Yes.

Q. Because a good many refiners have gone out of business, is it right to say that the Standard Oil Company drove them out or bought them out—gave them a good price to get out?—A. Why, take, for instance, our own concern right there under our eyes. I could have—

Q. (Interrupting.) Could you not have sold out in pretty good shape if you had desired?—A. I was never approached on that. I would be very glad to, but I think I could have put up a refining plant as good as the one that was practically sold for \$300,000 for about \$75,000.

Q. (By Mr. JEWINS.) That is the Argan?—A. That is the Argan.

Q. (By Mr. FARQUHAR.) Of course, that includes good will and everything else that goes into an establishment of that kind. But, from your own experience, do you know whether it is customary for the Standard, when they find a good, strong refining plant, to crush it out or buy it up at a pretty good figure?—A. They have not done that in a great many instances. They did not buy out Mr. Rice's plant.

Q. (By Mr. PHILLIPS.) Is it, or is it not, a fact that the Standard bought a large number of refining plants at a good price, and wrecked them?—A. Yes.

Q. (By Mr. FARQUHAR.) Is it not sometimes a good business proposition to dismantle plants when you have been getting good transportation facilities and getting the same quantity of oil and other products and attach to another pipe line, and let them go, leaving nothing but the bare wells?—A. Yes.

Q. As a business proposition, any man will do that?—A. Yes.

Q. (By Mr. KENNEDY.) What is the market price of crude oil to-day?—A. The last quotation I saw was \$1.15 at the wells.

Q. A barrel?

Q. (By Mr. PHILLIPS.) White sand oil?—A. The white sand oil.

COST OF PRODUCTION (RESUMED).

Q. (By Mr. KENNEDY.) Can you state to the commission what the cost of production is?—A. That varies a great deal; that is one of the uncertain quantities. I have spent a good deal of money in sinking wells with no return, but occasionally have been fortunate enough to get a well that was very cheaply produced and that gave a very satisfactory return. It is impossible to tell just what the cost is.

Q. In regard to the wells that are productive, can you say what the cost per barrel for the crude product is?—A. That varies as to the field.

Q. What is it in your field?—A. The nearest wells to Marietta are only about 400 feet deep and are very productive, while the Berea sand wells, in the Macksburg field, vary from 1,000 to 2,300 feet; therefore you can see that there is quite a little difference in the cost of wells in different fields. You have to use a great deal more casing in some instances than others—3 or 4 strings of casing frequently. In our fields you use but one, because of the surface drilling.

Q. (By Mr. PHILLIPS.) The cost of drilling is about \$5,000 or \$6,000 to the well in different localities?—A. Yes.

Q. And some are more uncertain than others?—A. Yes.

Q. (By Mr. KENNEDY.) What is your own individual production?—A. My own individual production?

Q. Yes.—A. That varies considerably. It is now about 100 barrels a day.

Q. You have been in the business a good many years?—A. Yes; I have several times thought I was in the business, but when I came to settle it up I found I was not—I was behind.

Q. Is it not possible for you to compete now, if the Standard Oil Company does fix the price of the product?—A. Yes, it is, where I get sufficient production to pay the expense of operating.

Q. (By Mr. FARQUHAR.) In a general way, do you think the exportation of petroleum over the whole world has been a great benefit to this country?—A. Yes; I do.

Q. Do you think it has been one of the great factors in holding the balance of trade in favor of the United States?—A. Statistics show that, of course; there is no question about it in my mind.

Q. (By Senator MALLOY.) Did you not state, some time back, that the managers of the railroad at Marietta, being interested in the Standard Oil Company, influenced the dealers along the line of that road?—A. The managers of the railroad company, being interested in the Argon Refining Company, made it appear to the ordinary village merchant that they were controlling that particular trade. In many cases they control the output of the coal mines that supply fuel for operating the road, and the managers and operators do their purchasing from the companies that are doing the work. In that way they secure indirectly control of the railroad company or the merchant.

Q. Do you mean the railroad employees?—A. The coal producers, the coal operators.

Q. Purchase of the dealers?—A. They were, in one instance, supplying the railroad company with their fuel and operating mines producing the coal, and of course they supplied them, or some one connected with them; not only the coal, but also the supplies that went into producing the coal.

Q. When I wanted to get at, or understand, was the influence which you referred to, in controlling these dealers to their detriment?—A. That was one. Whenever they had control, or were connected with the producing of coal or other things that were associated with the management of the road, they seemed to be able to control it.

Q. Do you say they had no direct influence?—A. Not that we could put our hands on, or only indirect it; the circumstance impressed upon us the fact that they had it.

Q. Did you find it to be a fact that your business was being conducted in a way that was different from various causes?—A. Yes; we conducted our business in that influence.

Q. To that influence?—A. Yes.

Q. (By Mr. KENNEDY.) A former witness before the commission said that he believed a new system of rebates to railroad companies had grown up. It is this: They furnish lubricating oil to the railroad companies, who pay them a great deal more for it than it is worth in the market. Do you know anything on that subject?—A. No; I do not; I have no information on that subject further than I have related.

WAGES PAID IN THE PRODUCTION OF CRUDE OIL.

Q. How do wages in the oil business compare with wages in other industries?—A. What branch of the oil business; the drilling?

Q. Yes; the drilling.—A. I think the wages for drilling have been fairly kept up. An expert driller commands from \$4 to \$5 a day for his services in our fields. The tool dressers get about \$3 to \$3.50 a day; I believe that is about the range in our country.

Q. How about the pumpers?—A. That of course depends upon the amount and the number of wells they have to care for. Their wages run from \$40 to \$70 a month in our field. Big builders, i. e., the people who put up the derricks, are getting fairly good prices. The contractors, the men who do the drilling and furnish the machinery, are getting from 60 to 80 cents a foot for drilling.

Q. The Standard has very little to do with fixing the wages in the fields?—A. Yes; so far as the drillers are concerned, except when they may be interested in drilling wells, as they sometimes are. I know of one piece they bought which only had one well on it at the time. Now I think they have 20 on that property. Of course they were interested in the drilling of those wells, which is usually done by contract.

Q. Is there any form of organization among the workingmen in the oil fields in your country?—A. Not that I know of.

HOW OIL LAND IS HELD.

Q. (By Mr. FARQUHAR.) Is it generally the custom to lease oil lands or purchase them outright?—A. The custom with whom?

Q. With the operators who sink wells?—A. In a great many instances they lease on a royalty interest to the lessee, but they frequently buy. If they can make a satisfactory price they will buy the fee and the royalty interest as well.

Q. The rule is to lease, is it not?—A. Yes; generally.

Q. (By Mr. PHILLIPS.) Do they pay the rental until such a time as they care to drill upon the lands?—A. Yes; if it is producing, they buy the right to continue operating and are at the entire expense of producing the oil and pay a royalty of one-eighth; one-eighth is the custom all through that country.

Q. (By Mr. FARQUHAR.) What is the usual time of oil leases?—A. From 10 days up to 20 years.

Q. Twenty years?—A. Most of them, or as long as oil is found in paying quantities.

Q. (By Mr. PHILLIPS.) Do you mean by 10 days simply the time to begin operations?—A. Yes; that is it.

Q. Then the lease holds as long as oil or gas is produced in paying quantities?—A. Yes.

Q. Have you anything to state yourself that we have omitted that will be of benefit to the commission?—A. No; I do not think of anything.

MOST BUSINESS MEN FOLLOW LIKE CUSTOMS.

Q. (By Mr. HATCHFORD.) Do you know of any business method practiced by any of these refining companies that would not be practiced by others if they had the same power?—A. I have given that subject a great deal of careful consideration, and I have never discovered it yet.

Q. You have never discovered any?—A. No.

Q. It is my opinion that these rival companies, battling against each other, are bound to their common interest to gain control of the market and to make such a monopoly; yes.

the effect of such action in the end on the consumer?—A. It affects different consumers differently, I believe. When you get far away from the oil centers, and give one or two companies the opportunity to increase the price, it is my experience that they are going to do it, and do it right straight through.

AFFIDAVIT.

STATE OF OHIO, County of Washington :

I swear or affirm that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

THRO. F. DAVIS.

Sworn and subscribed before me this 18th day of September, 1899.

[SEAL.]

HENRY G. BOHL,
Notary Public in and for Washington County, Ohio.

WASHINGTON, D. C., June 9, 1899.

TESTIMONY OF MR. THEODORE B. WESTGATE

Refiner of oil.

The commission met at 10.50 a. m., Vice-Chairman Phillips presiding. At 12.30 p. m. Mr. Theodore B. Westgate, oil refiner, of Titusville, Pa., appeared and testified.

Q. (By Mr. JENKS.) Will you give us your full name and address?—A. Theodore B. Westgate, Titusville, Pa.

Q. You are a refiner of oil?—A. I am.

Q. How long have you been engaged in the business?—A. About 18 years.

Q. Are you also interested in the production of crude oil?—A. To a small extent.

Q. In what way?—A. I am producing a little.

Q. As an independent producer?—A. Yes. It is so little, however, that it is hardly worth mentioning.

Q. Do you have your own refinery at Titusville?—A. Yes.

Q. Are you associated with any of the independent producing companies?—A. Yes; I am.

INDEPENDENT OIL COMPANIES—EFFECT ON PRICES.

Q. What ones?—A. The Producers and Refiners' Oil Company, Limited, of which I am one of the managers. That is a transportation company. I am also a director in the Pure Oil Company, which is a marketing company.

Q. We have had some testimony here before with reference to the Pure Oil Company and its competition with the Standard Oil Company in New York City, Philadelphia, and perhaps other places. Can you give us any information with reference to the effect on prices of the competition of the Pure Oil Company?—A. When we opened up an agency in New York City the prices immediately dropped. We did not drop them, but the Standard Oil people did, and without any corresponding decline in crude oil. I can not tell you the exact figures, for I have not my papers here. I can give it to you later, if you wish. There was quite a material drop. [Supplied August 19, 1899. "On March 20, 1896, the day the Pure Oil Company commenced selling Water White oil in New York City, our price and the Standard's was 94 cents. On March 26 the price was cut by the Standard to 88 cents. This price was gradually dropped, until on April 4 it was 75 cents and 74 cents."]

Q. (By Mr. JENKS.) So much so as to take away the profit?—A. Yes; entirely. The Standard oil was by the Pure Oil Company in New York City.

Q. Do the Standard companies sell at a loss?—A. Yes; it is still sold at a loss there.

Q. (By Mr. JENKS.) Do you recall any other places besides New York City where the Standard Oil Company went in as a competitor and followed prices down until it was sold at a loss?—A. Philadelphia, Pa.

DIFFERENT GRADES OF OIL MANUFACTURED.

Q. Will you tell us regarding the different qualities of oil that you refine and the difference in prices of those various qualities?—A. Taking the prices to-day as a basis?

Q. Yes.—A. Do you wish me to state the qualities—that is, the brands—as I put them out?

Q. Yes; if you will.—A. My highest grade of oil now is Sunlight, double refined. That is worth at the refinery to-day, in bulk, 4½ cents per gallon. My next lower grade is Headlight oil, which is one-fourth of a cent less per gallon. These grades of oil are water-white oil. My next grade of oil is Diamond Safety, which is one-fourth of a cent per gallon less than the last grade. My next grade is Silver Star, which is not water white but prime white. The first three named are water white, 150 fire test; the Silver Star is prime white, 150 fire test. I make 120 water-white oil, which is worth 4 cents a gallon. Export oil to-day is worth 3.90 at the refinery.

}. Are these all the different grades you make?—A. Yes.

}. And there is a difference in price between them?—A. Yes.

METHOD OF BRANDING.

Q. In branding these oils do you vary the brands at all to suit the whims of the individual customer when the oils are of the same grade?—A. Yes; I do; but I do not sell my Sunlight, double refined—my high-grade oil—under the brand of Diamond Safety; neither do I sell my Diamond Safety oil under the brand of Sunlight. A customer in northern New York may want his special brand put on my Sunlight, double-refined oil, and may call it Arc Parlor or Silver Star. Another man in Massachusetts may call it Starlight. There are 80 or 40 different brands that can be placed upon the same grade of oil with all due credit and due justice to the refiner as well as to the purchaser and consumer.

Q. In that way you vary the brand to suit the wish of your individual customer, although you do not put a brand that would imply a high-grade oil upon what is really a low grade?—A. No; I bill it out under the name of Sunlight. I do not take the brand on the barrel. It goes in my invoice as Sunlight, double refined.

Q. But you let him sell it under whatever name he chooses?—A. Under whatever he chooses; under the name of the Standard Oil, if he chooses. I have no names used by the Standard. In northern New York my Sunlight, double refined, put in yellow barrels and branded, American Oil Works, Limited, Sunlight, double refined, 150 water-white oil, was giving such entire satisfaction that they immediately began to copy the brand.

Q. You say "they"?—A. I mean the Standard Oil Company. They put their name on the outside of the circle. I do not think I lost any customers by that. It only went to show that I was giving a high grade of goods; and anything that is worth imitating is certainly a good article; it was not injurious to me.¹

Q. (By Mr. PHILLIPS.) Was their quality as good as your own that was upon the market?—A. That I do not know. I received empty barrels of theirs from Potsdam which my customers had picked up, and which went to prove what my salesmen had testified to and written me.

METHODS OF STANDARD OIL COMPANY IN MEETING COMPETITION.

Q. Can you give us any further information with reference to the methods of competing employed by the Standard Oil Company which you may have gathered in your business?—A. Sometimes the competition is very agreeable and runs along smoothly, and then all of a sudden there will be an outbreak, not in all localities, but in some particular locality. Whether that is occasioned by my refinery putting in too large a per cent of refined oil, I do not know. I wish you would bear in mind that I have no understanding with the Standard Oil Company as to how much oil I shall put in any district. They, however, keep a very accurate record of every barrel that the independent refiners put into each city, town, and hamlet. Their traveling men have to report each night concerning the customers in every town, whether or not they are their customers, whether they buy oil, and if not, why not, and whether or not there is any independent oil there. They keep closely in touch with the business. That is one reason why they are such a success, because they know what we are doing. I have found severe competition at times, so severe, indeed, that I have been obliged to sell oil under cost to certain customers. That is, after a customer has proved to me that he is an established customer, it is certainly to my advantage to endeavor to protect him just as long

¹ Compare Mr. Archbold, p. 545.

as I can. We are very cautious, however, about that, because we have so many times finally lost customers whom we have protected for 6 months or a year. They turn us down, and the Standard makes some arrangement for the handling of their oil. I have in mind such a case at Peekskill, N. Y., which took place within the last year. We had such a case as that at Albany some 8 years ago. I am thankful to say those cases are not in the majority, because we endeavor to our customers so that at times of pressure they will stand next to the Standard.

Q. I have been told that my company has two agencies, one in Auburn, N. Y., and one in Syracuse, N. Y. The prevailing price for 150 water-white oil in Syracuse during the past winter and early fall was 7½ cents per gallon. The prevailing price for the same grade of oil in Auburn, 25 miles south, was about 2 cents less per gallon. If you would ask me the reason, of course I could not tell you. It is simply theoretical. I have demonstrated this, however, to my satisfaction, if not to yours, that if I sell a limited amount of oil, very limited, say a tenth of the consumption in Syracuse, there are nine chances in ten that the prices will not be cut. But it is different if I attempt to get one-third or one-half of the trade, as I did have in Auburn. I wish to state, however, that the people who owned the distributing concern in Auburn had received this cut before I took hold of the business. It is not my policy to go in and get too much trade in any one locality. It is to my interest to distribute my business, and I find it better not to attempt to compete in that way. With some customers, where I am not marketing by the tank-wagon system, as I do in country towns and other places, I have a very heavy competition at times, what might be called an unjust, illegal competition.

Q. Is it your general policy not to attempt to drive the Standard out of any of its markets, but rather to get into some markets and secure only a small per cent of the trade, but not enough so that they will think it worth while to cut prices against you, and in that way to make your profits?—A. That has been my method during the last 5 or 10 years.

Q. (By Senator MALLORY.) What were you going to say was the reason for the difference in price between Syracuse and Auburn?—A. The reason, which, perhaps, I did not make plain, was that I was selling a larger percentage of the consumption of oil in Auburn than I was in Syracuse.

Q. If you pass a certain limit then they cut?—A. What that limit is I do not know. I have established it in my own mind. Were I to go into Albany to-day and establish a tank-wagon system, there is no doubt that for the first few weeks there would be a cut in prices; but if with the first advance of the market I maintained a sort of half-normal condition and desired simply to put out enough oil to pay running expenses and make a small profit, the probabilities are that prices would be maintained at an advance in time.

A CUT IN PRICE EASILY PRECIPITATED.

Q. Has that been your experience to such an extent that you can put it down as a rule to be governed by in your business?—A. No; there are no rules in the oil business. I wish to state, however, that sometimes even 1 barrel of oil will precipitate a cut by the Standard Oil Company. A friend of mine shipped simply 1 barrel of independent oil with an independent brand on it to Salisbury, Md., (I believe it was Salisbury). He sent it there as a present. A friend had told him that they were getting very poor oil there. The oil arrived, and the party to whom it was shipped, being a consumer and not a retailer, and having just bought a barrel of oil and put it on tap, in order to get rid of the barrel of oil presented him sold it to a darky, who put it on his wagon.

Q. (By Mr. JENKS.) You mean the oil of good quality?—A. Yes; the good quality; the independent oil. The darky put it on his wagon and went to peddling it through the town with the brand on the barrel. The Standard Oil Company at once began to investigate. Then they shipped in a carload of the best oil, the citizens said, that ever arrived in Salisbury, and made a heavy cut on the price of the oil; but, of course, there was no fight. The oil was not sent there to compete with the Standard Oil Company, but they are very alert; they will know unquestionably to-morrow morning what all my shipments were to-day. They know in New York City where that oil is billed to. They may not get it at the Titusville freight office, but if not there, they get it at the junction points, either Buffalo or one of the others. We know that because our customers have been apprised of the fact by some Standard traveling agent who has approached

agent and said, "We understand there is a car of oil on the way from Buffalo to Shortsville." The customer does not know it is on the way. His agent has not ordered it, but he has not yet received the invoice. So you see our business is entirely given away by some one. I can not say positively it is the railroad companies. It is not the men in my office, because all the men in my own office are members of the firm.¹

EXAMPLES OF COMPETITION.

Q. Can you give one or two specimen cases of the competition that you have in mind?—A. You understand, now, that this is simply my side, or rather my customers' side of this business. I have not evidence here, nor in my possession, that the Standard Oil Company, or their agent, said this. I believe, however, that he did say it. This letter is from Shortsville, N. Y.; it is from one of my customers, Thomas & Harrington [reading]:

[Office of Thomas & Harrington, dealers in fine groceries, dry goods, boots, and shoes 2080.]

SHORTSVILLE, N. Y., March 25, 1899.

T. B. WESTGATE, Esq.

DEAR SIR: We take this opportunity of writing you to explain the situation in the oil business. Mr. Cady is here, and we have told him just how things are. One of the merchants here wrote a letter to Buffalo in answer to an inquiry from the Standard people asking why there was not more Standard oil sold here. His letter was sent to New York, and they telegraphed to Buffalo to send a man to Shortsville at once. Their agent came and went to Mr. Hall, whom we supply with oil, and tried to get him to take some in the carload, but he refused, saying he could buy of us, and the agent made the following reply: "We have tried to treat Thomas & Harrington right, and have offered them oil less than they can buy elsewhere, but they still refuse; now we are going to force them to buy of us." The next day they cut the oil to 7 cents. We have held the price up to 10 cents, but our trade is leaving us and we must meet them. Now, under the circumstances, what is the very lowest price you can put in a carload of diamond oil for? Answer at once.

Yours, respectfully,

THOMAS & HARRINGTON.

The oil supplied to Mr. Hall was American Refinery oil—my oil.

Q. (By Mr. FARQUHAR.) Did you furnish them the oil at a rate so that they could compete with the Standard Oil Company?—A. Yes; I furnished them oil so they would not lose money, but there was no profit in it.

Q. (By Mr. KENNEDY.) No profit for you?—A. I can not tell you what price I got for it. I think it was one-fourth. We figured that we could give him from one-fourth to three-eighths of a cent per gallon on our oil. We are doing a fair business there—all that the Standard Oil Company will let us do—and customers find that we can not cut prices from half a cent to a cent a gallon and be able to stand it without a loss. The fact that we can run on such small margins is due to the magnitude—the great volume—of the business.

Q. (By Mr. JENKS.) If, under the pressure of competition, you make a cut of three-eighths of a cent a gallon, are you taking all your profit away?—A. Yes.

Q. And your ordinary margin?—A. I wish you to understand this, however. We will say that the price of crude oil is 8 cents per gallon, and refining is one-half a cent per gallon. You would say, then, not being acquainted with the business, that if I sold water-white oil at 4 cents per gallon I would be making one-half a cent per gallon profit. You must take into consideration that there is a waste of from 5 to 7 per cent in refining; there are products, such as tar, that to-day is worth about 2½ cents per gallon. Tar has been as low as three-fourths of a cent per gallon. In figuring the prices of the high-grade goods, therefore, we must not forget that there are low-grade goods of very inferior value, selling at even less than the price of crude oil. Benzine a year ago was less than crude oil; to-day it is worth more than water-white oil, being the most valuable product we have; that is, in the illuminating oil business—not in the lubricating oil business. You see, then, that we have to take all of these things into account. In Buffalo, N. Y., we have a customer by the name of W. S. Crandall. He is simply a retail peddler of oil, perhaps worth a few hundred dollars. He has been my customer for 5 years. He wrote me on April 7 the following: "The Standard Oil Company has put another retail peddler on the road. There was already 1 here, and this makes 2 retail peddlers they have here now drumming the trade. They have had 1 here for a year. He came April 1, 1898; about 2 weeks ago he approached

¹ Compare Mr. Emery, p. 414.

my man and wanted to hire him, and offered him considerable more than I would pay him and a bonus of \$100 if he would go to work for him. He would give him a bond, with a contract to keep him employed for 10 years; but he could make no impression on him, for he would not leave me. Now they have hired another man, and both the retailers and the man that wholesales are telling the people that they have a car of American oil on the road that will soon arrive, and that they will be prepared to furnish the same oil at less than we are selling it." I should have said, previously to this, that the Standard has repeatedly tried hard to get this man away from me. Of course that is all right; there is no harm in that. If they can give him good goods in a general way on a margin of profit, that is straight business. Ten days after receiving this letter, May 26, I received another letter from Mr. Crandall, which I do not need to read, but he stated in that that a carload of oil—our oil—had been received by the Standard agents in Fulton and wanted to know if we had shipped it to them, and told me about what the qualities of the 2 grades of oil were. I immediately reported that we had not shipped a car of oil to Fulton to the Standard Oil Company or anyone else but himself. I asked him to get the date of the inspection on the gallon end of the barrel, and that would give me a way of finding out to whom I shipped that identical car of oil. He did that on May 26, and wrote me that he looked at the barrels and found that they were inspected by my inspector on April 2. The only carload of oil that I shipped out on April 2 in barrels was to the Merchants' Refining Company in Buffalo. I shipped it in a Western New York and Pennsylvania box car. This oil arrived in Fulton in a New York Central car, so that it was transferred in Buffalo. Now, I am not prepared to say, gentlemen, that that identical oil in those barrels was my oil. They might have taken my oil out and put their own in at Buffalo, but in all probability they would not do that, because it is expensive business. It probably was my oil. I know very little of the Merchants' Refining Company. They are a small company, and I understand that they buy Standard Oil goods. I did not know that at the time I sold this carload of oil to them; but that is the method they adopted to get the American Oil Works oil in there to compete with my man. They could not do it with their own goods. We certainly had one man in Fulton, N. Y., who had the spirit of our forefathers.

Q. What has been the effect?—A. He says in another letter that the other man now follows his man around and endeavors to get the trade either by fair means or otherwise. They offer to cut the price from 1 cent to 4 cents a gallon, and to give them what they claim is the same oil my customer is dealing out to the people of Fulton.

Q. Do you think their intention is to drive your man out, if possible, by selling your oil cheaper than he can sell it, and then afterwards put in their own?—A. And drive him out of the business?

Q. Yes.—A. In this particular case his consumption is so small that it is not myself that I care so much about as I do about him. Besides, it would establish a precedent which would keep him or other men from undertaking the same line of business in other places. The canceling of 6 or 8 cars a year that this man might handle would have very little effect on my business, it simply affects him.

COMPETITION ON THE PACIFIC COAST.

Now, these letters that I have read and this evidence I have given is hearsay, and in a court of justice might not be admissible. I have, however, a letter from Portland, Oreg., which I will give in evidence, which is to my mind evidence of the most flagrant violation of honest competition that I have met with. That is on paper. They are very cautious usually about what they do in the way of making threats. This letter is, as you see, from the Standard Oil Company, Portland agency, George C. Flanders, special agent, Portland, Oreg. This letter is written to a firm in South Bend, Wash. I perhaps had better state now that I have been shipping oil in barrels from Titusville to a Mr. Copenspire, in South Bend, and that he had been selling a few carloads of oil in South Bend. It seems that the Eichnor Brothers, of South Bend, had written a letter to the Standard Oil Company at Portland, Oreg., describing the condition of the oil business there, in reply to which the Standard Oil Company, over the signature of Mr. George C. Flanders, special agent, wrote as follows (reading):

PORTLAND, OREG., *March 28, 1894.*

EICHNOR BROS., *South Bend, Wash.*

GENTLEMEN: Your favor of the 24th instant, giving us information regarding Sun Light oil duly received and contents carefully noted. It seems that the consumers of coal oil in South Bend have a curious idea as to what kind of an oil

¹ See Mr. Archbold, p. 550.

constitutes a first-class burning oil. We will state for your information that never a drop of oil has reached South Bend of better quality than what we have always shipped into that territory. They can name it "Sun Light," "Moon Light," or "Star Light;" it makes no difference. You can rest assured that if another carload of "Sun Light" oil arrives at your place it will be sold very cheap. We do not propose to allow another carload to come into that territory, unless it comes and is put on the market at one-half its actual cost. You can convey this idea to the young man who imported the carload of "Sun Light" oil. Thanking you kindly for this information, as well as past favors, we remain,

Yours, truly,

STANDARD OIL COMPANY.
By GEO. C. FLANDERS.¹

Q. (By Mr. JENKS.) Have you any other information to give with reference to their methods of competing?—A. I think of one method of meeting this which one of my customers in the East tried some 7 or 8 years ago. He was a German. He had good Bismarck blood in him, I judge, from what I will recite to you. I had sold him a number of carloads of oil, and the Standard agent of Jersey City came to him and said, "We must sell you the oil that you are jobbing here in Hoboken." He said, "No; I prefer to buy independent oil." The agent said, "We will name you a low price, and we will fix a marketing price so that you will make a good thing out of it." He said, "No; I prefer to run as I am running." The Standard agent then said, "If you continue in this, we will so cut the price here that we will drive you out of business." He said, "You mean to make me lose all the money that I have made?" The agent replied, "Yes." He said, "If you will do that, do you know what I would do to you?" And continued, "I would go over to your warehouses and I would blow them up with dynamite; that is what I would do." He told me that in less than 3 days the Standard Oil agent was over to see him and a price was fixed; but he still continued to handle oil from my refinery.²

Q. That is, by an agreement between the Standard Oil Company's agent and himself?—A. Yes.

Q. Is your source of information the man himself?—A. Yes; his own mouth.

Q. Have you finished with this special point?—A. Yes.

Q. (By Mr. FARQUHAR.) I would suggest that the name of this man be given.—A. Charles Frey.

Q. (By Mr. JENKS.) Was it at Hoboken or Jersey City?—A. He was at Hoboken, and the Standard Oil agent was from Jersey City.

Q. Does this cover substantially what you have to say with reference to methods of competition, aside from the question of freight rates, that might come up?—A. I think what I have stated is sufficient.

Q. (By Mr. JENKS.) You have had other experiences of somewhat similar nature, I suppose, but these are typical ones?—A. Yes.

PURCHASING AND DISMANTLING INDEPENDENT REFINERIES.

Q. Do you know whether the Standard Oil Company, for the purpose of getting control of prices in certain sections of the country, has bought up competing oil refineries and then dismantled them?—A. Yes; it has.

Q. What special instance have you in mind?—A. Two large refineries in Titusville were bought up in the year 1895 by the Standard Oil Company, not simply to get the refineries, but to get the stock which they held in the United States Pipe Line and the Producers and Refiners' Oil Company, Limited. They wished to assume or get control of these pipe lines; they did not care a snap for the refineries. They made that statement. They made a proposition to all of us to buy out all of the refineries if we would put our pipe-line stock in; and 3 of the largest refineries sold, 2 in Titusville, the Union Refining Company and the International Oil Company, Limited, and S. Y. Ramage, of Reno.³ You may ask, perhaps, if that did not lessen our own independent competition, those being drawn off and the refineries dismantled. The Standard dismantled them, and the iron was mostly sold for junk. It did, certainly, give us that much more field—that which these special independents had been working in; but it did not give their patronage to the United States Pipe Line and the Producers and Refiners' Oil Company, Limited, who needed it; it took it away. At that time we were having a very crucial test in the refining business and pipe-lining. It did not give us the patronage which we, as pipe-line men, desired and needed. It costs comparatively little more to run 100,000 barrels of oil a month through a crude pipe line than it does 75,000 or 60,000. It is always best to run full volume, and it took away not only their patronage, but their influence in our independent enterprises.

¹ See Mr. Archbold, p. 552.

² See Mr. Archbold, p. 550.

³ See Mr. Emery, p. 656, bottom.

(I Mr. PHILLIPS.) Were they buying crude oil through those independent lines and also shipping refined?—A. They were.

Those refining companies?—A. They were 8 of our largest refineries.

(By Mr. JENKS.) So, as a matter of fact, the business of the independents was seriously damaged by these 8 refineries selling out to the Standard Oil Company?—A. Yes; it was.

Q. Have you any information with reference to the prices that were paid for those refineries?—A. I have not.

Q. What were the offers that were made to you? Were they what you would consider high under ordinary circumstances?—A. The offer did not come to me in person from the Standard Oil Company, but through those who did sell and who had been in direct communication with the Standard people in New York. The price was not high; it was simply a constructive price—a cost price.

Q. That was all there was of it?—A. That was all I was offered for my plant.

Q. Have you any knowledge with reference to transactions on the part of the Standard Oil Company at any other time in the way of buying up refineries and dismantling them to get rid of competition?—A. I know from hearsay, before my oil days, that such things were done to quite an extent. I have no personal, direct knowledge.

Q. Your own knowledge is practically limited to this experience in Titusville?—

A. Yes.

EFFECT OF THE STANDARD OIL COMPANY ON PRICES.

Q. Some other witnesses have spoken with reference to prices and the effect of the Standard Oil Company on prices. This chart, representing prices of crude and refined petroleum, shows the way the prices of petroleum have fallen. Will you tell us what, in your judgment, are the chief reasons for the decline in price of refined oil, as compared with the price of crude oil, since 1870?—A. In the early days of refining, the by-products—what we term by-products, such as benzine from which gasoline is made and tar—were entirely worthless. They were either run into the creek at night or run into holes dug in the ground and burned. Their value then as a fuel was not realized, and refiners were buying coal and wood to refine oil with, when they were running into the creek what they might have used for fuel. I might say that the percentage that we now take out in these products—I do not know what they took, but it was practically about the same—is something like 20 per cent of the crude product. About one-fifth of the crude oil product was entirely wasted, which to-day, in 1899, is worth a high price; for instance, benzine is worth more to-day than water-white oil, as I have already stated, and tar is worth nearly as much as crude oil. These prices fluctuate; tar has been worth 4 cents a gallon during the past 8 years, but it has been down as low as three-fourths of a cent a gallon.

Q. So that in this way about 20 per cent of the crude oil, which formerly was an absolute loss, is now saved and made as valuable, on the average, perhaps, as the refined oil itself?—A. Yes. Then, too, the cost of refining has lessened very much. Approximately, oil can be refined for one-half cent per gallon—I refer now to illuminating oil and gasoline—whereas I am told that in the early days it cost about 2½ cents a gallon.¹ The quotations² which have been placed before you were based upon refined oil at the seaboard in 1898; that is to say, oil in barrels. In 1898 refined-oil barrels were worth, in Titusville, 88 cents apiece. In the early days barrels were worth from \$2 to \$3, which makes a difference of from 2 to 4 cents per gallon in the value of a barrel, which would knock off considerable of this advance in price, as he has arranged his schedule.

Q. As a matter of fact, when we find oil quoted by the barrel, the value of the barrel is included in the quotation?—A. Yes. The schedule is right, no doubt; but if the logic the witness uses is right, why should the Standard make the price of refined oil in 1895, when crude oil was \$1.35 a barrel, 4.9 cents per gallon, and in 1898, when crude oil was only 90 cents a barrel, 5.7 cents per gallon? You see, there is a difference there of 80 points. If they are cheapening, if they are tending to lower the price, his table is all right, but I do not see the logic in the point that he makes. These prices are simply on export oil. Suppose we take last year's average price. Refined oil was 5.7 cents per gallon; if for some reason the Standard Oil Company sees in foreign countries a necessity for cutting the price on export oil 1 cent a gallon, making it 4.7 cents per gallon, they would simply have to advance the prices on home products 1 cent a gallon on the balance of the products to make up for that deficiency, and therefore you can not determine prices in the oil business generally upon the prices of export oil alone.³ If his logic is true, he is giving all the benefit to the foreigner, because these prices he

¹ See chart of prices in Introduction.

² See Mr. Lee, p. 278; Mr. Rice, p. 736.

³ See testimony of Mr. F. B. Thurber, p. 4.

⁴ See Mr. Lockwood, p. p. 394, 398; Mr. Archbold, p. 599; Mr. Emery, p. 616.

uses for the chart basis are on export oil; there is very little export oil used in the United States, supposedly. If his logic is true, he is helping the man over on the other side, and you and I have to pay higher prices for water-white, lubricants, and gasoline. Do you see the point I make?

PRICE OF EXPORT OIL NOT A CRITERION OF PRICES IN THIS COUNTRY.

Q. Do you mean that he uses figures which simply represent one quality usually sent abroad, and that the table therefore does not represent the average price of refined oil to the consumers or the wholesale dealers in this country?—A. Yes; this is export oil and represents about 44 per cent. About 44 per cent of the crude product is export oil.

Q. Your general conclusion, then, is that the figures cited in this table, or represented on the chart, are untrustworthy for the purpose of drawing any conclusion as to the general level of prices to the consumer or to the wholesale dealer in this country?—A. That is certainly my conclusion. I believe, however, that the Standard Oil Company is employing the very best brains engaged in the manufacture of oil. They have certainly brought forward a great many inventions in the refining of crude petroleum. I certainly believe that. A man can not help but see that they are improving every day. They are doing a great deal to bring out the very best there is in crude oil and make the most of it. That is their business. They probably do more than any man or any firm. Probably Mr. Van Sickle, who was an independent refiner in the sixties and seventies, brought forth more original ideas at that time that are still being used than any one refiner. He was a very practical man.

Q. You would be inclined to think, then, that on the whole this decline in prices that has come through improvements in methods of production is due, in part, to the work of the Standard Oil Company and in part to the inventions of the independent refiners, and that the honors might fairly be distributed between the two?—A. You must not forget that with this decline in the prices of refined oil there has been a very heavy decline in crude oil; wells are bored and handled so much more cheaply. Originally 1 man with 1 pump, boiler, and engine would pump 1 well; to-day little wells doing a half or quarter of a barrel are harnessed up to 1 big drive power, with 20 and 30 and even 40 other wells. So you see the expense of operating is so greatly reduced that the cost of producing has become nominal compared with what it was 10 or 20 or 30 years ago.

Q. At the same time, in accordance with this table, the price of crude oil has not declined materially since 1879. In that year it was selling at 88 cents a barrel. Was it not \$1.05 in 1895?—A. What is it now?

Q. So the price of crude oil, on the whole, seems not to have declined very much since 1879 and 1880, and of course the price of refined has also declined very much less since 1880 than it did between 1870 and 1880, according to this chart. Would it be right, then, in your judgment, for us to infer that the chief improvements in the methods of production were made between 1870 and 1880 rather than since 1880—improvements in the methods of refining?—A. Between what years?

Q. Between 1870 and 1880, I will say, instead of since 1880?—A. That would be simply speculative.

Q. It was during those years that the chief difference was made in the cost of the refined product. (No response.)

Q. (By Mr. PHILLIPS.) Have the Standard Oil people any superior methods of refining that are not known to the independents?—A. If they have, we do not know it. Of course, if we did know it we would use the same; they do not give out their information, certainly not.

Q. Do you believe you can get out the whole value and make as good oil as they, both in by-products and refined material?—A. I believe the independents put out as good goods in every way as the Standard Oil Company does, certainly.

FREIGHT RATES AND TRANSPORTATION.

Q. And as economically in proportion to the amount they put out?—A. I believe we do; yes.

Q. (By Mr. JENKS.) The question of freight rates and the apparent advantage of the Standard Oil Company in that respect has come up a number of times. Have you any information that you can give us concerning the freight rates that you secure, and the influence of the Standard Oil Company upon the railroads, or the special advantages they get in the way of freight rates?—A. With reference to oil rates, I have no reason to state that we are paying any higher rates per hundred than the Standard Oil Company is. They are not shipping anything from Titusville, but there are other given points, such as Olean and Buffalo. Buffalo would take a little higher rate, however; but I know that they are underbilling

their cars. Since the establishment of the Interstate Commerce Commission the railroads, I think, have been very careful about giving rebates on oil, or perhaps on any other traffic; they may do it; I know of nothing of the kind.

UNDERBILLING OF CARS.

But I have seen freight receipts in New York from one of my former customers wherein a car of 7,000 to 7,200 gallons was billed from Olean at 24,000 pounds. Now, that car weighs, according to the basis on which we have to figure, 6.4 pounds per gallon—from 44,800 pounds to 46,080 pounds. I give you the weight of 7,000-gallon tank cars of oil. Were I to bill that car or those cars I would have to bill it as I have stated, at actual weight—44,800 or 46,080 pounds. They also prepay their freight. Perhaps I should not say that, for I do not know it; but my customers, who have received oil from them, state that the Standard prepays all freight on oil, and I believe they do. Now you see what a difference it makes when this oil is billed at 24,000 pounds. They may be paying the same freight rate per hundred, but you see what a disadvantage I am working under if I have to bill 44,800 pounds where they can bill it at 24,000 pounds and get it through. I have seen 3 of these freight receipts, and my opinion is that every car that goes out of Olean, or any other of their refineries, is billed on this same basis; and I believe that is where they are getting the remarkable leverage: and I believe, also, if I were paying on the same basis they are, or they were put on the same I am, we would not have to make such cuts or else go out of the town.

Q. Why not bill at still less than that?—A. Twenty-four thousand is the minimum capacity, the minimum car weight, in billing oil.

Q. Then you believe it to be true that the general custom that is followed is to bill every car at the minimum weight, although the car itself may be very much larger and heavier?—A. Yes; at the minimum weight. I know one other incident. It is just hearsay, but the case of these receipts only confirms what I am about to say. A certain party in New York bought a few tank cars of crude oil from the Standard Oil Company, which were shipped from Olean. The cars arrived and the freight bills were presented for collection, because they were buying it f. o. b.; they bought it f. o. b. Olean; it was certificate oil put into tank cars; it was not refined; the freight bills were presented to the buyer, who noticed, to his surprise, that the cars were billed at 24,000 pounds; and the cars held from 6,000 to 6,600 gallons, which would be 38,400 pounds on a 6,000-gallon tank.

Q. (By Mr. PHILLIPS.) Of difference?—A. No; that is what I would have to pay; they were billed at 24,000 pounds, whereas they actually weighed 38,000 pounds and more. A few days later this buyer got a corrected bill from the railroad company billing them at actual weight with the regular rate, which he paid, of course. I do not believe these were errors. The 3 cars I speak of in central New York were not billed at the same time; they were billed at different times, and those things could not be errors. Every railroad has or should have what we call a tank-car book, giving the number and initial of all the tank cars in the United States and Canada, with the gallonage and the weight, figured at 6.4 pounds per gallon.

Q. (By Mr. RATCHFORD.) 6.4 per gallon?—A. Yes, per gallon; 6.4 pounds per gallon. Therefore, I say these things can not be errors on the part of the billing clerk. It only confirms my belief. It is my belief, of course, that they are getting their goods put through, when in tank cars, at 24,000 pounds, while I am paying on the same car for practically 50 or 100 per cent more than the weight for which they are paying.

Q. (By Mr. JENES.) Do you recall the dates of these receipts? How long ago was this? You say you have seen separate receipts; have you any idea about when that oil was shipped?—A. It was about 3 years ago.

Q. So you think that, within 4 years at any rate, you have located 3 specific cases in which the Standard Oil Company has had its oil underbilled, i. e., at 24,000 pounds, where a fair billing would have been at least 44,000 pounds, and probably more?—A. Yes.¹

RAILROADS DO NOT CARE TO HANDLE INDEPENDENT OIL.

Q. Have you other information with reference to freight rates in connection with the oil business?—A. In reading these 3 letters I wish to show to the commission that for some reason independent oil is not a commodity that the railroads are desirous of handling. This one is from the commercial freight agent of

¹ See Mr. Archbold, pp. 550, 551; Mr. Rice, p. 731; Mr. Page.

the New York, Chicago and St. Louis Railroad Company; he is in Pittsburg. He writes (reading):

PITTSBURG, PA., *April 12, 1898.*

Subject: Rates on oil. Titusville to Vermont points.

Mr. T. B. WESTGATE,
Manager American Oil Works,
Titusville, Pa.

DEAR SIR: Referring to conversation the writer had with you a short time ago in regard to rates on oil from Titusville to points in Vermont—

I regret exceedingly that at the present time we can not name satisfactory rates on oil from Titusville to Vermont points.

We hope, however, to be able to do so in the near future and will advise you just as soon as possible.

Yours, truly,

W. H. RICHARDS,
Commercial Agent.
HOWES.

Here is a letter from the New York Central Fast Freight Line, F. L. Pomeroy, general manager, Buffalo. He is the general manager of the Red Line, White Line, Blue Line, Canada Southern Line, and Midland Line (reading):

BUFFALO, N. Y., *December 5, 1898.*

MESSRS. AMERICAN OIL WORKS, LIMITED.
Titusville, Pa.

GENTLEMEN: I have your favor of the 25th instant asking for rates on oil in tank cars and barrels from Titusville to Montreal, province of Quebec, and in reply would say that oil is not a commodity that we are permitted to handle by our fast-freight lines; therefore I have no authority to make or discuss rates on this commodity, but would refer you to Mr. S. Goodman, assistant traffic manager, New York Central and Hudson River Railroad, New York City.

Thanking you for the business which you are giving us of other kinds, which is fully appreciated, I am,

Yours, truly,

F. L. POMEROY,
General Manager.

FREIGHT RATES ACCORDING TO THE RED-LINE TARIFF BOOK.

I wish to offer in evidence a Red Line tariff book.¹ The Red Line is one of the lines of which Mr. Pomeroy is general manager. I take it that these lines are a sort of a wheel within a wheel for some purposes. I am now billing oil at Titusville to certain points via the Red Line. This, as you men who are acquainted with the railroads understand, gives in alphabetical order the names of towns in Pennsylvania, New York, and the Eastern States and their freight rates; that is, it gives what rate it takes; for instance, Abbingtion, Mass., takes a Boston rate. Referring to the sheet that this D. A. V. M. Line provides me with, I find the Boston rate on oil in carloads is 23½ cents per hundred; in less than carloads, local, it is 33 cents a hundred. I am prohibited shipping carloads to certain points named in this; that is, carloads of oil. Other classified freight goes through and oil in local lots goes to some points; but to points on the New York, New Haven and Hartford (e. g., the first one I read, Abbingtion, Mass.), I could not ship oil unless I paid 33 cents. I would have to pay an arbitrary price. This occurred, I should say, about 3 years ago, when the New York, New Haven and Hartford came into certain hands.² We suppose it is controlled by the Standard Oil Company. Our territory is being narrowed each year by the roads which are in some way made servants, in my opinion, of the Standard Oil Company.

Q. If I understand you, this Red-Line rate book that you have shows that you can ship ordinary kinds of freight at Boston rates to all these local points.—A. Yes.

Q. When you yourself attempt to get rates do they simply say they will not quote you any rate at all for carload lots of your product?—A. I enjoy freight rates to some of these points. There are exceptions; for instance, (reading): "Agents take special notice: Petroleum oils to points via Syracuse, on the Ogdensburg and Lake Champlain Division of the Central Vermont Railroad and points beyond, can not be taken at rates named in this tariff. Shipments of

¹ East-bound Red Line Tariff, No. 40, March, 1899.

² See paragraph 1 of Vice-President Hall's affidavit in footnote to the testimony of Mr. Page.

petroleum oil destined to points on the New York, New Haven and Hartford Railroad (New Haven and Old Colony systems) can not be taken at rates named in this tariff. Such shipments will be subject to arbitrary rates from the various junction points of the Boston and Albany Railroad." Now to points like Malone, which, on other freight, take a Boston rate, on oil of 23½ cents a hundred, I am compelled to pay 26½ cents per hundred. As I go beyond Malone to Rouse Point, I am obliged to pay 33 cents per hundred.

Q. Although through freight, ordinary freight, will be sent for 23½ cents?—A. Fifth-class freight is 20 cents per hundred. Oil is listed a little higher than fifth-class. I can ship anything to most any of these points specified unless it is designated here as arbitrary.

Q. (By Mr. PHILLIPS.) Why, in your opinion, did they make that difference—prohibit shipping to some points and allow Boston rates to others?—A. To keep us out of that territory.

Q. Would the difference be so great as to consume your profits largely?—A. It, in some instances, prevents us from selling in those localities and causes the consumer to pay a higher price for his goods, because the Standard probably will sell a little bit under us, getting the benefit of the high freight rate which I have to pay from Titusville and which they do not have to pay from, say, a New York point north or a distributing point somewhere, such as Albany. I wish to show in connection with these, which I term exorbitant freight rates, that this Red-Line traffic book quotes a Boston rate to Adirondack Junction, on the St. Lawrence and Adirondack Railway, which is within 9 miles of Montreal. Now, if I could ship oil there, as I should, on the Boston rate, which is 23½ cents, I could make a good, fair profit; but I hold in my hand a telegram from Samuel Goodman—I believe he is the assistant traffic manager of the New York Central—in reply to a telegram, which reads as follows:

"5, 6, 1899. To American Oil Works: There are no through rates on oil, Titusville to Montreal, or for other points you name. Tariff from Buffalo to Montreal, Adirondack Junction, or Beauharnois is 35 cents per 100 pounds via Utica, M. and M., St. L. and A. C. P., or I. Grand Trunk.

"S. GOODMAN."

He says that he quotes me a 35-cent per hundred rate from Buffalo to Adirondack Junction. That was the point named in the Red-Line traffic book, to which I should get through from Titusville on 23½ cents a hundred, if taking a Boston rate, which is named here; but instead he quotes me 35 cents a hundred from Buffalo there. Added to that, my 8 cents per hundred from Titusville to Buffalo makes a 43½-cent rate per hundred from Titusville to Adirondack Junction. I figured that out in miles and in ton rates. I will give the distance from Buffalo to Utica as 201 miles and from Utica to Adirondack Junction as 223 miles, making a total of 424 miles; the freight at 25 cents per hundred on oil would be \$7 per ton, which would be \$0.0165 per ton per mile. Now, the New York Central's average receipt per ton per mile on oil in 1890 was \$0.0073; in 1889, \$0.00712; in 1888, \$0.00753. The estimated cost of handling oil in 1890 was \$0.00549 per mile; in 1888, \$0.00557; the rate he has quoted me is nearly 3 times the average receipt per ton per mile as given in their schedule in 1890, 1889, and 1888. This computation is on page 100 of a pamphlet containing a case in the circuit court of the United States for the western district of Pennsylvania, which I can give you. This was the testimony that I referred to that was brought before the Interstate Commerce Commission in 1888 in Titusville. The State of Vermont is the State where I have had the most trouble in marketing goods, and I wish to read a letter here from a division freight agent; he is a soliciting freight agent for the Lake Shore and Michigan Southern Railway Company (reading):

CLEVELAND, OHIO, *April 2, 1895.*

The AMERICAN OIL WORKS,
Titusville, Pa.

GENTLEMEN: Referring to our conversation of some time since relating to car-load rates to Vermont points, I have looked into this matter very carefully and find that the following rates are the best at the present time.

Burlington, Vt., 44½ cents per 100 pounds, via Rutland.

St. Albans, Vt., 50½ cents per 100 pounds, via Rutland.

Richford, Vt., 54½ cents per 100 pounds, via Malone.

St. Johnsbury, Vt., 36½ cents per 100 pounds, via Bellows Falls.

Newport, Vt., 88½ cents per 100 pounds, via Bellows Falls.

The less than carload rate to St. Johnsbury, Vt., and Newport, Vt., is 33 cents per 100 pounds.

Note the attached letter we have from Mr. Chittenden, of the Central Vermont Railway.

Yours, truly.

W. F. ANDREWS,
Soliciting Agent.

Return the letter.

I wish to state here that St. Johnsbury and Newport, Vt., are booked in this Red Line traffic book as taking Boston rates. They should therefore give me a rate of 23½ cents per hundred on oil to those points. This is not the Red Line, however, but the Red Line prorates with the Lake Shore. I think all work together for good except in the oil business. He does not name that to me; he has not named it. Maybe he knows that the less than carload rate in the Red Line book is 33 cents a hundred, but for some reason or other he can not name me rates on carload lots into those points excepting as I have given them to you. You see that debar us. Such outlandish rates debar a manufacturer from going into territory where they want a good grade of oil, a light oil. Vermont is a good oil State; that is, for selling oil; and it curtails the business.

Q. (By Mr. JENKS.) You think that the Standard Oil Company simply comes into that territory from other shipping points where the rates are very much more favorable?—A. It must be. They certainly are not paying such rates. They do not countenance any such thing as that.

FREIGHT RATES TO THE PACIFIC COAST.

While speaking of freight rates I wish to mention that a few years ago we enjoyed to the Western coast—Western terminals—a freight rate on oil in carloads of 78½ cents per 100 pounds.

Q. You mean to the Pacific coast?—A. Yes; the Pacific coast; what they call terminal points on the Pacific coast. After the establishment of the Standard's refinery at Whiting, near Chicago, the freight rates from Titusville, Oil City, Warren, and Pittsburg to those points on the Pacific coast were abrogated, and they would not give us a through rate, but we must bill to Chicago at 17½ cents per 100 pounds, and then from Chicago west we added 78½ cents per 100 pounds.

Q. So that before the establishment of this refinery you had a rate to the Pacific coast, at terminal points, of 78½ cents, and afterwards your total rate through was 96 cents?—A. Yes; that was after the refinery was built near Chicago, at Whiting, Ind.¹ I have a letter in my hand from Charles T. Hallowell, general freight agent, Green Line system.

(Letter referred to is as follows:)

OIL CITY, PA., April 12, 1899.

AMERICAN OIL WORKS, Titusville, Pa.

DEAR SIRS: On request of Mr. Westgate we made application to Delaware and Hudson for rates to points on that line north of Whitehall, and have only just received Mr. Wadsworth's letter quoting the following rates per hundred from Whitehall, which must be added to our Boston rate of 23½ cents from Titusville:

	Tank cars.	Barrels.
	Cents.	Cents.
Chubb's Dock, New York.....	5	4
Dresden.....	5	4
Putnam.....	6	5
Wrights.....	8	7
Delano.....	9	8
Addison Junction.....	9	8
Crownpoint.....	10	8
Port Henry.....	10	8
Westport.....	11	9
Wadhams Mills ²	11	9
Whallenburg.....	11	9
Essex.....	11	9
Willsboro.....	12	10
Port Kent.....	12	10
Plattsburg.....	12	10
Beekmantown.....	12	10
Sciota.....	14	12
West Chazy.....	13	10
Chazy.....	14	12
Coopersville.....	14	12
Rouse Point.....	14	12
Moers Junction.....	14	12

¹ See Mr. Monnett, p. 309; Mr. Rice, p. 731; Mr. Page.

² Station without agent, freight prepaid.

We have again written Mr. Wadsworth, calling his attention to the fact that the rates quoted are about $2\frac{1}{2}$ cents per ton per mile, which is in excess of what other lines would charge for a similar distance, and will advise you if he makes any further concessions.

For points on the branch from Saratoga to Northcreek our Boston rate will apply, as shown in group 3 of oil circular No. 22.

Yours, truly,

CHAS. T. HALLOWELL,
General Agent.

We have also called Mr. Wadsworth's attention to the fact that we asked for rates from Schenectady and not Whitehall.

I received a letter written April 19, 1899, from Mr. Hallowell, in which he says that Mr. Wadsworth, the general freight agent, Delaware and Hudson, will not make any concession, so that if we ship oil to those points we must pay the enormous rate of $2\frac{1}{2}$ cents per ton per mile above Whitehall, which, as a railroad man signifies, is an enormous rate, and far beyond what any other road would charge. (The letter of April 19, 1899, above referred to, is as follows:)

OIL CITY, PA., April 19, 1899.

AMERICAN OIL WORKS, Titusville, Pa.

GENTLEMEN: As advised you in our letter of the 12th instant, we again wrote the Delaware and Hudson people in regard to rates you had asked for on that road, and now have letter from Mr. Paul Wadsworth, G. F. A., April 17, advising that he can make no better rate than that already named you for points north of Whitehall, and also states that our oil circular rate of $23\frac{1}{2}$ cents per 100 pounds from Titusville can not apply to points between Saratoga and Northcreek, and those points will take the following arbitrary per 100 pounds additional:

	Tank cars.	Barrels.
	Cents.	Cents.
Greenfield, N. Y.	6	5
Kings	6	5
South Corinth	7	6
Hadley	9	8
Corinth	8	7
Stonycreek	12	11
Thurman	13	12
The Glen	15	14
Riverside	16	15
Northcreek	18	17

We regret that we have not been able to make better terms with them, but it would appear that it will not be possible to do any better.

Yours, truly,

CHAS. T. HALLOWELL, *General Agent.*

Q. Do you mean that you are charged 14 cents per hundred more for oil to Whitehall, or to one of these local points you have mentioned, than, in accordance with this Red Line traffic book, is charged for ordinary freight?—A. No; it takes an arbitrary rate.

Q. You simply think the charge is excessive?—A. The charge is excessive; and, in fact, we are daily being narrowed down by the railroads. I can not get to New Haven, or Providence, R. I., with oil on a Boston rate, according to this Red Line traffic book. This Red Line traffic book on all other goods takes a Boston rate to Providence and New Haven. What is the cause for it?

CHARACTER OF OIL AS FREIGHT.

Oil is a good freight to handle. Mr. Motheral, who is a confidential man of the Green Line in Oil City, gave statistics in 1888, before the Interstate Commerce Commission, relating to the loss and risk in handling oil by freight, which I will read from page 189 of the pamphlet of testimony taken in cases 153, 154, and 163 before the Interstate Commerce Commission:¹

¹ Interstate Commerce Commission.

The Independent Refiners' Association, of Titusville, Pa., and the Independent Refiners' Association, of Oil City, Pa., v. The Western New York and Pennsylvania Railroad Company, the New York, Lake Erie and Western Railroad Company, the Delaware and Hudson Canal Company, the Fitchburg Railroad Company and the Boston and Maine Railroad Company, No. 153. Also the same complainants v. others, cases 154 and 163, testimony.

"Q. What is your opinion, from your own experience of the business, relative to the risk of fire from the transportation of oil by the two different methods, by tanks and barrels; which is the greatest?

"A. It is greater in tanks.

"Q. How much? What relative portion would you say?

"A. From 1882 to 1887, 5 years, the loss on oil in barrels was twenty-seven one thousandths of 1 per cent; the loss in tanks was forty-three one thousandths.¹

"Q. That is the result of actual experience?

"A. That is a statement made up from our office a year or so ago. I looked it up again to-day."

So you see the loss in transportation of oil is almost infinitesimal, and my opinion is that, if we could keep about upon the same basis—not my refinery alone, but all refineries and all shippers of oil—as the Standard Oil Company, we should not be having this terrible experience that we have had at times. We could get prices, because they would not have the means to cut us.

Q. (By Senator MALLORY.) Can you indicate what basis that is?—A. I referred to that a few moments ago when I stated that they were underbilling. I have evidence where they have underbilled—i. e., oil that would weigh 44,000 pounds was billed at 24,000 pounds.

Q. (By Mr. KENNEDY.) What did you say the wastage is in piping oil? Did you state that?—A. I did not say.

Q. Just the wastage of tanks?—A. You mean this railroad?

Q. Yes.—A. These figures that I gave concerning the transportation of oil in tank cars are given by Mr. Motherall, probably one of the best-posted traffic men in the country, because the Green Line, up to that time, undoubtedly handled more oil freight than any one road.

Q. Have you any figures there in regard to wastage in pipe lines?—A. No. From what I have read and from what my experience has taught me, the railroads do not cater for the independent oil trade. Until within the last 2 years we had very few railroad men soliciting oil trade; we have very few now; a few local lines solicit; but I do not remember of a New York Central, a Vermont Central, a New York, New Haven and Hartford, or a Boston and Albany man asking me for freight, and I ship in the neighborhood of from 12,000 to 14,000 barrels a month, going in directions that would be over their lines. During the construction of the United States Pipe Line, when we had a few tons of iron to haul to Athens and various points, and it was published in the papers that tanks were to be erected and that pipe was to be laid, there were traveling freight agents after us every day to get the shipment of those goods over their line—Lehigh, Erie, and other ways. We could ship iron, but the oil—we must not handle it. That is probably the password that goes over.

In connection with that Montreal business, I wish to state that we enjoyed, up to last fall, I think it was in October, a 23 cents per hundred rate from Buffalo to Montreal, P. Q.

Q. (By Mr. JENKS.) Had you been shipping oil to Montreal regularly for some time?—A. We had.

Q. For how long?—A. Four years and over.

Q. At what rate did you say from Buffalo to Montreal?—A. It was 21½ at one time, but it was advanced to 23.

CANADIAN REFINERIES PURCHASED BY STANDARD—ADVANCE IN FREIGHT RATES.

Q. For most of the time it was 23 cents from Buffalo to Montreal?—A. Yes; but at the time the Standard Oil Company came into possession, either by purchase or lease, of all the refineries in Canada, at P. trolia and the other oil points, the freight rates from Buffalo to Canadian points immediately advanced; the rate from Buffalo to Montreal advanced from 23 cents a hundred to 35 cents per 100 pounds. I got caught on that. I was not very sharp. They did not notify me of the advance. I sold a man a car based on the 23-cent rate, and it cost me 35. I was out the 12 cents per hundred.²

Q. (By Mr. PHILLIPS.) Did that 12 cents materially affect your prices?—A. Twelve cents a hundred is nearly 40 cents a barrel. If I can make 10 or 15 cents a barrel on oil I am doing a good business. It practically cuts me out. I can not sell oil in Montreal under these conditions. That is why I wired Mr. Goodman to get to Montreal via New York Central, via Utica and Malone, and this Adirondack division, but they did not want the trade.

Q. So you are practically shut off at this time?—A. Yes.

Q. Since the Standard made the purchase of the oil fields and oil refineries in Canada?—A. Yes.

¹ See Mr. Rice, pp. 718, 717.

² See Mr. Gall, p. 683.

Q. (By Mr. JENKS.) What are the railroads that made these Canadian rates?—A. The Grand Trunk running from Buffalo to Montreal and the Michigan Central¹ prorating with the Canadian Pacific from Buffalo to Montreal.

Q. Then, when you were asking for freight rates around this other way over the New York Central, you were merely looking for another way to get to these same places?—A. I did not know but I could find the bars down and slip some oil in; but they put them up.

Q. Then you asked for rates to Adirondack Junction?—A. Yes; that is the one I gave in evidence.

Q. That is some distance this side of Montreal?—A. Yes; 9 miles.

Q. But it was for the purpose of letting you into that Montreal market?—A. That was the idea.

Q. Were you going beyond the New York Central line in asking for rates to Adirondack Junction?—A. I was not; I could pay a switching charge of 9 miles and get it in.

Q. Do these increased freight rates through Canada still continue? How long is it since the rate was put up from 23 to 35 cents?—A. I believe it was in October last.

Q. And the rates are still held?—A. I understand that the independent oil men in Montreal brought the matter up before the parliament, and that the railroads were either compelled or advised to withdraw that tariff; and, according to the paper which I saw, a Montreal paper, the railroads had withdrawn the tariff—that is, they had withdrawn the printed tariff, but the rate still remains the same, if I wish to ship a car of oil in there. I think they have some very strong evidence in the matter; but I am not posted. I am not prepared to give it to you.²

Q. (By Senator MALLORY.) You have not attempted to ship any in there recently?—A. Yes; I have a party up there and I have tried to sell, but he could not buy because the rate was too high.

What we shippers would like is this, that oil be classified. To some places we pay more than fifth class, and occasionally a little less than fifth class. If I were asked what class oil should be in, I should say it should be sixth class; but if we had a fifth-class rate on oil our Boston rate would be 20 cents per hundred, and we are paying 23½ per hundred. We at one time enjoyed a rate of 78 cents per barrel to Boston, which would be 19½ cents per 100 pounds; but as the web grows tighter the rates go up, and our territory is made smaller.

Q. Is there more risk in the transportation of oil than ordinary merchandise?—A. Mr. Motherall stated that the loss of oil in barrels in shipping was twenty-seven thousandths of 1 per cent.

Q. (By Mr. JENKS.) Is it not to be concluded, then, from your testimony, that there is not much more risk connected with the shipping of oil than ordinary merchandise?—A. There certainly is some more risk.

Q. (By Senator MALLORY.) Does that include loss by fire?—A. Yes.

Q. But not leakage?—A. No; I think the commission should insist upon this commodity being classified. It certainly is of magnitude enough to be classified, and you can see from the evidence I have given that there must be a "nigger in the fence" if we can not get to certain points in a certain tariff book. We can get to certain points and not to others, and in one case can get no rate whatever.

Q. (By Mr. JENKS.) Your objection is not so much against high rates as against rates that are not at all uniform to places that seem to be similarly located?—A. That is true.

Q. And you also believe that the Standard Oil Company has its goods underbilled, constituting practically a direct discrimination against you?—A. That is true.

LITIGATION CONCERNING FREIGHT RATES.

Q. (By Mr. PHILLIPS.) Have you had any litigation with the Standard Oil Company, or any case before the Interstate Commerce Commission, with regard to freight rates, or discrimination in freight rates?—A. Yes, we have. We, the Independent Refiners' Association at Titusville and Oil City, in 1888 had a hearing before the Interstate Commerce Commission.³

We were awarded the claims that we demanded, or asked for. The claims were these: That we should have the same rate per barrel on oil shipped in a package as the Standard Oil Company—i. e., that they were paying on a barrel of oil shipped in tank cars, or that they should quote us a rate per barrel, instead of giving us a rate per 100 pounds. After many days or weeks of session the commission decided

¹ As to the Michigan contract, see Mr. Gall, pp. 675, 676.

² See Mr. Gall, pp. 675-677, 680, 683-685; Mr. Archbold, pp. 572, 573; Mr. Page.

³ See cases cited, p. 677; see also Mr. Archbold, p. 551, bottom.

in our favor, and awarded us in their best belief, what we asked for. Our awards amounted to something like \$88,000. We have been all this time, 11 years, trying to collect this, and we have a case coming up soon in the circuit court of the United States, Western Pennsylvania district, in Pittsburg, bearing on this, which has been decided in our favor two or three times by various courts.

Q. (By Senator MALLORY.) What road was that?—A. They were the Western New York and Pennsylvania Railroad Company, the New York, Lake Erie and Western Railroad Company, the Delaware and Hudson Canal Company, the Fitchburg Railroad Company, the Boston and Maine Railroad Company, and the Lehigh Valley Railroad Company.

Q. Were these companies responsible in the case you speak of?—A. They were; yes.

Q. What is the status of that case to-day?—A. The status of that case is a dormant one. They decided we should have this reparation, and also that oil should be shipped per barrels—that is, instead of charging us 400 pounds, as they do now per barrel, it should be taken at 320 pounds, actual weight of the oil, because the tank cars (the Standard Oil Company have their individual cars, and we have a few) are shipped full and come back empty, and also that the empty barrels should be shipped back with no charge, because if the oil was shipped in barrels the cars could be used to load freight back, whereas the tank cars come back empty. But they did not comply with the order given.

Q. The case, as I understand, has been appealed to the circuit court?—A. Yes.

Q. Has it made any progress in the circuit court since it was appealed?—A. No, it has not.

Q. Is that what you mean by lying dormant?—A. Yes, lying dormant; it comes up this fall.

Q. (By Mr. PHILLIPS.) What court was it tried in before it was appealed to the Interstate Commerce Commission, if any?—A. I have not looked up whether it was a civil action or not.

Q. (By Mr. JENKS.) Do you expect a final decision in the case this fall?—A. We do; yes.

Q. (By Senator MALLORY.) Can you state in a general way the territory in which you deal?—A. Yes; my territory is quite well defined. It is mostly in the State of New York. I sell some in Vermont and New Hampshire, and occasionally a car scattered through different States; but that is simply a catch order.

Q. Do you ship to foreign countries at all?—A. Oh, yes; nearly 50 per cent of our product goes to foreign countries.

Q. Do you deal with the South at all?—A. Not at the present time. The rates are high South.

Q. Do you deal with Cuba at all?—A. No.

NUMBER OF INDEPENDENT COMPANIES IN PENNSYLVANIA.

Q. (By Mr. KENNEDY.) How many independent refining companies are there in Pennsylvania?—A. I should say 12 or 15.

Q. Are you connected with only one or several of them?—A. Simply one.

Q. Have not the independent companies some sort of a combination to protect their interests as against the Standard Oil Company?—A. The only association we have ever had was that of the independent refiners of Titusville and of Oil City at the time of this suit, or this hearing. We have common interests in the United States Pipe Line, the Producers and Refiners' Pipe Line, and the Pure Oil Company.

Q. That is the only kind of a combination you have?—A. Yes.

THE PIPE-LINE SYSTEM.

Q. (By Mr. PHILLIPS.) Have you any specific knowledge about pipe-line systems, the history of them in Pennsylvania, and the independent pipe lines prior to the organization of the United States Pipe Line and the Producers and Refiners' Pipe Line?—A. I have some knowledge, but I think nothing that would be of any special benefit. I could tell you about the time since we organized the Producers and Refiners' Line, of which I am a director. We have had considerable trouble with the Standard Oil Company, who have bought up the production on our line, which caused us to lay lines more remote, but I suppose that is in the course of business. They paid high prices, however, for these properties, and it was a good thing for the individual producer that we were in there, because he sold out his property at a very high price. That has been done to quite an extent.

Q. Prior to the organization of the Producers and Refiners' Pipe Line Company were you getting your oil through the Standard lines?—A. We were buying oil from the Standard.

Q. What pipage did you pay them?—A. Twenty cents per barrel.

Q. What are you paying now for getting oil delivered at your refineries?—A. We are paying the market price, 15 cents per barrel pipage.

Q. Do you get at this lower rate as good oil as you did when getting it from the Standard Oil Company?—A. The majority of the oil is better. We get poor oil from 1 district, near Oil City; each refiner has to take his portion; that is very inferior oil, black oil.

Q. Does that go through the Producers and Refiners' Pipe Line?—A. Yes, it does; about 4,000 barrels a month comes through that line.

Q. Is it mixed with other oils?—A. No; it is delivered separate.

Q. What kind of oil did you get through the Standard pipe lines before you owned this line?—A. We got oil which was not of as high a grade, not as rich in illuminants as we are getting from the Producers and Refiners' Line.

Q. And paid practically 5 cents a barrel more for piping than now?—A. Yes.

Q. And the oil was not of as good quality?—A. No; it was not.

Q. (By Mr. KENNEDY.) Can you state what percentage of the oil of Pennsylvania is refined by the independent companies?—A. I have not the actual figures or data at my command, but I should say about one-tenth.

Q. The Standard Oil Company refines all the rest of it, 90 per cent of it?—A. I believe they must have refined it or shipped it abroad.

Q. And the business is profitable, I suppose, to all these independent companies, is it not?—A. It has been at times.

COMPETITION WITH THE STANDARD IN FOREIGN COUNTRIES.

Q. (By Mr. PHILLIPS.) Will you state to the commission what method the Standard Oil Company took to circumvent your markets abroad, after the laying of the United States Pipe Line for shipping refined oil through to New York as well as crude?—A. The prices in our foreign markets, in Germany and Holland, were cut very low, so that we were obliged to sell export oil to the one buyer (we have had but the one buyer, Philip Poth) very low; in fact, at ruinous prices. It was only by the strictest economy that a number of refineries were kept out of the hands of the sheriff during the crucial time that we had in 1893 and 1894.

Q. Did Poth handle your oil for a considerable length of time?—A. He handled it for a number of years, and until a short time after the Standard Oil Company purchased these other large refineries that I spoke of a short time ago. Then I understand that the Standard officials approached him and told him that we were on our last legs and that he had better get his money out of his stuff while he could. They paid him big money for his plant, and it was turned over to the Standard Oil Company entirely; his two sons-in-law were retained in the business. He had promised by all that was true and good to stand by the independent companies. We had sold him refined oil away below the cost of crude oil; but he got frightened when the Standard approached him in this way, and as I say he sold out. The shock was so great that he died within 2 weeks; we then established the Pure Oil Company—that is, we refiners and producers—and have been marketing our own goods in Germany.¹

Q. Did they also rent or buy the tankage abroad, so it was very difficult for you to dispose of all your oil?—A. They did some of that; yes.

Q. Were you compelled to build tankage and establish stations before marketing oil in Germany?—A. We were compelled to do so.

Q. Has your business there been a profitable one?—A. Our returns have been very satisfactory in Germany.

Q. What were your profits while Mr. Poth was acting as your agent?—A. There was very little in the refining business, just in marketing abroad. We sold him oil f. o. b. New York.

Q. You did not have any profits he made, if he made any, in Germany?—A. Certainly not; prices have been good there.

Q. But you sold a good many cut cargoes, did you not?—A. Yes.

Q. That is, below cost?—A. Below cost, some.

Q. Have you sold any cut cargoes since to your agencies abroad, in the Pure Oil Company?—A. No.

Q. They are quite uniform, are they?—A. Quite uniform; yes.

¹ Compare Mr. Lee, pp. 273, 274; Mr. Emery, p. 617.

RELATION BETWEEN STANDARD OIL COMPANY AND THE INDEPENDENT COMPANIES.¹

Q. A former witness stated before this commission that if the Standard Oil Company were to offer the independent companies a price far beyond the value of their plants they would still refuse to sell out. Is that the feeling of the independent companies of Pennsylvania? Would they not sell for more than the value of their plants if offered that by the Standard Oil Company?—A. Now, if you will define that I will answer you directly; do you mean \$10 more?

Q. There was no specific sum named; it was said they would not sell to the Standard even if offered more than the value of their plants.—A. If they were all like him they would not.

Q. Have the Standard people made any attempt to purchase stock or circumvent these independent pipe-line companies in any way in order to get control of them?—A. Yes; from the suits that have been in progress with John J. Carter and the Producers' Oil Company, Limited, it would seem that is what they are trying to do.

Q. Do you remember the capital stock of that company and how much they purchased?—A. The capital stock is \$600,000. Mr. Carter originally owned \$3,000 worth of stock; he purchased about \$300,000 worth more. We believe it was for the Standard Oil Company. I can not testify that it was, but from all outward appearances it looked that way.

Q. Did they attempt to get control of this independent company after purchasing this stock?—A. They did. Having the majority of the stock, they expected to elect the managers of the company. But the company, being organized in Pennsylvania under the special act of 1874, called the copartnership law or act, Mr. Carter would have to be voted in by a majority in number and interest in the Producers' Oil Company before he could vote that stock, and our people declined to vote him in. He has been in litigation with the company for the past 3 years or more, trying to get in. The courts have finally decided—the supreme court—that he was in error, and that the company must buy his stock at the appraised value. The appraiser was appointed, and that appraising has been taking place for the past 5 or 6 months. They are arriving at values, as the company are obliged to buy the stock that Mr. Carter owns. He has been voted into a portion of it, I believe.

Q. Have they bought stock in any other company?—A. If I remember correctly, they have secured something like \$400,000 in the United States Pipe Line.

Q. How much of that stock has been sold, and what is the capital?—A. I believe the capital is \$2,000,000, and, if I remember rightly, the stock that is out is about \$1,200,000.

Q. Did they attempt to get anyone on the board of managers in the United States Company?—A. They have 1 director in the United States Company; yes.

Q. Have they recently been purchasing stock in that company?—A. Not to my knowledge.

Q. (By Mr. KENNEDY.) That would be a legitimate way of getting control of those companies, would it not?—A. Yes; that is one way, but perhaps you or I do not care to go where we are not wanted; that is the only way I look at it; you do not desire to go into a company if you are not wanted there.

Q. If they get control of these companies, do you have any idea they will run them at a profit to the stockholders?—A. If they would run it, they would run at a profit; that is the way they run.

TRANSPORTATION SYSTEM THE CAUSE OF EXISTING EVILS.

Q. (By Mr. PHILLIPS.) Have you any statement you desire to make that we have not covered by asking questions?—A. This question of the aggregation of capital is, of course, a large one for a small man to handle, but I do not fight the Standard Oil Company. It is not my business to fight them. I do not believe the Standard Oil Company, with their millions, could or would drive me out of business, if I had the same advantages (and that every American citizen should have) that they have on the transportation lines. If they do not have that advantage over me, it makes no difference how large the company is; if they are run on right lines, it matters little.

Q. (By Mr. JENKS.) If I understand you, then, the evils that come from the Standard Oil Company would be done away with if the interstate commerce act could be enforced in both spirit and letter?—A. That is what I mean; in short, I mean that oil should be listed as other freight is. And my opinion is that it would be a good idea to have a railroad examiner just as you have a bank examiner for national banks. If I have a grievance and think Jones or the Standard

¹ See p. 370; Mr. Lee, p. 270; Mr. Archbold, pp. 577, 578; Mr. Phillips, pp. 589, 590, 595, 596; Mr. Emery, p. 656.

Oil Company is getting cheaper rates from a common point to Montreal than I am, let me file a complaint and have one of these examiners investigate the books of the railroad companies. It takes but a moment to find out where a groceryman or a wholesale-oil man is buying oil. You are not giving away a man's business by going to a railroad company and ascertaining the freight rate and the weight of his oil. The customer is not injured. I say that the complainant should do this because all men are human, and this is such a big business in shipping that we might not get justice even if a commissioner were appointed.

Q. Do you mean by that that it would be possible to buy up an inspector?—A. Yes.

Q. Unless the complainant were to have the privilege of going also?—A. Certainly. There are so few refineries that 3 or 4 railroad examiners would, in my mind, be sufficient. Of course other shippers might demand the same thing, but I believe, the way things are, conditions are such that something of that kind is necessary. It strikes me so, because I do not believe that we are getting justice; and I do not believe we can get it unless a thorough investigation is made.

Q. (By Mr. PHILLIPS.) Do you think there should be laws allowing the inspection of freight passing over the railroads?—A. Yes; I do.

Q. Have you anything further to suggest in remedial legislation for monopolies?—A. I do not believe they are harmful when on right lines. I believe that illegal or illegitimate competition ought to be banished in some way, whether by legislation I do not know.

Q. (By Mr. JENKS.) By illegitimate competition do you mean special favors shown by the railroads, and also this special cutting of rates in particular localities, of which you have already given us examples?—A. I mean the cutting of prices below cost of production. The oil business and every other business should be run on its own merits; if the Standard Oil Company, or Armour, or my little works can not get trade by holding out good goods and by good, honest competition, by manly efforts, we are not worthy of the trade; we should certainly have something that will protect us.

Q. (By Mr. RATCHFORD.) By honest competition do you mean that every man shall be allowed to place his goods upon the market with the opportunity to make a reasonable profit?—A. Yes; I do.

Q. (By Senator MALLORY.) Do you also mean that public carriers are created for a public benefit, and should not be permitted to show favors to one set of producers as against another set?—A. I can write a letter to Montreal, Quebec, soliciting trade, for instance, and send it for 2 cents. The Standard Oil Company pays 2 cents for the same kind of a letter. When I ship a carload of oil there that weighs 44,000 or 48,000 pounds, I pay freight on it accordingly; but from what I have seen, from what I have told you gentlemen, I am satisfied that their car goes through billed at 24,000 pounds, although it holds the same quantity as mine does. That is what I want; the majority of companies maintain that that is what I deserve.

AFFIDAVIT.

STATE OF PENNSYLVANIA, *County of Venango*, ss:

I swear that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

(Signed)

THEODORE B. WESTGATE.

Sworn and subscribed before me this 7th day of October, 1899.

[SEAL.]

Notary Public.

WASHINGTON, D. C., June 17, 1899.

TESTIMONY OF MR. M. L. LOCKWOOD,*Independent oil producer.*

The commission met at 10.55 a. m., Vice-Chairman Phillips presiding. Mr. M. L. Lockwood, being duly sworn as a witness upon the subject of the oil industry, testified.

Q. (By Mr. JENKS.) Will you kindly give us your name and address?—A. M. L. Lockwood, Zelienople, Butler County, Pa.

Q. What is your connection with the oil business?—A. I am an oil producer.

Q. For how long a time have you been in that business?—A. Since 1865.

Q. Are you an oil refiner also?—A. No.

Q. You have, I believe, a statement ready to make to the commission. If you will kindly give us that, we will afterwards ask any questions that seem desirable.

MR. CHAIRMAN AND GENTLEMEN OF THE INDUSTRIAL COMMISSION:

Robert Lockwood came from England with Winthrop in 1680. One hundred and forty-seven of his descendants, one of whom was my great-grandfather, participated on the side of the colonies in the war of the Revolution. I refer to this that there may be no question as to my Americanism.

It seems to me as though this reference is proper from the fact that it has become the custom of the monopolistic classes and all those who are fawning for favors at their hands to stigmatize as anarchistic and un-American any expression not in harmony with the present monopolistic condition of affairs.

I am a native of the State of New York. I left the farm in Erie County of that State in 1865 and went to the oil regions of Pennsylvania, and have been engaged in the work of producing oil ever since.

EARLY RAILWAY DISCRIMINATIONS.

Away back in the latter part of the sixties some of the refinery men in the oil regions who did not have the ear of the railway managers were unable to get a freight rate over the railroads that would enable them to sell their oil in New York and the export cities at a profit. They were obliged to sell the refined oil to the men who afterwards helped to create the Standard Oil Company, for these men even at that early date seemed to have an advantage in freight rates that enabled them to market oil at a profit when no one else could.

The facts which I shall present to you I desire not to be construed as against men, for I believe that the Standard Oil people are no better or worse than any other set of men would be, armed as they have been with practically exclusive advantages over the railways of the country. But the facts which I shall present to you I desire to be construed against an accursed system of railway discriminations which has made this great curse, the Standard Oil Trust monopoly, a possibility—against a system that has enabled the Standard Oil Company people to drive into obscurity, bankruptcy, or servitude the men whose energy and enterprise developed the great oil-producing and refining industry of America,¹ for before the blighting curse of railway discrimination was turned against the oil refinery men they prospered and grew rich in the refining business. They doubled the capacity of their refineries, adopted new and better processes, and were going forward in a business that promised much for themselves and their descendants.

But when the conspiracy between the Standard Oil Company people and the railways was consummated all men not included within the favored few were condemned to financial obscurity or ruin. No business ability however great, no better process however superior, could triumph, when the highways over which you must go to market were closed against you and manipulated in the interests of your competitors.

As long as there were open and equal rates over the highways of the country, many growing and prosperous refineries were built at every favorable point—at Franklin, Reno, Oil City, Rousseville, Petroleum Center, Pioneer, Titusville, Warren, Pittsburg, Cleveland, and Corry. The competitive contest in the business forced hundreds of the best minds to the study of better and more economic processes in refining, and the most rapid strides were made in perfecting and cheapening cost.

Many refinery men made many buyers of crude oil, and the producer selling his oil in the competitive market was enabled to obtain a fair share of the profit in the business. The consumer buying his oil from competitive sellers was enabled to receive the benefit of each and every economy in the process of producing and refining petroleum.

¹ See Mr. Archbold, p. 553.

THE SOUTH IMPROVEMENT COMPANY CONTRACT.

In 1878 the men who had been intrusted with the management of the highways, the railways of the country, understood so imperfectly their duty as common carriers to the public that they entered into a contract with the men who afterwards created the Standard Oil Company. This contract was known as the South Improvement Company contract, and was between a corporation of that name and five trunk railways—all of the railways that entered the oil regions of Pennsylvania.

This contract provided that the railways should increase the freight to about double what they had been charging on all oil shipped; that they should pay back in rebate to the South Improvement Company an amount about equal to said increase of freight rates; that they should pay to the South Improvement Company a like rebate on all of the oil that anybody and everybody else shipped; that they should make any other change in freight rates necessary to insure the South Improvement Company's success in business. This contract provided, in substance, that they should break up and destroy all refinery men outside of the South Improvement Company by high rates of freight; and that they were to keep watch and report to the South Improvement Company all the business and shipments which any of these outside refineries should make.¹

Now, Mr. Chairman and gentlemen, I desire here to say that everything that the railway companies publicly contracted to do for the South Improvement Company in 1878, the railway companies have since secretly and persistently done for the benefit of the Standard Oil people,² as I will prove to you. I shall prove it, too, in the face of the fact that whenever any of the Standard Oil Company's people or their agents or the railway people who knew the facts have been subpoenaed to testify they have almost invariably refused to answer, shielding themselves behind that provision of law which provides that you shall not force a man to testify to that which will convict him of a crime.

The men who developed the oil regions of Pennsylvania were of the best families of the Republic. The ancestors of many of them helped to win our independence as a nation, and when the provisions of the contract of the South Improvement Company became known, it created such a furor in the oil regions as has seldom been seen. Men saw the principles of equal rights destroyed, the highways over which their products must go to market being in the hands of a set of brigands, who had pledged themselves to rob the people of an average of more than \$1 a barrel on all the oil they produced, and give it to the 18 men who constituted the South Improvement Company.

The public press of the oil regions at that time had not yet been subsidised and it gave the alarm. Men came together and consulted, meetings were called, and the more that was learned of the provisions of the South Improvement Company contract the more awful the crime which was attempted against the rights of the people developed to be. Mass meetings at Franklin, Oil City, Titusville, and Parkers were attended by thousands. Men determined that if the railways were to be used to destroy the great American right of equality they would have no railways, they would tear up their tracks and burn their bridges.

SOUTH IMPROVEMENT COMPANY (CHARTER REVOKED).

The railway companies became alarmed. A committee of the producer refiners went before the legislature, then in session at Harrisburg, and secured the repeal of the charter of the South Improvement Company. The railway officials made fair promises to give everybody equal rates, and the producers and refiners, thinking that they had won a victory and their rights would be respected, went about their business.³ Right here I desire to state that the battle of the producers in the oil regions has been continuously and persistently conducted upon that same principle. They asked no favors beyond this, that they should be accorded equal rights over the highways of the country.

But it soon became apparent that the railway companies were not keeping faith; that in fact they were doing for the Standard Oil Company people secretly just what they had publicly contracted to do for the South Improvement Company. The independent refiners were fast being driven to the wall, while there was evidence of the greatest prosperity among the Standard Oil people's refineries. Very few of the facts of this period have leaked out, as when the Standard Oil Company people or the railroad people who knew the inside facts were subpoenaed.

¹ For a copy of this contract see the report of the Hepburn committee of New York, passed to 461; or Fifteenth Congress, first session, House Reports, vol. 8, pp. 387-391. A part of it is reprinted in this volume, pp. 430-434.

² See p. 430. Mr. Archibald, p. 359; Mr. Boyle, pp. 421-423; Mr. Emery, p. 415.

³ See producers and refiners' contract, p. 446, Hepburn committee report; or Fifteenth Congress, first session, House Reports, vol. 8, p. 391. It is reprinted in this volume, p. 430.

to testify they almost invariably, under the advice of their counsel that their evidence might incriminate them, refused to answer.

But by the evidence in the case of the Standard Oil Company against W. C. Schofield, at Cleveland, Ohio, we learned that the profits of refining, including railroad rebates for 4 of these years, was an average of more than \$2 a barrel, a profit in refining which, if economically managed and honestly capitalized, amounted to more than 400 per cent annually; while at the same time the refinery men who did not have the favor of the railroad companies were being driven into bankruptcy and ruin, while the producers, much of the time, were forced to take a price for their oil below the cost of production, and the consumers to pay two prices for the oil that they burned in their lamps.

STANDARD OIL COMPANY SECURES CONTROL OF THE PIPE LINES.

I have a record of 26 pipe lines built in the early part of the seventies to transfer oil from the wells to the railways.¹ These pipe lines were mostly built by producers in their struggle for deliverance from monopolistic control. The Standard Oil Company people, having secured control of the United Pipe Line and American Transfer Company, began a campaign to bankrupt, destroy, and absorb the pipe lines built by the producers. The Standard Oil people, having a large rebate on all the oil they shipped and on all the oil that anybody else shipped² through any of these different pipe lines, could go into the field and pay a little more at the wells, and could sell oil at a little less at the seaboard than any other shipper, and still only use a small fraction of the large rebates which they were receiving from the railway companies; growing rich themselves while they were bankrupting and absorbing the pipe lines built from the meager means which the producers were able to wring from the grasping greed of this great monopoly. Finally the producers and refiners came to understand that the highways of the country—the railways—were in the hands of a set of highwaymen, who, every time they went to market, would rob them of all of their profit and a part of their principal and hand it over to the Standard Oil Company people, helping to fasten that monopoly upon us. Mr. Chairman, if you must be robbed it does not make any difference to you whether Dick Turpin does it through the instrumentality of a pistol, or whether John D. Rockefeller does it through the instrumentality of a railroad.

There could be but one end to that kind of business—bankruptcy and financial ruin of the independent pipe lines. For the sworn evidence to prove all of the above statements, I desire to present the commission extracts from the evidence before the Interstate Commerce Commission, before the courts, and before both State and national investigating committees.

RAILROADS PAY REBATES TO THE STANDARD OIL COMPANY.

I have stated that interested parties refused to testify, but there is always some way for the truth to come out. There arose a little unpleasantness between the Pennsylvania Railroad and the Reading Railroad, and we were enabled by subpoenaing the assistant comptroller of the Reading Railroad, in the case of the Commonwealth of Pennsylvania against the Pennsylvania Railroad and the Standard Oil Company, to bring into court the settlement sheets showing their settlements for the transportation of oil. Some of these sheets showed that there had been rebates paid to the Standard Oil Company to the amount of \$1.10 per barrel.

Mr. A. J. Cassatt, third vice-president of the Pennsylvania Railroad, being subpoenaed to testify in regard to these settlement sheets and the rate on oil,³ was asked the rate per barrel. The answer was: "\$1.90." Question. "What was the actual rate?" Answer. "If shipped by the Standard Oil Company, 80 cents a barrel." The open accepted rate was \$1.90; but, after deducting the rebate of \$1.10 which the Standard Oil Company people received, the actual rate would be 80 cents. Now, further investigation showed that, through the terminal charges of corporations in which the Standard Oil Company was largely in control, the railway companies only actually had 35 cents a barrel to divide between themselves for the transportation of this oil for the Standard Oil Company, while an outside refiner and shipper would be obliged to pay \$1.90 per barrel. Question.⁴ "I understand you, Mr. Cassatt, that this 22½ cents paid to the American Transfer Company is not restricted to oil that passed through their lines?" Now, mark his answer, because it is a remarkable one. Answer. "No, sir; it is paid on all

¹ See Mr. Archbold, p. 553; Mr. Boyle, pp. 413, 420, 423-426.

² See Mr. Page, Mr. Rockefeller.

³ See page 608 of the transcript of testimony in the case of the State of Pennsylvania v. Pennsylvania Railroad Company, United Pipe Lines, and Acme Oil Company. Reprinted, p. 191, House Reports, vol. 9, Fiftieth Congress, first session.

⁴ Ibid., page 601.

oil received and transported by us, as I have before stated." Question. "Now, you will find a drawback paid of \$34,000—\$41,000 less the \$7,000, the Buffalo, Philadelphia, and New York proportion. (Part of this oil was shipped over a road that was not in the combine.) Could you tell who that drawback was paid to?" Answer. "Forty-nine cents per barrel went to the American Transfer Company and the Standard Oil Company under the arrangement which I have already explained." The testimony of J. D. Archbold showed rebates paid to the Standard Oil Company of 64½ cents a barrel.¹

It was impossible about that time and during the growth of this monopoly for outside shippers to get any cars for transporting their oil. The testimony of W. L. Fox, who owned a pipe line, Warren Gray, and others shows that the railways refused to allow the independent shippers cars, and that they were unable to move their oil.²

Q. (By Mr. FARQUHAR.) What year was that?—A. That was in 1878, I think. I wish to present here an extract from a letter of Mr. Daniel O'Day to Mr. Cassatt, accepting the commission or rebate. Now, I suppose you know that Mr. O'Day is the general manager, almost the generalissimo, of the Standard Oil Company. A very large percentage of the brains of that concern is done up in that little Irishman's head. It reads as follows:

"I here repeat what I have once stated to you, and which I ask you to receive and treat as strictly confidential, that we have for many months received from the New York Central and Erie Railroad certain sums of money, in no instance less than 20 cents per barrel on every barrel of crude oil carried by each of these roads. I am constrained to say to you that in justice to the interests I represent we should receive from your company at least 20 cents a barrel on each barrel of crude oil you transport.

"In submitting this proposition I feel that I should ask you to let this date from the 1st of November, 1877, but I am willing to accept as a compromise (which is to be regarded as strictly a private one between your company and ours) the payment by you of 20 cents a barrel on all the crude oil shipped, commencing February 1, 1878.

"I make this proposition with the full expectation that it will be acceptable to your company, but with the understanding on my part that in doing so I am not asking as much of the Pennsylvania road and its connections as I have been and am receiving from the other trunk lines."

Now here is an extract from a letter of A. J. Cassatt to Mr. R. W. Downing, comptroller of the Pennsylvania Railroad.

Q. (By Senator MALLORY.) What court was that case in? Was it in the supreme court of Pennsylvania?—A. It was taken before an examiner of the supreme court. The extract is as follows:

"I agreed to allow this commission from and after February 1, until further notice, after having seen receipted bills showing that the New York Central Railroad allowed them a commission of 85 cents a barrel, and that the Erie Railroad allowed them a commission of 20 cents a barrel on Bradford oil and 30 cents a barrel on all other oil, and that they had been doing so continuously since the 17th of October last.

"Of this, however, you saw the evidence yourself in the bills which I submitted to you last week. Please therefore prepare vouchers in favor of the American Transfer Company, per Daniel O'Day, for this commission of 20 cents on shipments during February, March, and April, and hereafter make settlements monthly."

In the same report will be found a letter from Mr. A. J. Cassatt to Mr. Daniel O'Day, dated May 15, 1878, in which he says: "Your favor of February 15 has been received, and direction has been given to allow you from and after February 1, 1878, the commission therein asked for, until further notice."

The statement of the Pennsylvania Railroad shows that the 20 cents a barrel agreed to amounted during the months of February and March, 1878, to \$68,753.50, which was paid over to the American Transfer Company by the Pennsylvania Railroad for the benefit of the Standard Oil Company's people. I have a vivid remembrance of that time. I was interested in a pipe line that was competing with the American Transfer Company for the oil produced in Clarion County. I

⁴ *Ibid.*, p. 732.

⁵ *Ibid.*, p. 734.

⁶ *Ibid.*, p. 734.

do not believe that at that time the American Transfer Company had over \$60,000 invested in all their pipe-line system, and yet in 2 months they received in rebate from the Pennsylvania Railroad Company alone \$68,753.50. I remember what a hard time we had in keeping alive, financially, the old Atlantic Pipe Line Company. The American Transfer Company was paying a little more for oil at the wells than we could get for it after we had piped it and loaded it on the cars. I can imagine now how financially easy the old Atlantic Pipe Line Company would have been if the Pennsylvania Railroad Company had poured into its coffers \$30,000 or \$40,000 a month. Remember, this \$68,753.50 was from the Pennsylvania Railroad alone. What the Erie and the New York Central were paying then I do not know, for there is no record; but men who have studied the evidence in the Hepburn committee's report claim that the evidence shows that the 5 trunk railways paid to the Standard Oil Company people \$11,000,000 in rebates in 16 short months.¹ Reverse these conditions and the Atlantic Pipe Line Company would have driven the American Transfer Company into bankruptcy just as the Atlantic Pipe Line Company was driven. Railway discrimination means ruin to any enterprise that is discriminated against, and it means monopoly for any enterprise discriminated for.

DESTRUCTION OF INDEPENDENT PIPE LINES.

Upon the question of the destruction of these independent pipe lines, Mr. W. T. Shidey, testifying before the Hepburn committee, said, in answer to a question as to whether the Hunter and Cummings Pipe Line, which was one of these independent lines, was shut out of the market: "Yes, sir; they were shut out of the market practically."² The history of the Hunter and Cummings Pipe Line was the history of all the independent pipe lines in the oil regions. By railway discrimination they were practically shut out of the market. Concerning the effect which the Rutter circular—providing for a rebate for certain pipe-line companies—had upon all the pipe lines not in the United (Standard) Pipe Line pool, Mr. E. G. Patterson testified before the Hepburn committee as follows: Question.—"To whose benefit did the 20-cent rebate provided for in the Rutter circular inure?" Answer.—"Entirely to the United (Standard) Pipe Line. The result of it was that the United Pipe Lines absorbed 80 per cent of the 20 lines that were then in existence in the country."³ To which I desire to add that they ultimately absorbed them all. The testimony before the Interstate Commerce Commission in the Titusville and Oil City independent cases goes to prove that the railways had turned their terminal facilities for the transfer of oil from the cars to the seaboard in New York over to the Standard Oil Company, so that the independent oil refiners could not use their tank cars in transferring oil to the seaboard, and had to ship their export oil all in barrels.⁴

Q. (By Mr. JENKS.) Do you recall the date of these cases?—A. They were about 1878 and 1879. Then came the discrimination against barrel shippers and in favor of tank shippers and in the interest of and for the benefit of the Standard Oil Company, and when the Interstate Commerce Commission ordered the railway companies to stop this discrimination they ignored the order.⁵ The evidence goes to prove that the railway companies adopted a system of false billing in the interest of the Standard Oil Company and against the independent refiners. The evidence further goes to prove that after the independent oil refiners had spent many years in building up a trade for their oil in the New England States the railway companies, in the interest of the Standard Oil Company, put up the railroad rates to New England to the independent refiners and shut them entirely out of that market. The work of years was destroyed in an hour by an act of these railway conspirators.⁶

All of this evidence, hundreds and hundreds and hundreds of pages of it, goes to prove without a shadow of a doubt that the railway companies all through these years were doing for the Standard Oil Company secretly just what they had publicly contracted to do for the South Improvement Company in 1876.⁷

NO REMEDY FOR RAILWAY DISCRIMINATION IN THE COURTS.

Now, what is the remedy? There is practically no remedy in the courts. They are too slow and expensive. These great railway combinations, in cooperation with the trust organizations, can "razoo" a man up and down through the courts, from one to another, for 10 long years, until he is financially exhausted and his business ruined. Why, gentlemen, the Cox case, which related to

⁷ See Mr. Archbold, p. 553.

anthracite coal shipments, with all the power and influence of the Interstate Commerce Commission behind it, has been before the courts for 11 long years, and is yet unfinished. This evidence goes to prove that these railway discriminations and favoritism were continued in favor of the Standard Oil Company and against the independent refiners even after the interstate commerce law was upon the statute books.¹

Now, then, in the face of all the wrongs which I have enumerated to you, the Oil Producers' Council, a body elected from the different producing districts, began criminal action in 1879 against the Standard Oil Company and the Pennsylvania Railroad for conspiracy against the public. This action was brought in the courts of Clarion County, Pa. The case was brought in the names of Col. J. A. Verra and myself. The case was prepared at enormous labor and expense. The evidence was at hand to prove the facts, some of the conspirators were before the court and the jury, with almost a certainty that, with the evidence at hand, they would be convicted and sent to the penitentiary to pay the penalty of their crime; and then 8 members of the supreme court of Pennsylvania took original jurisdiction in these criminal cases and took the indicted conspirators away from the courts of Clarion County and hung the case up.¹

The late Franklin B. Gowen, a man of great integrity and ability, who was a member of the constitutional convention of Pennsylvania in 1873, said before a committee of Congress here in Washington: "That if that constitutional convention did anything effectually it was when it took original jurisdiction in criminal cases away from the supreme court of the State." And yet when the men who had entered into a conspiracy to monopolize the great oil producing and refining industries of that State had been indicted and were before a jury of their peers, we find members of the supreme court ready to stretch, aye, violate, the constitution in order to protect them from just punishment. The producers and refiners, exhausted and impoverished, fighting for their right to do business in this free country, found not only the railway companies, in league with the Standard Oil Company, against them, but members of the supreme court ready to do the bidding of the Pennsylvania Railroad and the Standard Oil Company and protect indicted conspirators from just punishment for their crimes.

Read the record of the Matthews case¹ against the Standard Oil people for conspiracy to blow up his refinery and ruin his business. Read the evidence of Matthews; read the evidence of his partner, whom they had bribed and debauched to betray his associate. Read the evidence of this man, whom they had spirited about from the Atlantic to the Pacific, keeping him under cover, under an assumed name, at Boston and elsewhere—keeping him under cover for four long years, that his evidence might not be had by the courts; keeping him until the load of crime in his heart became too great for him to bear, and conscience forced him to go back to Buffalo and confess to Matthews. Note how Matthews, struggling with poverty, yet determining that justice should be done, had spent the few remaining thousands he had left in these litigations, and how finally his little refinery was forced into the hands of a receiver, and he was financially ruined. Read it all, for I say to you that no honest man can read the record of his case without feeling that there was a crime committed against the State. And that's not all. Matthews had verdicts for \$270,000 against the Standard Oil Company people in his civil damage cases, and the creditors of Matthews, under this receivership, had to settle these \$270,000 verdicts for \$17,300.² And this is not all. These great monopolies and the political bosses—who are but the creatures and servants and instruments of these great monopolistic combines—these bosses secure, in my opinion, nominations of judges, and then, through the help of the party machinery and a liberal supply of corruption funds, succeed in electing them; and there, in our higher courts, men, elected by corruption funds, sit to dispense their kind of justice to the American people.

The remedy is not in courts. You can not reach these fellows in the courts. They will circumvent you. They will break up any man who honestly attempts to bring them to judgment. The thought is fast becoming fixed in the minds of the common people that these great railway combinations, extending as they do from the Atlantic to the Pacific and from Canada to the Gulf, these great combinations of corporate capital, are gradually packing our higher courts with men who will do their bidding, or rather with men who are in sympathy with the present monopolistic condition of things.

THE INTERSTATE COMMERCE ACT.

Now, then, in 1878 the producers of petroleum in Pennsylvania had the old Anglo-Saxon confidence in the justice of the courts and in the power and omni-

¹ See Mr. Archbold, p. 558; Mr. Boyle, pp. 427, 428; Mr. Emery, p. 602. ² See Mr. Archbold, pp. 555, 556.

tency of the law. If we could get a law enacted by Congress which would remove all discriminations we thought then there would be no more trouble. I paid \$1,600 to a retired railway attorney of great ability to draft an anti-discrimination railway bill. The conditions were that it should be such a bill that when enacted into law the railroad companies could not drive a train of cars through it. I shall never forget the report which that committee made when they came back without bringing that bill from Washington. They found Judge Reagan, of Texas, chairman of the Committee on Commerce, and took the bill to him. He read it over and said: "Well, my God! this is just what we need down in Texas." We all know what a magnificent fight Reagan and the friends of that measure made in Congress for its passage. We always thought that the Cullom amendment in the Senate very much weakened it, but at last it was passed, and we had the interstate-commerce law. But do you know that these great railway and trust combinations do not seem to care any more for that law than though it was not upon the statute books? On every subterfuge they evade and violate it. If they can control the appointment of Attorneys-General and Supreme Court judges they do not care what the law is. They have become bigger than the Government itself. They dare to threaten the Interstate Commerce Commission and ignore its orders, and that commission of this great Government seems powerless to perform the duties provided for it in the law that created it.

Four or five years ago the Atchison, Topeka and Santa Fe Railroad went into the hands of a receiver, and about the first thing the receiver found out was that the officers of the road had paid out over \$7,000,000 in rebates to trusts, monopolies, and favored shippers. And, while this was a State prison offense, there did not seem to be any disposition on the part of the Attorney-General of the United States to bring these great criminals to judgment. These great railway combinations and monopolistic organizations seem to overshadow the Government and direct and control the action of its officials.

Q. (By Senator MALLORY.) Was not that before the passage by Congress of the law which subjected the party who received a rebate to liability under its provisions and which bound all parties concerned in the rebate business?—A. It was at the time the Santa Fe road failed, in 1893-94, long after the interstate-commerce law was in operation.

Behind the power of railway discrimination the Standard Oil Company, the Sugar Trust, the Steel Combination, the Big Four Beef Combination, and the rest of these trust organizations feel so secure in their power to throttle competition and plunder the producers and consumers of America that the stock of these companies, some of it from 30 to 90 per cent water, is selling to-day at from 200 to 400 cents on the dollar.

THE CASE OF GEORGE RICE, OF MARIETTA.

The greatest battle in the record of time has been fought by George Rice, of Marietta, Ohio, for the right to do the business of his choice in this free country. What is the record in that case? In the latter part of the 70's the railway managers, in order to cripple Rice in the interests of the Standard Oil Company, doubled the freight on oil at Marietta, where Rice's refinery was. But the raise was only on oil; no other freight was raised. It was also only at Marietta. Ten miles below, at Parkersburg, on the Ohio River, the Standard Oil Company had a refinery, and the rate was not raised on oil from there, nor was it raised at Wheeling, above Marietta. The railroads raised the rate on Rice's oil at Marietta, but no raise was made anywhere else. There is evidence to prove this statement.¹

What further? The railroads over which Rice had been shipping to the southern markets raised the rate to him from 29 to 212 per cent over and above what the Standard Oil Company had to pay. Finally they refused to give Rice any rates at all.²

What further? The railroads paid the Standard Oil Company rebates on the oil that Rice shipped.³

Freight Agent

Q. (By Mr. KENNEDY.) How much?—A. I have given you the reference so you can tell. I did not go into that.

What further? The railroad companies discriminated against Rice in favor of the Standard Oil Company to an amount equal to \$128 per car on cars carrying 100 barrels.¹

I hope I am not asking too much when I ask the members of this commission to read these 48 pages² giving the history of George Rice's exertions to do business over these American railways. Every statement therein made is supported by sworn evidence before the Interstate Commerce Commission, before the courts, and State and national investigating committees. When you have read this report of crime and seen how the rights of American citizens are destroyed by these railway companies, I would suggest, and I think it proper, that when John D. Rockefeller appears before you, you ask him whether, if the railway companies had treated him as they did George Rice, he thinks that he could have succeeded in business.

Q. (By Senator MALLORY.) What is that [referring to book in witness's hand]? What book is that?—A. Three chapters of H. D. Lloyd's great book called *Wealth v. Commonwealth*.

It does not seem possible that, under this great Government, based upon the doctrine of the equal rights of man, such outrages could be possible. Yet this great Government, through its Congress and its commissions, seems powerless to prevent the wrongs which I have enumerated.

THE REMEDY FOR RAILWAY DISCRIMINATION.

What is the remedy? Take the railroads away from the corporations; make them public property, let the Government own and run them; make them highways over which the people can go to market upon even terms. The \$11,000,000,000 of capital combined in the railways of the Republic, organized under joint tariff and passenger associations, has throttled the law of competition and constituted one gigantic railway trust, controlling the highways of the people, dictating who shall and who shall not do the business of the country, and condemning this man to poverty and that man to riches. The holders of this \$11,000,000,000 of capital, with those holding the capital of the trusts and monopolies, have constituted themselves the political dictators of this country. They furnish millions of dollars for corrupt political campaign purposes. They assume to own the votes of all the men in their employ, and he who becomes politically obnoxious to them is blacklisted and turned out to starve or to hunt a new occupation. Shrewd politicians, backed by this combination of capital and this power, have constituted themselves political bosses. These political bosses are but the creatures and servants and instruments of this great corporate power, and these bosses are dictating the nominations of legislators, Congressmen, Senators, and judges satisfactory to their masters. In this way they are controlling legislation and escaping punishment for their crimes. It takes a strong man, Mr. Chairman, well anchored in the confidence and affections of his people, to triumph politically against this combined capital and power, and just in proportion as these great trust combinations are enabled to absorb the wealth produced by the people and impoverish them, just in that proportion will the people become subservient and cowering, because the fear of hunger for wife and babies makes cowards of us all. Can the Republic survive with these railways in the hands of corporations which are fastening these monopolies upon us? These corporations, in justification of their management of the highways of the people, the railways, set forth that they are moving the freight of this country cheaper than the freight of any other country upon the globe. True, but out of their own mouths they convict themselves of a great crime. I hold in my hand a receipted freight bill for the shipment of a carload of oil-well supplies from Harmony, Pa., to Unity, Pa., a distance of 49 miles. The cost was \$46.40 for this carload of 16 tons, or \$2.91 a ton for the 49 miles, or \$0.0593 per ton per mile. I have freight bills showing that I have paid \$0.0493 per ton per mile in carload lots. A large percentage of the freight of the American people is moved in less than carload lots. I have here receipted freight bills for 1 and 3 ton lots, and I find that I paid \$0.1257 per ton per mile.

Q. (By Mr. JENES.) Have you any evidence to show that, over the same road for the same distance and the same kind of freight, any lower rate has been given

¹ See exhibit, page 552, report of the Fifth Congress on combinations and trusts.

² H. D. Lloyd, *Wealth v. Commonwealth*.

to anybody else?—A. No; I have not. It is a small matter and I am only shipping occasionally, you know. A large percentage of the freight of the country is shipped by men who ship a car this month, a car next month, etc.

Q. These freight bills are for fifth and sixth class freight, which I think oil-well supplies are. Does not everybody pay the same freight?—A. For small shipments I suppose they do. Now, statistics show that all the freight of this country, including everything, is moved at the average rate of \$0.0085 per ton per mile. These facts convict the railroad managers of a great wrong, for these freight bills show that the people are being robbed for the benefit of the stockholders of the railroads; and the statistics show that the stockholders of the railroads are being robbed for the benefit of the monopolies, trusts, and favored shippers. Here is the problem: If the people are obliged to pay upon their shipments of freight, as these freight bills show, from \$0.0432 to \$0.1357 per ton per mile for the movement of their freight, and all of the freight of the country is moved for \$0.0085 per ton per mile, how much less than \$0.0085 do the monopolies, trusts, and favored shippers pay in order to bring this average from \$0.1357 per ton per mile down to \$0.0085 per ton per mile? The answer to this question will answer the oft-repeated question of why so many of our railroads are in the hands of receivers. A proper answer to this question will answer why it is that so many of our railway managers are becoming multi-millionaires while the railroads are becoming bankrupt. The record of the last 25 years has demonstrated that as long as the railways are in the hands of corporations they will use them for the benefit of their friends, or inside combinations, and for the purpose of destroying the great principle of equal rights, which is the foundation stone of our Republic.

Take the railroads away from these corporations, and give every man an equal right in the transportation of his products. I know the independent oil producers and refiners of America, and if you will establish equality over the railways, with a guaranty that that equality will continue, I feel safe in saying that in less than 15 years the independent oil producers and refiners will drive the Standard Oil Company into a secondary position in the oil trade of the country. These great trust combinations do not know the first principle of economical management. By virtue of the great flow of wealth which has come to them from railway rebates and trust possessions, they have not been obliged to study the principles of economy a moment in their lives. By this monopoly process they have been able to take more money from the people than they absolutely know what to do with. Reestablish the equality of our people with respect to the railways of the country and there will be no more coal-miners' strikes; soldiers and deputies will not be called upon to shoot down American citizens like dogs in order to force them back under monopolistic control, for then the miner can ship his car of coal just as cheap as the biggest coal combine in the land. Men do not strike and go out and starve except as a last resource. Establish the equality of our people over the railways of the country and then the coal miners, when they become dissatisfied for any reason, will get together and form a little coal company of their own instead of striking. They will lease McCoomse's or McLaughlin's farm, open up a coal mine of their own, and ship their coal, the product of their own labor, to market upon equal terms with the biggest coal combination in the land. How could these great overcapitalized and extravagantly managed coal combinations stand such competition as that? They could not stand it at all; it would be mighty hard on the big coal combinations, but it would be justice and a wise national policy. With absolute equality over the railways of the country, so that every butcher could ship a car of cattle just as cheaply as the Big Four Beef Combine, that combine could not hold the monopoly of the meat trade of America for 24 hours. Under Government control, the letter of an oil producer, a coal miner, or butcher goes to its destination with the same speed, at the same cost, and with the same precision as the letter of an Armour or a Rockefeller. Send their oil, meat and coal to market upon the same terms of equity and it will not be long before these monopolistic combinations will be getting rid of their \$25,000 a year lawyers and managers upon the plea that their business will not stand such high-priced men. These managers will soon be engaged in building up businesses of their own, and the lawyers in a better business than advising their principals just how far they can go without getting behind the bars.

GOVERNMENT OWNERSHIP AND CONTROL OF THE RAILWAYS FEASIBLE.

How can the railways be taken away from the corporations? The public welfare demands it, and the power exists under the right of eminent domain of the State. The States can condemn the railways for the public welfare just as the private

lands were condemned upon which the railways were built for the public welfare. Pay the corporations for them just what they are truly worth, and in this transaction let there be no injustice either to the people or to the stockholders. But, someone will say, how could the Government pay the interest on the immense public debt which this purchase would create? Mr. Chairman, the people in this land, who are the Government, are paying it to-day. These railway companies are taxing the people under exorbitant freight rates for the payment of the interest on all of their corporate debt, money dividends upon watered stock, and hundreds of millions annually for the benefit of trusts, monopolies, and favored shippers. The railways are the peoples' highways, and under Government ownership they are only changing their managers. One of the greatest judges that this land ever produced, in my judgment, once said that "a public highway can not be private property." An important reason for Government ownership consists in the fact that the bonded debt of the United States for the purpose of acquiring the railroads could be placed at from 1½ to 3 per cent less interest than is now being paid upon their bonded debt. This great reduction in interest would be an important factor in cheapening the cost of transportation. But a greater and more overshadowing reason for Government ownership is that then we should be able to shake off the grip of these monopolies from the throats of the people. But some very good men, however, fear the power of patronage which Government ownership would give the party in power. I do not fear it. That can be controlled by civil-service laws. But even if Government ownership should be a source of strength to the party in power, that party would have to be responsible to the people for a just, wise, and fair administration of this great public property in the interests of the people. Under corporate management, all of the power and influence of these great railway combinations, together with that of the men whom they control, is thrown into the balance in favor of this party or that party, according to whichever will secretly agree to serve them the best. They hold the balance of power in many of the States, and can elect the candidates of the party whose bosses will guarantee the greatest subserviency to their will. The party that obtains control by virtue of this influence is not held responsible to the people for the maladministration of these public highways, as they would be under Government ownership. It is because these \$11,000,000,000 of railway capital, together with all the men which it controls, are in politics clear up to their armpits, and it is because this capital and these men are in politics for corrupt and selfish purposes, irrespective of the public welfare. That capital of \$11,000,000,000, together with all the capital of the trusts, is corrupting our public affairs and debauching our public men. That constitutes one of the most important reasons why the people should take the railways away from the corporations. The record of the last 25 years has demonstrated that the Government must own and control them or else they will control the Government.

In the oil regions of Pennsylvania there is left a set of men who have never bowed the knee to Baal, but have battled on continually for their rights as American citizens in the use of the railways of the country. It has been a long battle; some of them who buckled on the armor in 1872 have been claimed by the hand of death; some of them have gone down under the blandishments and money of the Standard Oil Company; many of them have become bankrupt and been reduced to servitude and even obliged to go to work for that great monopoly in order to obtain bread for their families; some of them, with a deep sense of the great wrong that has blighted all their hopes and darkened all their future lives, with a deep sense of the great wrong that has driven them from the highways of the country, and chained them to the rock helpless while that great monopoly robbed them, have been driven to the grave of a suicide and to the insane asylums; but there are enough left to keep the faith and battle on for commercial liberty and equality. They have never faltered, but have battled as best they could with the means at their command. They first built the 26 pipe lines to which I have referred and then found that it was railway discrimination. They then went to the courts, and when the courts failed them, they went to Congress for the interstate commerce law. When the interstate commerce law failed them, they attempted to hew a way for themselves by building a pipe line to the ocean where commerce is free, thinking, hoping, praying that somewhere beyond our borders they might find a government where the equal rights of man are maintained upon the highways. We have found it in the great Empire of Germany, where the Government owns and controls the railways. The poorest man in Germany can ship a barrel of oil from one end of Germany to the other just as cheaply as the Standard Oil Company can. In Germany the independent oil producers and

refiners of America are not only able to compete successfully with the Standard Oil Company, but in addition they are enabled to earn flattering profits upon their entire capital. Give us national ownership of the American railways, which will insure and perpetuate equal rights, and we will soon give the people of America their oil at competitive rates. The people of America will not then be obliged to pay 40 per cent dividends on Standard Oil Trust stock, at least 50 per cent water, because there will be plenty of capital ready to serve them at 6 per cent profit upon the actual amount invested. I take no stock in the idea that inordinately great capital produces cheaply; where monopoly begins there improvement ends; it is competition that drives men to economy, improvement, and invention; it is monopoly that demands great profits. While competition was putting refined oil into tank steamers for the competitive markets of Germany at 2 cents a gallon, monopoly, backed by railway favoritism, was forcing the people of Texas and Arkansas to pay 25 cents a gallon for the oil that they burned in their lamps.¹ The attorneys of the Standard Oil Company, by a liberal use of the public press and a system of comparisons, have imposed upon the American people the thought that the Standard Oil Company has furnished them their oil cheaply. If the people have been served cheaply by this great monopoly what is the meaning of the \$500,000,000 which it has garnered? It is not the purpose of trusts to serve the people cheaply. It is their purpose to create monopoly and then force producers and consumers to pay dividends on billions of watered capital. Before the Sugar Trust had fully fastened its fangs upon us I bought good granulated sugar for my family use at \$3.90 a hundred. To-day the Sugar Trust is forcing the American people to pay from \$5 to \$6 a hundred upon the same grade of sugar, a difference, I am told, of more than \$200,000,000 annually. Two hundred million dollars, produced by the American people, are by this process transferred from the pockets of the people to the coffers of the Sugar Trust; and then Havemeyer says, "What are you going to do about it?"

How can this be prevented? First, by assuming control of the railways and guaranteeing to every man equal rates on the transportation of his products, and then by enacting a law forcing the great trusts and monopolistic combinations to fix a price upon their goods which, freights considered, will be the same in every township and hamlet of the land. When the price is changed at any point it must be changed everywhere. Make a violation of this law by the managers of corporations a State's prison offense. Corporations are the creatures of the State; the State has created them and has the right to control them in such a way that they will not be detrimental to the public welfare. Such a law would prevent the trusts and combinations from putting up the price in one section of the country, where there is no competition, and forcing the people there to pay the cost of destroying competition in another section. Such a law would prevent the corporations from forcing the people to pay for a war of annihilation against growing competition. It would protect and encourage competition upon every hand and cure the evils which are upon us. Say to all of our people—mine, manufacture, produce—the products of your labor shall go to market at rates equal for all, and you shall be protected in a fair competitive combat. Do this, and the great over-capitalized and unwieldy trust combinations will wither and go down before the energetic, intelligent, and active competitive capacity of the American people.

Q. (By Mr. KENNEDY.) I gather from the statements which you have just made that you believe freight discrimination and favoritism to be the mother of all the great trusts of this country?—A. I do, largely, yes; that is really the foundation; a trust must be protected in some way; the brains of the country are not in the heads of a few men. The protection which has created the Standard Oil Company, the Big Four Beef Combine, and trusts and monopolies of that class, is that of discrimination in freights.

(After a recess from 1 to 2 p. m. the examination of Mr. Lockwood continued.)

METHODS BY WHICH THE STANDARD OIL COMPANY SECURED CONTROL OF THE PIPE LINES.

Q. (By Mr. JENKS.) I understood you to say that there were quite a number of different pipe lines in the earlier days in Pennsylvania that were either forced to suspend operation or were bought up by the Standard Oil Company and united. How many pipe lines did you mention?—A. I have a record of, I think, about twenty-six.

Q. Can you tell us the methods by which the Standard Oil Company secured control of the pipe-line industry?—A. Well, in those early days their policy was to go to the wells and bid more for the oil than anyone else could pay. For the

¹ See p. 398; Mr. Archbold, p. 559; Mr. Emery, p. 616.

last 15 years they have adopted a policy of paying what they call a premium on oil that is accessible to the competing pipe lines. When a new pipe line starts into a particular district then the oil of that district becomes very valuable, the Standard Oil Company will put a premium on it, say, of 20 or 30 cents a barrel. When they have finally succeeded in driving out or buying up the competing pipe line the oil is no longer any more valuable than other oil, and then they take the premium off. Let me give you an illustration: In 1887 the Craig, Elkins & Kimble Company built the Western and Atlantic Pipe Line. They made their first shipment of oil on October 11, 1887. At that time the Standard Oil Company was paying 69 cents a barrel for crude oil at the wells. The Western and Atlantic Pipe Line did not fairly get started in business until the spring of 1888; but by that time the exchange market for crude oil, under the growing competition, was 88 cents per barrel, and the white-sand oils of Butler, Armstrong, Allegheny, and Washington counties, into which the Western & Atlantic Pipe Line ran, had become so valuable that the Standard Oil Company was paying a premium of 20 to 25 cents a barrel, which, added to the 88 cents, gave the producers of those counties \$1.08 and \$1.13 a barrel for their oil at the wells.

Refined oil was selling in August of that year for 7½ cents a gallon, including the barrels, in New York City and export points. In November, 1889, the Standard Oil Company was paying us \$1.30 a barrel for oil at the wells, and refined oil was selling in New York City at 7½ cents a gallon. Competition was putting crude oil up to the producers and refined oil down to the consumers. I have a very vivid remembrance of this time, because I was opening up some territory on the Little Connequenessing Creek, in the western part of Butler County, Pa., in what is known as the 100-foot rock. I had leased the Cable, Charley Young, Edward Young, Eyeholtz, and Hayes farms. I was getting some magnificent wells. One on the Eyeholtz farm started off at 125 barrels an hour. I had 1 well on the Charley Young farm that averaged 1,000 barrels a day for a long time. I think I drilled about 40 wells on this property. Competition was giving me all this oil was worth, as compared with what the consumer was paying for it, and I was getting rich. I was getting from \$1.10 to \$1.30 a barrel. About this time it became evident there was a 100-foot oil belt extending from the western part of Butler County down into the eastern part of Beaver County, Pa.

I worked night and day, and never stopped for anything, until I became interested in about 3 miles of this oil belt. Starting on the southwest I got the Fogle, Kanoff, Shrumm, Trautman, Allen, Passavant, Coker, Fauke, McCurdy, Eyeholtz, Getman, Eichenower, and Moyer farms. I was interested in 2½ miles of this oil belt solid; I had it all. I thought I would make a million. I got some grand wells; one on the Trautman farm started off 1,200 barrels a day. About this time the Standard Oil Company gave the Elkins and Kimble crowd their price, and bought their pipe lines and refineries. The very next day the premium came off from that oil. It was not any better then than any other oil. As soon as there was no competing pipe line its superior qualities were gone, and from that day competition was gone. The price of oil gradually fell to 53 cents. They kept the market below 60 cents for one whole year. I did not sell a barrel of oil for one year above 60 cents. The average, I think, was about 56 cents. The next year I was obliged to sell all my oil at less than 70 cents a barrel, and below the cost of production. This condition continued for two years. The Standard Oil Company practically confiscated all of that magnificent property, and instead of having \$1,000,000, which I should have had, if I had been able to secure my share of the profit that was made on that oil, I absolutely had to mortgage my property to get money to pay my debts contracted for the tubing, casing, engines, boilers, rope, tools, and men. All of the value of that immense property, that would have made any man a millionaire, was transferred to the coffers of the Standard Oil Company.

Q. (By Mr. KENNEDY.) What did you say was the price per barrel when it started?—A. \$1.30.

Q. And what was the price of refined oil?—A. The price of refined oil at the time I started was 7½ cents a gallon in New York City.

Q. The cost of refined did not go down at all compared with the cost of the crude?—A. No; it did not. You can see from the dates I have just given that during the period of competition when that pipe line was in existence, the price of crude oil went up and that of refined oil went down, I think, a fraction of a cent. The history of that case is the history of the manipulation of the Standard Oil Company over and over again. If the oil producers are lucky enough to find and open up a great field the Standard puts the price down and practically confiscates the profits. Of course the Standard Oil Company's newspapers will be full of

cock-and-bull stories about the increase of production and increase of stocks of oil, but the facts are, that during the year which I have described, when the price of crude oil was pulled down from \$1.30 to 53 cents a barrel, the entire increase would not have supplied the consumptive demand of the world for 2½ months.¹ All of this talk about production and stock was a mere subterfuge to take from the producers the wealth they had created and transfer it to the coffers of the Standard Oil Company.

Q. (By Mr. JENKS.) Does that practically cover the explanation of the way in which the pipe lines were absorbed by the Standard Oil Company and the effects upon producers?

Q. (By Mr. PHILLIPS.) About 28 in number?—A. Yes; I have a record here of the number and names of them, if it would be of any benefit.

Q. It is, perhaps, not worth while to name them here, if you can give us the reference to the book. [Book held by the witness.]—A. Now, this is in a biographical book in which there is a speech delivered by myself on the free-pipe bill question 20 years ago.

DOES THE STANDARD OIL COMPANY AT PRESENT RECEIVE FAVORS FROM THE RAILROADS?

Q. In your testimony this morning you gave a great many instances of special railroad rates that were secured by the Standard Oil Company a good many years ago, and showed how, in your judgment, by virtue of these special rates, the Standard Oil Company had been built up. You cited us also the authorities by which these statements could be verified. Have you any information or any proof that the Standard Oil Company is at the present time getting any special privileges from any of the railroads?—A. The evidence in the Titusville and Oil City Independent cases goes to prove that.

Q. (By Mr. JENKS.) How long ago were these cases brought?—A. They were brought in—

Q. (By Mr. KENNEDY, interrupting.) Did you not say 1893 this morning?—A. It was about then; they were along after the interstate-commerce law was enacted. The evidence all goes to prove that the railroad companies are manipulated in some way so that the Standard Oil Company gets an advantage, and the great fear among the independent producers and refiners is that, after they have gone on and extended their trade and spent money to build up stations in which to do business in any section of the country, by some scheme the railroad companies will put up the rate on them and shut them out of that district, just as they shut them out of the New England States in the case which I cited this morning. It is the fear of railway discrimination that paralyzes men.

Q. (By Mr. JENKS.) We have had some evidence offered tending to show that the Standard Oil Company is at the present time receiving special favors. Have you yourself anything of a definite nature to offer in that direction?—A. No. I am an oil producer and I do not get in touch with the railroad people so much as the refinery men do. I have no doubt that they are getting a great advantage to-day, and probably at the end of 4 or 5 years we will find out just what that advantage is. At the time when they were getting \$1.50 and sometimes more in rebates they persistently denied that they had any advantages, but ultimately the truth came out in some way and we saw then why it was that they were triumphing over the independent companies.

Q. Have you any information at the present time with reference to the freight rates on oil over the Canadian roads?—A. No; I have no information on that subject.

Q. Did you not give us some instances this morning of very high rates which you had paid on some of the roads that run from Pittsburg to Union City?—A. To Unity Station.

Q. You showed that these rates were very much higher than the average rates throughout the country. Have you any proof of discrimination in rates between different persons or different companies by those railroads?—A. The road that extends to Unity is a coal road. It was built into that district to take out coal for, I think, the Buffalo and Cleveland Coal and Gas Company. I was told, while operating in that district, that the rate of freight on coal to anybody outside of that company was so high that it was impossible for them to compete at all in the market at Buffalo and in Canada.

Q. Were the rates on coal different to members of the company from what they were to outsiders, or were the rates the same to all parties, the members of the company getting their profits simply from the high rates that put money into

1887

their pockets as railroad owners?—A. I really do not know the inside working of that coal road. All I know is that the men who own coal farms there can not ship their coal. They are powerless to do any business in competition with the coal combination.

Q. Of course that might have been true, even though the owners of the road were paying the same rates, because what they were paying out in one form they were possibly getting back in another. Have you any information to show that this railroad has been acting contrary to law in making discriminations?—A. I imagine that on the class of freights which I ship everybody pays the same.

Q. Is there very much freight shipped over this road besides coal?—A. There has been quite a development in the oil and gas business in the region, which has made that road necessary for shipping oil supplies and pipes.

Q. You speak of this railroad running from Pittsburg to Unity. Is it a small line or a large road?—A. It is a part of the Allegheny Valley system, which is a branch of the Pennsylvania Railroad.

PIPE LINES OF THE INDEPENDENT COMPANIES.

Q. (By Mr. KENNEDY.) Did you not say the independent companies had their own pipe lines to the seaboard?—A. After the purchase by the Standard Oil Company of the Elkins, Kimble & Craig pipe-line system, when oil got down so low that it meant bankruptcy and ruin to all of us, the independent oil producers went to work and tried to hew a way out for ourselves by building a pipe line through to the seaboard. The first movement was in building what was known as the Producers and Refiners' Pipe Line Company, Limited. I think that was built into the McDonald field, with the expectation of piping oil to the railroads and then shipping it in cars to the independent refineries at Oil City and Titusville. As soon as that was completed and business began, a system of discrimination was set up against them in some way. I do not remember just how it was, but it resulted in the producers having to lay a line from the McDonald field, where the first little line was started, through to Oil City and Titusville and the refineries. After they had done that the discrimination began against the refined oil again. As long as these refinery men were taking the inferior oils of the Standard Oil Company which had been in tanks until the finer parts had evaporated, there was not much discrimination against them, I understand, but after they were able to get good fresh oil from the wells shipments of refined oil were blocked. Then we undertook to lay the seaboard line from Titusville to New York, or Jersey City.

Q. Have you a line there?—A. The line has been built down into New Jersey, but the railroads have blocked us. The managers bought a piece of land in fee simple that went under where a highway, a wagon road, passed. In the lower courts I believe we got a verdict in favor of our right to lay the line under there and transport oil, but they finally carried the case up to the supreme court in New Jersey, and after we had laid our line, I think, 60 miles farther on, that court reversed the decision and forced us to stop. I do not know, but I think we are still putting oil through there, but it is subject to the final decision of the court. The verdict was reversed by which we had the right.¹

Q. Does the line go to the seaboard?—A. It goes down now from New Jersey over the Central Railroad.

Q. (By Mr. PHILLIPS.) From what point?—A. From the end of the pipe line, I think 80 or 90 miles; it may not be as far as that to the tanks at the seaboard. This line that the Producers and Refiners Company has built is a double line. They transport the refined oil from the refineries at Oil City, Bradford, and Titusville through to the end of this pipe line, as they do the crude oil, and then it goes on board the cars to the seaboard. The refined oil is there put into steam tank vessels and sent to Germany, where the independent producers and refiners have built 3 large stations, each one of them, I think, capable of holding 70,000 barrels of oil. The crude oil is refined at the seaboard. In Germany there is no railway discrimination.

Q. What I wish to get at is whether the railroads now give the Standard Oil Company any advantage over you in getting oil to the seaboard; but I judge, by what you say, that, with the possible exception of the Jersey Central, no road can do it.—A. No road except the Jersey Central Railroad has anything to do with our oil from the time it leaves the well until it gets to the seaboard.

Q. They cannot, then, give the Standard Oil Company any advantage over you?—A. No, not on export oil; we are on even terms with the Standard Oil Company, with the exception, I think, of about 7 cents freight per barrel.

Q. (By Mr. PHILLIPS.) It does not exceed 15?—A. No, it does not exceed that.

¹ See Mr. Emery, pp. 650-655, 662; Mr. Phillips, p. 593.

SHIPPING REFINED OIL THROUGH PIPE LINES.

Q. A great deal has been said about the Standard Oil Company's methods of doing business. Were they ever able to, or did they ever, ship refined oil any distances through pipe lines?—A. Not to my knowledge; they have always claimed that it could not be done; that it would injure the quality of the oil.

Q. What has been proved by this pipe line running through to New Jersey?—A. It has been proved that it can be done successfully. You can ship 110 fire test, which is export oil, and put through right behind it 150 fire test, and separate the oil at the end of the line without making a change of more than a barrel, which is within 20 or 30 feet of the column of oil.

Q. Is that an improvement by the independents over the Standard Oil Company's methods of handling oil?—A. Certainly; very much.

Q. (By Mr. KENNEDY.) Then the independent companies do have some advantage over the Standard Oil Company in getting their oil to the seaboard?—A. In that connection.

Q. (By Mr. PHILLIPS.) Does the Standard Oil Company refine a percentage of theirs at the seaboard after pumping it through in a crude state?—A. Yes; I understand their export oil is nearly all refined at the seaboard.

PRICE OF OIL SHIPPED TO GERMANY.

Q. (By Mr. JENKS.) Did I understand you to say this morning that the independent refineries were supplying refined oil in Germany at 2 cents a gallon?—A. In the contest for that trade the producers sent shiploads of oil to Germany at from 2½ to 2½ cents a gallon; one cargo of oil, I believe, was sent at 1½ cents a gallon.

Q. Was that for the purpose of starting the German trade?—A. Yes; it was to get into the trade.

Q. They were then selling oil in Germany considerably cheaper than here?—A. I think so; a good deal cheaper than it was sold to American people generally.¹

RELATIONS BETWEEN INTERSTATE COMMERCE COMMISSION AND THE STANDARD OIL COMPANY.

Q. Did I understand you to say that the independent oil producers were chiefly instrumental in starting the idea of the interstate-commerce law?—A. Yes.

Q. And also that since the interstate-commerce law had been in force the Standard Oil Company, in particular, and the railroads, who were opposed to any restrictions upon their powers, had succeeded, in your judgment, in defeating largely the purpose of the law?—A. Yes.

Q. And in that connection, did you make the statement that the members of the Interstate Commerce Commission have been threatened?—A. Yes.

Q. In what way have they been threatened?—A. That their powers would be tested.

Q. You do not mean, then, that the members of the Interstate Commerce Commission had been personally threatened?—A. Oh, no; they simply questioned their authority and threatened to test their powers.

Q. From the connection in which you used the expression I was not certain but that you meant to say that the members had been personally threatened. You meant simply that the Standard Oil Company and the railroads had asserted that they thought they could defeat the law?—A. That the Commission did not have the power to perform the duties provided for it under the law.

Q. And they proposed to test that in the courts?—A. Yes; in the courts. There was one case taken into the courts by the Commission. You remember the Cox case; that was 11 years ago, and it has not yet been finished.

THE PRESS SUBSIDIZED BY THE STANDARD OIL COMPANY.

Q. You made the statement also that the press had been subsidized by the Standard Oil Company. Have you any positive information of special cases in which the Standard Oil Company has subsidized the newspapers?—A. Well, they have bought out the Oil City Derrick, and have hired Pat Boyle to run it. He runs it in their interest. I do not know just what the arrangements are, but the

¹ See Mr. Lee, p. 274.

paper is conducted in the interest of the Standard Oil Company, and attacks the independent producers and their movements.

Q. (By Mr. PHILLIPS.) Has there ever been any action brought against that paper for libel?—A. Yes. I think that Senator Lee sued them for libel; they published some very damaging statements, and he brought suit against them. I think Senator Emery also brought suit against them for what they stated about him.¹

Q. Were either or both of these suits carried to a conclusion?—A. I am not certain as to how those cases ended. My memory is that they were settled in some way, but I do not know just how.

Q. (By Mr. JENKS.) Have you any other specific cases in mind besides the Oil City Derrick?—A. Well, the Titusville papers, particularly the Titusville Herald, seemed to be under their thumb, and the Pittsburg papers have now reached a point where they take all of the oil information that they publish from the Standard people. The Standard publish what they want to in the reports and in the daily papers.²

Q. Your statement, then, means substantially this, that there are several papers in the section of the country in which you live that regularly make favorable reports with reference to the Standard Oil Company's methods and unfavorable reports with reference to the methods of those opposed to it?—A. Yes.

Q. More particularly the Oil City Derrick?—A. More particularly the Oil City Derrick.

Q. But you have no direct personal knowledge that the paper is owned by the Standard Oil Company, and you make your assertions largely upon the nature of the material that is published by that paper?—A. That is the source of the knowledge I have of the transaction.

Q. (By Mr. PHILLIPS.) Has the Oil City Derrick generally been favorable or unfavorable to the independent movement?—A. It is bitterly opposed to the independent movement and attacks the credit and reputation of the men who are exerting themselves for an outlet.

Q. You do not remember the termination of their suit at Warren in regard to the libel case?—A. Now, I am not sure as to that.

RAILWAY DISCRIMINATIONS RESUMED.

Q. (By Representative BELL.) Have you ever read Larrabee's book on railroads?—A. Yes.

Q. What would you say as to the merits of it?—A. Well, I think it is a full exposition of the railroad question in this country.

Q. Does not he develop the fact that as early as 1876 there was a tendency in the United States to interfere in political affairs?—A. That is, a tendency of the railroads to manipulate political parties?

Q. Yes.—A. Yes.

Q. And to fill judicial positions with their sympathizers?—A. Yes.

Q. Now, you spoke of the Standard Oil Company building up their trust through railroad discriminations. Was there any reason whatever at that time for creating the trust or anything that would enable them to build up the trust other than railroad discrimination?—A. I do not think there was. The men who were refining oil were men of ability and business capacity. At least equal to the business capacity of the Standard Oil people, with the exception that the Standard Oil people recognized that it was a question of advantage in freight rates instead of a question of superior goods; that superior goods could not go over the railways unless the railways let them.

Q. They raised the price on crude oil from about 40 to 80 cents a barrel, and then if an independent company shipped a barrel of oil did they not take 40 cents of that and hand it over to the Southern Improvement Company?—A. From 40 cents to \$1.10.

Q. And that had the effect of destroying not only the competitors, but of destroying the value of all the independent oil wells in the United States?—A. Very largely.

Q. And the market fell off?—A. Very much.

Q. And forced them out of business?—A. In a great many cases.

Q. Have you given any attention to the coal fields of Pennsylvania?—A. No; I have not, except in a general way.

Q. Is it a fact that the railroads of the United States refuse to let any private individuals operate a coal field?—A. Yes; I know that to be the case in Allegheny County.

¹ See Mr. Boyle, p. 487.

² See Mr. Boyle, pp. 404, 487; Mr. Rogers, p. 587; Mr. Monnett, pp. 312, 381.

Q. They have an independent coal company, which is a kind of a wheel within a wheel, gotten up among the railroad stockholders?—A. Yes; and that company is the only one that can successfully ship coal over that special railroad.

Q. If they give you a rate, do you ever have any trouble in your country in getting cars?—A. Why, in those early days and throughout the time of the independent refiners' struggle that was one of the principal ways in which the railroads discriminated in favor of the Standard Oil Company. They refused to give cars to men who had oil to ship. For instance, if a man wanted 20 or 30 cars, perhaps 2 or 3 days after he needed them 1 or 2 would come, and he would not be able to get his oil into the market at the time he expected.

Q. What have you seen in the way of discrimination against towns? Has anything of that kind come under your observation?—A. Well, not personally, but in the investigation of this question I have found that towns are built by railroads and that towns are practically destroyed by railroads as far as their commerce and industry are concerned.

Q. Is it the tendency of private ownership to create commercial centers, great centers?—A. Yes.

Q. Like Chicago?—A. And New York.

Q. Now, what, in your judgment, would be the effect of Government ownership or Government control that would require all railroads to carry freight for one man at the same price as they carry it for all others, the distribution of population being taken into consideration?—A. I think that it would be especially beneficial. It would give individual enterprise an opportunity. Men would have the courage to enter into business enterprises that they do not dare to enter under the present system.

Q. As I understand you, there is a timidity about building up enterprises in your part of the country for fear of discriminations in favor of some strong company and against the men that are starting the new enterprises?—A. Yes.

Q. These men are afraid to meet competition?—A. Yes; the great, overshadowing fear that men have in the oil country in starting in to compete for the oil trade and the refining business is that the railways will design against them and shut them out of the markets; that is the trouble. If there was a guaranty that everybody would be treated equally by the railways, the men of the oil regions have the courage, the ability, and the resources to go in and do this business.

Q. Now, what has been the experience in your part of the country with regard to the individual farmer marketing his product and the elevator companies shipping the same product from the West?—A. We do not have any elevator companies in our section.

Q. No; not in your section; I refer to the elevator companies in Chicago and the West. How does the freight rate from Chicago to New York correspond with that from Pennsylvania to New York?—A. Well, from the information that I have gathered on investigation of the subject, the rate from Chicago to New York is sometimes much less than it is from Pittsburg to New York.

Q. That is, the elevator companies and the beef companies can reach the markets in New York for less than the individual farmer in Pennsylvania?—A. Yes; I believe that.

Q. Is that a general principle now established with regard to the beef combines, the elevator combines, and all like combines?—A. I think it is.

RELATIONS BETWEEN RAILROADS AND THE SOUTH IMPROVEMENT COMPANY RESUMED.

Q. (By Mr. RATCHFORD.) Did I understand you to say this morning that the South Improvement Company made a contract with the railroad companies in 1872?—A. Yes; in 1872.

Q. Was that a contract to transport their products at certain prices?—A. Yes, at certain prices; they raised the prices.

Q. Would you care to state those prices?—A. I can not state the prices without referring to the testimony in those cases.

Q. (By Mr. PHILLIPS.) Have you referred to where that testimony can be found?—A. I have referred to the sworn testimony.

Q. (By Mr. RATCHFORD.) Can you state who composed this South Improvement Company? Was it composed of the independent producers and refiners?—A. The South Improvement Company was composed of 18 men. Ten of them were afterwards the prime movers in the Standard Oil Company combine.¹

Q. It appears that the contract to which you refer was not carried out on the part of the railroad company.—A. No; publicly it was not. I wish you would let

¹ See Mr. Emery, p. 619; Mr. Rice, p. 490.

me answer that. That contract was so abhorrent to every idea of American right that the men in the oil regions went into revolt. They would not stand it; they created such an excitement that the legislature took up the question and repealed the charter of the South Improvement Company.

Q. Did the producers bring action against the railroad company?—A. There was a settlement of the difficulty at the time, in which the producers, or a committee of the producers, entered into a contract with the railroad company that henceforth there should be no discrimination for or against anybody; that everybody was to have equal rights. I have given the reference to that contract;¹ it is on record.

Q. Is the South Improvement Company still in existence?—A. The charter of the South Improvement Company was repealed by the Pennsylvania legislature in 1872, and the company, of course, went out of existence; but as you will note, by referring to my statement, everything that the railroad company contracted to do publicly for the South Improvement Company in 1872 they have since secretly and persistently done for the benefit of the Standard Oil Company. If the South Improvement Company had been allowed to go on, they would have created a monopoly and controlled the oil business just exactly as the Standard Oil Company, enjoying the same advantages which the railroad companies had contracted to give the South Improvement Company, was afterwards able to do.

THE CASE OF MR. RICE RESUMED.²

Q. In referring to the case of Mr. Rice, of Marietta, against the Standard Oil Company, did you say that the railroad companies increased the rate on Mr. Rice's product, charging him an exorbitant price?—A. Yes.

Q. And that in doing so they paid a certain percentage of the amount received from Mr. Rice to the Standard Oil Company?—A. That is right. Now let me answer that a little further. Rice got the crude oil for his refinery from the Maxburg field, which, I think, is something like 70 or 80 miles from Marietta. Rice had a little pipe line and a car. He obtained a rate, I think, of 15 cents a barrel from the Lake road for his car, running it back and forth. He was extending his business, and the Standard Oil Company got after that railroad and told those men that he had to be stopped. When the road went into the hands of a receiver, Daniel O'Day went to the receiver and threatened that unless they would carry the Standard oil for, I think, 10 cents a barrel and charge Rice 35 cents a barrel—I am not quite sure as to these amounts, but I can fix that—they would lay a pipe line and ship all their oil by pipe line to their refineries in Marietta. The evidence shows that the receiver made that arrangement, and out of the 35 cents that Rice paid he turned over 20 or 25 cents in rebates to the Standard Oil Company. It is in evidence; it is on record; it can all be seen.

Q. Do you believe that it was the result of a demand on the part of the Standard Oil Company?—A. Yes.

Q. Following that question, now, a little further, have you not stated that the railroad company finally refused to ship Mr. Rice's oil at any price?—A. Yes; that was afterwards. Rice extended his pipe line to the Muskingum River, I think, or some river that runs in there at Marietta, and got some flatboats. The refusal to give Rice any rate at all was when he attempted to get his oil into the southern markets.

Q. Do you believe that was also the result of the influence of the Standard Oil Company?—A. I have no doubt of it in the world; not the least.

Q. Now, if the Standard Oil Company found it advantageous to get from the railroad company a certain percentage of the money paid by Mr. Rice for his shipment, how could it be advantageous for it to influence the railroad company to give Mr. Rice no transportation?—A. The profit of this monopoly has been enormous. The \$500,000,000 which it is said they have accumulated is an immense amount of wealth, and they have gotten it by working the railroads to destroy all competitors so that they could force the consumer to pay a large price for their oil. The 25 cents rebate which they got on Rice's oil was only a drop in the bucket compared to the profits that they could obtain by shutting Rice out of the market and selling their oil in Rice's territory.

Q. I take it from that that the company obtained the best conditions they could and that when they could improve them they did so. Is that it?—A. The Standard Oil people?

Q. Yes.—A. They are always looking out for the Standard Oil.

¹ See p. 385.

² See p. 390.

WASHINGTON, D. C., September 6, 1899.

TESTIMONY OF PATRICK C. BOYLE,

Proprietor and publisher of the Oil City Derrick.

The commission met at 10.30 a. m., September 6, 1899. Vice-Chairman Phillips presided and introduced Mr. Patrick C. Boyle, of Oil City, Pa., who, being duly sworn, testified regarding the oil industry.

THE OIL CITY DERRICK THE ORGAN OF OIL PRODUCERS.

Q. (By Mr. PHILLIPS.) Please state to the commission your name and residence.—A. Patrick C. Boyle, Oil City, Pa.

Q. What business are you engaged in?—A. Just now I am an editor and publisher.

Q. Of what paper?—A. The Oil City Derrick.

Q. You are the editor and publisher of that paper?—A. And proprietor.

Q. Who are the owners and stockholders?—A. Well, there are five stockholders. I own all of the stock but enough to qualify—all but four shares; there are four other stockholders owning one share each, enough to qualify them as directors.

Q. Are any of the Standard Oil Company interested at present, or have they been, in the Oil City Derrick?—A. They are not now and have not been for very many years. I have been the proprietor of the paper for a great many years.

Q. Were they not the original purchasers of the paper before you came into possession of it?—A. When I came into possession it was known as the Derrick Publishing Company, and W. J. Young was manager; that was in 1885.

Q. Was W. J. Young managing it in the interests of the Standard Oil Company?—A. Not as I understand it. He did not conduct it in the interests of any particular party, but employed editors, and they printed the news, as other papers did.

Q. Is it not publicly and fully known to be the organ of the Standard Oil Company? Is it not so considered throughout the whole oil field?—A. It may be assumed to be the organ of the Standard Oil Company, but it is not. It is the organ of the oil producers. It is the firm and steadfast friend of the producing interest, and has been from that day to the present time. I am speaking of my personal connection with it. From 1879 to 1885 I knew very little about the paper, but up to 1879 and since 1885 it has not been the organ of any special party.

Q. Has there ever been any adverse criticism of the Standard Oil Company in the Derrick?—A. Oh, unquestionably; any number of them.

Q. Within the last 10 years?—A. Oh, I can not recall any particular time. Within the last 10 years there has been no occasion for adverse criticism of the Standard Oil Company. There unquestionably would have been if there had been any occasion for it.¹

Q. Since you have been manager it has always been very friendly to the Standard Oil Company?—A. I can not say that. It is very friendly to the entire oil trade. As the Standard Oil Company is a part or division of that trade, it is friendly to that as well as the other interests.

Q. Has it not been adverse to all the independent movements that have been started since you have been manager and editor?—A. No, sir.

Q. And especially the independent pipe lines?—A. Only to those involving an unnecessary outlay of money and a taxation of the producers. It has stood hand in glove with the producers except those who would impose a tax on them for useless service.

Q. Do you consider it imposing a tax on the producers for the refiners and producers to build a pipe line into a given field for their own benefit?—A. So long as there was an efficient service already performed at the same cost I should consider it a hardship to have a duplicate.

Q. If you owned a refinery would you consider it a hardship on yourself and stockholders to lay a pipe line to gather oil from the fields?—A. We have taken the position that the producer would not be benefited by the duplication of the pipe line, and in that position we have been sustained by the results. Most of the pipe lines erected 10 years ago have never paid a cent in dividends.

¹ See Mr. Lockwood, pp. 398, 399

WHY THE WITNESS IS BEFORE THE COMMISSION.

Q. You may proceed in your own way to make a statement of whatever facts you have to the commission, but there is one question I will take the liberty to ask before you proceed. By whose solicitation did you come before this commission to give testimony?—A. My own.

Q. Your own solicitation. Did you have any conversation with the principals of the Standard Oil Company before coming before this commission?—A. None whatever, before or since. I should like to state in way of explanation that it was the outrageous testimony which I had heard here by previous witnesses that impelled me to ask the privilege of coming before you as an observer and as a person in a position to know the facts and to make some statements concerning the oil industry.

EARLY HISTORY OF THE OIL INDUSTRY.

There was an oil business in existence before Drake drilled his experimental well in 1859. The manufacture of shale oil began about 1840 in France, 10 years later in England, and 3 years later in America. While America was perhaps the latest among the Anglo-Saxon races to embark in the new industry, it made up in enterprise what it lacked in precedence. With the discovery of petroleum in 1859 the coal-oil industry of this country within a year or two practically ceased to exist, and plants constructed for the distillation of oil from shale were converted into refineries for the crude petroleum. By this means the refining industry was fully established, when petroleum appeared to claim the attention of commerce. The product, crude from the wells, found a ready market at remunerative prices. Petroleum was produced from gravel beds, salt wells, and oil springs long before it was obtained by the artesian process, and a considerable commerce established by Kier, Badger, Ferris, Peterson, Lockhart, and others when the Drake well came to increase the production. It was not at once used in the arts, but a demand was found for it among the apothecaries, and for many years it was known to the pharmacopœist as a liniment. Artesian borings were first applied in America by salt producers. At this point I should like to present petroleum in the original package. That is the way it appears. [Presenting small bottles of crude petroleum]. The first is from the Kiers well, and the second is from a well in Kentucky—from the American oil well on the Cumberland River. Prof. S. F. Peckham describes at some length in the Tenth Census reports the process employed by Colonel Ruffner, the pioneer salt-well driller, in 1808. Colonel Ruffner is given credit by this writer for having devised drilling tools not differing materially in form from those now in use. The jars, an essential implement in the oil-well driller's outfit, is said to have been devised and first used by Colonel Ruffner, and every salt-well borer since his time has laid claim to the use of this indispensable implement. As a matter of fact, drilling tools, substantially the same in form, were employed by the English coal hunters a hundred years before. This, however, does not detract in the least from the credit due to Colonel Ruffner, who unquestionably had never seen nor heard of an English rock-boring outfit. Many of the early oil wells were drilled after the manner of Ruffner and those who succeeded him with light tools, depending from the end of a flexible pole, which rose and fell by hand power manually applied. Oil, often in very considerable quantity, was noticed in salt wells, in some of which the flow was so free as to interfere with the operation for brine. The demand for salt, about 1810 to 1814, along the western slope of the Alleghenies from New York to Alabama was so great as to excite adventure in many parts, and salt wells were bored simultaneously in widely separated localities on the Ohio, Monongahela, Allegheny, and Kanawha rivers and their tributaries in large numbers, and with what might pass for spontaneous effort. Every district so explored has its traditions of oil discoveries, and, singular to say, the later oil developments in almost every instance have been faithfully outlined by the salt wells. In the absence of surface indications, at one time much in demand, all the earlier oil developments were conducted in the vicinity of salt districts, with the single exception of Oil Creek, and here it was found exuding from crevices in the rock or from gravel bed deposits. Rev. S. J. M. Eaton, one of the most intelligent observers among the early writers on oil topics, reports the first shipment of petroleum from the region of Oil Creek to consist of two 5-gallon kegs, conveyed to Pittsburg on horseback by a Mr. Carey, one of the first settlers in Venango County. Gen. Samuel Hays, another pioneer settler of Venango County, at a later period purchased the oil product of the county, 16 barrels in all, representing a year's production, which was conveyed to Pittsburg by raft and sold to

apothecaries at a dollar a gallon. Previous to 1820 the production of oil from salt wells, added to a somewhat extensive dipping interest at various places in several States, had reached a very considerable amount; so large, indeed, that the supply seemed inexhaustible, and a writer in the *Pittsburg Gazette* in 1828 agitates the use of petroleum for street-lighting purposes.

THE FIRST FLOWING OIL WELL.

The first flowing well anywhere was the famous American well, near Burkesville, on the Cumberland River, in Kentucky. It was drilled for brine in 1829, on the land of Mr. Lemuel Stockton, who passes into history as the first of his race to literally "set the river on fire."

Niles' Register (1829) says: "Some months since, in the act of boring for salt wells, in Cumberland County, Ky., a vein of pure oil was struck, from which it is almost incredible the quantity of the substance issued. The discharges were by floods, at intervals of from 2 to 5 minutes between each flow, vomiting forth many barrels of pure oil. These floods continued for 3 or 4 weeks, when they subsided to a constant stream, affording many thousand gallons per day."

Another writer says: "The oil found its way into the Cumberland River, was set on fire, and is said to have burred on the surface for a distance of 40 miles below." In 1833 Professor Siliman describes a visit to the oil springs near Cuba, N. Y., and the manner of collecting the oil from the surface of the water. Charles B. Tergo, in his *Geography of Pennsylvania*, 1843, describes the oil springs on Oil Creek, from each of which from 2 to 10 barrels of oil were collected in the season by the proprietors. In 1845 petroleum obtained from Peterson's salt well, at Tarentum, was experimentally used as a lubricant at the Hope Cotton Factory, in Allegheny. Two years later, Thomas and Samuel M. Kier produced oil from salt wells in the vicinity of Peterson's wells, and Samuel Kier, deeming the oil more important than salt, set about to find a market for it. A description of his efforts in this direction is set forth in the *Derrick Handbook*, pages 945 and 947. No one who is familiar with the history of the petroleum industry can withhold from Kier the credit of being the first trader and one of the earliest manufacturers of mineral oil. His efforts in behalf of an infant industry merit more than passing notice, and his contribution to it should be perpetuated in permanent form by a grateful people.

ORGANIZED ATTEMPT TO PRODUCE PETROLEUM.

The first organized effort to produce petroleum appears to have been set on foot in 1853 by Jacob D. Angier, of Titusville. The first recorded lease, the one under which he operated, contained these stipulations, to wit:

"Agreed, this 4th day of July, A. D. 1853, with J. D. Angier, of Cherrytree Township, Venango County, Pa., that he shall repair up and keep in good order the old oil spring on land in said Cherrytree Township, or dig and make new springs, and the expense to be deducted out of the proceeds of the oil, and the balance, if any, to be equally divided, the one-half to J. D. Angier, the other half to Brewer, Watson & Co., for the full term of 5 years from this date, if profitable.

"BREWER, WATSON & CO.
"J. D. ANGIER."

The royalty or rental fixed in the above lease served as a model for the oil leases later on, and the terms were adopted to a very considerable extent during the earlier periods of development. Under this agreement Angier proceeded to dig ditches and pits, and in so doing frequently struck pockets of oil in the gravel a few feet below the surface. When the ditches were first opened from 4 to 6 gallons were collected per day from the surface of the water, but the labor required to keep the oil flowing consumed the entire profit, and after a few months the experiment was abandoned.

Angier appeared to have been unfortunate only in his location. A slight change of a very few rods north and westward would have brought him to the vicinity of what was subsequently known as the bonanza district, where, in 1877, oil springs were developed at a depth of 15 feet in a bed of gravel confined above and below by a casing of clay, impervious to water, from which, in the course of a very few months, thousands of barrels of oil were obtained.

The next organized effort to obtain oil from the springs was by George H. Bissell and Jonathan G. Eveleth, who in 1854 purchased 185 acres in Cherrytree Township, Venango County, from Brewer, Watson & Co., upon which the subsequent experiments of Drake were conducted. Preliminary to the boring of the Drake

well a lease, dated December 30, 1857, was effected by and between the Pennsylvania Rock Oil Company, and E. D. Bowditch and E. L. Drake, conveying the same land purchased by Bissell & Eveleth from Brewer, Watson & Co. As the first oil lease under which operations were actually conducted it is worthy of notice. The lease in substance makes acknowledgment of the payment of \$1 in hand, then is mentioned the demise and let of the lands, "owned or held under lease by the said company in the county of Venango, in the State of Pennsylvania, to bore, dig, mine, search for, obtain oil, salt, coal, or other minerals existing in and upon said land, and to take and remove and sell such for the exclusive use and benefit, for the term of 15 years, with the privilege of renewal for the same term. Rental, one-eighth of all the oil collected from the springs in barrels furnished or paid for by lessors. The lessees may elect to purchase the said one-eighth royalty at 45 cents a gallon, but when such election be made it shall remain. On all other minerals, 10 per cent of the net profit. Lessees agree to prosecute operations as early in the spring of 1858 as the season will permit, and the failure to work the property for an unreasonable length of time or failure to pay rent for more than 60 days, the lease to be null and void." By agreement, February 12, 1858, the lease was amended so that 12 cents for every gallon of oil should be payment in full for all rental; the amendment also gave the lessees the privilege of renewal for 25 years.

SUCCESSFUL PRODUCTION IN THE OIL CREEK TERRITORY.

The experimental boring, begun in 1858, was not carried to a successful conclusion till the latter part of August, 1859. The excitement attending the success of Drake's experiment finds a parallel in the gold discoveries in California, to which it is second only in degree and not importance. The fact that the oil could be obtained by artesian boring with so little labor and expense was sufficient to create a demand for territory in the vicinity and to inspire others to follow his example. During this and the year following wells were completed in various parts, embracing the entire length of Oil Creek, south of Titusville and extending to Franklin, below its mouth and Tidioute above. The produced oil did not go begging for a market; rather buyers came begging for the oil. Col. A. C. Ferris claims to have purchased the first thousand barrels produced from the Drake well, which he distributed among the New York refineries. The early writers, Gesner, Hodge, Redwood, Antisell and others inform us that the art of refining coal oil had attained to an advanced stage before petroleum was commercially known. Both Gesner and Antisell published lists of patents covering almost every process of manufacture as practiced by the oil refiner of the present day, all known and many of them issued prior to 1860. Steam was freely used in distillation and suggestions offered for various processes of continuous distillation. In 1860 Joshua Merrill took out letters patent for a process for "cracking" oil, which demonstrates that chemistry was abreast of the drill, in devising useful methods of manufacture.

TRANSPORTATION AND MEASURES OF OIL.

The one problem left unsolved was that of transportation. The oil district, then 30 miles distant from the nearest railway points, was dependent upon teams for an outlet. Oil was conveyed by wagons from Titusville to Union Mills (now Union City) and Erie, by raft and barge to Pittsburg, by way of Oil Creek and the Allegheny River. Oil refineries rose as if by magic throughout the region. Before the industry had closed its first year there is said to have been upward of a dozen so-called refineries in Erie, 50 miles distant from the fields of production. One of the difficulties met at the outset was the scarcity of packages. The demand for barrels outgrew the supply, and any cask fit to retain fluid was impressed into the service of the oil producer. The unit of measure at the outset being the gallon, sales were made on that basis, therefore the size of the package was not a necessary condition to trade. But later on, when the barrel became the unit, discrepancy in the size of barrels became a matter of embarrassment to the producer. The resources of the seaport towns were drawn upon for coopers, and as a consequence men from the Eastern States were among the first to recognize the importance of establishing barrel works in the new oil fields. The whaling industry, at that time unprofitable, owing to the extended voyages and hardship of the chase, had a fully developed cooperage industry, and mechanics drawn from this trade found employment in the oil-producing country. The capacity of the barrel became a matter of comment among producers about the time of the advent of the whale-oil men, who brought casks of enormous size with them,

which in periods of surplus production were offered and accepted as ordinary barrels. Therefore the necessity for a uniform barrel was early apparent. As the result of these discussions, 40 gallons became the trade-customs barrel for crude oil, and this continued from 1860 to 1866, when representative producers got together and issued the following:

"Whereas it is conceded by all producers of crude petroleum on Oil Creek that the present system of selling crude oil by barrel without regard to the size is injurious to the oil trade, alike to the buyer and seller, as buyers with the ordinary sized barrels can not compete with those with large ones, we therefore mutually agree and bind ourselves that from this date we will sell no crude oil by barrel or package, but by the gallon only. An allowance of 2 gallons will be made on the gauge of each and every 40 gallons in favor of the buyer."

It will be seen that the barrel by resolution differs from the barrel by adoption only in the addition of 2 gallons for tare or waste. Later on, after the establishment of pipe lines, buyers began to demand 42 gallons net with the addition of 2 per cent for tare, which is the accepted barrel of to-day, although the construction placed upon the barrel by the Government during the period of excise, April 1, 1865, to March, 1866, was "any vessel containing not more than 45 gallons and not less than 28 gallons." This amount was subject to a duty of \$1. The railroads, for transportation purposes, when bulk shipments began, construed the barrel to be 45 gallons, and so it remains, but the barrel of commerce is 42 gallons.

NUMBER OF WELLS IN OIL CREEK REGION PREVIOUS TO 1869.

The development after the striking of the Drake well was necessarily slow, and its history is somewhat obscure. We can do no better than quote from the Derrick's Handbook, page 788, in regard to this period:

"There is a great deal of uncertainty in the early records of field operations. No systematic effort at collecting the statistics of rigs, drilling wells, and completed wells was made, except by spasmodic efforts now and then, until May, 1875, when the Derrick commenced to publish its regular monthly report of oil developments."

On November 21, 1860, the Venango Spectator published a report containing the names and location of 74 producing wells in the Venango oil region. These wells had a combined daily production of 1,165 barrels, and were distributed from the head of Oil Creek to its mouth and along the Allegheny from Tidioute to the Hoover well, 3 miles below Franklin. In this report the output of Drake No. 1 is given as 12 barrels, and No. 2 at 30 barrels a day.

A year and a half later, May 18, 1863, the Oil City Register made a careful estimate of the entire field and gave results as follows: "Number of producing wells, 75; number of wells that had formerly flowed and pumped, 62; wells drilling, 358; total, 495."

On January 1, 1869, according to Cone and Johns, in Petrolia, there were 1,186 producing wells in the region. About 150 of these wells produced less than 2 barrels. There were 200 of which the production was less than 5 barrels a day. Of the entire number on the producing list, 724 were completed in 1868 and the remainder during the preceding years, as follows: 1867, 148; 1866, 92; 1865, 99; 1864, 46; 1863, 29; 1862, 20; 1861, 17; 1860, 10; 1859, 1.

The total number of wells drilled in the region from 1859 to 1869, as given by Henry E. Wrigley, in the Second Geological Survey, was 5,560. This would show that 4,874 wells had been completed and abandoned as dry or unprofitable during the first ten years of the industry.

Before the closing of Professor Wrigley's report the oil business had become firmly established and thoroughly systematized in all its departments.

FLOWING WELLS AND THEIR DISASTROUS EFFECTS.

At the close of 1860 fully 500 teams found employment in the transportation of oil from the wells and the movement of supplies, in addition to the flats and barges employed on the creek and river to the number of 100 or more. In 1861 flowing wells appeared to vex the producer and embarrass the trade. The first flowing well, which was also the scene of the first tragedy in connection with oil development, was struck in April by Little & Merrick, on the John Buchanan farm, Rouseville, 3 miles above the mouth of Oil Creek and 12 miles below the Drake well. The sight of a flowing well was so unusual as to attract many spectators, who crowded about the derrick to the number of some hundreds, and while they were looking on in amazement at the phenomenon before them, fire was com-

municated to the floating gas by a near-by boiler, when a terrific explosion occurred and in the resulting fire 17 persons lost their lives, among them being the Hon. Henry R. Rouse, ex-member of the legislature and one of the leading spirits in the oil development.

In June following, the Funk well, about midway between the Rouseville and the Drake wells began to flow, and in September of that year, Phillips & Co. No. 2 on the Tarr farm, about midway between the 2 flowing wells, began to gush at the unheard of rate of 4,000 barrels a day. In December the Woodford well, 400 feet from Tarr No. 2, was flowing at the rate of 3,000 barrels a day. The effect of the flowing wells upon the oil trade was little short of disastrous to the small producers, and for the time being were not a little embarrassing to the owners thereof. The scarcity of barrels and the absence of tankage made it extremely difficult to save the oil, but as fortune would have it, all these flowing wells were located on the banks of Oil Creek and the barges became available to store the surplus production. One of the effects of the enormous production was to smash the market which, at the close of 1860, was not very strong, having declined from \$20 a barrel in January to \$2 in December. January, 1861, prices opened at \$1.75; the market continued to soften until the advent of the gushers, when it went off to nominally nothing, 5 and 10 cents a barrel being offered.

The condition of the trade at the close of 1861 was very much worse than it was at the beginning, and this period, owing to overproduction and the political disturbances due to the opening of the rebellion, was one of the worst known in the history of the business. One of the results of the flowing wells was to create a corner on oil barrels, coopers refusing to sell except for cash, and the value of a barrel at this time expressed in terms of oil was as 20 to 1.

CONDITION OF THE INDUSTRY IN 1862—CONSTRUCTION OF THE FIRST PIPE LINE.

Unremunerative prices checked production, and the spring of 1862 witnessed a gradual rise in the price of oil. The suspension of specie payment and the rapid advance in the price of gold caused a general advance in the values of all kinds of commodities. Petroleum was in good demand and better prices began to prevail. Oil at the wells rose from 10 cents a barrel in January to \$1 in June and \$2.50 in December. The most reliable estimate of the average for the year is \$1.05 per barrel.

The development work in 1862, while not large, was exceedingly important in the discovery of large wells. Operations for the most part were confined to the Upper Allegheny—that is, Tidioute, Oil, and French creeks. Smith's Ferry, 100 miles in a bee line from the Drake well, marks the first important extension of the oil development. The cost of sending a barrel of oil to New York from the producing field in January of this year was \$7.45; the cost of delivering a barrel of oil in Pittsburg by steamboat, \$2; teaming from Oil Creek to Meadville, \$2.25. The producers, appreciating by this time the value of good resolutions, held a town meeting and resolved to sell no oil at less than \$4 per barrel.

A bill was this year introduced in the legislature for a pipe line from the upper oil farms to the mouth of the creek. A charter was granted under the title of the Oil Creek Transportation Company to carry oil in pipes or tubes from any point on Oil Creek to the mouth or to any point on the Erie Railroad. No line was built.

In March of this year the first shut-in movement for the betterment of prices was inaugurated, owing to the stagnant condition of the trade. Stopcocks were turned on the wells, production ceased for a considerable period, and the movement was carried to a successful conclusion. Congress during this year imposed a tax of 10 cents per gallon on refined oil and proposed to tax crude oil 5 cents per barrel; but the producers, conscious of the power to be attained by uniting, held a town meeting in Titusville, where resolutions were adopted and Congress petitioned to lay a tax on refined oil only, and for the benefit of the refiners recommended a drawback on all oil exported to foreign countries. Congress assenting, laid a tax of 10 cents a gallon on refined oil and absolved the producer from any levy whatever.

The first successful pipe line was constructed during this year by J. M. Barrows, to convey oil from the Densmore wells on the Tarr farm to his refinery, distant about 1,000 feet. This was the first pipe line, "correct in principle and successful in operation."

About the same time a pipe line $2\frac{1}{2}$ miles long was constructed from Tarr farm to the Humboldt refinery. Cast-iron pipe with lead joints was used as a conduit. Great loss resulted from leakage at the joints. After an experiment of some months' duration, the loss from this source proving greater than the cost of

transportation by team, the enterprise was abandoned, and no other attempt was made to solve the great problem of hydraulic engineering until Van Sickle's experiment, 24 years later. Railways were extended into the region this year—the Oil Creek road south from Corry to Titusville and the Atlantic and Great Western eastward from Meadville to Franklin. By means of the latter the Cleveland refining interest received its first great impulse, since it was possible to receive oil by rail direct from the wells without transshipment, and the advantage thus derived gave them a trade position later on which was practically impregnable.

On the other hand, Samuel Downer, availing himself of the advantage of rail transportation, located an oil refinery, the largest of its day, at Corry, a point most admirably adapted because of the facilities afforded by two competing railroads.

DEVELOPMENTS IN 1863 AND TRANSPORTATION BY BOATS.

The production of the large wells had greatly declined and the total yield for 1863 was hardly one-half that at the beginning of 1863; developments throughout the year did not materially add to the production. The development work of the year was neither large nor important, though not entirely lacking in sensational features, as attested by the striking of the Noble and Delamater well on the Farel farm, Upper Oil Creek, which started with an initial production of 3,000 barrels, and maintained an average of 1,000 barrels per day throughout the year. This was followed in midsummer by the Maple Shade well on the Hyde and Egbert farm, which started with an initial production of 1,000 barrels per day. During this year the pond fresh obtained its highest development. A conservative estimate of the number of boats plying on Oil Creek at this time would be 300, and upon the Allegheny River 700, making a total of 1,000 boats employed in transporting oil.

The pond fresh was unique in that it was an artificial flood, made by confining the water in several dams, all of which were cut at a given time, letting out vast quantities of water and creating a boating stage that continued from 2 to 3 hours, during which hundreds of boats would float out with the tide and reach the Allegheny River. The pond fresh had its days, when water was comparatively plentiful, as many as two a week would be arranged when water was plentiful, but during the dry season it was generally limited to one—Friday usually being the day selected. It was not unusual for 20,000 to 60,000 barrels of oil to pass out of the creek upon one of these artificial freshets. If a source of convenience to the trade it was also a source of annoyance because of accidents occurring to boats and the consequent loss of oil. A careful writer has estimated that fully one-seventh of the oil produced was wasted by the oil freshets, leaky barrels, etc., which loss, as a rule, was incurred by the shipper. The pond fresh was a source of considerable expense to shippers and boatmen, and to meet the cost of creating the artificial rise a tax upon the boats or oil shipments was levied by an agent of the mill men who controlled the water. The method of collecting the tax, though somewhat simple, was exceedingly laborious, an agent passing along the creek from point to point making the collections before the boats started. It frequently occurred that when collections were difficult the fresh was delayed often as much as a day.

The fall of this year was exceedingly dry, and the mill men, taking advantage of it, raised the price of water upon shippers. The difficulty in making collections at this particular time caused the insertion of the following notice in the Oil City Register, October 29, 1863, signed, A. S. Dobbins, superintendent.

"A statement in regard to the cost of a pond fresh in dry weather, or when all the dams are needed, may be interesting to those who have to pay for them, and will serve to explain why 4 cents per barrel per pond-fresh tax is charged this season instead of 2 cents for the same purpose the last season. I here give the cost of the dams and other necessary expenses of the pond fresh this year: Kingsland's dam, \$300; Pearson's dam, \$12; Stanton's, \$20; Childs, Benedict & Rouse's, \$20; Tallant's, \$5; Newton's, \$20; Langworthy's, \$7; Tryan's, \$20; Lyttell's, \$10; Hide Creek, \$29; for superintendent's horse, expenses and hire of the 2 men to cut dams, one on each creek, \$40; thus making a total of \$583. All these dams can not often be had, as their owners will not set them up for us. In dry weather Mr. Benedict will not cut his at any price, hence we can not get the Rouse dam, which is right above it. In dry seasons a freshet can not be had every week, and if the superintendent spends a week or two extra between freshets collecting along the creek, this must be added to the expense. So that

in some cases a fresh actually costs \$400. The same dam which we now pay Mr. Kingsland \$200 for cost us in the early part of last season but \$55, and at no time during the summer of 1862 over \$100. Other owners of dams have raised their prices but not in the same proportion. The rise in the price of oil and the railroads at Titusville and Franklin have greatly diminished the amount of oil run out of Oil Creek. While the cost of a pond fresh is fully as much as last year, the amount of oil shipped is fully one-third less. During the prevalence of the smallpox and cholera scare it was impossible to collect the tax; and then many boats run through to Franklin without stopping, and they 'haven't stopped since.' This leaves us with a debt of nearly \$800 to commence the coming season."

Transportation by teams and boats received their first effective blow by the completion, that year, of the Atlantic and Great Western Railroad to Franklin, and the Oil Creek from Corry to Titusville.

CONDITION OF THE OIL-PRODUCING INDUSTRY IN 1864.

During 1864 the Oil Creek developments were extended to Upper Cherry Run, and there was great excitement over oil in all parts of the country. It was the beginning of the era of oil stock companies and every part of the known oil region was purchased or leased by them. In July, 1864, the Reed and Criswell well, on the Reed lot, Cherry Run, was struck and flowed at from 280 to 800 barrels a day. A quarter of the land interest in this well was sold for \$280,000, and the first purchasers realized nearly \$1,000,000. Oil in July sold as high as \$18.75 per barrel. In this year the export trade began to assume large proportions, and the total shipments of refined oil abroad amounted to nearly three and one-half times as much as was sent abroad in 1863. Prices reached the highest point this year since 1859 and 1860 and have not been paralleled in the history of any succeeding year. Starting at \$4 a barrel in January, values rapidly appreciated until July, when some sales were made at \$14. There was afterwards a falling off which carried prices down to \$0.50 a barrel in October, but this was followed by another rally, and the year closed with oil bringing from \$10.50 to \$12.

In July, 1864, the Oil Creek Railroad was completed from Titusville to the Schaffer farm. There was an active demand for lands along the Clarion River, but the experimental wells were all failures.

COST OF DRILLING WELLS IN 1864.

Drilling extended to the hill slopes and hilltops during 1864, and the use of machinery for drilling purposes became more general. The cost of drilling a well to a depth of 600 feet at this time, as given by Eaton, page 125, is as follows:

40 feet of metal pipe, at \$6 per foot.....	\$240.00
1 engine, 10-horse power.....	1,600.00
Band wheel and belting.....	125.00
1 set of boring implements.....	325.00
Derrick, complete, bull wheel, etc.....	100.00
600 feet of cable and sand-pump rope.....	100.00
Drilling, 600 feet, at \$2.50 per foot.....	1,500.00
600 bushels of coal at 50 cents.....	300.00
Total	4,290.00

SPECULATION AND AMOUNT OF CAPITAL INVESTED IN THE BUSINESS.

It is difficult for the average mind, unfamiliar with dealings in speculative interests, to appreciate the magnitude of the oil business at the time. The capital represented was greatly in excess of that necessary to produce the results attained on the side of production. Speculation had become such a prominent feature of the business that the most extravagant prices were offered and declined for desirable producing properties. The same is true of the refining branch of the business, which was so enormously remunerative, transportation alone being unaffected by the spirit of speculation. John W. Forney is authority for the statement, made by Governor Curtin at Titusville, on the occasion of a visit to the oil region this year, that "4,000 teams were employed in the transportation of oil and supplies in the oil fields, and that 1,000 boats, employing from 2,000 to 4,000 men and as many horses, found employment upon the creek and river."

The capital invested in teams and paraphernalia, reckoned at the prices ruling for this time, namely, \$800 per outfit, amount to the enormous sum of \$3,000,000. Adding to this \$3,000,000 for the 1,000,000 oil barrels required to handle the product, estimated at the ruling price of \$3 each, there would be a sum total of \$6,000,000 embarked in the single feature of transportation. In the above I have averaged the barges with their outfit as equaling in value the price of a team of horses and its outfit. The average production for the year did not greatly exceed 6,000 barrels a day, and had reached the full limit of the existing transportation facilities. That is to say, if production had increased at this time beyond the capacity of the teams and boats to haul the product to the market, oil would have backed up at the wells, gone into permanent storage or to waste. The capital engaged in transportation would have purchased the entire production of the region at \$1,000 a barrel, a sum greatly in excess of the cost of production. In other words, transportation had so fully kept pace with field developments that the cost of moving a barrel of oil to the river or railroads exceeded that of producing it.

IMPORTANT EXTENSIONS OF THE OIL FIELD IN 1865.

The year 1865 witnessed the collapse of the speculative oil bubble. The opening of the Pithole pool is one of the landmarks of field developments. Marked extensions of the oil field took place during this year, notably the discovery of oil at Parkers Landing, following upon the heels of a successful venture in the same line at Bradys Bend at the close of the year previous. Pipe lines came into use and revolutionized the transportation. On the market side prices failed to maintain the high average of the preceding year, owing to the imposition of an excise tax of a dollar a barrel on crude oil, which went into effect on April 1.

THE TAX ON OIL AND PRICES IN 1865.

This tax has to be deducted when figuring what was actually realized by the producers for their oil at the wells. Starting at \$10 a barrel in January, the lowest point, \$4, was reached in August. After that there was an advance to \$9.50 in October, but the year closed with oil at \$5 a barrel. The statisticians of the New York financial journals placed the average realized for oil in 1865 at \$4.27 in gold, and \$6.61 to \$7 in currency. At New York the average price for refined for the year was 87½ cents per gallon. The Columbia Oil Company realized \$6.65 per barrel for their product during the first half and \$5.87 for the latter half of the year 1865. Their average for the year was \$6.18. It is well to recall that these are quotations along Oil Creek, and that a tax of \$1 a barrel had to be paid from the producers' receipts. Oil at Pithole sold as low as \$2.50 per barrel in August and \$4.50 to \$4.60 in December. It was not unusual previous to the establishment of pipe lines to find a difference of 50 per cent between the ruling prices on Oil Creek and those at the wells at Pithole, the difference being due to the cost of transportation.

IMPORTANT IMPROVEMENTS IN 1865.

In many respects 1865 stands forth as the red-letter year in the oil business. During this year casing was introduced, by which the life, so to speak, of an oil well was greatly prolonged, as well as its production materially increased, by permitting the free escape of gas in such manner that it could be utilized for fuel purposes in the production of steam. Tank cars appeared on the railroads, due to the inventive genius of the Denzmores, admitting of bulk shipment for the first time by rail, and dispensing with the cumbersome barrel, which had proved both an incubus and an embarrassment to the trade. There were sundry improvements in drilling; a notable increase in the weight of the tools; the torpedo appeared as an aid to production, upon the appearance of which the crevice searcher, sand scraper, volcano burner, steam injectors, and various other devices for increasing production disappeared. The cylinder gas pump came into limited use this year, displacing the rotary gas blowers and atmospheric injectors previously in use. The use of benzine as a solvent for paraffin was beginning to attract public notice. Careful observers estimate that in the five years ending 1870 a million barrels of benzine went into oil wells to dissolve paraffin, came out as crude oil, and was sold back to the refiners at an advance of 800 and 400 per cent on the original cost.

Shippers eventually were compelled to apply a gravity test upon all oils to protect themselves from the benzine habit, and for many years high gravity oils, now so much in demand, were not considered a good delivery at export points. I think the limit of gravity was placed at 48°. Oils above 48° were not a good delivery at export points.

The increase in the refining capacity during 1864-65 was a matter of very general comment throughout the region. Eaton estimates that there were 90 refineries in the oil region, with a crude capacity of 18,000 barrels a week, costing on an average \$10,000 each. The whole he roughly estimated at \$1,000,000 in value.

PROGRESS IN THE CONSTRUCTION OF PIPE LINES.

The first successful pipe line was completed during this year,¹ the Miller Farm line, using force pumps to deliver the product at a railroad point 5 miles distant. About the same time the Pennsylvania Tubing Transportation Company completed a gravity line from Pithole to Oleopolis, on the river. Both were successful and well patronized. The effect was to reduce the cost of delivering oil to shipping points from \$2 and \$3, according to the condition of the roads, to a uniform price of \$1 per barrel, the fixed price established by the pipe lines. Within a year five pipe lines centered in Pithole, competing for a business scarcely sufficient for one, namely, the Miller Farm Pipe Line, the Pennsylvania Tubing and Transportation Company (later known as the Rochester and Oleopolis Pipe Line), Pickett & Sherman's Titusville Pipe Line, John Warren & Bros.'s Pipe Line to Henrys Bend, and Smiley & Coutant's gathering line about Pithole. When pipe lines were first established they did not reach out for the producers' wells, but established a tank at a fixed point, called a "dump," at which the producer was obliged to deliver his oil in barrels. Smiley & Coutant's line was the first to connect with the producers' wells and its function was limited to delivering the producers' oil to the dump tanks of the pipe lines. Later on they sold their gathering system to the Titusville Pipe Line and from that time forward the pipe lines were extended to the producers' tanks and gathered their oil on their own account. The tariff charged for gathering this oil by Smiley & Coutant was 25 cents a barrel, being slightly below the cost of delivery by team in barrels.

I want to call your attention especially to the following fact: It has been stated before you that piping the refined oil is a recent thing.² During this year, 1865, refined oil was successfully transported by pipe lines a distance of 3 miles by John Warren & Bro. from the Osceola refinery, at Plummer, to McMaho's Run, on the Allegheny River, near Oleopolis.

The following year Vandergrift & Forman's Pipe Line put in an appearance and made the sixth pipe line competing for business in the Pithole watershed.

Commenting upon the pipe-line system, just then introduced, the Pithole Record, in its issue of October 16, modestly says: "One of the most wonderful of the many wonders produced at Pithole is the oil pipe running from the United States well to the Miller farm, on Oil Creek, a distance, on an air line, of about 5 miles. The pipe is 2 inches in diameter and lies most of the way on top of ground. Three pumping engines are stationed along the route, forcing the oil through the pipe at the rate of about 80 barrels an hour, doing the work of about 300 teams working 10 hours a day. This machine can work all day and all night. This was considered experimental, but proved a decided success. The 6-inch pipe line laid from Pithole Creek to the Island well, distant 7 miles, by the Pennsylvania Tubing Company, is likewise a success."

COST OF TRANSPORTATION IN 1865.

The cost of moving a barrel of oil from Pithole to New York in December, 1865, was \$5.55, to wit: Pipe transportation from Pithole to Miller farm, \$1; barreling, shipping, etc., at Miller farm, 25 cents; freight to Corry by the Oil Creek Railroad, 80 cents; freight from Corry to New York, \$3.50. Cost of delivering a barrel of oil to New York by the way of Pittsburgh: Transportation charges by pipe from Pithole to the river, \$1; freight on river to Pittsburgh, \$1.50; wharfage, loading, etc., at Pittsburgh, 25 cents; freight from Pittsburgh to New York, \$3.44; total, \$4.59; difference in favor of Pittsburgh route, 56 cents.

The price of moving a barrel of oil from any part of the region to the seaboard to-day is 50 cents or less, owing to the existence of pipe lines, the price for rail and pipe being the same since 1879.

¹ See pp. 406, 604.

² See testimony of J. W. Lee, page 267; Mr. Lockwood, p. 366.

THE PRODUCTION AND PRICE OF OIL IN 1866.

The tax on crude oil was repealed in May, 1866, but it did not stay the downward tendency in prices. Production had been increasing under the impetus of higher values and the daily yield for the winter of 1866 was at least 12,000 barrels. By May this had largely declined, owing to the falling off in the output of the wells at Pithole, and prices again began to strengthen, but the collapse of numerous oil companies and the general scare over the bursting of the great oil bubble exercised a depressing influence. The Columbia Oil Company's statement (we have a good deal to say about that company, because it is the only company that has been in existence constantly from the beginning of the oil business to the present time; their prices were given at stated periods and they were producing continuously from 1861 to 1890) shows sales at \$1.65 to \$5, and an average price of \$3.78 per barrel for the year. Another good strike was made at Bradys Bend this year, promising the opening up of new territory in that section.

RAILWAY TRANSPORTATION AND BANK FAILURES.

Railways were now in general operation throughout Venango County, and the beginning of increased shipments of oil by rail is to be noted. The railroads and the pipe lines eventually superseded the water transportation of petroleum down the Allegheny River. At the beginning of this year the Oil City and Pithole railroad was ready to carry freight from Pithole to Oleopolis. The failure of the banking house of Culver, Penn & Co., the prime movers of which were interested in financial institutions throughout the oil country, caused great excitement and the closing of several of the smaller banks. Among them were the Petroleum Bank, Venango County Bank, Crawford County Bank, and Cotton & Co.'s Bank, located at Oil City, Meadville, Titusville, and Petroleum Center.

Q. (By Mr. PHILLIPS.) Were these banks all under the control of Culver, Penn & Co.?—A. They were supposed to be under the control of Culver, Penn & Co.

Q. They, therefore, did not affect other banks so as to cause failures?—A. But Culver, Penn & Co. were so closely identified with the oil interest at this time that it seemed to affect it at every point.

LOSS OF OIL BY FIRE—INCENDIARY.

In April, 1866, the oil tanks of Henry Harley & Co., at Shaffer, which received the oil from Benninghoff Run, two miles distant by pipe line, were set on fire by an incendiary mob composed, it is said, of teamsters, who had been thrown out of work by the construction of this and other pipe lines. Four Oil Creek railroad cars, with two tanks on each, together with pipes, platforms, and about 1,000 barrels of oil, were burned. In July, 1866, the Titusville Pipe Company perfected arrangements whereby oil shippers could have their product shipped direct to New York by the Empire Line, the pipe line lading bill answering for the entire distance. The effect of that innovation by the Empire Line, 1866, was to make one rate on the oil from the well to the seaboard or refinery, a matter which caused a great deal of discussion later on between the shippers, producers, and railroads. The Oil City Register estimated that the loss of oil by fire during the first six months of 1866 amounted to 70,000 barrels. The Warren and Franklin railroad was completed to Oleopolis, where it connected with the Oil City and Pithole railroad. It was noted that Professor Hamar, in July, 1866, successfully exploded a torpedo in a well on the Tarr farm, which is reported to have brought the well up from nothing to 800 barrels.

CONDITION OF THE INDUSTRY IN 1867.

The year 1867 proved another one of low prices and general depression owing to over-production. Dennis Run and Triumph Hill, near Tidioute, with Shamburg and Scrub Grass, were added to the producing area this year. The advent of railroads and the established success of the pipe-line system had greatly improved the methods and lessened the cost of oil transportation. Pipeage charges from Benninghoff Run to Shaffer were 50 cents per barrel; Pithole to Titusville, 50 cents; Bull Run to the Miller farm, 45 cents.

West Virginia had assumed some prominence as an oil field, and the daily pro-

duction of the various fields was reported in January as follows: Burning Springs, 500 barrels; White Oak, 200 barrels; Sand Hill and Horse Neck, 100 barrels; lubricating oil district, 100 barrels a day.

Q. The first production was at Burning Springs, on the Little Kanawha, and was for many years confined to that region?—A. The first was at Burning Springs; that is, the first actual operations were there; but almost contemporary were the operations on Duck Creek in Ohio.

Q. But both these fields ceased to be any factor?—A. They ceased to be any factor from 1861 to 1867. In 1867 there was an increase. They came into prominence then through the operations in the vicinity of Newells Run and Cow Run in Ohio. The production had not entirely ceased at any time on Duck Creek.

In March, John Ponton published his much-abused pamphlet on the Crisis in the Oil Region, in which he figured the stock of oil in the United States on March 10 to be 386,105 barrels; in Europe, 325,000 barrels; a total of 711,105 barrels. He figured the foreign and home consumption of oil during 1866 at 8,577 barrels per day, and declared that it would require a net daily production of 11,237 barrels to supply the probable demand of the year. The production he placed at about 6,000 barrels a day, showing a deficit of over 5,000 barrels. At an estimated value of \$2 a barrel for crude oil for that period Ponton proceeded to demonstrate by figures that the production of oil was a losing business. He went into figures showing the cost of producing or lifting oil by gas on an estimated value of \$3,500 a well, and was able to show a profit of \$504 by the use of gas that cost nothing; by the use of coal, at 50 cents a bushel, he was able to show a loss of over \$1,500 to the producer at existing prices; with wood fuel, at a cost of \$10 a cord, there was a loss of upward of \$1,000.

HIGH COST OF FUEL IN THE OIL REGION.

Q. Will you state why fuel was so high at that time? From where was the coal supplied?—A. The high cost of fuel was owing in very great part to the difficulties in teaming. Coal was procured from various places.

Q. But largely from Pittsburg?—A. Largely, and from points on the Allegheny River.

Q. There was no coal produced in the immediate oil field?—A. Not on Oil Creek; the nearest coal to Oil Creek was at the Cranberry mines, 4 miles south of Oil City and substantially 20 miles south of the Drake well.

Q. A very large number of people think that coal and oil have some connection; I brought it up for that reason; there is no coal overlying the original oil fields?—A. There is no coal overlying the original oil fields, but, with the completion of the Jamestown road, the coal was brought in from the Jamestown fields at a very much less cost.

PROFIT AND LOSS IN THE PRODUCTION OF OIL.

I will read an extract from John Ponton's *A Crisis in the Oil Region, 1867*:

"The cost of sinking wells at the present time is less by from \$2,000 to \$3,000 than it used to be when new engines and machinery had to be bought and labor was more expensive. With secondhand machinery the average cost of sinking a well is \$3,500; very rare instances occur where men have been fortunate enough to put down their wells for \$2,500, while in other cases it has cost \$6,000. We will, therefore, take \$3,500 as the average. From accurate statistical information it has been ascertained that upward of 50 per cent of all the wells that have been sunk in the region have produced no oil; this is an actual loss of capital to the extent of \$350,000 in every hundred, and the hundreds of wells yearly put down will give an idea of the exhaustion of the life principle of the region. Of the producing wells, 14 per cent are under 5 barrels, and three-fourths of the oil is obtained from wells under 30 barrels per day. What is meant by a 30-barrel well is one which produces 210 barrels per week. This class of wells sometimes pump 40, 50, and even 60 barrels when running, but as they are constantly breaking down they average only 30 barrels per day.

"About 50 per cent of this class of wells use, in some cases partially, in others totally, gas for fuel; the other 50 per cent use wood and coal. In nearly every instance one-half the oil goes to pay the land interest; this reduces the supply to 15 barrels per day. Now the average life of wells does not exceed six months, and we shall see whether or not it is a paying business.

416 HEARINGS BEFORE THE INDUSTRIAL COMMISSION.

"The average daily cost of running a 30-barrel well by gas, coal, and wood, is as follows:

BY GAS.

Two engineers, at \$3.....	\$6.00
Waste oil and repairs.....	2.00
	<hr/> 8.00
By 15 barrels of oil, at \$2	30.00
Deduct expenses.....	8.00
	<hr/> 22.00
Surplus to pay back capital.....	22.00
\$22 per day for 182 days or 6 months	4,004.00
Original capital invested.....	8,500.00
	<hr/> 504.00
Profit	504.00

BY COAL.

Two engineers, at \$3.....	6.00
Waste oil and repairs.....	2.00
Seven-eighths ton coal, at \$12 delivered	10.50
	<hr/> 18.50
By 15 barrels of oil, at \$2	30.00
Deduct expenses.....	18.50
	<hr/> 11.50
Surplus to pay back capital.....	11.50
Original capital invested.....	3,500.00
\$11.50 per day for 182 days or 6 months	2,093.00
	<hr/> 1,507.00
Loss	1,507.00

BY WOOD.

Generally \$2 less than coal	\$16.50
	<hr/>
By 15 barrels of oil, at \$2	30.00

Surplus to pay back capital.....	13.50
Original capital invested	3,500.00
\$13.50 per day for 182 days, or 6 months.....	2,457.00
	<hr/> 1,043.00
Loss	1,043.00

"These figures clearly prove that the present low price of oil has a direct tendency to destroy the entire oil production of the territory, and not only is the capital of the country becoming rapidly exhausted, but, owing to the reckless speculation in oil lands in the years 1864 and 1865, whereby it is supposed over \$100,000,000 were withdrawn from other useful occupations in the United States and lost, it has become a practical impossibility to induce capital to return to the region for the purpose of development. The class of men who have during the past year been instrumental in developing the territory were not men of capital. One would put in his labor, another supply an engine, a third build the derrick, a fourth supply the tools, a fifth the fuel, etc., dividing the proceeds into shares or interests. It is almost unnecessary to state that the bitter experience of the past few months has made them sadder and wiser men. In fact this process of development has become almost extinct. The development of the territory is now left to those parties who have been successful in making large strikes, and to the land interest.

"It is a very significant fact that the chances of striking large wells are becoming less, in a ratio that is, to say the least, truly alarming. The 1,200 and 1,400 barrel wells of 1865 were replaced by 300 and 400 barrels in 1866; and at the present time

a man who strikes a 100 or 200 barrel well may be considered to have realized the extreme of success. If this diminution takes place in the future in the same ratio, a 30 or 40 barrel well will be considered at the close of this year as much the extreme of success as a 200-barrel well is to-day, and those parties upon whom we now depend for development will, if they do not receive a proportionately remunerative price for their oil, become actually ruined with those upon whom we depended for the production of last year.

"Our philosophers will look wise and say that the law of supply and demand will regulate itself, which is certainly not true in this case; but, even supposing it to be so, if the law of supply and demand takes so long to regulate itself that before that much-to-be-desired end is accomplished we must ruin our capitalists, reduce our mechanics to the brink of starvation, and deplete the territory of its inhabitants, it is high time that we take the supply into our own keeping and give it only to those who are willing to pay a remunerative price for the same."

In this connection I will say that this refers to 1868, but, owing to the general improvements in the means of transportation and the decline in prices of oil machinery and the uniform success in drilling operations, that year proved highly prosperous to all concerned. Large casing was introduced for drilling operations during the year, and to some extent in the year previous; it enabled the driller to have a dry well clear to the bottom, and water could enter into it to no very considerable extent.

Q. Will you state what the casing was put in for? A. It was used to exclude fresh water; it was put in at what would be considered the lowest point of fresh-water supply—the mountain sand as we call it. That was the point below which no fresh water was found, and salt water was not considered so detrimental to the wells and no provision was made against it. The casing was used to control the water.

CONDITION OF THE INDUSTRY IN 1868—REPEAL OF THE WAR TAX.

The Armstrong and Clarion fields began to attract the attention of oil operators, but the greater part of the oil developments during 1868 were confined to the older sections of the region. The improved methods of transportation were gradually placing the industry on an entirely new basis. In January the Titusville Herald estimated the production of the region at 11,035 barrels a day, with 182 wells drilling. On February 3 a convention of Oil Creek oil refiners was held at Petroleum Center and resolutions passed demanding that the tax on refined oil be repealed. The production was greatly in excess of the demand, and the price had consequently declined below the cost of placing the refined product on the market. On July 1 the production for the month of June was reported at 11,220 barrels a day, with 200 wells drilling. On July 18, 1868, Congress passed a bill exempting petroleum and its products from taxation. Refined oil at this time was subject to a tax of 20 cents a gallon.

Q. What was the tax on crude oil levied by the Government?—A. One dollar a barrel, and it existed for practically a year.

Q. That tax ruined quite a large number of small producers, did it not, who were not able to pay such a tax? The Government war tax on crude petroleum of \$1 a barrel, which remained about one year, worked very unequally, because small producers could not afford to pay it, whereas if a man struck a very large well, 500 barrels or upward, he could afford to pay it. A large number of farms that were only capable of producing from 10 to 25 barrels a day could not be operated, whereas farms adjoining them having a larger producing capacity would drain the other farms. It operated very unequally?—A. My answer to that would be that the period of the tax on the oil was 3 or nearly 4 years, but it was repealed on the refined. There certainly were a great many failures in that period, but coexistent with them was the bursting of the oil bubbles—a great number of companies that started at the time. There was so much disaster that it is difficult to tell what was the cause of it. I can not say that I know of any producing well which was ever stopped on account of the tax; but my knowledge extends to hearsay only, as my experience does not go back that far. I went to the oil country the year the tax was repealed on crude oil.

Q. (By Representative LIVINGSTON.) Why was the tax levied?—A. It was an excise war tax.

Q. What is the tax on oil now?—A. There is no tax.

Q. Why not?—A. That is beyond my knowledge. There is no tax on any manufactured products except whisky and cigars and tobacco of which I know.

Q. If you should levy a small tax on oil would it not be a good source of

revenue?—A. It would be a source of revenue, but it would be bad for the oil interests.

Q. Would it be good for the people who burn it?—A. It would be bad for the consumer; the price would follow. The subject of levying a tax on oil was pretty thoroughly discussed in Congress.

COST OF FUEL IN THE OIL REGION RESUMED.

Q. (By Mr. RATCHFORD.) In one of the papers you read it is stated, I believe, that coal delivered was \$12 a ton at a certain time. What date was that?—A. The figures, as stated, I read from Ponton's Crisis in the Oil Regions, 1867.

Q. Are you prepared to state what the cost of crude oil was at that time?—A. Two dollars a barrel; he states that in the same connection.

Q. Are you prepared to state what the cost of transportation of oil was at that time?—A. I have just read that, by pipe line at that period, the cost from Benninghoff Run to the Shaffer farm, a distance of 2 miles, was 50 cents a barrel. From Pithole to Titusville, a distance of 10 miles, the rate was the same.

Q. Now, I should like a comparison between the cost of coal, oil, and transportation at that period and their cost at present. What is the cost of coal to-day?—A. There is no consumption of coal in that region to-day for the purpose then used. They use gas engines. There is oil produced in the same locality, but there is no consumption of coal except to a very limited extent.

Q. What does it cost where it is used?—A. About \$2 a ton delivered at the wells.

Q. A reduction of \$10 as compared with the other period. What is the cost of oil per barrel?—A. About \$1.37.

Q. Does not that show that the reduction in the price of oil has not equaled the reduction in the price of coal?—A. If the commission will indulge me, I should like to answer by a little explanation. At the time to which you refer, 1867, coal at the mines did not exceed \$2 a ton and the difference was made up in transportation. There were a great many transfers to the boats and each transfer added cost and the teamsters charged enormous prices for hauling a little coal. A load of coal might be anywhere from 500 to 800 pounds, or three loads to the ton, and they charged \$2 to \$2.50 a load. I am speaking of conditions that would make the rate that. I am quoting a writer of that day, a man that has a considerable reputation as a statistician. He was a newspaper editor at the time. I am giving his figures.

Q. I asked these questions because it is claimed by the friends of oil producers, particularly the Standard Oil Company, that the reason for the existence of the trust is that the prices of their products have been reduced much more than the prices of other products. When you spoke of coal I supposed you spoke of soft coal. There has been no trust in soft coal, excepting one formed within a week or two past. There was none at that time. The figures you have quoted show that there has been a very much larger reduction in coal than oil.—A. I should say that the comparison is rather unfair, for you take oil at the point of production and coal at the point of delivery, where it has acquired cost by every movement. Let us reverse the case, and take oil at the seaboard; take the price of oil at the seaboard at that time.

Q. Take them both at the point of production. I believe the same conclusion would hold good. What would it have cost to ship a ton of that coal from the initial point?—A. It depends on the initial point.

Q. In the vicinity of Pittsburgh?—A. It would have cost more than one-half of the \$12, at least, to get it there. I am not competent to state the price of coal, and I am not defending this gentleman's figures. We are speaking of the conditions of the time in the mind of the man who did the writing.

PRICES OF CRUDE OIL AT THE SEABOARD IN 1867 AND AT PRESENT.

(By Mr. SMYTH.) I should be glad to know as to the comparative cost of oil delivered at the seaboard to-day and in 1867, and the cost of coal delivered at the seaboard to-day and in 1867.—A. In 1865 and 1867 existing conditions were very much the same, with this difference, that crude oil was higher. The price of coal remained about the same between 1865 and 1867, but in 1865 the statistics show that the cost of crude oil at the seaboard was 37 cents a gallon.

Q. What is the price of crude oil delivered to-day?—A. \$1.37 or \$1.40.

Q. Per gallon?—A. Per barrel.

Q. Can you give us the gallon price to-day, so as to make a comparison?—A. It is somewhere in the vicinity of 5 cents a gallon.

Then the reduction has been from 37 cents to 5 cents. Can you tell us about it?—A. I do not know anything about that.

Q. (By Mr. RATCHFORD.) Was that 37 cents the normal price at the period of which you speak?—A. I can not tell you as to that.

Q. I asked the question because you stated in one of your papers that oil fluctuated from 10 cents to \$2.50 a barrel at the well.—A. From 10 cents to \$1.75.

Q. I understood you to say \$2.50. It seems the price of oil has taken some very rapid jumps up and down.—A. We are now discussing a period in the oil business when it was controlled entirely by speculation. The business had hardly gotten down to a stable basis and the value necessarily changed rapidly in those days.

Q. (By Mr. FARQUHAR.) In the statement you were reading from, were the prices conditioned on speculation entirely, on production, or on transportation; that is, the fluctuation from 10 cents to \$1.75?—A. I think they were conditioned on all three, but mostly on transportation—the difficulties of getting the oil to market.

Q. (By Mr. PHILLIPS.) Was not the fluctuation from 10 cents to \$1.75 caused by striking a large number of flowing wells?—A. Overproduction. We had never had a consumption equal to over 1,200 barrels a day up to that time. The consumption was 1,200 barrels a day, and a constant outflow of 7,000 or 8,000 barrels a day caused depression.

Q. (By Mr. FARQUHAR.) Overproduction at that period—it is not possible to account for it by a combination of producers?—A. Oh, no; not at all.

THE PRODUCTION OF OIL IN 1869.

For 10 years up to 1869 the amount of oil produced was about 25,700,000 barrels. Butler, Armstrong, and Clarion counties, and Church Run, near Titusville, proved the most active centers of oil development during that year. Small extensions in the producing territories at Rouseville and Cherry Run were made and there was some excitement over a few large strikes on West Pithole Creek. On January 30, 1869, the Pittsburgh Commercial Gazette reported 68 refineries in operation in Pittsburgh, and stated that the petroleum trade of the city amounted to \$13,000,000 per year. On February 12 a meeting of oil producers was held at Titusville and the Petroleum Producers' Association of Pennsylvania organized (being the first association of producers), with George K. Anderson, president, and F. W. Andrews, vice-president. This association was called into existence to take cognizance of the statistics of the region, for the better protection of the trade. The shippers and buyers of that day had begun to influence the speculative market by reports and by bulling and bearing it to their advantage. The purpose of this association was to gather statistics and to inquire into the general condition of the trade for the betterment of the producers, and from what I know of it I say now that it was necessary. On March 11 it was reported that the Vera and Blake well, Petroleum Center, which was opened September 22, 1868, had sold, up to date, 22,699 barrels of oil, for which the owners had received \$98,500. July 1, 1869, work was begun on the extension of the Jamestown and Franklin Railroad, from Franklin to Oil City, contracts being let for the entire distance, including the tunnel at Oil City.

Q. (By Mr. JENKS.) Was the producers' association distinct from the refiners?—A. Yes; it was distinct from the refiners' association.

Q. (By Mr. PHILLIPS.) It was not a chartered company?—A. No; it was not a chartered company at that time, but it led into other associations and agencies by which stock was issued.

PRICES OF PETROLEUM IN 1869 AND 1870.

At the close of 1869 the New York Daily Bulletin said: "The price of petroleum ruled higher during 1869 than during any of the three previous years, and those engaged in the production of oil have received larger profits in comparison with the capital employed than during any previous year. The profits of the refiners and dealers have been fair, but very much less than those of the class first mentioned. Speculation has been pursued on a colossal scale, and prices underwent great and violent fluctuations. But notwithstanding this the year closed with a much smaller volume of failures than usual, and on the whole was singularly exempt from any serious financial disaster."

Values showed a downward tendency in 1870, and the market steadily declined from the prices established during 1869. The extreme range was from \$4.90 per barrel in January to \$2.75 in August. The year 1870 closed with petroleum at from \$3.30 to \$3.50 per barrel.

That decline may be accounted for in a great measure by the hostilities between Germany and France, for the closing of their ports against us operated seriously with the oil business of this country.

In January, 1870, the first well drilled on the bluffs on the Robinson farm, at Parkers Landing, started at 40 barrels a day. In February a petroleum association was formed by Cleveland refiners for the purpose of protecting the refining interests of that city.

Q. (By Mr. JENKS.) In February of what year was this refiners' association made?—A. 1870; refiners' associations were very prolific in those days; they were found wherever the refiners were, exactly as the producers were associated.

The year 1870 was a very important year in many respects, because of the striking of the well at Bradys Bend; that developed fourth-sand territory. The finding of a flowing well in that country rather agitated the trade and stimulated things. Large and important developments were made at West Hickory. Coming all at the same time, these new developments created a very serious situation.

Q. (By Mr. SMYTH.) What was the percentage of increase just at this time from the flowing wells?—A. I can not state the percentage, but it was very large.

Q. You said a little while ago consumption of the world was twelve hundred barrels a day?—A. I was speaking then of the overproduction in 1861, which was caused by large flowing wells.

PRODUCTION AND PIPE LINES IN 1870.

Q. What period are you now speaking of?—A. 1870, or a year later. Parkers Landing at that time assumed very formidable proportions. There were at least twelve to fifteen separate, individual pipe lines; and there was one, named the Mutual Pipe Line, just reaching the Karns Pipe Line, organized that year or the year before, which began buying oil on the same terms as the other lines. At this time the other pipe lines were bidding for the production, probably 800, but not exceeding 1,000 barrels a day, at Parkers Landing. The Karns was one of them. It would take oil on the same terms as another line; each line framed its own terms, and many of them had drawbacks, rebates, and private contracts with producers and shippers. Competition was such that they were forced into that in order to get business and prevent others from going in.

On April 9 the production of the Petroleum Center district was estimated at 1,426 barrels a day. The Karns Pipe Line began taking oil upon the same terms as the Mutual—25 cents a barrel transportation charges and 2 per cent for loss. By October, 1870, the total production of the region had reached nearly 30,000 barrels a day. The James S. McCray farm, which had a daily production during October of 2,686 barrels, declined to 1,944 barrels in November, a falling off of 742 barrels a day.

The important development of the year was in April, at Armstrong Run, 8 miles southwest of Parkers Landing, which had an initial production of 1,000 barrels a day. The production declined rapidly, but other wells equally productive, with better staying qualities, came in later on. This was the first flowing well found south of Scrub Grass, and attracted universal attention.

OPERATIONS IN 1871.

The Titusville Oil Exchange was organized in 1871, and was the first regularly organized exchange in the oil country, although the trade at Pittsburg was organized some years previously. Exchanges were likewise opened at Oil City and Franklin.

The Titusville Herald places the daily production of the Pennsylvania field, on April 11, at 13,581 barrels.

Q. (By Mr. PHILLIPS.) That was in 1871?—A. That is in 1871; yes, sir. A. D. White, reporter for the Petroleum Producers' Association, for the lower district, issued the following report for July in Parkers Landing district:

"There are 441 producing wells, of which 63 produce all the oil, and average 10½ barrels per day, while the daily average of all wells is 5½ barrels. The average depth of the wells is 1,060 feet, and the average cost of completing a well is \$25,200."

Hints of speculation by pipe lines in the production of oil increased; there were more than hints; there were rumors, and in some instances the result of that being that oil was not held the same by any two of the existing lines. There were scarcely any two of them that offered the same prices for oil. The price was dependent very largely upon the reputation of the line for integrity. Those lines having a reputation for integrity—that is to say, oil put in their custody

would be found when wanted—got the highest price. Those lines which were sometimes considered short got a lower price.

Q. (By Mr. PHILLIPS.) Did the producers ever lose any oil through these pipe lines to which you refer, to your knowledge?—A. To my personal knowledge, no; except the difference in the valuation of their product; there was a difference in valuation, but I know of no loss.

Q. No embezzlement of oil that was left in the line?—A. No embezzlement of oil. I have no personal knowledge of that. Rumors were circulated in midsummer of 1871, that the various pipe-line interests of Pennsylvania were about to merge their holdings into a single combination, the whole to be under one management. No merger ever took place, or at that time; no merger took place at that time.

Operations this year took a very wide range. Bradford appeared for the first time in the oil reports. A correspondent of the Petroleum Center Record, writing under date of September 29 concerning a trip made to Bradford, says:

"Bradford is a village of 300 inhabitants, and is altogether a very desirable point for the coming oil excitement which we feel sure is bound to break out in the vicinity. The Bradford well is down 90 feet and being pushed as fast as possible. It is located near a well sunk in 1864, which had an excellent showing and produced some oil, but was abandoned. About 3½ miles south of this point Col. J. K. Haffey has a well drilling, and the indications are good for finding oil. North of this latter point are the two Job Moses wells, one of which is producing about 2 barrels and the other drilling deeper. The oil from the Moses wells sells for \$22 a barrel (for lubricating purposes)."

It is important here in this connection as pointing out that the discovery of the Bradford region, which was developed say 10 years later, or less than 10 years later, the greatest field ever discovered, was long before actual developments ever took place there. The existence of oil, the presence of it, was known in that field for at least 8 years, and wells actually sunk even before the Butler and Clarion county fields were fully developed.

Q. (By Mr. PHILLIPS.) It did not become a factor in the oil business until 1876 and 1877, did it?—A. 1876, I think it was, or 1877; yes, sir; 1877.

Q. It became a factor?—A. It became a prominent factor, a leading factor at that time, but the possibilities of the field always pointed to it as a field for wildcats, for some place that producers could occupy their time, and led to overproduction, great overproduction. Operations in Clarion County had reached a point near the mouth of Turkey Run, where D. L. Kistler and others found a ten-barrel well. S. L. Kier, the pioneer petroleum merchant, developed a 20-barrel well on the Faust farm, near St. Petersburg. Marcus Huling's well, on the Ashbaugh farm, near St. Petersburg, was reported flowing 250 barrels a day, and 300 wells were reported in various stages of operation between Alum Rock and the mouth of the Clarion River at the close of October. These were all pioneer wells at that time.

HISTORY OF THE SOUTH IMPROVEMENT COMPANY.¹

The year 1872 is conspicuous for the remarkable progress in Butler and Clarion counties. Starting from a point at the Clarion River, remunerative developments penetrated to a point beyond Antwerp, more than 5 miles, and southwestward to Millerstown and Greece City, in Butler County, a distance of 15 miles, with the prospect of further extension at both ends. The increase in production was rapid, owing to the large capacity of the wells developed in all of the new fields. In addition to a very large production of crude oil, there was an unquestioned overcapacity of pipe lines, and an overproduction of refining plants, so that these two divisions of the business, refining and transporting oil by pipes, became unprofitable. This is the year of the South Improvement Company, a movement which found few supporters in the region and was very generally execrated by the trade, and died, so to speak, "a-bornin'." Of all the multifarious movements having for their object the betterment of trade conditions, this one is perhaps the least understood. The movement was a combination of the railroads and certain refining interests. It had its inception with certain Philadelphia and Pittsburgh refiners, with an agreement for cooperation on the part of certain Cleveland refiners. But philosophical minds, viewing the subject from this distance, are agreed that it had its origin, as a matter of fact, with the railroad interests, rather than the oil interests. Refiners, ever satisfied with a fair profit, had been able and were willing to accept their chances with the trade, but with the railroads the case was slightly different.

¹ See Mr. Lockwood, pp. 385, 400; Mr. Archbold, pp. 540, 553; Mr. Emery, pp. 605-613, 615-623, 644, 646; Mr. Rice, pp. 659-664.

The development southward from 1870 brought about conditions through which some of the important railroads of the country might be deprived of a share of the oil-carrying trade. The Pennsylvania Road, however, was not affected by the transfer of activities from the Venango region to that of Butler and Clarion counties. The Allegheny Valley Railroad, on the one hand, serving as a feeder for rail shipments, and the Allegheny River serving the Pittsburg refiners, on the other, with barge shipments, the products ultimately coming to the Pennsylvania Railroad for export and interior shipments, gave them not only a fair but the lion's share of the carrying trade. The northern railway lines—namely, the Erie and New York Central—were naturally affected by the transfer of operations to distant fields which they could not reach with their existing connections. The first-named road was materially aided by the gathering lines of the Pennsylvania Transportation Company, operated by Henry Harley, but the New York Central and its connecting lines were left without petroleum feeders of any description. This resulted some years later, and after the failure of the South Improvement Company to establish itself, in the creation of pipe lines by the New York Central interests. Therefore, at the close of 1873 all the principal railway lines touching the oil regions at any point were served by feeders or pipe lines specially provided. From this period developments were so rapid that no attempt will be made to trace the progress of the business chronologically, except by movements in the order in which they take place.

Now this leads us up to the time of the South Improvement Company, when the overproduction of the pipe lines and the competition of the railroads were so very sharp, and it sought to correct all the difficulties that the region has ever been troubled with in the way of discrimination in freights.

Q. (By Mr. JENKS.) Have you anything further to state with reference to the South Improvement Company?—A. I have here about 1,000 pages touching the whole question—the history of the proposed movement.

Q. You could, perhaps, make a brief statement concerning the South Improvement Company, and then give us additional information?—A. I have nothing further on that branch of the subject, unless I refer to the Derrick's handbook, about what was done. The first move was to meet and combat the South Improvement Company. The producers combined, and the combination took in the oil interests of their class; well-owners, producers, and the railroads—that is, the Oil Creek Railroad and the small railroads of that region—felt satisfied.

Q. I understood you to say that the railroads themselves organized an association and made special discriminations in rates, and that the South Improvement Company was organized afterwards?—A. Yes; but its inception was with the railroads through the carrying trade.

Q. Then it is your idea that the railroads suggested the formation of the association called the South Improvement Company, and that they then offered it special rebates, or more favorable rates than they were giving to other refiners?—A. That is my idea; and it is, further, my idea that it originated in Pennsylvania. The Standard Oil Company has been very much maligned in connection with the South Improvement Company.

Q. (By Mr. PHILLIPS.) You said that the Cleveland and Pittsburg refiners were in this movement, and then that the refiners after defending it were opposed to it?—A. I said the local refiners.

Q. (By Mr. JENKS.) Then the association was made up practically of Pittsburg and Cleveland refiners for the purpose of getting differential rates from the railroads?—A. It was the purpose to make differential rates, but it was never carried out.

Q. (By Representative LIVINGSTON.) Were any advantages given by the railroads to any oil producers or refiners?—A. I am not aware of any.

Q. (By Mr. FARQUHAR.) Was this South Improvement Company incorporated by the legislature of Pennsylvania?—A. It was incorporated under some other name; I think they purchased one of the numerous charters under the old constitution, prior to 1873. I do not know just what name the charter was first issued under; but whatever it was, they had, among other things, power to change the name of the corporation. It was a charter issued by the State of Pennsylvania.

Q. (By Mr. PHILLIPS.) A special charter?

Q. (By Mr. FARQUHAR.) That is the very question I wanted to ask. Was it a special enactment that gave authority to this South Improvement Company?—A. Yes.

Q. It was incorporated for the purpose of refining, transportation, sales, and everything else?—A. That is the way I understand it, and I think to operate railroads also.¹

¹ See Mr. Emery, pp. 606-608.

Q. What interest did the Pennsylvania Railroad have in the South Improvement Company?—A. The conviction was general in the oil region that the Pennsylvania Railroad was really behind it. It never passed beyond suspicion; there was no proof of it.

Q. (By Mr. JENKS.) Then, if I understand you, when this agreement came to the knowledge of the public, there was so great an outcry on the part of the other refiners that the company itself was abandoned and its charter annulled by the legislature?—A. That is substantially the whole story; it rose and fell within 6 months.

Q. And nothing further was attempted?—A. Nothing further was then attempted.

Q. (By Mr. PHILLIPS.) Are you aware that after the South Improvement Company charter was annulled and the subsequent contract with the producers and refiners of oil by the railroads was made, giving equal rates to all without rebates or other discriminations, that George R. Blanchard, second vice-president of the Erie Railway, testified before the Hepburn committee, in 1879, that said contract only lasted two weeks?—A. I have no knowledge on the subject at that particular time; I am not familiar with the investigations of the Hepburn committee, but I understand that such an inquiry was made in 1879; I can not testify as to exact date.

Q. If this were a fact, would it not leave the same rates prevailing that prevailed under the South Improvement—that is, the same discrimination?—A. No; I can not say that. I merely recall now my own assent; and I wish to substitute for that, that I do not know.

REBATES IN VOGUE BEFORE THE TIME OF THE SOUTH IMPROVEMENT COMPANY.

Q. (By Mr. FARQUHAR.) Is it a fact or not that every one of the pipe lines, up to the time of the establishment of the South Improvement Company, gave rebates and drawbacks?—A. I believe it is; they gave special rates to favored customers.

Q. Without an exception?—A. I can not testify so broadly as that, but I have heard it variously stated that such was the case, and I know one particular instance.

Q. (By Mr. PHILLIPS.) You know one particular instance?—A. One instance came to my knowledge in such a way that it was impressed on my mind.

Q. But you have no personal knowledge that there were such rebates?—A. Yes; I have personal knowledge of that—my knowledge of the contract.

Q. Of the different pipe lines?—A. Not of the different pipe lines. I said it had been variously stated, and that I know of one particular case.

HISTORY OF THE CONSTRUCTION OF PIPE LINES.

Q. You know of only one particular case in which rebates were given?—A. Yes. We now come to the question of pipe lines. The first line, as I said this morning, was the Vansickle line, 5 miles in length, extending from Pithole to the Miller farm.

Q. About what distance?—A. About 5 miles. Simultaneously with the starting of that line, another line was begun from the same point, that is to say, Pithole, and extended to the Allegheny River, 7 miles in length, called the Pennsylvania Tubing and Transportation Company. The next enterprise in order was the Pickett & Sherman pipe line, extending from Pithole possibly 10½ miles. About the same time Harley & Abbott constructed a pipe line from Benninghoff Run to the Shaffer farm, a distance of 2 miles. The next enterprise was Warren's line, from Pithole to Henrys Bend. From this small lines of 1½ to 5 miles in length, but more generally 2 miles than 5, were extended from year to year. There were very few 5 miles in length, but at various times they were all different concerns. Tidioute had its system of pipe lines, and the Empire Transportation Company was operating Pickett & Sherman's line, and several distinct gathering lines in different parts of the field at the same time. The first pipe lines were laid in what is called Parker's district, in 1860. Possibly there was a small beginning in 1868. In 1869 pipe lines began to be recognized as carriers. The first line there was the Parker, Thompson & Company; the next was the Karns. About the same time, however, Martin & Harms, of Petroleum Center, built a line known as the Foxburg line, subsequently named the Mutual Pipe Line. Then followed the whole Mutual Pipe Line system extending out to St. Petersburg and running throughout Clarion County, throughout the entire field.

10 or 12 miles. The Mutual became quite an extensive concern. The next in order was the Grant Pipe Line, at Parkers Landing, a small gathering line, getting its oil from the Black and Milford farms, at Parkers Landing, and terminating at the river and railroads. Previous to this time and during the Pithole developments and those immediately following it around Fagundas, Vandergrift & Forman started a system which was later extended to the Cranberry district, Pine Grove Township, and the Milton farm, and, with the opening of the large wells in Bear Creek Valley, to the river at Bradys Bend and throughout the producing district in Butler County, and subsequently to Concord Township, in Butler County, on the development of what became the Greece City field. This line formed a nucleus of what is now known as the United Pipe Lines System. The next in order was the Relief Pipe Line Company, starting at Millerstown and terminating on the Allegheny River. This pipe-line development brings us down to the period 1874-75, and what I have named thus far had been constructed on one side of the river; that is, on the side of the Butler and Armstrong developments. On the other side there was equal activity. Marcus Hulings constructed the Antwerp Pipe Line, taking oil in opposition to the Mutual Pipe Line. Later on the American Transfer Company commenced to compete for business. Then came the Atlantic Pipe Line. All these lines would average about 10 miles in length—from 7 to 10 miles in length; possibly the Atlantic might exceed that, for the reason that they had two termini, one on the river and one on a branch railroad. Two of these lines subsequently constructed trunk lines from the Clarion field to Oil City, and delivered oil there, which was at that time a common point. Common points were points of common shipment where stated rates were given. The aim of the pipe line, so far as possible, was to reach a common point, to get the advantage of the freight rate. The original pipe lines were merely transporters of oil, but through the exigencies of operation they became buyers of oil; not in their corporate capacity, but by some arrangements outside of the corporation.¹ Each one of them had a purchasing department and the prices in all lines varied to some extent. Very rarely was the same price stated at the same time on two lines. This condition existed up to 1877.

AGREEMENTS WITH RAILROADS FOR THE ESTABLISHMENT OF THROUGH FREIGHT RATES.

The result of this enormous competition and overcapacity of pipe lines was that no line was able to earn by its legitimate function sufficient to sustain itself. Therefore, the purpose of the association you speak of by the railroads was to establish a through freight rate. These pipe lines were in some manner connected with one or the other of the four leading railway lines, and the rate of freight was established from the wells to the seaboard, or from the refinery, wherever it was, to the termini. In 1874 Mr. Rutter, general freight agent of the New York Central Railroad, issued a new freight tariff in which it was expressly stated that all shippers receiving oil from pipe lines would have rebated to them 22 cents a barrel.²

This was the beginning of the rebating assessment or charge. Considerable tumult was occasioned by this circular; meetings were held, resolutions adopted, and an attempt made to influence the railroads to abandon the rate; at all events that is where the rebate charge of 20 or 22 cents a barrel, about which testimony has been taken by other commissions and which was given to pipe lines, started. Both the pipe lines and the railroads wanted the oil, and their principals, or whoever they were, whatever railroad was back of them, were satisfied to divide the freight tariff with the pipe lines in order to get oil freight for the railroads.

Q. (By Mr. JENKS.) Did all those who shipped oil over these lines generally receive this 22 cents rebate?—A. Yes; all shippers who patronized the pipe lines within the pool, but not all pipe lines either—I want to correct myself on that point, because through the active competition, about 1873 or 1874, a pooling arrangement was entered into by the pipe lines; it was an attempt on their own part to get the pipeage. Failing in that they failed to make a success of their organization with the pipe line association. Then they brought out the Rutter circular, in which I think all the railroads concurred. If the circular is of any interest you will find it already published in the investigation before the Manufacturers' Committee in 1888. It would be loading down your records to quote it again.

THE CONSOLIDATION OF THE PIPE LINES THE RESULT OF EXCESSIVE COMPETITION.

This condition existed from 1874 until some time in 1877, when there was a consolidation of certain pipe-line interests. This consolidation grew until about all

¹ See Mr. Lee, p. 235.

² See p. 605, bottom. See the circular in full, p. 641.

the pipe lines in the region were members of one firm known as the United Pipe Lines Company. The organization was effected some time in 1877 or 1878. The United Lines started, as I understand it, with a capital of \$3,000,000, and acquired by purchase the property of the Columbia Conduit Company and the Empire Line, these two being the strongest, and a lot of smaller lines.

Q. Do you think the cause of this combination among the pipe lines was the extraordinary competition that existed among them practically making the business unprofitable?—A. There is no question about it. It was the overcapacity of pipe-line enterprises, or the eagerness with which individuals rushed into it. Nearly every person within a mile of the railroad handled his own oil, so far as it was possible. By getting the small lines in that way they formed the nucleus of other lines. Having to take a little capital here and there, they got into the pipe-line business. The pipe lines were not equal in strength and capacity or integrity. This period of the overproduction of pipe lines resulted in a great deal of embarrassment to the trade. It is a matter of public information that some of the lines were not able to make deliveries on demand. Suits were entered in the courts for false statements after the pipe-line law of 1874 went into effect. That was the cause of the consolidation of the pipe lines. It was a necessity. The business could not have existed had it not been done.

Q. (By Mr. PHILLIPS.) Was not there more than one suit entered of the kind of which you speak?—A. I recall but one at this time.

Q. Yet there was a multitude of pipe lines at the time when the suit was entered for false statements?—A. I say that from information, because I have the information here. I only speak of what I know. This leads up to the consolidation of the pipe lines. When this consolidation took place, during the period of the greatest tribulations among the pipe lines, from 1874 to 1876, the daily production fell from 29,987 barrels in 1874 to 24,504 barrels in 1876. It rose in 1877 to 35,988 barrels, and in 1878 to 41,544 barrels. From that time on until the highest production in 1897, which was 96,857 barrels, there was an annual increase in production.

Q. Was not the production in 1878 larger than you have named there, being after the Bradford field was opened up?—A. Eighty-one thousand barrels.¹

Q. Did not the Bradford field at one time produce 80,000 barrels per day?—A. That was said to be the case; it was about 1880 or 1881. The year 1878 was the period of the earlier developments. I have heard it stated as a matter of fact that the United Pipe Lines, which began business on a capital of \$3,000,000, afterwards increased it to five million, but paid no dividends for 3 years after its organization, or until after the opening of the Bradford field.

THE OWNERS OF THE UNITED PIPE LINES.

Q. Who were the owners of the United Pipe Lines then; and who are they now?—A. I can not say who they were then; the National Transit Company owns it now.

Q. Did the Standard Oil Company control the National Transit Company when it was organized?—A. I can not say as to that; I do not know that they did.

Q. Do they probably now?—A. The National Transit Company?

Q. Yes.—A. It is a part of the Standard system.

Q. And was from its inception?—A. I do not know who the owners were.

Q. It is the Standard's system, then?—A. Yes.

Q. (By Mr. FARQUHAR.) Can you state at what time the Standard took an interest—an immediate pecuniary interest in this pipe line; what year?—A. Well, that would be very difficult to answer. I should say about 1877.

Q. (By Mr. JENKS.) It was the refiners practically who organized the United Pipe Lines system?—A. Yes; the Standard was an aggregation of firms. It was not a Cleveland concern alone. What we know of the Standard is that it was an aggregation of the strongest refining concerns in the country.

Q. And they organized themselves into a pipe-line system?—A. Well, they were in it.

Q. (By Mr. PHILLIPS.) They controlled it then and control it now, do they not?—A. It is a part of what is known as the Standard system. That is as near as I can answer you. I guess there is no secret about that.

Q. (By Mr. FARQUHAR.) What proportion of interest did the Standard Oil Company have in the United Lines in 1877?—A. Well, I have heard it estimated that in 1877 they took a little more than one-half, because in the formation of the United Pipe Lines, a number of pipe-line owners retained their interest and became officers in the United Pipe Lines.

¹ See table of production, p. 547.

Q. So that the establishing of the pipe line was a mutual arrangement between the refiners?—A. It was a mutual arrangement.

Q. But principally of interest to the Cleveland men?—A. Principally of interest to the Cleveland men.

Q. (By Mr. PHILLIPS.) They were the largest holders?—A. Well, I am not prepared to say that, because I do not know.

Q. (By Mr. FARQUHAR.) But the parties in Cleveland interested at that time in the so-called Standard were the same parties as are now interested in the Standard companies?—A. I believe so, with very few exceptions.

Q. This Vandergrift & Forman Company?—A. Yes; Mr. Vandergrift was president of the line. He was the first president of the line and remained the president.

Q. The Rockefellers were in there as managers?—A. I never understood that they were.

Q. (By Mr. PHILLIPS.) Was not Vandergrift president of this line for some years?—A. I believe he was; I know that he was.

Q. You do not know when he resigned?—A. Yes; I do. He left the service about 1885, or within a year or two of that time.

Q. And about the same time resigned his position as director of the Standard Oil Company?—A. I never understood that he was a director of the Standard Oil Company; I am receiving now my first information on that point.

Q. I have been informed that he was acting in that capacity.—A. It is needless for me to say the information is not common in the oil country or I certainly would have heard it. He was connected with the Imperial Refining Company. Vandergrift & Forman and John Pitcirt were very large holders in that; it passed to the Standard Oil Company.

Q. (By Mr. FARQUHAR.) But that was chiefly Pittsburg money and not Cleveland?—A. It was all Pittsburg money or railroad money in the Imperial Refining Company.

THE FALL IN PRICES AND ATTEMPTS TO LIMIT PRODUCTION.

In 1882 I find the largest daily output. That was the period of the development of the Bradford field. It was 82,358 barrels. The sudden increase could have but one effect upon prices, and there was a downward tendency. Prices dropped of necessity because there was more oil than the world would take. I will run over hastily the period when this depression made itself most manifest. In 1866 there was an agitation for a shut-down movement with the object of bettering the condition of the producers. In 1862 right after the period of the flowing wells we have noticed that there was a movement to turn the stopcocks on the wells and retard production. In 1872 there was an agitation for a suspension of operations both before and after the agitation concerning the South Improvement Company. The first practical shut down went into effect that year—a shut down that was very successful and included both production and drilling. It was almost absolute, as nearly absolute as anything human can be.

Q. What effect did that have on the price of crude oil?—A. It raised the price of oil.

Q. (By Mr. RATCHFORD.) Was that the main object of that agitation?—A. The object of the combination was to increase the price of crude oil which had been depressed by competition.

Q. (By Mr. FARQUHAR.) How long did that shut down last?—A. Thirty days.

Q. Do you know how many barrels were comprised in the shut down?—A. Well, I said it was almost total.

Q. Total?—A. Yes; the daily production then was 17,000 barrels; it was practically total.

Q. This was an agreement between all the producers in that field?—A. An agreement between all the producers in all the fields.

Q. In all the fields?—A. In all the fields.

Q. (By Mr. PHILLIPS.) Do you know about the effect of that afterwards? Did it induce a large amount of drilling and increase the production? Do the facts show that there were a great many more wells drilled immediately after the shut down than before, through anticipation that prices would remain high?—A. That effect was apparent, but it does not account for the great decline in production during the next year. There was an impetus given to drilling for the next 8 months after the shut down that made itself seriously felt in prices; but the decline that took place in 1873 was due to the large wells in the neighborhood of Millerstown. At that time we had, to vex the trade, several points where they were getting wells averaging from 700 to 1,400 barrels a day. I am speaking now of initial production. Take what was known as the Troutman, Modoc, Millerstown, and Buena Vista—that section has been productive of very large wells.

PRODUCTION INCREASED BY DEEPENING OLD WELLS.

Q. Was not that enlarged production caused by the fourth sand running through under the third sand belt, so that it was only necessary to deepen the wells about 60 feet? Were not a large number of third-sand wells deepened to fourth sand at comparatively little cost at the period to which you particularly refer?—A. That period comes later. Fourth-sand discoveries were made in 1873, but the development had no considerable effect until 1874. Its presence was felt in 1873 in the Karns City district, in the Tack and Morehead wells.

Q. That was the reason that the others were deepened?—A. That was what caused the wells to be deepened. From that time forward during the next year the most remarkable development ever seen in the oil region was sprung upon the trade. No one was in condition to receive it. All that was needed was to drill less than a hundred feet, from 65 to 85 feet—that is, one day's drilling—to deepen a well from one rock to another and oftentimes quadruple its capacity.

Q. The increase by deepening those wells was about 18,000 barrels per day, was it not?—A. I have no doubt but the rapid development of the field lasted for about 6 months. Most of the wells were not deepened before midsummer, 1874, because we found the production of 1874 only 2,000 barrels greater than the production of 1873; that is, the daily production.

THE SHUT-DOWN MOVEMENTS OF 1873 AND 1874.

Now, about 1873 there was a disposition on the part of the producers in every section outside of that in which these large wells were found to suspend operations. The remuneration was so small as to leave no inducement to continue, except for a big well. In 1874 an independent shut-down plan originated in Clarion County. I will not call it independent because it was local. The region at large did not participate to any great extent. In the northern extremity of the Clarion fields at this period some very large flowing wells were found, and prices were naturally off that year, the competition among the pipe lines not leaving them anything. So there was an agitation for a shut down, which was only effective locally. In 1876 a plan was started for pooling the surplus oil as a means of advancing the market; but conditions improved so rapidly about midsummer that it became unnecessary, and there was one of the greatest bulges in the market ever known since the trade had become established on what might be called a firm footing. The advance to \$4 a barrel in the fall of 1876 was responsible for nearly all the ills that followed for the next 10 years; it called the attention of persons not permanently engaged in the oil business to the great amount of money to be obtained through drilling wells. Prices did not continue long at \$4. In the fall of that year a peculiar development was started in the region of Bullion. I say peculiar, because it was to one side and out of the usual line of oil belts. This field, not great in extent, was yet large enough to add within 2 years 8,000,000 barrels to the production. Bradford coming on at the same time, gave the producers about the worst quarter of a year they ever had, and it might be extended to a quarter of a century, because prices have scarcely recovered yet.

ORGANIZATION OF THE PRODUCERS' PROTECTIVE UNION.

In 1877 and 1879 what was called the Producers' Protective Union was started in a small way as a result of the effect of the Bullion development on prices. It was the work of a few producers at Elk City, in Clarion County, who thought that by uniting their interests and suspending operations they might induce their friends and neighbors to join them until they formed an unbroken chain. David Armstrong formed the first union and within a short time became the head of an organization taking the name of the Petroleum Producers' Union. This movement continued for two years. When once fairly started Mr. B. B. Campbell, who was called to the presidency, carried the organization along for a greater period than any others of a similar nature that had ever been formed up to that time. Organizations since that time have lasted for longer periods, but up to 1879 no similar movement had lasted two years.

SUITS AGAINST MEMBERS OF THE STANDARD OIL COMPANY AND PIPE LINES.

This movement, which started as a protective concern, developed rapidly into an aggressive organization. They undertook to fight the transportation companies and the railroads. Suits were started in the Supreme Court of Pennsylvania to annul the charters of pipe lines, and criminal actions instituted against some

of the owners of the pipe lines, members of the Standard Oil Company. The object of these suits was never developed. The aim, if it was to improve their condition, failed of its purpose.

Q. Where were the suits brought against members of the Standard Oil Company and the pipe lines?—A. A suit against members of the Standard Oil Company was instituted in Clarion County; the proceedings against the pipe lines were in Venango County.

Q. Was that suit tried in Clarion County or was it removed from Clarion County?—A. It was not tried anywhere and was not removed from Clarion County.

Q. Did they not take an appeal to the supreme court at Philadelphia?—A. No doubt they did, but, as I understand it, the suit was settled outside of court.

Q. Yes, but after an appeal was taken?—A. I am not clear on that point.¹

Q. It was a suit for conspiracy. was it not?—A. It was called a suit for conspiracy, but it hardly was a conspiracy from the fact that it was never tried.

CONDITION OF PRODUCERS NOT IMPROVED BY THE COMBINATION.

Q. Oh, certainly not. You have covered the ground very fully; you have said it was a criminal suit?—A. The condition of the producers was no better after the termination of that combination than it was before. The production continued to increase, and prices were falling with the additions to the stock. In 1879 the daily production was 54,206 barrels and the price 85¢ cents. When the movement was started in 1877 the daily production was 35,988 barrels and the price \$2.39¢. That was the average for the year. That is what makes me say the condition of the producers was no better at the end of the combination than it was at the beginning. The great increase in drilling had not ceased to any extent; stocks had accumulated and production increased. In 1881, during the development of the white-sand pools in Warren County, an individual shut-down occurred among the heavier operators. It was partially successful.

THE PRODUCERS' ASSOCIATED OIL COMPANY.

In 1884 there was an attempted combination of producers to restrict drilling. The movement, while very general, was only partially successful. That was the year of the Thorn Creek development, the period when very large wells were found in a small area. The persons engaged in engineering the shut-down of 1884—that is, the combination of 1884 for the improvement of prices and the betterment of the condition of the producers—claimed and alleged that the failure was due to the want of cooperation on the part of the Thorn Creek operators, for it was carried out very generally through other sections of the field. One of the results of this was the formation of what is known as the Producers' Associated Oil Company, which is in existence to-day. This was a company formed by all the companies, all the existing producing companies, taking some of the shares. The capital stock, I believe, was \$1,000,000, and the shares were parceled out to existing producing companies. It became necessary to purchase property in order to curtail production or stop the drilling. Purchasing was resorted to by the Associated Producers' Company, and all the shareholders participated in the profits accruing. It was considered a very wise arrangement at that time, and the fact that it is still in existence and doing business would attest that it was in every way. In connection with that I want to state another movement, born of it. It was a drilling contract, known as the boundary-line contract, entered into by the operators connected with a subsequent shut-down. It was the contract of the shutdown combine of 1887 and was an agreement between the producers and the Standard Oil Company for mutual benefit. It provided for reducing production one-third and for relinquishing certain holdings in oil, 6,000,000 barrels, I think.

Q. What year was that?—A. 1887-88. In consideration of the receipt of 5,000,000 barrels of oil the producers on their part agreed to suspend active drilling operations and to restrict their production at least one-third for the period of a year.

RELATIONS OF THE PRODUCERS' ASSOCIATION TO THE STANDARD OIL COMPANY.

Q. (By Representative LIVINGSTON.) Will you explain to the commission what you mean by the producers? Does that take in all the producers—the Standard and the independent companies?—A. No; I refer now to the Producers' Association itself, the association in existence to-day.

Q. What is the name of the organization?—A. It was the Producers' Protective

¹ See Mr. Lockwood, p. 389; Mr. Archbold, p. 558; Mr. Emery, p. 602.

Association, and it is in existence and organized to-day. It was organized previous to 1887.

Q. That does not cover the independent companies?—A. No; not necessarily. It is an organization for the betterment of their condition as producers, out of which came these independent companies which you refer to. They resulted from this agreement. I shall lead up to that presently.

Q. (By Mr. SMYTH.) Entirely separate from the Standard Oil Company?—A. Yes; the organization is entirely separate from the Standard Oil Company.

Q. (By Representative LIVINGSTON.) Opposition?—A. It is not in opposition. They are in harmony in many respects; the proceedings state that.

Q. How are they hitched together? If they are in harmony, what hitches them up?

Q. (By Mr. SMYTH.) What is their relation?—A. The remunerative feature that existed in the original contract between the Standard Oil Company and the Producers' Protective Association—

Q. (By Representative LIVINGSTON.) Have you copy of that contract?—A. The contract is published in the voluminous report of the investigations of the Manufacturers' Committee in 1888.

Q. When you speak of producers do you mean the Standard Oil Company and the Protective Association?—A. Yes, if you please; speaking of both sides during that one year.

Q. (By Mr. PHILLIPS.) You spoke of the receipt of 5,000,000 barrels of oil. On what terms was that oil turned over, and what was the price of oil at the time this shut-in movement, as it is called in the oil country, began? On what terms, if any, was that oil turned over to the producers?—A. The oil was turned over to the producers on condition that they suspend drilling operations as far as practicable and restrict their production at least one-third. The price at which it was turned over was 62 cents a barrel. The existing price at the time it was turned over was 10 cents a barrel more. The Standard sacrificed 10 cents a barrel on the oil when they turned it over to the association.

Q. That might possibly be; when the papers were drawn up it was in anticipation, but the day the contract was made it was 62 cents?—A. I can only testify to the facts as they appear, and that is as they appear now—

Q. (By Mr. FARQUHAR.) You testified as to the agreement, that is all?—A. Yes, and the price when the transfer was made; oil was 71 cents.

THE EXTENT OF THE COMBINATION.

Q. I wish you would state very explicitly how wide this combination was, what class of producers it took in, and what control it had over the market and the consumer.—A. Well, I should say that the agreement was far-reaching; it took in every class of producers they could get in. They made strenuous efforts to bring people into it, and I believe great sacrifices were asked on the part of the Standard Oil Company, or rather demanded, to enable some large producers to join it.

Q. (By Representative LIVINGSTON.) Now, then, if I understand that answer, you mean to say that they endeavored to get everybody into it they could?—A. Yes.

Q. Did they get them all in?—A. No.

Q. Why not?—A. Well, I think it might be said to be due to energy, enterprise, or hoggishness—anything you care to call it—that some people would stay out.

Q. (By Mr. PHILLIPS.) The Standard people were as anxious to have other people in as the Producers?—A. It was mutual.

Q. (By Mr. FARQUHAR.) Who made the first proposition?—A. That I am not prepared to answer; I do not think I ever heard it stated or saw it in print.

Q. Did not the proposition originate with this very company of which we have been speaking—the Producers' Protective Association? Did it or did it not?—A. Well, as a matter of opinion, I should say it did.

Q. As a matter of common belief?—A. Belief at the time; yes. Now, as to the other branch of your question—

THE EFFECT OF THE COMBINATION UPON THE CONSUMER.

Q. (By Representative LIVINGSTON.) The other part of the question was: How was the consumer benefited by it?—A. The condition of the producer was bettered by it. Crude oil advanced 20 or 25 cents a barrel. We will now see what refined oil did. I should say that the parallel of increase was regular; that, taking the annual average, the advance to the producer was no greater than the advance to

the refiner and the advance to the public. Refined oil sold in 1887 at 6½ cents retail, and the average for 1888 was 7¼.

Q. What was the advance, then, on refined oil?—A. About three-fourths of a cent.

Q. A gallon?—A. A gallon. The price was not advanced to the consumer in proportion to what it was to the producer.

Q. The producer of crude oil?—A. Yes, of crude oil.

Q. (By Mr. FARQUHAR.) Do you propose to say that the Standard Oil Company stood the difference?—A. Somebody stood it.

Q. Well, what is your judgment?—A. If we hold that the Standard Oil Company produces three-fourths of the refined oil they certainly stood three-fourths of it.

Q. (By Representative LIVINGSTON.) The Standard Oil Company was involved in that original proposition. It would seem that they were working for their health along about that time?—A. It did seem so to me; I thought so.

Q. Now, then, what was the ulterior purpose? If they were standing that loss, in the end they hoped to gain. Do you know how, in the end, they hoped to be benefited by the arrangement, after standing the loss?—A. That question involves an opinion on my part that I do not think I would be justified in submitting. I do not know that I can answer it in any intelligible way. To answer it would be to give an opinion only.

Q. In the end they would put down competition and regain all they had lost?—A. No, sir; that is not it. I can not agree with that, but I can agree with one branch of it. The betterment and the benefit of the producer is always the concern of the Standard. If you kill the goose, where are you going to get the golden egg?

Q. There are more geese.—A. Oh, no. The supply is limited.

Q. (By Mr. SMYTH.) Was the cost of refined oil lessened at that time?—A. I do not think there was any material change in that feature of it.

Q. They could not have recouped their loss by reducing the prices in that way?—

A. No, I think the recoveries have been fully made in oil and its by-products.

Q. I understood you to say that the price was advanced to the producer, but was not advanced in proportion to the consumer. Now, was the process cheapened in the meantime?—A. I think not.

Q. (By Representative LIVINGSTON.) The witness seems to be an intelligent one all along this line, and I do not see why we should not insist on having his opinion as to the nature of this recoupment?—A. I can state it as a matter of opinion.

Q. Well, that is all.—A. I am very willing to state my opinion.

Q. Where would they recoup and how?—A. Well, the betterment of the trade would leave a condition of harmony that could not exist where everybody was working at unremunerative prices.

THE COMBINATION THE RESULT OF TOO MUCH COMPETITION.

Q. Now, that word "harmony;" do you mean by that the killing of competition?—A. What word?

Q. The word "harmony." Do you mean by that the removal of competition?—A. My dear sir, this whole trouble was brought about by competition, too much competition in drilling, too much drilling.

Q. That is what led to the combine. You needed a combine to control it?—A. It led to the combine, and that leads me to the question of one of the movements connected with the shut down of 1887 and 1888. In the drilling contract it was provided that the members of the association were not to drill a well along any line within a stated distance—that is, closer than would give an area of 20 acres for each well.

Q. That lessened production?—A. The aim was to lessen production, and therefore it benefited the trade.

Q. Now, I want you to use another word for that word harmony. You said trade was improved because it produced a kind of harmony among all the parties interested here. You mean that it took all the competition out of the way?—

A. Well, I can not say that competition was destroyed.

Q. I do not mean to say it was, but crippled or lessened?

Q. (By Mr. FARQUHAR.) Hypnotized?

Q. Hypnotized?—A. I will adopt that term, "hypnotized."

Q. Was it not lessened?—A. Oh, unquestionably.

THE LABORER SUFFERED BY THE RESTRICTION OF COMPETITION.

Q. If it was lessened, who suffered by it, the producer or the consumer?—A. Neither—labor.

Q. Labor?—A. Labor lost it all.

Q. That burden was put on labor?—A. The burden was put on labor; but let me say that in addition to this 5,000,000 barrels of oil—

Q. Did you not say that crude oil increased 29 cents a barrel, and refined three-fourths of a cent a gallon? Now, how did the laborer bear that charge? Was not the increase paid to the producer, and the 29 cents a barrel by the consumer?—A. As far as the difference in price would be represented by the difference in cost.

Q. Then the laborer did not bear that loss, but the consumer?—A. True from your standpoint and true from mine.

Q. You have got two ways of looking at that?—A. Yes.

Q. You know what the Scripture says: "He that seeth double"?—A. Yes; I neglected to state that in addition to the 5,000,000 barrels 1,000,000 was set apart in the agreement for labor. To that extent labor did not suffer.

Q. (By Mr. PHILLIPS.) Was not that 2,000,000?—A. Yes; the Standard set aside 1,000,000 and the association 1,000,000 to the labor, and the profits of the 2,000,000 barrels compensated them to that extent.¹

EFFECT OF THE COMBINATION UPON THOSE WHO DID NOT GO IN.

Q. (By Mr. KENNEDY.) You said that about all of the producers went into this association, and I infer that enough of them entered into it to accomplish the object that they had in view. Is that true, and is it true that those who stayed out did not affect that object?

Q. (By Representative LIVINGSTON.) Ask him if the man who did not go in was not hurt. Would it not have been better for him had he gone in?—A. The ones who stayed out made a lot of money by it, because they went on drilling and secured large wells, and most of them got rich. Many of them got rich by simply taking advantage of the producers' necessities. It was necessary to do something at this time. Producing oil was not a remunerative business, but at the prices at which oil was left at the close of the year it was remunerative. Nearly the entire number of operators in the Washington oil field, then the greatest field we had, stayed out because they were getting very large wells. One person drilling along the line would start another, and in this way an endless chain was formed around the group of wells. It was just like setting up a row of bricks and starting the end one—all the rest go.

THE COMBINATION AND LABOR.

Q. (By Mr. PHILLIPS.) Well, did labor work in perfect harmony with that movement throughout the oil country—with that particular feature of it—and agree to go into the thing? There was harmony between the Standard and the laboring people, was there not?—A. So far as I have heard, there was.

Q. (By Mr. FARQUHAR.) Do you think they could help themselves, whether they went in or not?—A. Oh, yes, they could.

Q. Was labor organized at that time?—A. One of the first steps of the laborers, the well drillers, and the tool dressers, was to combine themselves in an organization. It was my observation, and I examined it very closely and took a great interest in it, watching it from year to year, that the drillers could have made a failure for the producers had they been so determined. Enough of them could have got together to start drilling on their own account.

Q. (By Representative LIVINGSTON.) Then, it is your observation that labor in that instance was not damaged by the combination?—A. Not by that particular combination, but what you referred to a while ago was the drilling contract.

Q. (By Mr. PHILLIPS.) Was not the price of labor put up after this shut-in to the scale agreed upon in the movement?—A. Yes, there was a scale adopted.

Q. (By Representative LIVINGSTON.) Who paid that?—A. The oil producers.

Q. Did they pay it in the price of the oil?—A. That is in the construction account; it goes into drilling the well, that is, building the superstructure over the well. It just adds that much to the cost of drilling wells.

Q. That does not have anything to do with the cost of oil?—A. No, not at all. It diverts the producers' profit to the extent of the advanced cost.

Q. (By Mr. KENNEDY.) What did you say was the period of that shut-down?—A. One year.

Q. What was the amount of oil set aside by the producers and the Standard Oil Company for the benefit of labor?—A. One million each, but the 6,000,000 originally came from the Standard.

Q. That oil was sold for the benefit of the laborers?—A. After this shut-in; it was sold for their benefit and distributed by their organization.

¹ See p. 284.

Q. How did the money thus distributed to them compare with the amount they would have earned had the work continued in that field?

Q. (By Representative LIVINGSTON.) Did they lose anything by the combination?

Q. (By Mr. FARQUHAR.) Subsequently?—A. I have not right at my tongue's end the amount that each individual driller received, but for the most part the driller constantly employed (what we call constantly employed) will perhaps work 200 days a year and make \$1,000.

Q. (By Mr. PHILLIPS.) Did not the laborers get more out of their oil being sold first at a higher price than the producers did?—A. I believe that is true.

Q. (By Mr. KENNEDY.) What I want to know is, did they receive anything like the amount of money they would have received had operations continued?—A. About the only way I can get at a reply to that is to state that there were nearly 800 fewer wells drilled during the year of the shut down than the year previous, and labor would lose the amount to be secured from drilling 800 wells, provided the same number would have been drilled in 1888 as in 1887.

Q. (By Mr. PHILLIPS.) Then did labor receive compensation in addition to what they got in the shut-in points?—A. It seems to me that labor received some addition in the way of increased compensation. It would be very difficult to state the precise loss of labor in drilling at that time. Drilling was very active in the Lima fields in Ohio, and gas drilling was very active also during all that period and furnished a new outlet for labor. But the married men living in distant portions could not get away, and they were the ones who would have made the trouble, if there was any, in that association.

CONDITION OF THE OIL INDUSTRY AT THE TIME OF THE COMBINATION.

Q. Were there not about 31,000,000 barrels of oil in tank on top of the ground when that shut-in movement was inaugurated, and was it not deteriorating in value and the price very low, as you said before? Was it not the object of the Standard and the producers to prevent the deterioration of that oil and in the end to get a remunerative price, and also to advance the price of labor?—A. The conditions precedent to that movement were worse than any that had ever existed before. Great stocks had accumulated in the Bradford field, the accumulation having started just 10 years before that period and still continuing with a prospect of increase. The Washington field had been opened 2 years before and the largest wells found anywhere were there. A very prolific district had been found in Butler County, Reibold and Glade Run, where wells were obtained producing 3,000 barrels a day, and at the same period another development was going on at Saxonburg. That was the condition when this agreement took effect. It was entered into heartily on both sides for the betterment of their condition, and I believe they were both benefited by the movement. The stocks were reduced 10,000,000 barrels and upward. I have a leaflet showing precisely the amount and I will hand that in later.

Q. (By Mr. RATCHFORD.) I understand you to say that this shut down was brought about for the benefit of the industry and particularly the producers?—A. Well, that the industry might survive would be my way of putting it.

Q. But from your standpoint are not prices cut for the same reason?—A. No; I do not believe so. Prices are cut because the trade will not take the supply at the existing prices.

Q. I understood from your previous statement that prices are cut for the purpose of improving trade conditions, and I also take it from your remark that prices are advanced for the same purpose. Now, I want to know what the peculiar trade conditions are which can be relieved by methods directly the reverse of one another?—A. I am very willing to answer that question, but my explanation will be simply an opinion. In answer to the first part of your question, I will say that prices are cut in periods of overproduction for the purpose of finding a market for the surplus goods. One of two things can be done—the oil may be stored in tanks and carried at great expense until it can be put on the market at remunerative prices, or prices may be made to the foreign consumer that will induce him to take the surplus. I have no doubt that all companies manufacturing oil find it necessary at times every year to hold out inducements to the trade to take surplus goods off their hands. There is a period, from May until September, when there is a decline of one-third in the consumption of oil. If there is an overproduction of crude during this period of underconsumption, it becomes necessary to convert it into money, for it would seem like folly to add millions of barrels to the existing stock during 4 or 5 months when there would be no sale for it. These various branches of the oil business are dependent on one

another, the producer on the refiner, the refiner on the producer, and the consumer on both. The success of any one branch depends on the success of the whole. The division of labor has not been carried out anywhere so fully, I think, as in the petroleum business.

Q. That is your answer to the whole question?—A. Yes; that is the only way I can answer it. There is only one of two things to do—to find a market at a lower price or hold the oil for higher prices.

Q. If production continues?—A. Assuming that production remains at a point above the consumption.

THE COST OF PRODUCTION AND THE PRICE OF OIL.

Q. Is the oil trust, combination, or whatever it might be called, in the habit of introducing its products into foreign markets by selling them at prices below cost?—A. Well, I do not know that it is sold below cost. It is the aim of business people to get cost where they can.

Q. You are not in a position to say whether oil is sold below cost or not?—A. They may sell at a very low margin of profit, and I believe they often are induced or, rather, compelled to do so.

Q. Have you ever known them to sell, in any particular case, in order to improve the market, as low as 5 cents per gallon?—A. I never have.

Q. If it has been done, do you believe it was below cost? Have they been able to produce it at any time for 5 cents to your knowledge?—A. Well, that involves an opinion on my part. I am not a manufacturer, and can not tell what the cost of producing is. I have heard—what are you leading up to by that question?

Q. I am seeking to corroborate or cast doubt upon testimony that has been given.—A. I should say that 5 cents a gallon would be a very low cost for distributing oil under the existing conditions in this country.

THE PURPOSE OF THE STANDARD IN SELLING AT OR BELOW COST.

Q. It has also been said that the Standard Oil Company has sold oil below cost in cities in the United States where the competition of other companies has had to be met.—A. I can only say that I have in my business sold advertising space below cost in order to have it occupied. I have heard that other business men do that in order to get off surplus stock. You have to sell below cost in order to get cash; and every spring and fall we carry one or two pages of advertising matter for merchants' clearing sales. They are all below cost. At a period of depression in trade, I should not be surprised if a business concern were compelled to sell at less than cost.

Q. I do not think your illustration is a fair one, because it was not your object to crowd out the fellow who was paying regular rates. I understand, however, that it has been the object of the Standard Oil Company to drive out the man who was disposing of his product at a fair price.—A. I have heard a good deal of that, but I have never seen any of it.

Q. After the control of a market has been secured by the Standard Oil Company through very low prices, is it not true that prices have advanced to a very high figure?—A. Assuming the facts to be as you present them, I should think it would be a very natural result.

Q. (By Mr. PHILLIPS.) Has not the Standard Oil Company followed up new, independent producers, from one place to another, where they have found a market, and reduced the prices there so as to drive them out? Are there not a great many instances of that kind on record?—A. There are none in the oil country. My observation is limited to the oil country, and there are none there.

Q. (By Mr. FARQUHAR.) Are you prepared to make any statement as to the dismantling of plants by the Standard Oil Company?—A. None at all. I have no information of that kind. The things we hear about have certainly not occurred within the range of my vision in the oil country.

OIL PRODUCERS HAVE NOT BEEN INJURED BY THE STANDARD.

Q. (By Mr. PHILLIPS.) You may proceed in your own way.—A. I have here a paper I should like to put in evidence showing that the producers of oil are not beggared in their business relations with the Standard Oil Company. It covers the years 1860 to 1896 and has not been presented before. It shows the amount of oil produced, the average price, and the valuation by years; the total production and valuation by decades and for the period, and also the number and cost of wells drilled.

EXHIBIT I.—Yearly production and valuation.

Year.	Amount of oil produced.	Average price.	Total valuation.	Year.	Amount of oil produced.	Average price.	Total valuation.
<i>Barrels.</i>				<i>Barrels.</i>			
1880	650,000	\$9.80	\$6,240,000.00	1881	27,561,376	\$0.854	\$23,496,078.04
1881	2,118,000	.52	1,101,360.00	1882	30,221,261	.784	23,723,689.88
1882	3,056,000	1.06	3,208,800.00	1883	23,942,021	1.064	24,671,014.73
1883	2,681,000	8.15	8,287,650.00	1884	23,952,290	.884	20,030,102.52
1884	2,116,200	8.15	17,247,030.00	1885	21,528,621	.884	19,025,918.81
1885	2,497,700	6.59	16,459,843.00	1886	26,003,945	.714	18,988,565.74
1886	8,597,500	8.75	13,490,625.00	1887	22,873,450	.604	15,239,436.06
1887	8,347,900	2.40	8,053,520.00	1888	16,905,890	.87	14,708,124.30
1888	8,715,800	3.624	13,469,775.00	1889	22,949,825	.944	21,080,772.78
1889	4,215,000	5.60	23,604,000.00	Total.	241,544,250	-----	206,623,341.56
Total.	27,944,500	-----	111,142,608.00	1890	30,067,307	.864	26,045,804.69
1870	5,659,000	3.90	22,070,100.00	1891	85,939,777	.664	23,967,850.87
1871	5,705,000	4.40	25,488,000.00	1892	83,425,877	.554	18,551,361.73
1872	6,539,100	3.75	24,521,625.00	1893	81,762,690	.64	20,072,249.60
1873	9,893,799	1.80	17,908,814.80	1894	30,781,924	.894	25,779,861.35
1874	10,926,945	1.15	12,565,986.75	1895	30,959,139	1.354	41,871,235.50
1875	11,987,514	1.244	14,954,423.61	1896	33,970,222	1.19	40,424,564.18
1876	9,120,699	2.574	23,497,123.51	1897	86,165,990	.784	27,561,244.66
1877	13,337,393	2.994	31,926,312.66	1898	81,647,860	.914	28,839,112.42
1878	15,381,641	1.174	18,015,747.02	Total.	293,220,986	-----	253,113,285.00
1879	19,864,288	.854	17,094,484.10	Grand total.	671,245,042	-----	778,771,847.08
Total.	108,535,309	-----	207,892,617.47				
1880	26,245,571	.944	24,703,643.70				

	Wells drilled.	Cost per well.	Total cost.	Value of crude oil.
1880-1870	5,000	\$4,000.00	\$20,000,000.00	\$111,142,603.00
1870-1880	20,259	3,000.00	60,777,000.00	207,892,617.47
1880-1890	32,132	2,000.00	64,264,000.00	206,623,341.56
1890-1899	43,490	2,000.00	86,980,000.00	253,113,285.00
Total	100,881	-----	232,121,000.00	778,771,847.03

If one-fourth of all the oil produced went to the land interests they would receive \$194,692,968, leaving \$584,078.885 for the oil producers. Deducting the cost of drilling, there still remains \$351,957,885; the cost of lifting the oil, at an average of 25 cents a barrel, would be \$87,989,471.25, leaving \$263,968,413.75 as the profits of the producing business for the last thirty-nine years, or an average of \$6,768,420.86 per year.²

DRY WELLS AND THEIR COST.

- Q. Do your figures include dry wells?—A. They include 15,000 dry wells.
- Q. Is the cost of territory included—the bonus?—A. 15,000 dry wells are included which never produced any oil and which cost the producers about \$30,000,000.
- Q. Is that your idea of the proportion of dry wells? Would not the percentage be much larger than that? How many wells were drilled altogether?—A. 100,881.
- Q. How many dry wells?—A. Fifteen thousand.
- Q. That does not correspond with the experience of a great many as to the percentage of dry wells, does it?—A. It is consistent with the statistics available. We are liable to be mistaken, but our work is subject to revision. These are not our own figures in every case, but we vouch for those that are. We can take the figures from 1875 and vouch for them; beyond that we are dependent on the early statistician.
- Q. Has the inspection of the oil country been sufficient to give you a record of all the dry wells? I can readily see that the striking of a good well would be reported; but has there been an organized attempt in the oil country to ascertain the facts as to the many thousands drilled and abandoned?—A. During the first 10 years of the business there were probably a thousand men in the oil region who had been through it from the beginning to the end. Of these personal observers 900 probably had been over all parts of it. Mr. Wrigley was commissioned in 1874 to make a survey of the field and report as to the extent of the operations. His report carries us down to about 1875. From that time the news-

¹ See Mr. Emery, p. 661.² Compare Mr. Archbold, p. 539. As to sources, see p. 485.

papers have taken it up and published reports; and, whether right or wrong, they are subject to public inspection and criticism. The figures for the first 10 years are as nearly official as they can be made.

THE RENTAL OR BONUS FOR LAND NOT AN ELEMENT OF COST.

Q. I understand that you do not include the bonus or rental paid for holding the ground in these figures; but are there not many instances where persons pay a very large bonus for a prospective territory that does not prove valuable? Do not such payments amount to many millions of dollars?—A. We have considered that question very fully, and have adopted the view that the bonus or rental paid on account of speculation should not enter into a question of this kind. While it is true that it operates against the profits, the amount needed to produce a given quantity of oil consists in the cost of drilling, the rental of the well, and the expense of lifting the oil; any other expense is purely speculative and is incurred for the purpose of giving the individual producer an advantage.

Q. But is it not necessary, in order to pursue the business, to pay this bonus or rental? Could any firm or individual become a large producer without paying a bonus or rental when the ground had only a prospective value?—A. But it should appear as a bonus and not as the cost of operating.

Q. But is not the producer out that many million of dollars, equal perhaps to the cost of drilling?—A. It is not compulsory, while the cost of drilling and lifting the oil is; the lease is speculative and does not enter into our figures; it curtails the producer's profits; when he sees fit to invest in that way he takes the chances.

AVERAGE DAILY PRODUCTION AND PRICE, 1870-1898.

I should like to offer here a table of figures which purports to give the average daily production by barrels from 1870 to 1898, inclusive:

EXHIBIT II.—*Trend of prices of crude and refined oil, 1870-1898.*¹

Year.	Average daily production.	Average price per barrel.	Refined, per gallon.	Stocks increased.	Stocks decreased.	Total stocks.
	<i>Barrels.</i>			<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>
1870 ..	15,350	\$3.00	\$0.20	203,872		544,636
1871 ..	15,800	4.40	.24		12,626	532,000

1893 ..	85,296	.64	.06		5,284,206	6,336,777
1894 ..	84,334	.83	.06		5,774,406	5,161,905
1895 ..	84,820	1.35	.07		1,174,872	9,550,593
1896 ..	92,815	1.19	.09	4,498,678		10,789,652
1897 ..	96,357	.78	.06	1,239,069		11,541,753
1898 ..	85,206	.91	.06	752,101		

Since 1870 the daily production has increased 450 per cent; the price of crude oil has declined 75 per cent, and the price of refined about 75½ per cent.

In 1871 we exported petroleum and its products to the amount of 152,195,617

¹ See p. 547, where it is shown that this table includes only "Pennsylvania oil;" pp. 561, 568. As to sources, see p. 485.

gallons, and of the value of \$36,663,825. In 1897 our total exports were 964,397,757 gallons, valued at \$59,057,547. In other words, our exports increased over 500 per cent in 26 years, but the increase in valuation of the total product was but a little over 61 per cent.

In 1871, 132,178,848 gallons of illuminating oil sent abroad brought \$33,493,851, while in 1898, nearly six times as great an amount, or 771,350,636 gallons, brought but \$48,348,916. The total exports of petroleum for the year 1898 amounted to 966,480,610 gallons, valued at \$52,551,048. The decline during the past year (1898) reached 7,817,147 gallons in amount, and \$6,506,499 in value. For 1896, our exports of petroleum and its products were 931,795,022 gallons, valued at \$63,764,278, and for 1895, 858,126,130 gallons, valued at \$56,224,425.

In 1888, 680,000,000 gallons of petroleum were within \$6,000,000 of the value of nearly a billion gallons exported in 1897.

PRICES OF CRUDE AND REFINED OIL, 1891-1899.

I have another paper which I wish to offer in evidence now, and which is prepared to show the comparative prices for 4 years before Mr. Seep's agency, and for 4 years after.

EXHIBIT III.—*Crude and refined prices compared.*

On the 23d of January, 1895, there was posted in the various offices of the Seep Purchasing Agency throughout the oil regions the following important notice:

"NOTICE TO OIL PRODUCERS.

"The small amount of dealing in certificate oil on the exchanges renders the transactions there no longer a reliable indication of the value of the product. This necessitates a change in my custom of buying credit balances. Hereafter in all such purchases the price paid will be as high as the markets of the world will justify, but will not necessarily be the price bid on the exchange for certificate oil. Daily quotations will be furnished you from this office.

"JOSEPH SEEP.

"January 23, 1895."

This marked a radical departure in the methods of buying and selling oil and determining the price of crude petroleum. It tended to make the deal between producer and refiner a direct one, and to eliminate the speculative broker as a factor in determining values. The price of speculative oil, in the shape of certificates hawked about on the floor of the oil exchanges, was no longer to rule the real market as established directly between the man who had oil that he wished to sell in the lines and the agents of the refiners who desired to buy it. The change was rendered imperative by the gradually diminishing volume of business in the oil exchanges and the practice of some of the larger producers, who, by the purchase of a few thousand barrels of speculative oil on the floor of the oil exchanges, were able to manipulate the market a few cents in their own favor and at the same time dispose of a large amount of credit-balance oil at the advanced figures.

This order put a sudden stop to the frequent practice of establishing a fictitious value for oil by interested parties who desired to effect sales or purchases of the commodity. It, however, did not eliminate the petroleum broker or put a check on speculative dealings in oil. This business is pursued as usual, but instead of the credit-balance price being determined by the price of certificate oil, as in times past, all speculation is based upon the price paid from day to day for credit balances in the direct dealing between the producers and refiners. But the broker has ceased to be longer a factor in the business. The manifest absurdity of basing the price of the entire amount of daily production on the few thousand barrels of oil that changed hands occasionally on the floor of the oil exchange is a thing of the past.

In the following tables are shown the average price of a barrel of oil in the exchanges, from month to month, as compared with the price of a gallon of refined oil in New York, for the four years immediately preceding the time when the new rule of the Seep Purchasing Agency went into effect.

Refined prices are quoted in cents and decimal parts of a cent.

Date.	Average price crude oil, per barrel.	Average price refined, per gallon, New York.	Date.	Average price crude oil, per barrel.	Average price refined, per gallon, New York.
1891.	Cents.	Cents.	1893.	Cents.	Cents.
January	74½	7.42	January	58½	5.83
February	77½	7.43	February	57½	5.80
March	74½	7.81	March	65½	5.84
April	71	7.18	April	68½	5.62
May		7.20	May	58½	5.20
June		7.13	June	60½	5.21

August	54½	6.08	August	80½	5.15
September	54½	6.10	September	83	5.15
October	51½	6.03	October	82½	5.15
November	51½	5.80	November	82½	5.15
December	53½	5.45	December	91½	5.61
Average	55½	6.07	Average	88½	5.17

It must be remembered that the prices quoted above include the cost of the barrel. Refined oil in bulk is 2.50 cents less than the above figures. For example: In 1891 the producer realized an average of 66½ cents per barrel for his crude product, or 1.59 per gallon, while the refiner, after paying cost of transportation, manufacturing, etc., delivered it on board the tank steamers for export abroad at 4.85 per gallon. In 1894 the producer received nearly two cents a gallon for his crude product, while the refiner realized but 2.07 cents per gallon.

SEEP AGENCY PRICES.

The following table shows the price paid for crude petroleum by the Seep Purchasing Agency, since 1895, with the corresponding price of refined oil on the dates when changes in the price of crude were made:

June 2186	6.15	August 31	1.35	8.10
June 2287	6.15			

¹ These figures prevailed until the close of the year.

² Ranged from 5.70 to 5.75 cents.

³ September 19, 6.65 cents.

⁴ In April dropped to 6.95 cents.

When there has been a large amount of surplus production seeking a foreign outlet, reduced prices have been the invariable result for both crude and refined. Increased consumption is always gained at the expense of price. Foreign competition has been keen, and prices for refined for the four years from 1891 to 1895 were hammered down to the lowest notch. When refined oil gets above a certain price per gallon, its use becomes almost prohibitive to millions of our foreign consumers. The result of higher prices is immediately shown in a falling off in the foreign demand.

A careful inspection of the above tables will show that the relative ratio between the price of refined and crude oil has been better maintained during the years that the practice of basing prices upon the actual conditions of supply and demand has prevailed than during the years immediately preceding the adoption of the new order of things. The speculator devoted his efforts to bearing the market whenever there was any immediate prospect of a temporary increase in new production, without any regard to the foreign demand for refined or the actual value of refined oil in the markets of the world. The producer was absolutely at his mercy.

Taking the year 1899 for illustration, it will be observed that the price of refined oil has advanced from 7.50 cents a gallon at the beginning of the year to 8.10

cents at the present time, a gain of 60 points. During the same period the Seep Purchasing Agency price for crude oil has advanced from \$1.19 to \$1.35 per barrel, or 16 cents. During March and April, when crude oil was \$1.13 per barrel, refined dropped as low as 6.95 cents per gallon. On June 28, when refined had advanced again to 7.20 cents, crude oil was marked up to \$1.15, and a few days later, when refined had advanced to 7.50 cents, the crude-oil price had been raised to \$1.21 per barrel.

HOW THE PRICES OF OIL ARE FIXED.

Q. (By Mr. PHILLIPS.) You say "it tended to make the deal between producer and refiner a direct one;" but does the producer have any part in the bargain? Do they not post the price each day that they will give? Can it be considered a deal when the producer has nothing to do with fixing the value of his commodity?—A. Would you suggest that I say "option"—that the producer has the option? Would you advise me to change that?

Q. Provided he has another place to sell.—A. He is not driven to that necessity. When he becomes reduced to that necessity, it may be as you say.

Q. Do they not fix the prices also of the refined? Do they not post that in New York and Europe, the same as the crude?—A. I believe the prices are posted; they are reported every day and posted somewhere, but whether or not they do it I can not say.

Q. When the Seep Agency advanced prices, as they did lately, did not the Standard advance the refined 10 or 15 hours later, the same day or the day following?—A. I have no knowledge of that, but I dare say refined would go up in proportion to the advance in crude.

Q. They fix both prices, the crude and refined?—A. Mr. Seep states here that the markets or the demand of the world fix it. We are giving Mr. Seep's version of it.

Q. (By Mr. FARQUHAR.) Does Seep post the European market?—A. No.

Q. What market does he post?—A. The crude-oil market.

Q. Of America?—A. Of the United Pipe Lines and the National Transit Company.

Q. (By Mr. JENKS.) You speak of the export price fixing the price of all oil and of the markets of the world fixing the prices when Mr. Seep is purchasing. Is it true that the relation between the regular export price in New York and the price Mr. Seep is paying the producer is a constant one?—A. I believe it is.¹

Q. You think the relation between these two prices is substantially the same all the time?—A. Inevitably. The purpose of this paper is to lead up to that question.

Q. (By Mr. PHILLIPS.) Did not the Standard Oil Company completely control the price of oil 4 years before Seep's Agency? What does the statement that they "would pay what the markets of the world would justify" mean? Was there sufficient business done on the exchange by others to affect the Standard in any way?—A. To affect prices, there was.

Q. To any considerable extent?—A. To an extent sufficient to influence the market one way or the other. I have an instance in mind now of a gentleman coming to Oil City and advancing the market 2 cents by dumping on it a half million barrels of his own oil.

Q. Was that a common practice? Did not a brief period of time elapse in that transaction?—A. It was just an instance of marvelous mention, you might say.

Q. The gentleman only had time to walk from one place to another?—A. He took that time.

Q. (By Mr. KENNEDY.) Who was the gentleman?—A. Mr. Michael Murphy.

Q. (By Mr. SMYTH.) That was a case of pure speculation?—A. Yes. It was possible for anyone with money and nerve and oil to do the same thing any time.

Q. (By Mr. PHILLIPS.) It would be risky for a producer to pursue that course, would it not?—A. I would not want to be the man to try it.

BY-PRODUCTS AND THE PROFITS OF OIL REFINING.

Q. Is it fair to compare the price of crude oil with that of export oil to show what the profits are, without taking into consideration the by-products, such as lubricating oil, which is sold in this country and other places?—A. That question has occurred to my mind a number of times, and the conclusion I have arrived at is that when we have an article of export or commerce the foreigner makes the price; Manchester fixes the price for cotton; Liverpool, for wheat.

Q. Does the foreigner make the price of oil in Denver, Minneapolis, and the southern cities and towns?—A. If oil could be transported by telephone, or placed

¹ See Mr. Lee, pp. 276, 285; Mr. Westgate, pp. 371, 372; Mr. Lockwood, pp. 384, 388; Mr. Archbold, p. 558; Mr. Emery, p. 616.

there without labor, it would be sold as cheap in Denver as in New York; but since labor enters into it, the oil at Denver is produced at Denver and the eastern oil is hardly brought into competition with it.

Q. Does not the Standard make a very large profit out of the by-products—benzine, tar, lubricating oil, etc.—which you do not take into consideration when simply comparing the price of refined oil with what they pay for crude? I may be misinformed or mistaken; what is your view in regard to that?—A. Well, the way it has always appeared to me is this: The by-product is something of a gift of nature. In marketing the by-product labor and capital have been employed; the producer has nothing to do with these by-products; he sells his product as a whole, and they are only created by labor in the process of manufacture or by chemical process. In other words, they cost something; they possibly cost something near as much as they produce in many instances, but that there is a profit is very complimentary to the refiner and to the chemist who has made it possible. There was a time in the refining business when there were no by-products. The only by-product that I knew anything about when I went into the oil business and that had a ready market was benzine. That was sold as a dissolvent for paraffin, went into the wells as benzine, came out and went into the producers' tanks, and was sold back to the refiners as crude oil at 400 and 500 per cent over cost. Now, that is the only by-product that we had in the beginning. Chemistry has advanced the art of refining, and at every step labor and capital are employed in the preparation of by-products, and I dare say there is a profit. There should be a profit in them.

Q. Well, provided there is a profit, and you admit that there is and a large one, in the by-products now, is it fair to take the price of the refined export oil and compare it with the price of the crude? In your opinion are not the by-products the source of one-half of the profits of the Standard Oil Company or other people engaged in shipping oil abroad?—A. Well, it occurs to me that with the profits on oil at export prices, we should have no oil business, because with the production of the present volume no refinery could undertake to carry on the business and run it for the profits on burning oil alone. The oil would necessarily be so high that there would be no inducement for the consumer to buy it. It has been stated here in my presence by some person on the stand that 10 cents a barrel was a fair profit, but he was taking into consideration the by-product.¹ No refiner can take 10 cents profit, and that alone.

Q. (By Mr. FARQUHAR.) Does not the Standard Oil Company dispose of the by-product to other manufacturers? For instance, is not the petroleum residuum which enters into dyes sold at a cheap rate to manufacturers outside of the Standard Oil Company?—A. Yes.

Q. And in the long run it makes very little difference in the tables you have presented here in respect to the crude oil itself?—A. That would be my view of it.

Q. Do you know whether the Standard Oil Company has entered into the manufacture of by-products such as dyes, magenta dyes, and others, or is that done by different corporations and individuals who have taken up the by-product business?—A. By separate concerns.

Q. (By Mr. PHILLIPS.) How about the paraffin or wax that enters so largely into sperm candles; do they manufacture the paraffin or wax?—A. There is a large percentage of wax and they sell wax to other manufacturers.

THE PRODUCERS' PROTECTIVE ASSOCIATION BUILDS REFINERIES.

The volume of matter involved in this subject is so great that I have necessarily skimmed over it. The complete examination of this subject would require more time than the commission can give to any one witness. Therefore, we have jumped from the movement in the 70's to the present time, but I should like to go back now to the shut-in movement and the matters growing out of that. After that period of 12 months' suspension of operations the Producers' Protective Association continued in force, and their next step was to promote the erection of refineries in competition with their benefactor, the Standard Oil Company.

Q. Did you not say that that was a mutual arrangement? Were not the producers at liberty to do as they pleased after that?—A. That agreement was carried out for 1 year; it was limited to 1 year, and at the expiration of that time the parties did as they agreed; their mutuality ceased. They fell apart. The Standard Oil Company pursued its course as a transporter of oil. The Producers' Association proceeded, as I have stated, to promote the erection of refineries, and stated, as an inducement, that there was so much profit in the by-products that

¹ See testimony of J. W. Lee, page 273.

they could afford to give the burning oil away. A refinery was built on that proposition by impractical men and failed. There was no reason why a refinery where it was built should not have succeeded; there is one there now in successful operation.

Q. How many were built after that shut-in period?—A. Only one.

Q. Were there not a large number before, called independent refineries, which united their interests?—A. Yes.

Q. The producers did not spend money in building refineries?—A. They supplied the money to build that one refinery.

Q. No large per cent of it?—A. It was contributing financially.

THE ORGANIZATION OF NEW PIPE-LINE COMPANIES.

Q. Had they a right to do that?—A. They had a perfect right to do it; but, to show the object of the organization still further, they proceeded about 1890 or 1891 to organize pipe-line companies. The first company organized was the Producers' Oil Company, Limited, with a capital of \$600,000. No one questions their right to do that. It was organized at a very opportune time, at the period of the greatest production that has ever occurred—the opening of the McDonald field. They entered the McDonald field, but they got away from the production that was likely to be overwhelmingly large. They kept on the outskirts and limited themselves to such wells as they could handle with their capacity. That was the first point where they entered actively into competition with the United Pipe Lines in the transportation of oil. At this time the McDonald field rose within 3 months from practically nothing to a daily production of 80,000 barrels, and the production was limited to a territory about 6 miles long by 2 miles wide, a very narrow strip for so large a production. That flow continued for but a single day, but the average was above 60,000 barrels a day for months. The Producers' Association, which had been formed for the betterment of the oil trade, did nothing to improve the condition of the McDonald producer. It gave him competition at once useless and expensive—expensive to the extent of \$600,000 of the producers' money embarked in it, which has never paid a cent of interest from that time to this. The one concern was obliged to shoulder the entire responsibility for carrying the oil in that district, and would have done so regardless of the presence of the association of producers.

INTEREST OF THE STANDARD IN THE PRODUCERS' OIL COMPANY, LIMITED.

Q. Did not the Standard Oil Company purchase a large percentage, a majority, of the stock in the Producers' Oil Company, Limited, of that \$600,000 capital of which you speak?—A. I know of some purchases by Colonel Carter.

Q. Did not that find its way to the Standard Oil Company, and in the suit pending was it not proven that the Standard Oil Company furnished the money to purchase the majority of that stock?—A. I did not understand it so, but I do not know.

Q. Did they not pay as much as two for one in order to get control?—A. I have no information on that. The only sales I know of were at par; I know of some few sales at par.

Q. Was that a direct corporation, or what was the nature of the organization?—A. It was a limited partnership.

Q. Mr. Carter attempted to be elected a director in it, did he not? And is it not a fact that the matter was taken into the courts with the result that it was decided that he could not become a director or have the power to vote that stock, and that therefore he failed to secure control of the company?—A. I know there was a suit and a decision.

Q. You do not know that the decision was adverse to Mr. Carter or the persons who stood back of him?—A. I assume that it has been from the subsequent proceedings.

Q. Are they not now appraising the value of that stock?—A. I understand they are now appraising the value of the stock. The Producers and Refiners' Oil Company, Limited, proving ineffectual for the purpose intended, obtained additional capital through a combination with refiners to the amount of \$250,000 and built a connecting line to that one to supply oil to the refiners, making a capital of \$850,000. That has never paid a cent of dividend. It has been in operation nine years and has never paid a cent to the stockholders. The market price of oil has ranged from 1 to 9 cents higher per barrel in that line as compared with the Seep Agency prices.¹ The producers got the benefit of that. Yet the refiners to whom the oil was sold paid the existing market price, or a price less than the one paid to the producer.

¹ See p. 444; Mr. Phillips, 598-600.

THE ASSOCIATION CONSTRUCTS A PIPE LINE TO THE SEABOARD.

Q. Was there another line built after the second one to which you refer?—A. The United States Pipe Line was built to the seaboard.

Q. By whom?—A. By the same association. A m. 'on dollars were embarked in that. Other capital was added to that, probably four or five hundred thousand dollars, making upwards of \$3,000,000 invested in transportation as a result of that movement, and upon which the stockholders have never received a dollar excepting a 5 per cent dividend paid by the United States Pipe Line at a time when it was paying nothing on its fixed indebtedness.

Q. Do you not believe that they would have reaped a large profit had it not been for the opposition of the Standard?—A. Not at all. I believe that investment was useless, the capital wasted, and the producers wronged.

Q. When this company commenced to sell refined oil in New York City did not the Standard put the price down there to less than the cost of refining?—A. Whatever was done there, was a matter of merchandising on both sides. They were not producers or refiners—they were merchants.

Q. Did they not do the same thing in Philadelphia?—A. I believe that to be a common practice wherever there are sales. Each person having a commodity for the market places it at the best advantage to himself.

SELLING AGENCIES ESTABLISHED IN EUROPE.

Q. Did they not obtain a market in Europe and establish a selling agency there?—A. I was leading up to that.

Q. Did not the Standard buy that agency and obtain all the tanks available in Germany and leave the independents without any chance to market their oil? Did they not buy out a man by the name of Poth, who was handling the independent oil abroad?—A. I understand they did.

Q. Was not the agency sold before his death?—A. I know nothing about that; I cannot answer that question.

Q. Have you any knowledge of that?—A. No, I have no knowledge of it.

Q. Do you know that the Pure Oil Company, as it is called, built storage tanks abroad and established agencies of their own? Are they not now doing business in that way, independent of the Standard's opposition, and where they can not be discriminated against in prices?—A. I know of the existence of the concern called the Pure Oil Company.

THE PRODUCERS' ASSOCIATION BECOMES A TRUST.

Q. You do not know then that these companies have established agencies abroad and are now marketing their oil?—A. Oh, yes, that is a matter of common information; but I was about to say that when the Producers' Protective Association started in to protect their business in an associated way I suppose they were incorporated. They started out with the pipe line, under an arrangement in which they could limit their responsibility and say who they would admit to partnership. That being ineffective they formed a combination of refiners and secured \$250,000 additional capital. Then came the construction of the United States Pipe Line, and after that the establishment of the Pure Oil Company. But the Pure Oil Company did not come until after the Oil League was formed and it became necessary to complete the trust. This thing began in a most untrust-like way, but ended up in a trust as complete as could be formed. The creation of the Pure Oil Company was necessary in order to control all these other properties. The Pure Oil Company, with the nominal capital of \$1,000,000, and an actual capital of \$400,000, is trying to swing this \$3,000,000 concern, and will eventually if the voting trustees have the power.¹

Q. (By Mr. JENKS.) Will you explain the evolution of that trust a little more in detail?—A. That is a trust.

Q. Explain just what you mean by that. Do you refer to the method of its formation?

Q. (By Mr. PHILLIPS.) Do you mean a trust or a combination?

Q. (By Mr. FARQUHAR.) With respect to the form of control you regard it as a trust?—A. In that respect I regard it as a trust. It is a combination, a series of combinations, but the properties are all managed by voting trustees. The property is in a trust; three-fourths of the property of the United States Pipe Line, or the proportion which this organization controls, is in a trust.²

Q. (By Mr. PHILLIPS.) Do you know the reason why a voting power was put there? Had not the Standard bought several hundred thousand dollars' worth of

¹ See Mr. Lee, p. 285; Mr. Westgate, p. 365; Mr. Archbold, p. 528.

² See p. 600.

³ See pp. 433, 434, 438, 507, 518; Mr. Phillips, pp. 539-598; Mr. Emery, pp. 657-659.

the stock of the United States Pipe Line and did they not propose to control it? Was it not essential to the existence of the United States Pipe Line that the stock should be put in trust?—A. If we start by admitting that proposition we must indorse all that has been done before in the way of combination; that of itself is a virtual admission that the Standard Oil Company was right.

Q. (By Mr. FARQUHAR.) You mean to say that this action of the company has vindicated the action of the Standard Oil Company?—A. Entirely.

THE PRODUCERS' ASSOCIATION COPIED THE METHODS OF THE STANDARD OIL COMPANY.

Q. (By Mr. SMYTH.) You consider that this company copied in a measure the plans and proceedings of the Standard Oil Company?—A. Not exactly; that was open; this is secret.

Q. (By Mr. PHILLIPS.) Do you mean that the Standard Oil Trust was not one of the most secret organizations in existence in the management of their business and in making statements to the stockholders?—A. I suppose they have not opened the pages of their books to the public.

Q. Have they ever issued any statement to the stockholders?—A. Not being a stockholder, I can not say.

Q. You are a newspaper man?—A. They have never issued any to me; I have never asked for any.

Q. Was suit ever brought by a stockholder in that trust in order to get knowledge of their business and to have a statement made of how the funds were being handled?—A. I think the suit failed, and properly, because the purpose of the suit was to work an injury to the company. It was not brought in good faith.

Q. Then you think that a man holding stock in the company has no right to know anything about the amount being earned or whether or not its means are being squandered? As a rule, do other corporations exist without making a statement to their stockholders?—A. If the act of the Pure Oil Company in excluding Colonel Carter is justified, I do not see how other concerns can be censured for what they have done.

THE INDEPENDENT OIL MOVEMENT HAS NOT REDUCED PRICES OF REFINED OIL.

Q. (By Mr. JENKS.) What has been the effect of the independent oil movement upon the prices of refined petroleum to the consumers? You state that these various independent organizations that were compelled to go into a trust made no profits and declared no dividends, and that you regard the investment of that money as a practical waste, because they had been of no service to the oil producers?—A. Yes.

Q. What has been the effect of this independent movement on the prices of refined petroleum?—A. It has had no effect whatever.

Q. You do not think it resulted in reducing the prices of petroleum at all?—A. None whatever; it only gave members of this company and the independent refiners in the creek regions the opportunity to get immensely wealthy. They are making money faster than ever before. The producers are making a little more money than previously, to the extent of the premium which the producers will not pay the patrons, and the stockholders receive nothing for their investment.

EFFECT OF THE MOVEMENT ON THE PRODUCERS.

Q. Do you know how far the stockholders of these combinations are themselves producers?—A. A very large per cent are producers.

Q. Do you know what proportion of the producers whose oil they are buying are themselves stockholders?—A. I do not.

Q. Then you would say that the general result of this independent movement has been to increase the price of crude oil?—A. Only to a very few, to persons interested in that line and connected with its service.¹

Q. To others, too?—A. To others, no; its effect has not been felt to any extent anywhere.

Q. Does it benefit all of those whom it reaches?—A. To that extent and by this means: It is a method of "robbing Peter to pay Paul." It is taking money out of the pipe line to pay the producer in the way of advanced prices for his oil; it performs its service by piping oil for less than published rates or established rates, whatever they may be.

¹ See p. 442; Mr. Phillips, p. 598-600.

Q. What is the rate?—A. The pipage rate is understood to be 15 cents a barrel.¹ Now, when the premium has been as high as 9 cents a barrel, that would mean as much as 9 taken from 15, leaving the pipage charge 6 cents.

EFFECT OF THE INDEPENDENT MOVEMENT ON REFINERS.

Q. I understood you to say, further, that this independent movement had resulted in making refiners in that region rich?—A. It did.

Q. Will you explain how that was brought about?—A. If I could, I would be in the refining business myself.

Q. You think it has not resulted in the lowering of the price of refined oil?—A. No; they claim that their success has not resulted in lowering the price of refined oil, not in the region, at least, where we are. That oil which goes abroad is restricted in every State of the Union.

Q. (By Mr. PHILLIPS.) That is, both as to the Standard and to the others?—A. Yes; it is necessary by reason of the laws of this country.

Q. Are not these companies now making money?—A. The refining companies?

Q. The independent refining companies? Would not their stock be very desirable at the present time?—A. The refiners' stock?

Q. No; the stock of these various independent companies?—A. It would be if they managed on business principles. I believe there is money in piping oil if the business is run for the benefit of the lines, for the plant itself. There must be money in it.

Q. Did they not establish the first pipe line to the seaboard to handle refined oil?—A. That cuts no figure. Warren, as we have shown here, piped refined oil a distance of 8 miles in 1865, and in tank cars they have taken refined oil from one point to the other. And what is a tank car but a pipe line on a limited scale? If you confine oil in an iron vessel, it makes no difference whether it is a continuous pipe or in a closed tank and agitated, the result is the same.

THE OPPOSITION MET BY THE NEW COMPANIES.

Q. Would not these companies have gained a good deal more if they had not been opposed by combinations in New Jersey and could have gotten through to New York? Would not their profits have been much larger if they had had free pipage through to New York, as the Standard Oil Company had?—A. If there was only the one proposition, a person might answer that.

Q. Have others the same right to go through to New York that the Standard Oil Company has?—A. Undoubtedly they have the right.

Q. And is it fair or just that they should be prohibited from exercising that privilege of equality?—A. Let me answer that by comparison in this way: I think it would be just as fair as for one of two producers bidding for land to outbid the other and take the land away from him. If it is unfair to prevent a pipe line from going into a market already occupied, it is unfair for one producer to compete for land and take it from another if he has, with his neighbor, superior wealth and ability to control it.

Q. One is exercising the right of eminent domain?—A. And he is performing for that right an adequate service to the public.

Q. Would you say, if one railroad could supply the whole market of New York, that all other railroads should be prohibited from going there?—A. If the money to construct those roads was to come from the passengers who were expected to patronize them and then to pay their fare, too, I should say yes.

Q. Do you undertake to say, then, that these independent companies which the Standard is so anxious to control, and in which they have purchased stock which would sell to-day at a very large profit, are robbing the people or doing an injustice?—A. "Robbing" is a hard word, and I do not care to use it in any connection. The fact remains that the money embarked in the enterprise is unremunerative.

Q. You stated they were taking money from some persons and giving it to others?—A. That was only a comparison; just a remark. That is a very common expression: "Robbing Peter to pay Paul."

Q. You have no direct knowledge of these people having done injustice to any of the stockholders, have you?—A. I have no knowledge that they have done full justice to the stockholders in returning them interest on their investment in the pipe lines. I have no knowledge of that kind. There are \$3,000,000 invested in that enterprise.

Q. You have knowledge of the fact that they have been employing every honorable means to get through to the city of New York, and that they have

¹ See Mr. Archbold, p. 553; Mr. Rogers, p. 581.

lessened freight rates a very great deal by getting into New Jersey, have you not?—A. I have; yes.

Q. (By Mr. JENKS.) You have said that you do not think the independent movement has reduced the price of refined oil. What has been the price of water-white oil for the last few years, since the organization of the independent companies, as compared with what it was before?—A. I have no means of knowing; we do not have water-white oil in export. In the sale of water-white or any other class of oil there is a special contract, according to the district or location.

Q. You have no record at all with regard to the price since 1874?—A. None at all.

THURSDAY MORNING, *September 7, 1899.*

THE SEEP PURCHASING AGENCY.

Q. (By Mr. JENKS.) During the session yesterday you spoke of Mr. Seep as being the general purchasing agent. Whom does Mr. Seep represent? Is he the general purchasing agent for the Standard Oil Company?—A. I so understand it.

Q. So he receives his instructions from the New York office?—A. I do not know from whom he receives his instructions; he acts independently so far as my knowledge extends.

Q. He is supposed to represent the Standard?—A. Yes.

Q. Whether he fixes his prices of his own accord or whether he receives direct instructions from some superior official of the Standard Oil Company you do not know?—A. I do not know.

Q. Is he a general purchasing agent with other agents under him?—A. That is the way I understand it.

Q. You understand that he fixes the prices for his different subagents throughout the oil regions?—A. That is my understanding.

Q. Have you any idea as to the number of subagents he has under him?—A. I have an idea; the number is very large, probably twenty or thirty.¹

Q. You do not think the number of agencies runs into the hundreds?—A. Oh, no; I do not think that; 20 or 30 will include them all.

Q. How large a portion of the crude oil produced is purchased through Mr. Seep and his subagents?—A. I should think about 80 per cent.

Q. Is that for the whole field, the Ohio, Pennsylvania, and West Virginia oil?—A. I can testify only as to Pennsylvania oil.

Q. Have you any information with reference to the Ohio oil?—A. I think that estimate would hold good as to Ohio.

Q. The agencies there are under his control also?—A. So I understand.

Q. Mr. Seep, then, in posting prices that he will pay, is practically doing so for 80 per cent of the oil that comes into the market?—A. I think about that.

FLUCTUATIONS IN THE PRICE OF CRUDE OIL EXPLAINED.

Q. In posting the prices he will pay for crude oil from day to day, are the fluctuations by the barrel very large or are they only a cent or two?—A. Well, I do not know as to that; I pay but very little attention to the oil market. The fluctuations are usually a full cent at a time; sometimes a fraction of a cent.

Q. That is a barrel?—A. A barrel. It has been 2 cents; it may have been higher than that at times.

Q. Do you see any satisfactory reason why, on a barrel of oil, fluctuations should be so small as that? Are there any special causes that affect the market in such a delicate way?—A. Now that question has occurred to me, and I think I have spoken to one or two persons about it, and the reason I have heard assigned is this: They have adopted the point system on refined oil, and the point is a very delicate fluctuation; for example, 10 points in oil may represent a fraction of a cent or a full cent, and that would account for the margin on the amount you stated; it is controlled in some way by the movements of refined, and the fluctuation of refined is by points, 100 points representing a cent, and it is the fraction of 100 that controls the prices of the crude.

Q. So in your judgment these minor fluctuations that Mr. Seep makes are controlled by the fluctuations of the refined?—A. Yes.

¹ See Mr. Archbold, p. 571.

HOW THE PRICE OF REFINED OIL IS DETERMINED.

Q. The prices of refined are presumably fixed by the Standard Oil Company in New York?—A. As I understand it, they are fixed by the demand in Europe.

Q. There must be somebody who has oil to sell and who determines the selling price?—A. The parties holding the oil would have the option of relinquishing their holdings at the existing price, but to make the price, as you put the question, would imply that the Standard chalked the price up, and said to Europe: "You must take this or none at all." That is not the situation, as I understand it. The pulse of the market is carefully felt in Europe constantly, and the market is made to suit the demand there.

Q. The point I had in mind was this: Is it some official of the Standard Oil Company who determines what price shall be accepted for the oil they have?—A. There is undoubtedly some salesman connected with their establishment who is in direct connection with the prices at some point. The condition of the market is known to this person, and if he wants to relinquish the oil at that figure it goes.

Q. Then if the price of the crude oil that is bought by Mr. Seep varies with the price of refined oil, would there be a presumption that the two are connected? Would the prices then presumably be fixed by Mr. Seep?—A. The price of crude oil is invariably controlled by the price of refined. When there is a variation in refined, amounting to points enough to make a fraction of or a full cent, it appears in the crude.

Q. (By Mr. PHILLIPS.) Is it not the case frequently that they advance the crude before the refined, or is not the one advanced the same day the other is? Was not that the case with the recent advances, the crude oil being first advanced and the points afterwards named on refined?—A. I am not clear as to that, and I will say furthermore that I am not personally familiar with the movements of refined oil.

Q. (By Mr. JENKS.) Yesterday I asked you with reference to the price of water-white oil, and you said that the regular prices of oil were the prices on export oil?—A. The prices quoted.

Q. Quotations on refined oil are made in Pittsburg, New York, and other places, are they not?—A. Yes; those are local market quotations, and they pay no attention to local markets; the general market is the one that controls the price of crude.

PRICES OF OIL IN CINCINNATI, 1865-1877.

Q. In your paper you pay no attention to these markets, Pittsburg or New York?—A. I pay no attention to them; but in connection with that question I hunted up some figures gathered back in 1865. They consist in a series of reports of the Chamber of Commerce of Cincinnati from the year 1865 on into the seventies. Now, this gives the local market and not the export:

[Report of the Cincinnati Chamber of Commerce for the year ending August 31, 1865.]

The price of this article, owing to the decline in the price of gold, was much lower at the close than it was a year ago, though the average price is higher for the year than that of the previous season. There has been a marked falling off in the production of the article, according to the statistics of the commerce of the country.

The following was the price of refined petroleum, per gallon, duty paid, at the close of each month during the year 1865:

	Cents.		Cents.
September 28	85	March 29	83
October 26	85	April 26	73
November 30	88	May 31	70
December 28	93	June 28	70
January 25	92	July 26	70
February 22	93	August 30	70

The following were the imports of petroleum, including coal oil, of which but little is now brought to market, the last four years:

	Barrels.		Barrels.
1861-62	23,000	1863-64	49,081
1862-63	20,000	1864-65	50,925

The price of this article has been very low during the entire season, but did not undergo much change. The supply has been larger than the previous year, as is shown by the statistics of the trade, there being an increase in the foregoing exports from New York alone of over 7,000,000 gallons. Previous to July, 1868, there was a tax of 10 cents per gallon on refined; since that time it has been free of that tax, so that in comparing the prices given this must be remembered.

Q. Have you facilities for obtaining, conveniently, the prices of water-white oil at Pittsburg or New York, covering the same period as those of export oil?—A. Not any more than the commission itself. These figures, I should say in explanation, were obtained some years ago when I was making an investigation into the movement of oil. The Cincinnati Chamber of Commerce seemed to be the only one that had given attention to it and kept a correct record from 1860 to 1869, and up to the present time.

Q. You think that Cincinnati would be as fair a point as could be chosen in determining the price of water-white oil?—A. It is the only point at which a correct record has been kept, a correct record of the prices of all commodities.

Q. I understand you to say that the prices of water-white oil in these local markets do not vary with the prices of export oil?—A. I said it was a matter of special contract in the various markets where it was offered. I do not know that I can add to that because, in the various cities, the prices have varied according to the quality of the oil; but water-white, as a standard quality, is always water-white wherever it is offered; the elements that enter into that are transportation; it may cost more to sell oil in Ohio than it does at the point of manufacture, if it is manufactured in Pittsburg.

Q. Certainly. If we could find one standard market where they have kept a record of the prices of water-white oil from, say, the early seventies or sixties up to date, would that, in your judgment, show us fairly well what the effect of the combination has been upon the American consumer?—A. It undoubtedly would; it would show you the trend of prices—what the American consumer has been obliged to pay.

Q. You think a record of that kind would be fair to all parties concerned?—A. Yes.

Q. Fully as much so as the record of export prices?—A. Fully as much so as the export prices, taking into consideration the difference in the quality of the oil.

Q. From what you have said I infer that you believe that a great many elements come in to affect local prices that do not affect export prices.—A. Undoubtedly.

Q. For example, home competition?—A. Well, and a better quality of oil; the higher the grade of oil the more the cost in manufacture, transportation, and other things besides competition.

Q. But if we were to take some one market and keep a record, comparing prices there with the price of crude oil, you would consider that a fair test?—A. Yes; and I believe Cincinnati would be as fair a market as you could get.

Q. (By Mr. PHILLIPS.) Would that be a fair test if there was no competition in Cincinnati, and there was no other market?—A. Undoubtedly. Competition has very little effect in regulating prices through a long series of years. You take a series of thirty years and competition has had very little to do with it; it will go down to a stable price, and that must be a remunerative one for people to remain in the business.

Q. Taking a period of thirty years, as you have suggested, do you suppose competition would appear there on the whole, as it would in, let us say, New York and Pittsburg?—A. I have no reason to doubt that it would.

THE ESTABLISHMENT OF OIL EXCHANGES.

Q. (By Mr. FARQUHAR.) When was the first oil exchange established in this country?—A. Well, from the various records we have, it would be about 1871; that is, an oil exchange for handling business, as we now understand it.

Q. (By Mr. JENKS.) That was at Titusville?—A. That was at Titusville in 1871. There were exchanges before that.

Q. (By Mr. FARQUHAR.) What was the character of the exchanges before 1871?—A. The exchanges then were something like the Chamber of Commerce, where persons engaged in the business would call and exchange views. It was a meeting ground.

Q. How many exchanges were established in the country?—A. At one time I think there were no fewer than twenty.

Q. When was the New York exchange established?—A. I think about 1890; but we can determine that exactly.

Q. I want to find out who the speculators were that fleeced the public on oil.—A. On May 2, 1877, I have a record of the petroleum exchange being opened in New York.¹

Q. How long did that exchange exist?—A. That or its successor is in existence to-day.

Q. What is the character of the exchanges in New York now with respect to oil?—A. Oil is dealt in in futures now. They speculate on the value of oil a month or a year ahead.

Q. The same as in cereals?—A. That is the method of speculation now. But dealing in futures is only of recent date.

Q. (By Mr. PHILLIPS.) Is there any considerable amount of speculation now of the kind to which you refer, compared with what there was 15 or 20 years ago?—A. It is very small in comparison.

Q. (By Mr. FARQUHAR.) What is the character of the business in the oil exchanges in the oil country itself, in Oil City?—A. There were two elements in the trade, one interested in high prices and one in low. The bears had a decided advantage. Through the existence of a very large stock of oil it was possible to sell along in the later seventies and early eighties and never cover. Oil could have been sold short there to get the carrying rates; brokers became rich on selling wind and got the carrying rates—all that with wind, and never covering. The effect of that was to depress the prices to producers. The larger producers took a very pronounced stand against that sort of trading in the oil exchanges. It was denounced severely in their meetings and in letters to the press.

Q. Who are the supporters of the oil exchanges?—A. They are generally called "lams"—that means the public, you know; the people who come from the outside and bet on the price of oil and generally lose.

Q. Were the producers, as well as the refiners and all others, interested in this speculation?—A. Undoubtedly they were—producers, merchants, laborers, and clerks.

Q. So it was a free field for a while, in an oil exchange, for people who took their chances in speculating?—A. Yes.

Q. Have you any idea of the losses to the public resulting from that speculation?—A. I have never heard an estimate of that, but if I were asked to make one myself I should think one hundred millions of dollars would not be too high.

POSITION OF THE STANDARD AND THE PRODUCERS' ASSOCIATION WITH REGARD TO SPECULATION.

Q. Was that speculation in oil in 1865, or what was the time?—A. I should place it at a later period than 1865. I should place it from 1870 up to the early nineties. There was very little speculation in oil after the movement known as the Producers' Protective Association. That movement killed speculation in oil.

Q. Now, how was that brought about?—A. That movement?

Q. Yes.—A. It was brought about by an agreement between the Standard Oil Company and the association called the Producers' Protective Association, and we have the agreement here.

Q. Then you give credit to the joint action of the Producers' Protective Association and the Standard Oil Company for the suppression of speculation?—A. In removing the feature of injudicious speculation. Proper speculation is all right. It is proper and just for a person to buy oil and hold it—buy the certificates outright. No one ever raised a voice against that—against the purchase of oil outright. It is the mere gambling on margins that has been destructive to values and injurious to the business standing of the communities in which these exchanges are located.

Q. Since that agreement have the producers, the Producers' Protective Association, or the Standard Oil Company sustained in any way the petroleum exchange in New York?—A. No.

Q. Have they been adverse to it?—A. Well, I cannot say they have been adverse to it; I can simply say that they have let it alone.

Q. In other words, the regulation of prices by the Standard has eliminated the speculation in certificates entirely?—A. Undoubtedly.

Q. At what date do you place Joseph Seep's quotations?—A. January 25, 1895.

Q. Now, does it follow that Mr. Seep's quotations are standard and stable quotations following that agreement?—A. They are.

Q. So we have now reached a market where speculation has nothing to do with the price of oil?—A. Precisely; we have reached the point now where the consumer makes the prices.

¹ Derrick Handbook, p. 280.

EFFECT OF THE SHUT-IN MOVEMENT ON SPECULATION.

Q. (By Mr. PHILLIPS.) Did not the removal of a large amount of stock by the shut-in agreement between the Standard and the producers have much to do with the elimination of speculation?—A. That was an incident or a factor in it. I was about to say that, in connection with the oil exchanges, a habit grew out of the speculation that proved very injurious to all concerned. The speculator on the exchanges along in the early eighties began to influence the market by field conditions at every possible opportunity—that is, by rumors of wells, rumors of big strikes in localities from which facts could not be obtained readily. The effect of these rumors was either to elevate or depress values for the time being, and no matter if they were corrected within an hour or two, the effect would be felt on the market. Out of that movement grew a protective system among the larger speculators, and the prominent producing concerns grew out of that movement. They selected experts who were placed in the fields at points of interest where large wells were coming in or expected to come in. It was their duty to watch developments and report results at the earliest opportunity.

Q. What were they called?—A. They were called scouts.

Q. (By Mr. JENKS.) Did these persons make the information public or keep it for the special use of the Producers' Union?—A. The Producers' Union did not do that. It was the individual producers; the individual speculators had them there for the purpose of speculation. Large producers had them there for the purpose of being informed as to the true state of affairs.

Q. (By Mr. PHILLIPS.) Did you ever act as a scout in those days?—A. I had that honor. I laid down the quill for a period of 2 years and served as a scout on the frontier.

Q. For whom?—A. For the Union Oil Company. I reported to them daily and my reports were accepted at their value at the time.

Q. (By Mr. JENKS.) I understood you to say yesterday that when this Producers' Union was formed one of its chief purposes was to gather trustworthy statistics and information, in order, as I suppose, to check somewhat the speculation on exchanges?—A. Not this particular movement. That referred to the movement in 1865 and 1870. I should like to refer to that later on. I have some data on that subject.

Q. (By Mr. FARQUHAR.) Before leaving the subject, will you state as nearly as you can who the parties were that participated in that movement from 1865 to 1870 and later on? Were they the large or the smaller producers? And will you also give us as complete an idea as you can of who have participated in these speculations?—A. That happens to be a pretty long subject, but if you will bear with what may seem to be a digression, I might start in by explaining what first made oil prices. That will lead to the oil exchanges and the dealers in oil at the stated places and times where and when they did their trading.

ORIGIN OF THE FIRST OIL MARKETS.

The first oil markets were, in my opinion, made by the dump men on Oil Creek. Now, the dump men were the first speculators in oil. A dump is a tank of any capacity from 10 barrels to 600. The dump man developed into a refiner later on, and as a refiner was known as the B. S. refiner; that is, he took B. S. oil, non-merchantable oil, and redeemed the better parts of it and placed it on the market. The dump man visited the small producer in all localities, bought his oil at so much by contract, and if there was 1 or 2 feet in the tank bottom he immediately bought it in lump sum or so much per barrel. He also bought the good oil, the merchantable oil, from small producers, who could not hold their oil long enough to get a full shipment of 50 or 100 barrels, whose wells had declined to such a point that they could not hold for a month at a time, and were obliged to sell from day to day or week to week. The dump man was their market. When the refiners sent their representatives up in the region to purchase oil—and they used to travel up and down Oil Creek like platoons of cavalry, pricing oil at various wells—the usual method of approaching the producer was to say, "Have you any oil to sell?" The answer would be "I have so much." And then the producer would say, "What price are you giving to-day?" If it was thought the producer was not posted on existing prices the trader would probably reply, "What is the dump man paying?" Receiving a reply he might name a figure just above it, just enough to get the oil. The dump man was the first merchant to make prices in the oil field. His price was steady all the time. You could always market with the dump man. After the first few years of the business the market was spasmodic. There were days and weeks at a time, perhaps months

at a time, when there were no quotations or prices from the refiners and agents. Now, in the course of time the dump man was eliminated.

OIL SOLD THROUGH REFINERS' AGENTS.

These refiners' agents during the first 10 years of the business were migratory; that is to say, they moved about through the region making individual contracts with producers and others. Their meetings would occur at night; they would meet in the evening after supper and discuss the trade. That was the origin of the first oil exchange. Later on, as the business became systematized in fewer hands, they began to adopt regular hours for business, and one of their first resolutions was to do no trading after a certain hour in the day, 6 o'clock. Later on they adopted a resolution to do no trading after 4 o'clock; then they adopted banking hours for their trading, but that was when the oil exchange became a permanent factor in the trade. All the trading, say, from 1875-76 up to 1895, was done in the exchange. Trading done outside of the exchange, and known as curb trading, was considered disreputable and classed with bucket-shop operations. The rapid fluctuations in oil in 1876 did a great deal to foster the exchange element and show people that it was possible to make money rapidly by these wide fluctuations; and the sudden advance of \$3 a barrel in 1876 brought the public into speculation with the producers. I can say here and now that producers who remained out of the oil exchanges and away from speculation invariably got wealthy. Those who went into the oil exchanges as invariably got poor, and the number who went into the exchanges outnumbered those who remained out so largely that they formed themselves into a league after a while to combat those organizations that had nothing to do with speculation and shake out of them some of their earnings.

THE SUPPRESSION OF SPECULATION.

Q. (By Mr. PHILLIPS.) Were there not some exceptions in regard to the producers? Captain Murphy, for instance, was a producer and speculator. Did he not make a success of it both ways?—A. I thank you for calling my attention to that; that is one exception. I would thank you for another one.

Q. I think as a rule you are correct. I never speculated as you know.—A. No, I know you never speculated, I am satisfied of that; and you were one of the strongest opponents of the wild-cat speculation that existed, an outspoken opponent. We have letters from you in our newspaper denouncing wild-cat speculation.

Q. Especially the scout and mystery business.—A. That mystery business was the source of the institution of the scout.

Q. (By Mr. FARQUHAR.) Are we to understand, then, that after this era of speculation and the shut down the strong men in the oil region, the Rockefellers and others, resolved to suppress all this speculation in oil and oil certificates; that the bucket shops in oil agreed to make the shut down on a conservative basis, and bring oil up to a paying figure for producers as well as refiners, which system, as a matter of regulation, has existed until the present day; and that the benefit of the whole oil trade that has come to the consumer has come through the great organizations of oil men? Are we to understand by your testimony that the stronger the producers and refiners have been and the more they have been united in finding a stable market, the more the consumer has gained?—A. I believe that is true.

Q. That is your observation?—A. Yes.

Q. And the credit of the suppression of the inordinate speculation in 1876 and later is due entirely to the producer and the refiner, as well as stable rates of transportation and stable and cheap prices to the consumer? Are we to understand that that is the gist, so to speak, of your remarks, or have you something further?—A. Well, the producer is a man of energy and force, and his tendency has usually been in the direction of overproduction; he has been entirely uncontrollable. Show him an oil field and he runs off, wild and excited, and no matter what the conditions are, he will drill as soon as he can get the means, regardless of what others are doing. That is his right; he is injuring himself as much as others.

OVERPRODUCTION AND SPECULATION THE CAUSE OF SMALL PROFITS TO PRODUCERS.

Q. You say you regard overproduction as the cause of small profits to the producer?—A. Overproduction and speculation.

Q. And speculation?—A. Yes, and speculation. But overproduction has been

something that has bothered them for more than thirty years. We noticed yesterday that in 1862 it was necessary to turn the stopcocks on the wells, and every year or two since there have been movements to curtail production, all due to the energy of the producers.

Q. (By Mr. SMYTH.) Has the consumption of oil gradually increased year after year?—A. Yes.

Q. Has it kept pace with production?—A. Yes; I should say it has substantially kept pace with production, but the price at which it was offered has had much to do with that. A reduction of the price always induces consumption.

Q. (By Mr. FARQUHAR.) What effect has the cheap crude oil on the refined oil profits?—A. Well, I can not say whether or not the manufacturer's profits are very largely controlled by the price of crude oil. When he buys crude cheap he can not sell refined very high, because the competition of the refiners is too active for that, and competition among the refiners controls the prices to the producers very much in the same manner. I should say that in a period of very low prices the refiners suffered equally with the producers.

Q. There is a sensitive touch between the two?—A. Yes, there is a sensitiveness between the two. At a medium price they succeeded better; that is, at a price large enough to make it remunerative for the refiner and to induce consumption. There has to be a medium beyond which it is dangerous to go on either side.

Q. Testimony has been given before this commission which indicates a great deal of the dissatisfaction and grumbling on the part of the producer, testimony which goes to show that the producer is the only one that is affected injuriously in the whole business. It indicates that the refiners are making money while the producers are losing. They have to take the rates that the Standard puts as well as their own association, which follows the Standard, as we understand it. Now, as a business proposition, can the producer ever ask to divide the profit with the manufacturer?—A. I should think not.

PRODUCERS HAVE NOT BEEN ABLE TO REGULATE THE PRODUCTION OF OIL.

Q. Does it not legitimately belong to the producers to so regulate their own output, trade, and business that they will conserve their interest in producing the oil and selling it to the refiner? Can they legitimately share in any profit beyond that?—A. I should think not. It has been their constant aim to regulate their supply, but the business is one that is uncontrollable by reason of new producers constantly coming in with new fields. The conditions change continually now. If it were possible to form a combination, as did the men who produced oil on Oil Creek in 1870, when they formed their producers' agency, their corporation, and their limited partnership companies with a subscribed capital and the declared purpose to retire the surplus portion of the oil, a combination so close as to embrace everybody in the business, the same prices might exist to-day, and we might be paying the prices that were current in Cincinnati at the close of 1865. If it were possible to do that, the producers could in that case control their output and ask and receive anything they wanted for oil. The opening of new fields, as I remarked, brings in a class of new producers. Take, for example, the Parkers Landing field, opened entirely by what we now call tenderfeet, farmers, stock companies, persons owning a fraction of an interest. I happened to be present during the greater part of the development of that field, and I believe I am reasonably familiar with operations of that kind.

Q. (By Representative LIVINGSTON.) Do I understand you to say that the producers' organization is distinct from the refiners' organization?—A. Yes.

Q. Why do not the producers refine their own oil and get rid of these refiners?—A. They have attempted that in many cases.

Q. Why is it that they failed?—A. Well, for that I shall have to refer you to the officers of the association.

Q. Do I understand you to say now that the producers are able, that they have capital and brains enough to produce the oil?—A. They certainly have.

Q. Do I understand you to say that they can not refine their own oil independently of that organization?—A. I can answer that in this way: They never have; they have attempted it and failed.

Q. Have they not been able to combine?—A. The failure does not seem to be due to lack of combination; they have combined readily enough.

Q. (By Mr. FARQUHAR.) The combination has never stood?—A. The combination has stood, but it seems to be a matter of experience.

Q. (By Representative LIVINGSTON.) What is the reason for that? Why is it that they are laboring at a disadvantage in the refining of the oil? Why do they not put up their own refineries and refine all they make and get all there is in it?—A. They do not do it; we know that.

Q. (By Mr. SMYTH.) It is usually considered as a separate business?—A. It is a separate business.

HOW THE PRODUCERS ARE HANDICAPPED.

Q. (By Representative LIVINGSTON.) If one-third of the oil producers should organize, could they not control the price? I know that if one-third of the cotton raisers will organize they can control the price of every bale of cotton all over the country; I know it is also true of the wheat raisers. Now, could not one-third of the oil producers organize and thereby get rid of all this handicapping?—A. They could organize up to the point of establishing manufacturing; but the manufacturing talent and experience and the merchandising talent and experience might be wanting among the producers.

Q. Would the railroads stand in the way of their organization? Is that one of the impediments?—A. I agree with what has been said about the early conditions in the oil business. The refiners being able to offer inducements to the railroads in the way of very large shipments, obtained some concessions which enabled them to tide over a time when they needed assistance very much.

Q. It is very important for this commission to know whether the railroads or any other combinations or corporations whose franchises have been granted by the States or the General Government stand in the way of the producers. I do not see why they do not organize. If it is the railroads or any other organizations having franchises or charters that stand in the way of a legitimate profit from their oil it ought to be known?—A. I am leading up to that point in discussing the existing organization of the producers.

Q. (By Mr. PHILLIPS.) Now, is it not a matter of sworn testimony by the present president of the Pennsylvania Railroad that the Standard Oil Company received over \$10,000,000 in rebates in about fourteen months in the early days?—A. I do not so understand it. I understand that certain testimony was given by the present president of the Pennsylvania Railroad, certain figures stated, and that certain deductions have been made from those figures by another person who did not testify. The deductions of this person are given as the testimony of the president.

Q. I think there is a document¹ there—A. (Interrupting.) I am referring to that document. My remarks apply to it. The president did not testify to the figures and he gave no sums. There is nothing stated in the testimony about any sums of money received.

Q. They paid rebates to someone of something over \$10,000,000 in fifteen months?—A. He did not say that; the president did not so testify.

Q. My recollection may be incorrect. It is in that volume there.—A. It is in that volume in the testimony of Mr. Lewis Emery, jr. He testified to that, and it is his own testimony.²

Q. Was it not Mr. Cassatt's testimony?—A. He goes further than Mr. Cassatt. Mr. Cassatt testifies as to the operations of his own road; and Mr. Emery takes it for granted that the three other roads within the pool at that time conceded the same rate, and upon this he checks the entire production for the period of 17½ months. He takes the total production for that period. During that period he was shipping to the seaboard by his pipe line and by water as much as 2,000 barrels a day, and he includes that. The trouble is that his figures cover oil that does not go over any railroad. These roads were from the producing regions to the seaboard. There were shipments westward to which this does not apply, shipments from Pittsburg, and shipments from Huntington over the Chesapeake and Ohio to Norfolk.

THE EFFECT OF OVERPRODUCTION ON PRODUCERS RESUMED.

I have said that the ills of the producers proceed largely from overproduction and from speculation. On the point of overproduction we will read the circular issued in 1870 in connection with the first organized movement for the betterment of the producing trade.

¹ Congressional Investigation of 1888.

² See Mr. Archbold, pp. 514-516; Mr. Emery, pp. 660, 661.

Q. (By Representative LIVINGSTON.) Now, is that on the point of overproduction?—A. On overproduction; yes. (Reading.)

OFFICE OF THE SECRETARY OF THE
PETROLEUM PRODUCERS' ASSOCIATION OF PENNSYLVANIA,
Reno, Pa., April 25, 1870.

DEAR SIR: This association is a voluntary organization "for the protection and promotion of the interests of oil producers." Its objects are declared to be "the collection and dissemination of valuable statistics and information respecting the production of petroleum, the securing of the most advantageous facilities for transportation, the protection of the producing interest against unfriendly legislation and against all unjust exactions by whatever means threatened or attempted, and the general improvement of the methods of producing and handling oil.

Any person actually engaged in the production of crude petroleum may become a member of the association, with the consent of two-thirds of the managers present at a regular meeting of the board, upon subscribing the constitution and paying a membership fee of \$5.

Among other things, the association is engaged in the preparation of a full report every month of the production of oil in Pennsylvania, embracing information of value, not only to oil producers, but to all who feel an interest in the progress of the oil-producing business.

This report is made up by districts from detailed reports of farms and single wells, and its correctness is verified by the personal visitation of all the districts by a special canvasser of ability and integrity, employed for the purpose by the association. The report exhibits monthly, in a compact table, by districts and in the aggregate, the number of barrels of oil on hand at the wells, the amount of oil delivered from the wells, the aggregate production for the month, the average production per day, the number of wells producing, average daily production per well, the number of wells being drilled, the number of wells commenced, the number of wells completed, the number of wells abandoned, the number of abandoned wells resumed, the capacity of iron tankage, the number of barrels of oil stored in iron tankage. These statements afford a concise view of the condition and progress of the oil-producing business essential to an intelligent comprehension of it by operators and dealers in oil. It is designed to extend the scope of the report so as to embrace the local shipments by railroad and river, the stocks of oil in hands of refiners, amount of crude and refined in store at home and abroad, the foreign shipments, etc.

The amount of money realized from adjoining fees of members is wholly insufficient, after providing for the necessary current expenses of the association, to defray the constant expense of preparing and publishing these reports, and at the last meeting of the board of managers of the association the following resolutions were adopted:

"Resolved, That, for the purpose of securing funds to meet the expenses of the association, each member be requested to contribute, as membership dues, \$5 at the beginning of each calendar year; and that the secretary be directed to furnish each member, who shall have paid the annual dues as above provided, a copy of each Monthly Report of Production in circular form.

Resolved, That the Secretary be authorized to regularly furnish at \$5 per year, to all persons who may subscribe therefor, a copy in circular form of the Monthly Report of Production, and that he be authorized to furnish to all members and subscribers entitled to receive the Monthly Report, as above provided, additional copies to their own addresses, for gratuitous distribution only, at such rates as he may prescribe, not exceeding \$1 per copy.

As authorized, extra copies of the report, printed upon good strong paper, of light weight, to cheapen postage, will be furnished to members of the association not in arrears for annual dues, and to regular subscribers to the report, to their own addresses, for gratuitous distribution only, upon the following terms:

One copy each month for the year.....	\$1.00
Two copies each month for the year.....	1.75
Each additional copy for the year.....	.50

All persons engaged in the production of petroleum, either personally or as members of petroleum mining companies, are urgently requested to become members of the association; and those who are not eligible to membership, but who feel an interest in the success of the association, are respectfully invited to subscribe for the report as a means of promoting the objects of the association.

It is suggested to petroleum mining companies that, while they can not as corporations become members of the association, it would be gratifying to receive

from each company such a contribution to the funds of the association as would cover a membership fee for at least each of the officers of the company and members of the board of directors, together with such of its employees as they may see fit to constitute members of the association. In addition to the advantage of having each one who may be engaged in carrying on the operations of the company thoroughly posted in the statistics and facts relating to the petroleum business, the presentation of a membership in the association to an employee would be a judicious method of expressing appreciation of his services and of increasing his intelligent interest in the business.

Please make remittances by post-office order, or by draft when convenient, addressed to F. W. Hastings, esq., assistant secretary, at Franklin, Venango County, Pa., who will acknowledge the same as received, and forward receipts therefor signed by the secretary and treasurer of the association. Be careful to give accurately and fully the name and post-office address of members and subscribers, that no errors may occur in acknowledging receipts and sending reports.

Please favor the association by such subscriptions as you may be able to make or secure.

Respectfully,

C. V. CULVER,

Secretary of the Petroleum Producers' Association.

Q. (By Mr. PHILLIPS.) What date was that?—A. April 25, 1870. As production proceeded the consumption did not keep pace with it. There was a constant increase in the supply above ground. It became apparent that further efforts were required for the betterment of the trade. A concern, known as the Producers' Agency, with a stated capital, was therefore organized to purchase from the producers within this association, a certain amount of oil per day or per month and retire it, or store it and keep it off the market to the disadvantage of the consumer. It will be sufficient to state briefly what they proposed and expected to do by the retiring plan.

Q. Was that ever carried into effect?—A. It was carried into effect to the extent of an organization.

Q. It never had any effect on the market. The money was not subscribed, the plan was not carried out?—A. The money was partially subscribed and the organization effected. I am attempting to show the efforts the producers were constantly making for the betterment of their own condition and that was an effort to put their business on a paying basis.

Q. Was it an effective one?—A. It was not.

Q. (By Representative LIVINGSTON.) Tell us why?—A. The only reason I can assign is the constantly varying condition of the oil trade. With every change in the field new men were brought into the business and they were generally the most energetic and aggressive of producers. They went on regardless of the experience of others.

WHAT IS MEANT BY OVERPRODUCTION.

Q. What do you mean by the overproduction?—A. I mean more than would be consumed at remunerative prices at the time.

Q. You mean more oil than the world would consume?—A. More oil than the world would consume at that time; the facilities for taking care of a large surplus production were not in existence at that time.

Q. How much have the producers and refiners ever had that they carried over 18 months?—A. Forty million.

Q. Forty million barrels?—A. Forty million barrels; yes. They had 40,000,000 barrels that they carried substantially for 10 years. At the end of 10 years, at the point of highest production, there still remained 81,000,000 barrels.¹

Q. (By Mr. SMYTH.) Was that carried by one or more parties or by the trade generally?—A. It was carried by the trade generally but the storage was supplied by one party.

Q. Who was that party?—A. The National Transit Company.

Q. (By Mr. CLARKE.) Is it not a fact that the existence of that quantity of oil in the world available for the market under existing conditions had the effect of preventing the very object they sought to accomplish?—A. By this organization?

Yes.—A. Undoubtedly.

(By Representative LIVINGSTON.) During the time they carried that surplus oil was the price lessened to the consumer?—A. Not materially, but gradually.

Q. Explain why it is that a surplus like that did not lessen the price to the consumers.—A. Are you speaking now of the year 1870 or the time of the greatest production?

¹ See table of stocks, p. 435.

Q. At any time.—A. My reply was on the assumption that your question referred to the period of 1870. There was no material reduction then, but at the point of the greatest production and quantity of stocks there was a very material reduction in price.

Q. Do you catch my question? You say the price to the consumer was not materially reduced. Why not?—A. My answer assumed that your question referred to 1870.

Q. Well, at any time?—A. (Interrupting.) I will change my answer in that event, and say it was greatly reduced.

Q. At any time?—A. Yes, at some time it was greatly reduced.

Q. (By Mr. SMYTH.) Owing to this large surplus?—A. Owing to this large surplus. I did not mean to give an evasive answer. I will state that, at the period of the large surplus, the price to the consumer was gradually lessened.

Q. (By Representative LIVINGSTON.) Is that the time of the forty millions?—A. That was at the time of the forty millions.

THE PRICE OF REFINED OIL HAS BEEN CONSTANTLY REDUCED.

Q. What was the reduction?—A. To the producer?

Q. No, to the consumer.—A. To the consumer from the prices we have noticed at Cincinnati in 1865—

Q. (Interrupting.) No, no, I do not want any dates. I want to know what the reduction was when you had the big surplus of oil?—A. Well, it was reduced to 8 or 10 cents a gallon. I can tell you precisely in a moment.

Q. Take it for granted that it was 10 cents, did you regain that loss?—A. It does not appear that there was a loss. I believe that oil was sold at a profit at the time.

Q. Was the price raised to the consumer later on when the surplus disappeared?—A. I think not.

Q. It remained there?—A. It remained there; kept decreasing.

Q. It is a fact that the price of refined oil has been steadily decreasing for the last 15 or 20 years?—A. Constantly.

MOVEMENTS IN THE PRICE OF STOCK COMPARED WITH MOVEMENTS IN THE PRICE OF OIL.

Q. Did the stock in the companies also gradually decline?—A. The stock of oil?

Q. No; I mean the stock in these corporations. Did the value of the Standard's stock decrease with the decrease in the price of oil?—A. I think not.

Q. (By Mr. SMYTH.) I suppose the cost of handling oil has decreased very much?—A. Yes; very much; great improvements have been made.

Q. (By Representative LIVINGSTON.) Now, if the price of oil has decreased to the consumer on account of the surplus, and the price of the stock has not, will you explain why?—A. Well, I will answer that in this way: If there were any profits in manufacturing then by any particular company, it might be said that it was due to the larger volume handled and manufactured, the reduced rate of profit being made up on a very large quantity. But let me say that the profits are not all with the Standard Oil Company. The producers in the meantime have made enormous profits.

Q. I understand that, although the price of oil decreased and you were carrying a large surplus, the value of the stock of the Standard Oil Company increased?—A. The cost of producing and refining oil decreased very materially in the following years.

Q. It seems as though that did not depend upon the cost of production or anything else. It seems to be continually going up; do you know what it is worth now?—A. I have not heard any quotations of the value of the stock; I am not prepared to express an opinion upon that.

THE OBJECT OF THE PETROLEUM PRODUCERS' AGENCY.

Q. (By Mr. FARQUHAR.) It is a good deal like the Chemical Bank of New York?—A. Now, the purpose of the agency formed by the Petroleum Producers' Association, which was created in 1869 and 1870, is contained in a few words in what is called the practical exhibit. (Reading:)

"The establishment of the Petroleum Producers' Agency is expected to accomplish among others these important things:

"1. It will prevent unwise competition between producers and sellers, by taking advantage of which buyers contrive to depress prices.

"2. It will, as a result, secure a fair price for whatever amount of oil the world requires—unaffected by the fact that there is more produced than the consumption demands.

"3. The surplus oil being kept in the control of the agency, it can not be used by anyone to manipulate or depress the market prices.

"4. The surplus oil placed in tank exactly represents the overproduction and unerringly indicates its extent and increase."

Q. (By Representative LIVINGSTON.) I understand from that that you will make more money by holding oil than you can by putting it on the market?—A. That is it, precisely; that is the whole subject in a nut shell. (Continues reading:)

"5. No concealment or misrepresentation can be made of the stock, or overproduction to unduly affect prices.

"6. Every producer being the holder of a tank receipt representing his share of the surplus oil is doubly interested in restraining overproduction—because he suffers both from the inability to realize upon his receipt for oil in tank and from having to deduct from the value of his production the value of that required to be placed in tank and the cost of tanking it.

"7. The effect of competition and of the lack of it in buying and selling crude oil is shown by the fact that with an established demand for 16,000 barrels of oil a day and a production of the same amount, the advantages of the buyers and sellers are so nearly balanced that \$5 a barrel will be freely paid by the buyer and accepted by the seller—yielding \$80,000 a day for the gross production: but if the production should fall off, say, 1,000 barrels a day, competition between buyers would exist to such an extent that \$6 would be just as readily paid and be readily accepted, making \$90,000 for the whole. If the production should still further decrease so as to not exceed 14,000 barrels a day, the price would promptly advance to over \$7, and realize at least \$100,000 for the total."

Q. Make a little explanation right there. Would that be independent of the surplus carried? Would the price vary notwithstanding the surplus?—A. The surplus would be retired and kept out of the way when the market advanced.

Q. Your answer is yes?—A. Yes. (Continues reading:)

"If, however, the advantage were to turn the other way, as would soon be the case with such stimulating prices, and the production should reach, say, 17,000 barrels, exceeding the demand by 1,000 barrels, the competition would be between the sellers instead of the buyers, and the price would decline to \$4 a barrel, making \$68,000 for the daily production; with less readiness 18,000 barrels would bring at most \$3.50 per barrel, or \$63,000 in the aggregate, while 19,000 barrels would hardly find purchasers at \$3 per barrel, or \$57,000 for the daily product, and a production of 20,000 barrels would not command \$2.50 per barrel, or less than half the amount that a production of 14,000 barrels would readily command, and apparent permanent production in excess of 20,000 barrels would so thoroughly demoralize the market as to make petroleum without a reliable quotation."

Twenty thousand barrels there was considered a very extravagant estimate of the production. If it ever reached that the business would not only be a losing one, but there would be no market whatever. (Continues reading:)

"The logic of this undeniably correct statement has a thousand times suggested that it would be a profitable speculation to buy the entire production at the price which is current when production is largely in excess of demand, and, reserving only so much as the market would actually require, to set fire to the remainder, put it out of existence, and thereby realize twice as much from the remainder as the whole cost."

Q. That would be justifiable, would it?—A. That is what they say here. (Continues reading:)

"Wanton as the destruction of such valuable material would be, but one consideration has prevented its accomplishment long ago as a speculation—that is, the great advance in price which would naturally result from its consummation would so stimulate production as to entail upon the enterprising speculator the possibility of loss by a second stock larger than the first.

"There is, however, a common-sense method of accomplishing a better result by better means. The oil is too valuable to destroy or waste; and to withdraw the supply from competition with the amount which the world requires would enable the producer to realize a fair price for what is sold and retain the surplus without other cost than that of putting it in tank. But who shall do this? If any individual or firm or company were to undertake it they would find their resources, however large, eventually exhausted, only to make a market for an enlarged production stimulated by their enterprise.

"There is but one way to secure a community of interest among producers: By

affording them the advantages of the good prices resulting from selling through our agency without competition, and compelling them to bear uniformly the burdens and losses resulting from excessive overproduction. These ends are sought to be accomplished through the agency, which undertakes to receive all the oil produced, to pay a fair price for what the world will consume, and to tank the surplus at the cost of the producer, for his benefit.

"The following table shows the practical result of selling 16,000 barrels of crude oil a day at \$5 a barrel and storing the excess at the expense of the producer, estimating the cost of tankage at \$1 per barrel.

"Observe, that if the supply is not in excess of the demand, the full market price will be paid for the entire production as fast as delivered, so that there would be no delay in making payment, and no tanking of surplus oil.

"The table is only to show what would be the result to the producer, the demand being for 16,000 barrels a day, and the production steadily rising from 17,000 to 24,000 barrels a day.

"The operation of the plan is to secure the producer a minimum price of \$5 a barrel for all the oil which can be sold—deducting therefrom only the commissions for selling the oil and the cost of tanking the surplus. For his interest in the surplus oil in store and in the tankage he has a receipt estimated in the table at a valuation of \$3 a barrel, at which valuation it is assumed the receipt can be readily sold, if the producer proposes to realize upon his entire production rather than wait for the surplus oil to be marketed at a higher rate.

"The table shows at a glance what the producer will realize from the advance made by the agency, what the proceeds of the sale of the oil in addition to the advance, and what his interest in the stored oil is worth at the estimated value. The right-hand column shows what he may realize per barrel at once on his entire production by selling his interest in the tanked oil with the amount marketed.

"The advantage to producers—resulting from the establishment of the agency, by which the rates indicated can be realized from sales through it—contrasted with sales made in competition between sellers, is so marked and decided that it needs only the simple exhibit to prove that by the operations of the agency, at least from \$1 to \$2 a barrel upon the entire production may be saved to the producers at large—amounting in the aggregate to from \$6,000,000 to \$12,000,000 a year."

Daily product.	Daily payments \$5 per barrel		Daily receipts (sales 16,000 barrels) at \$5.	Surplus oil put in tank.	Cost of tanking, \$1 per barrel.	Daily cash balance.	Cash paid per barrel on certificates.	Total cash paid per bar- rel.	Amount per barrel of tank receipts issued.	Value per barrel of tank receipts, estimating surplus oil, with tank- age, at \$3 per barrel.	Net return to produc- ers, estimating tank receipts at 50 cents on the \$1.
	Cash, \$3.	Certificates, \$2.

Q. (By Mr. PHILLIPS.) Now, was not that a wild, visionary scheme? It did not cause a ripple in the oil fields at the time it was presented, and there were very large producers that never heard of it.—A. I am not prepared to agree with you in that statement. It seems to me there was a very considerable discussion of it in the newspapers. It was talked over at various points in the region. A fund was subscribed for it at that time. While inoperative it was owing to other causes. It failed to go into operation because of the enormous production at that time in Butler County. Had conditions remained as they were when it was contemplated it would have undoubtedly gone into effect.

Q. It was entirely ineffective and inoperative and was not received generally by the producers?—A. It was inoperative. Here is substantially the same plan, adopted a few years later by the Petroleum Producers' Association. This one was

effective. Agencies were established at various points in the oil regions for the purchase of oil. Oil was bought from the producers and sold substantially on the same plan for the purpose of retiring it, as may be seen by the report of the committee on organization of the Petroleum Producers' Association, Limited, adopted by the general council of the Petroleum Producers' Union, of which Mr. B. B. Campbell was president. That was a partnership affair.

Q. Did that have any material effect on the prices either to the producers or consumers?—A. I can not say that it did. But it was an effort for the improvement of trade conditions at that time. An address by the general council of the Petroleum Producers' Union of the same date states the reasons for the existing depression and urges producers to join the union. To this movement a million dollars was subscribed.

Q. Was it ever paid in?—A. Well, we have only reports of the subscription, acknowledgments of the same, and the fact that it was put into practical operation. Agencies were established at various points in the oil country and they set up opposition buyers.

Q. Did it have any especial effect on the trade?—A. No noticeable effect. It was very shortly abandoned, but it was an outgrowth of the movement inaugurated by D. Armstrong in 1877, 1878, and 1879. Benjamin Campbell succeeded to the chairmanship.

RESTRICTIONS ON DRILLING OPERATIONS.

I have here a drilling contract to which reference was made yesterday that I should like to submit. It is in connection with a movement in 1887 and 1888 for the restriction of operations in interior drilling:

EXHIBIT IV.

BOUNDARY LINE DRILLING CONTRACTS.

Whereas excessive waste has occurred in the past from the prevalent practice of fighting lines, which largely increased expenses without adding permanently to the production, while it caused a spasmodic and temporarily excessive production, with a vicious influence on the market price of petroleum:

Now, therefore, to correct this waste and relieve the industry from the evils in the future, we, the undersigned producers of petroleum, do hereby agree to and with each other, as follows:

First. That hereafter the number and location of wells for the production of petroleum along or adjacent to the exterior boundary line of any producer on either side of said line shall be determined by the agreement of the producers interested in the production along said boundary line, or, in case of their failure to agree, by three arbitrators, one to be chosen by the producer or producers on one side of the said boundary line; one to be chosen by the producer or producers on the other side of the said boundary line, and the third arbitrator to be chosen by the two so chosen by the producers aforesaid.

But no decision of such arbitration shall be permitted to deny altogether the right of a producer to drill when he can not drill at all without drilling within 800 feet of the boundary.

Second. No well shall be drilled on or within 800 feet of any boundary line until its location shall have been fixed by agreement of adjoining producers or by award of arbitrators as hereinbefore provided.

Third. This agreement shall apply to boundary lines between subscribers to this contract, and not then at points where one not a subscriber adjoins and drills within 800 feet of the subscribers hereto.

Fourth. Any subscriber hereto who shall violate this agreement shall pay to the producer or producers owning or operating the territory adjoining his boundary line, who are subscribers hereto, for every well put down along said boundary line contrary to this agreement, such damages as may be awarded by three arbitrators, or a majority of them, to be chosen in the same manner as herein provided for, the fixing of the number and location of wells along boundary lines when producers do not agree. Such award shall be final and conclusive, and for the amount so awarded, respectively, shall have the right to sue and recover against offender or offenders, as if this contract were between such parties only to this contract for this purpose, shall be considered and construed a several contract, of every subscriber to and with every other subscriber hereto.

Fifth. In case of a failure to agree as to the number and location of wells along a boundary line, if any producers, or producers subscribers hereto shall neglect

or refuse to choose an arbitrator, as provided in the first clause of this contract, in that case the executive board of the local assembly of the proper district of the Producers' Protective Association shall, and they are hereby authorized to, appoint a suitable person to act as such arbitrator. And every producer shall, within 8 days after request made by another producer, either agree or appoint his arbitrator as aforesaid, or he shall be considered in default, and the arbitrator shall then forthwith be appointed by the executive board as above provided.

Sixth. Every subscriber hereto further agrees that should he convey any or all territory at any time to other parties, he will make such conveyance subject to all the conditions of this contract.

Seventh. This contract is to take effect on and after September 8, 1888.

INTERIOR DRILLING CONTRACT.

Whereas abundant territory as well as our own experience teaches us that the price of any commodity is mainly dependent upon the relation between supply and demand, and that petroleum is no exception to this rule;

And whereas the excess of visible supply of stocks of petroleum, furnishing an apparent supply largely in advance of the immediate demand, has been and still is the most depressing circumstance which affects the petroleum industry;

And whereas the effect of our "shut in" of production for 8 months, while not as advantageous as we had hoped, has nevertheless put the price on a higher plane than that upon which it had previously rested, and, as we believe, has prevented the commodity from sinking to even lower prices than we had experience of in recent years, and we had, therefore, to limit the production by a moderate restraint of drilling, as demanded by the interests of the producers of petroleum until the stocks are reduced to an amount consistent with the healthy relation between supply and demand, and, as a result, the receipt of remunerative prices to the producers;

Now, therefore, we, the undersigned, producers of petroleum, do hereby agree to and with each other that we will not drill any wells for the production of petroleum on any farm or tract of land owned by us, except along or adjacent to exterior boundary lines of our respective properties, to a greater extent, exclusive of boundary-line wells, than one producing well for each 20 acres and each fractional part of 20 acres; provided that additional wells may be drilled with the consent of the local assembly of the Producers' Protective Association for the district in which the particular property may be situated and of the general executive board of said producers' association, or, in case such consent can not be obtained, upon the allowance of the arbitrators, or a majority of them, one to be chosen by the person or persons desiring to drill, one to be chosen by the local assembly of the Producers' Protective Association for the district in which such property is situated, and the third by the two so chosen.

And we further respectively agree that all conveyances made by any of us of oil territory during the continuance of this contract shall be made expressly subject to all the conditions of this agreement.

This agreement shall continue in force until the 1st day of May, 1889, but may be abrogated before that date by the votes of a majority of the general assembly of the Producers' Protective Association, and such general assembly shall be convened to consider the question of abrogation upon the demand of one-third of the local assemblies of said association.

ATTEMPTS TO IMPROVE THE CONDITION OF THE BUSINESS IN 1887 AND 1888.

We have the various movements known as shut-in or shut-down movements for the betterment of the oil producers from 1870 up to 1887 and 1888, omitting that of 1884, which was only partially successful. I will read a few notes I have made on the subject for the purpose of connecting this association with subsequent enterprises in which the producers' association started new pipe lines and refineries, the Pure Oil Company embracing the whole movement. (Reading:)

The shut-down movement of 1887 and 1888, in which the Standard Oil Company cooperated with the producers and did much to make the movement a success, was no doubt the most successful action ever inaugurated by the producers.

Having its inception among some of the heavy operators in the Washington County field, it extended over the whole region and embraced all but a very few of the operators. Its scope was wider and its effect greater than any similar movement. The mutuality of interest among all branches of the trade rendered its success certain. Thus we find that the producing, refining, land, and working interest all cooperated to make the movement a success and enhance the value of

the product of the producer. The Taylorstown operators, controlling 6,372½ acres of producing territory, early in June entered into an agreement to restrict production. At this period the reduction of stocks was going on quite rapidly, but the market was in the sixties, with the consumption 8,000 barrels a day over the production; hence the conditions were favorable for the inception of the movement. On August 2, at Bradford, there was a meeting of representative producers at the invitation of H. L. Taylor, of Buffalo, at which time it was developed that the organization pending was so nearly completed as to insure a successful undertaking of the work mapped out, and the meeting decided to postpone action for a short time. About the same time the P. P. A. held a few secret meetings in Bradford in the interest of the shut down. The movement became the subject of much discussion in the newspapers, and its probable outcome was very thoroughly discussed.

The sensational press got in its work on this movement early in the game, and among other things given publicity by the Cleveland Leader in connection with the shut-down movement was a series of propositions which implied that the sole object of the movement was a battle against the Standard Oil Company, which allegations were promptly denied by Mr. Kirk. The Derrick criticised the action of one man in Butler County who was alleged to be hustling to get down all the holes he could while the preliminaries of the shut down were being arranged. In Butler County, in the Reibold pool, he had two wells doing 2,900 barrels a day. The Derrick made a couple of attempts to interview him on the subject of the shut down, but he maintained a strict silence upon the subject. Early in September there were meetings of the P. P. A. at Bradford, and a conference of large producers at Pittsburg, which included D. O'Day, of the National Transit Company. The operations in Butler County attracted special attention, and a special to the Derrick from Butler asserted that the operator was a shut-down man in name only. The leading producers, about the middle of September, had another conference at Pittsburg with officials of the Standard, presumably on matters connected with the shut-down movement. It was learned from Washington County that McKeown and Willets, two of the largest operators in the field, had refused to have anything to do with the movement, contending against the shut-down movement as a means of bettering the conditions of the trade, which had been depressed from overproduction for 10 years. Some persons asserted that the shut-down movement would have the effect of bringing in new producers, with the result of defeating the very object of the project. The discussion in the Derrick of the shut-down movement covered a wide scope, and many diversified opinions as to how to better conditions were expressed, but the general trend of opinion was largely in favor of the shut down. The production from the three wells in the Reibold pool amounted then to 5,000 barrels daily, and on September 29 a meeting of the P. P. A. was held at Emlenton, at which matters pertaining to the shut down were considered but not made public. At this same meeting and among the Emlenton producers it is said there was a decided change of sentiment toward the Standard Oil Company, it being asserted that but for the Standard the Pennsylvania oil would be selling at 50 cents per barrel. On October 2 the 4 wells at Reibold were making 5,400 barrels a day, which might be called a pretty strong showing for a man working for the success of a shut-down movement. There is no intention of stating that his actions were contrary to contract; everything was open and understood.

At the middle of October, N. F. Clark, one of the leaders in the shut-down movement, stated that 80 per cent of the producers had joined the P. P. A. and were ready to get into the shut down; he also found that more than two-thirds of the oil was produced by the small producers. During the month of October the executive committee of the P. P. A. made strong efforts to get all the producers of oil into line, but still the gushers continued to arrive on schedule time at Reibold, and on October 20 another was added to the list, making an aggregate production of 5,520 barrels from 6 wells. The first authentic news that the shut down would be a success came out October 23, when it was learned that the movement would go into effect on November 1, and that its essential features were as follows: The shut down was to include the shutting in of not less than one-third of the production of the operators in the agreement, the cessation of drilling operations, and the general cooperation of the producing element. The Standard Oil Company entered into the agreement to help make it successful. The company set aside 6,000,000 barrels of oil. The profits upon 5,000,000 barrels of this, that is, the advance above 62 cents, they proposed to donate to the producers, while the profits on the other 1,000,000 were to accrue to the oil-well workers thrown out of work by the shut in and shut down. This result was arrived at only after prolonged and energetic negotiation on the part of the producers, but

once all the elements of the business were combined it was practically assured that the movement would be successful. This looked like a one-sided proposition wherein the Standard was not likely to be much of a winner, but, that being the agreement brought home by the producers' committee, they returned to the region with the sole idea of organizing the producers and making a success of the movement. How well they succeeded in handling the question is best evidenced by the fact that there were then 14,000 producers, and that they succeeded in enlisting 85 per cent of the number into the movement.

BUSINESS ASSOCIATIONS ORGANIZED BY THE PRODUCERS' PROTECTIVE ASSOCIATION.

That continued in effect until October 31 of the year following, both sides to the agreement faithfully carrying out every condition. The Producers' Protective Association continued their organization, which at the start was secret. I think the restriction extended so far as not to permit the naming of any officer of the concern; anyone holding an office in the association was not allowed to be known by name outside of the organization itself. Altogether it was one of the closest corporations ever organized for business purposes. They continued to hold their meetings and discuss the conditions of the trade, which were not permanently bettered by this shut-in movement, owing to very large developments at McDonald within two years of the termination of the shut-down agreement, where an enormous production took place in a very short time. While operations were progressing in McDonald, the Producers' Protective Association proposed to organize business associations fostered by their own association. They were instrumental in organizing at least three or four, of which the first was the Producers' Oil Company, Limited, which had a capital of \$600,000. This went into business in Allegheny County, in the vicinity of the McDonald oil field, but on the edges of the field, and did not participate to any great extent in relieving the producers of the overproduction existing there. After a period in which no very considerable success was achieved, another company was organized, known as the Producers and Refiners' Company, in which certain refiners, cooperating or combining with the associated producers of the Producers' Oil Company, subscribed \$250,000 additional capital, which was invested in pipe lines furnishing an outlet from the McDonald field, or the terminus of the Producers' Oil Company, Limited, to the refineries at various points in Pennsylvania. The next step in the movement was to combine these companies by a sale of one to the other. The Producers' Oil Company, capitalized at \$600,000, was absorbed by the Producers and Refiners' Oil Company, capitalized at \$250,000; in effect, the weak company took and assumed the property of the greater concern. From this time the Producers' Oil Company practically went out of existence, though I think the organization was maintained and all the property of the Producers' Oil Company, Limited, was not disposed of at that time; some of it remained, and perhaps still remains. This proving unsatisfactory, another consolidation was made about 1894, by which the Producers and Refiners' Oil Company undertook to absorb the United States Pipe Line Company, a company organized with a capital of \$1,000,000, with two systems of pipe lines, and according to the terms of the purchase, the stockholders of the United States Pipe Line Company—the only straight and real corporation connected with the whole concern, because it is incorporated under the pipe-line act of Pennsylvania, and none of the others are—

Q. (By Mr. PHILLIPS.) (Interrupting.) The others were limited partnerships?—A. The others were limited partnerships.

Q. Are you not mistaken about the two first companies undertaking to absorb the United States Pipe Line Company? The United States Pipe Line Company was formed before the Producers and Refiners' Company, and they only worked in harmony with the United States Pipe Line Company at this time. Is not that correct?—A. I am giving this largely from memory, and I may be in error. I have a paper here describing the whole process, and it may be just the other way. It may be that the United States Pipe Line was absorbing the other concerns, but there was an absorption attempted.¹

Q. Are you quite certain there was at that time? Were they not simply making running rates and agreements?—A. I will proceed and then afterwards read the answer of J. J. Carter in a suit in equity. Here is a paper which recites the whole transaction.

Q. (By Mr. KENNEDY.) An official paper?—A. I do not believe it has a seal; it is a copy of the official paper.

Q. (By Representative LIVINGSTON.) A certified copy?—A. No.

Q. (By Mr. FARQUHAR.) Is there a statement to show where the original papers can be found?—A. Oh, yes; the original papers can be found.

¹ See p. 471.

THE ORGANIZATION OF THE PURE OIL COMPANY.

Q. Is there any verification of the correctness of this copy?—A. No; there is no verification of this copy, which is merely a copy of the petition to dissolve an injunction. Whatever the attempt was—to consolidate, or combine, or absorb one of these pipe lines or the other at the time—it failed through the activity of one of their own stockholders, who went into court and prevented this consolidation. That being the case, another company was formed, known as the Pure Oil Company. The Pure Oil Company was formed on or about the 24th of January, 1895, at a meeting of producers at Butler. Subscriptions were received to the amount of about \$50,000 toward the organization of what was called the Pure Oil Company. The stated purpose of this company was to market the products of the refineries and pipe lines. It was to be the commercial organization of the trust then in process of formation, and it has since been sought by a reorganization of that concern which took place about 1897 in New Jersey—

THE PURE OIL COMPANY CALLED A TRUST.

Q. (By Mr. PHILLIPS, interrupting.) Why do you call the Pure Oil Company a trust? Was not that a straight corporation like the Standard and others that have since organized?—A. I quote here from Mr. David Kirk, the first president. He calls it a trust, and it is so called here. It is cited as a trust agreement.

Q. It was organized under the laws of New Jersey as a corporation?—A. Mr. Kirk calls it a trust.

Q. Does Mr. Kirk's calling it a trust make it a trust?—A. I think the organization makes itself a trust by the appointment of trustees for the conduct of the business.

Q. It is only a voting trust, and have not voting trusts existed in all ages, in Europe as well as America?—A. I am not contending against the legality of the trust; it is merely a statement of fact based on information obtained from David Kirk. The reorganization took place at Taylor's Hotel in Jersey City in 1897, and the powers of the organization increased from that moment. They have attempted to take in all the corporations combined with them, to combine into one concern. The attempt was made several times, as I understand it, to absorb all the old interests in which the Producers' Protective Association is concerned, and they are still attempting it with a very considerable show of success, as I am informed.

(The witness then read Exhibit B, filed with a bill in equity in a suit entered by Mr. David Kirk, at Pittsburg, Pa. See below, page 464.)

Q. (By Mr. PHILLIPS.) Did the McCalmont Oil Company have anything to do with this as a company?—A. Possibly David Kirk may have acted as trustee for the McCalmont Company; as president of the McCalmont Oil Company he may have been trustee of that company in some subscriptions of this stock; that is the only explanation possible at this time.

Q. The agreement itself, then, shows that the trust to which you refer is a voting trust for the election directors, does it not?—A. It has a tendency to show that. I believe, if you will indulge me the time, we will accomplish more—

Q. (By Representative LIVINGSTON.) What is the point you wish to bring out?—A. I will get down to that by reading one clause and submitting the rest for your consideration. The clause I particularly wish to call your attention to is one that provides for the dissolution of the trust and the conditions under which it may be done:

"Fourth. This agreement may be canceled, and the trust hereby created dissolved only by the winding up of the Pure Oil Company, or by the consent, in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase at one hundred and ten dollars per share, in cash, of all the preferred and common shares of the company at the time outstanding."¹

The purpose of this clause is in effect to make the trust perpetual; but if dissolved, the shares under that agreement, costing originally \$5, are compelled to be sold at \$110. They agree in this to repurchase at 110 when the shares previously cost 5.

Q. (By Mr. PHILLIPS.) I think perhaps that is a mistake.—A. It is here. It is part of Mr. Kirk's Exhibit B.

Q. (By Representative LIVINGSTON.) Do you mean to say that A and B, two members of the company, turn in \$110 for their own stock or outstanding stock?—A. It states outstanding; it puts the redemption of all stock at 110, the original cost of the stock being 5.

¹ See modified form on p. 511, footnote.

Q. (By Mr. PHILLIPS.) Does not that mean 10 per cent?—A. I am only reading what it states.

Q. Is that a certified copy?—A. Oh, no; it is a copy of the record in Allegheny County, in a suit entered by Mr. Kirk, the retiring president.

PRESENT STATUS OF THE PURE OIL COMPANY.

Q. (By Representative LIVINGSTON.) What is the condition of that company now?—A. It is in existence and largely in control of this three-million corporation. There is an authorized capital of ten million with possibly \$400,000 paid in. It then substantially controls the other combinations, in which upwards of three millions are invested.¹

Q. (By Mr. KENNEDY.) What is the voting power of the five trustees?—A. I have stated that it is the power to vote all the stock represented in the trust.

Q. Not for the transaction of other business?—A. For the election of directors. It is stated in the second clause: "At all meetings of the company for the election of directors or for any other purpose, to cast the entire number of votes which, as holders of said shares, they would be entitled to cast."

Q. That is a true copy of the original?—A. It is a true copy, and the original may be obtained in the court at Pittsburg.

Q. (By Mr. SMYTH.) Your opinion is that the company controls all these companies?—A. Substantially; it has come to be known as the Pure Oil movement.

Q. (By Mr. PHILLIPS.) Were there not more than five trustees?—A. It is necessary to say that there have been some changes in the organization since then. At a meeting not long ago in New Jersey, I am informed, an attempt was made to reconstruct the by-laws, and in this they may have changed the voting power. This represents the condition of affairs in 1897. I submit the whole:

EXHIBIT V.

Trust agreement, and by-laws and rules and regulations of the Pure Oil Trust.

EXHIBIT B.

THE TRUST AGREEMENT IN FULL.

This agreement, made and entered into by the Pure Oil Company, a corporation organized and existing under the laws of the State of New Jersey: David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Charles H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee, and David Kirk, trustees for the McCalmont Oil Company, severally subscribers to and owners of the capital stock of the said Pure Oil Company, and Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison, parties mutually agreed upon to exercise the trusts created hereunder:

Witnesseth, That whereas the Pure Oil Company is formed for the purpose of engaging in directly and of aiding other companies and parties engaged in the production, transportation, storage, manufacture, and sale of crude petroleum and its products, and in any business incident thereto, and it is desired to enlist therein the cooperation of other parties, and to procure capital to be invested in the shares of its capital stock, and in such other ways as may be desirable, which investments are to be solicited from parties not now interested in the company; and

Whereas it is advisable, equitable, essential, and intended for their safety and advantage of all interests that the control of the said Pure Oil Company shall be secured permanently, as to prevent and render impossible at all times the diversion of its resources and business from their intended use and courses, in opposition to monopoly in the business, and to permanently protect and maintain what are known as the "independent interests" in the petroleum industry, and to maintain the policy agreed on for conducting the business of the company in the interest and for the protection of all rights in the company, created by mutual agreement of shareholders, or by operation of law; therefore the said parties hereto, in consideration of the sum of one dollar by each to the other paid, the receipt of which is hereby acknowledged by each, and in further consideration of the mutual benefits received, to be received, or expected from the agreements, covenants, and trusts hereinafter contained, and from the undertakings and business to be promoted, do hereby agree and consent to the various acts and things hereinafter set forth; provided, however, that no party hereto shall be bound to do any act or

¹ See Mr. Phillips, p. 600.

thing, or be responsible for the results or consequences of any act or thing done or omitted to be done, except so far as relates to such act or thing as he himself expressly undertakes to do and perform; and do further agree as follows:

First. The capital stock of the Pure Oil Company, as authorized in its certificate of organization, is to be one million (\$1,000,000) dollars, represented by two hundred thousand (200,000) shares, of the legal par value of five (\$5.00) dollars each, divided into classes and to be issued, held, and transferred subject and according to law and the by-laws, rules, and regulations adopted and approved by all the shareholders of the company, a copy of which is hereto attached and referred to.

Second. The said David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westgate, William L. Curtis, James W. Lee, and David Kirk, trustee of the McCalmont Oil Company, are the owners of all the shares of the capital stock now subscribed, amounting to three thousand (3,000) shares, of which they hereby transfer to the said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison sixteen hundred (1,600) shares, being more than a majority of the shares of the company now subscribed, and agree that one-half of all the shares hereafter subscribed and issued shall be transferred in like manner to the said parties and their associate trustees, as may be appointed, to be by them held in trust for the uses and purposes herein proposed, and subject to the terms and conditions as follows:

First. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement; such ownership of the shares or interests therein may be sold at the will of the holder, but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any right other than are provided for in the by-laws, rules, and regulations of the company and in accordance with this trust; the trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares to carry into effect the purposes of this trust, and all equitable owners of trust shares or interests therein shall specifically agree in writing to the terms of this trust, and no transfer of any such shares or interests shall be made, or be effective if made, until the transferee of such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust.

Second. At all meetings of the company for the election of directors, or for any other purpose, to cast the entire number of votes which, as holders of said shares, they would be entitled to cast.

Third. Each trustee at such meetings shall be entitled to cast an equal number of all the votes which all of the trustees would be entitled to cast in the aggregate, if present, except as hereinafter provided.

Fourth. In case of differences of opinion among the trustees present at any such meetings as to how such votes shall be cast in regard to any matter or thing to be voted on, they shall be cast as the representatives of four-fifths of all the shares held under this trust may direct in writing, if so demanded in writing by any of the trustees.

Fifth. Any trustee unable to attend any meeting of shareholders, and to personally cast the votes he would be entitled to cast if present, may authorize any other trustee to cast the vote which he would be entitled to cast personally present, which authority shall be in writing, approved by three-fifths of the trustees other than himself.

Sixth. When none of the trustees can be present at any meeting of the stockholders, legally held, they may be represented in proxy by an attorney appointed in writing, executed by three-fifths of the trustees.

Seventh. The trustees may execute such consents in writing as in their opinion it may be right and proper for them to do in the interest of the Pure Oil Company and of the owners of the shares held by them in trust, provided that no such consents shall be executed against the objection of the equitable owner of 10 per cent of the shares held by them in trust, unless after the question of executing such consent shall have been submitted in person, or by writing, properly addressed to the several equitable owners of the shares held in trust, and approved in writing by such owners of three-fifths of such shares.

Eighth. The number of trustees may be increased or diminished at any time; or any trustee may be removed, without assignment of cause or reason therefor, by three-fifths of the trustees and the written consent of the equitable owners of three-fifths of the shares held in trust hereunder; and upon such removal, or on filing of such written consent with the secretary of the company and on notice in writing delivered to the party so removed, or sent by registered letter to his proper

address, the rights, duties, and obligations of such party, as trustee, shall immediately cease.

Ninth. In case of death, resignation, or removal of any of the trustees the trust shall be exercised by the remaining trustees until the vacancy be filled by the appointment of new trustees for that purpose, on the nomination of the equitable owners of a majority of the shares previously represented by the trustees, whose place is vacated with the consent, in writing, of the equitable owners of three-fifths of the shares held under this trust and the approval of the three-fifths of the trustees.

Tenth. No trustee has any such beneficial interest in this trust, personally, as to entitle him to maintain any action at law or in equity to enjoin, delay, hinder, or prevent his removal from the trusteeship, or to recover any damages on account thereof from the company or the trustees, or from the individual stockholders by whose action he may have been removed.

Eleventh. The trustees shall appoint a chairman and secretary, and shall keep regular accounts showing the ownership and residence of the various equitable owners of the shares held by them in trust, and shall execute and deliver to such several owners certificates in due form, approved by the directors of the company, evidencing the number of shares held by them in trust for each of such several owners, and shall make such transfers of any of the shares as they may be requested to do by such several owners on the surrender of such certificates representing such shares, properly endorsed, assigned for transfer subject to the terms of this permanent trust, any of the shares thereby represented in the manner prescribed for making such transfer.

Twelfth. The trustees shall immediately advise the company, by writing, addressed to the secretary, of any transfer of ownership of any of the shares held by them; and shall, on written request of the treasurer of the company, certify to him the names and residences of all equitable owners of shares held by them in trust; and shall sign warrants for the payment to such owners, severally, of any dividends to which they may be entitled on the share so held in trust.

Third. This agreement may be changed at any time only with the consent in writing of the Pure Oil Company, three-fifths of the persons at the time acting as trustees hereunder, and of the equitable owners of three-fifths of the shares held in trust thereunder.

Fourth. This agreement may be cancelled, and the trust hereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase, at one hundred and ten dollars per share, in cash, of all the preferred and common shares of the company at the time outstanding.

Fifth. The said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison hereby accept the trust herein conferred and imposed on them.

In witness whereof the parties hereto have severally signed this agreement as of the 6th day of November, A. D. one thousand eight hundred and ninety-five.

PURE OIL COMPANY.
DAVID KIRK, *President*.
C. H. DUNCAN, *Treasurer*.

Incorporators: David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, C. H. Duncan, Theodore B. Westgate, James W. Lee, David Kirk, trustee for McCalmont Oil Co., W. L. Curtis, Thomas W. Phillips, David Kirk, Marcus L. Lockwood, Clarence Walker, James W. Lee.

Trustees: Walter A. Dennison, Jerome B. Akin, C. H. Duncan, Adolphus A. Hoch, Ferd. Reiber, Louis Walz, Rufus Scott, Lewis Emery, jr., M. Murphy, H. King.

EXHIBIT A.

BY-LAWS AND RULES AND REGULATIONS OF THE PURE-OIL TRUST.

[Incorporated November 8, 1895. Capital, \$1,000,000.]

The objects of the company are to produce, purchase, transport, store, and sell crude petroleum and its products and to protect and to aid other companies and parties in the production, transportation, manufacture, storage, and sale of the same. The corporation may acquire, hold, maintain, and dispose of any stocks,

shares, bonds, and other interests in or issued by the corporation, joint-stock, or limited-partnership association engaged in or aiding or promoting the producing, transporting, storing, refining, and selling of crude petroleum or its products, or in any business incident thereto.

BY-LAWS.

ARTICLE I.

MEETINGS OF SHAREHOLDERS.

SECTION 1. The annual meeting of the shareholders shall be held at the principal office of the company on the fourth Wednesday of January in each year, commencing at 10 o'clock a. m., standard time.

Notice of the annual meeting of shareholders shall be by written or printed letter addressed by the secretary to each shareholder at his or her last known place of residence, and mailed ten days prior to the time fixed for holding such annual meeting.

SEC. 2. Special meetings of shareholders may be called whenever it shall be deemed advisable by the board of directors, or by the president upon request in writing signed by the shareholders owning collectively not less than one-third of the shares of the company.

Notice of special meetings shall be given in the same way as the notices of annual meetings.

PROXIES.

SEC. 3. Shareholders may be represented at any meetings of the shareholders by proxy, duly authorized in writing, executed within thirty days next preceding the meeting.

QUORUM.

SEC. 4. The legal representatives of a majority of all the shares of the company shall constitute a quorum at any meeting of the shareholders; and without a quorum being present or represented by proxy no business shall be transacted or election held, but a less number may adjourn from time to time until a quorum be present.

SEC. 5. At meetings of shareholders, general or special, all votes upon disputed questions shall be by ballot, if demanded by any shareholder present, and all votes by ballot shall be determined by the number of shares represented by the respective votes cast.

At all meetings of shareholders for the election of directors, each shareholder shall be entitled to cast as many votes as he has shares of the company standing to his name on the books of the company.

The election shall be by ballot, and each ballot shall have endorsed thereon the name of the person casting the same and the number of shares represented thereby.

VACANCIES.

SEC. 6. In case of death, resignation, or removal of any director, the vacancy shall be filled by the remaining directors.

SEC. 7. The directors shall appoint two shareholders as tellers to conduct the election and to certify the result in writing to the parties elected and to the president and secretary of the company. In case of the directors failing to so appoint, the shareholders present shall choose two tellers to conduct the election.

The secretary of the company shall furnish the tellers, for their guidance in conducting the election, a list of shareholders, showing the number of shares standing in the name of each on the books of the company, authenticated by the seal of the company.

TIME OF ELECTION AND TERM OF OFFICE.

SEC. 8. The polls shall be open from two to three o'clock p. m. The terms of office of directors shall commence at noon on the first Wednesday after their election at the annual meeting of stockholders and continue until their successors are duly elected and seated.

ARTICLE II.

DIRECTORS—MEETINGS.

SECTION 1. The board of directors shall fix the time and place for holding its meetings.

Special meetings of the board may be held at any time on the call of the president or any two directors, after due notice given to each of the directors.

ELECTION OF OFFICERS.

SEC. 2. At the first meeting after their election the directors shall organize by electing from their number a president and a vice-president to serve until their successors are qualified, and appointing a secretary and a treasurer to serve during the pleasure of the board.

QUORUM.

SEC. 3. A majority of the directors shall constitute a quorum at any meeting of the board, and no business shall be transacted by the board without a quorum being present.

SEC. 4. The salary of the president and vice-president shall be fixed by vote of the stockholders.

EXECUTIVE COMMITTEE.

SEC. 5. For the more prompt and efficient management of the affairs of the company there shall be an executive committee of the board, consisting of the president, vice-president, and three other directors, who shall be appointed by and hold office during the pleasure of the board. In the intervals between the meetings of the board of directors its powers and duties shall devolve upon and be exercised by the executive committee, subject to the approval of the board at its next regular meeting.

The proceedings of the executive committee shall be duly recorded in the same manner as the regular proceedings of the board of directors.

A majority of the executive committee shall constitute a quorum.

In case of disagreement of the executive committee on any subject, the matter shall be referred to the board of directors.

SEC. 6. The board of directors shall cause to be kept a complete record of their official proceedings and acts of the proceedings of all shareholders' meetings; present to the shareholders at the annual meeting a statement of the assets and liabilities of the company and of the condition of its affairs generally.

ARTICLE III.

POWERS AND DUTIES OF OFFICERS—PRESIDENT.

SECTION 1. It shall be the duty of the president to preside at all meetings of the board of directors, to sign all certificates of stock and warrants for the payment of money ordered by the board of directors, and such other papers as he may be ordered by the board of directors to execute on behalf of the company.

In case of the absence or inability of the president to act, the vice-president shall be invested with all the powers and shall perform all the duties of president. In case of absence or inability to act of both president and vice-president, the board of managers may appoint one of their number president pro tem., who shall during such absence or inability perform all the duties of president.

SECRETARY.

SEC. 2. The secretary shall keep the minutes of the meetings of the board of directors in a proper book provided for that purpose; attend to the giving and publication of all notices of the company, unless otherwise provided for by the board of directors; have the custody of the seal of the company and affix same to all certificates of stock and such other papers as the directors may order; counter-sign all warrants on the treasury for the payment of money, which shall have been previously signed by the president as authorized by the board of directors; attend to such correspondence as shall be assigned to him; act as secretary of all

standing committees of the board, and shall in general, under the direction of the board of directors, perform all the duties incident to the office of secretary of the company.

TREASURER.

SEC. 3. It shall be the duty of the treasurer of the company to receive and deposit or hold and pay, as the board of directors may order, all funds resulting from the sale of shares or any property of the company; and shall sign all stock certificates and obligations of the company created by special order of the board of directors.

The treasurer shall give bond for the faithful discharge of his duties in such amount and with such security as the directors may determine.

RULES AND REGULATIONS.

1. The business of the company shall be the producing, purchasing, transporting, storing, and selling of crude petroleum and its products, and aiding other companies and parties in the production, transportation, storage, manufacturing, and sale of the same. The corporation may acquire, hold, manage, and dispose of any stocks, shares, bonds, and other interests in or issued by any corporation, joint stock company, or limited partnership association engaged in, or aiding, or promoting the producing, transporting, storing, refining, and selling of crude petroleum or its products, or in any business incident thereto. And in addition to the powers hereinbefore provided for, it may also purchase, hold, manage, and sell on commission, or otherwise, such investment securities and other property, real, personal, and mixed, as the corporation may be generally or specifically authorized in writing from time to time, by the owners and holders of a majority in number of the shares of the capital stock of the company, to purchase, hold, and sell.

And the company may exercise such trusts and do such other things, not inconsistent with its charter, as it may from time to time be authorized in like manner to do.

2. The principal office of the company shall be located at Jersey City, in the county of Hudson and State of New Jersey, and branch offices may be established from time to time as may be determined by the consent of the owners and holders of three-fifths of the shares of the company.

3. The shareholders shall make rules and regulations and by-laws for the government of the company and the management of its business and affairs as in their discretion they may deem advisable, which may be amended at any time by the consent of the owners and holders of three-fifths in number of the shares of the company, given in writing, filed with the secretary, and recorded in the minutes of the proceedings, both of the shareholders and directors of the company.

4. The affairs of the company shall be managed by a board of directors, consisting of nine members, to be elected annually by the shareholders at their annual meeting, at which each shareholder shall be entitled to cast, personally or by proxy, one vote for each share of stock in the company held by such shareholder. The directors shall choose annually from their own number a president and vice-president to serve until their successors are chosen; shall appoint all other officers, managers, agents, or employees of the company; prescribe the duties and fix the compensation of each; and may suspend or remove any of them at discretion, and they may make such additional by-laws as may be deemed by them advisable—all subject to the by-laws and rules and regulations adopted by the shareholders for the government of the company.

5. Interests of the company will be represented by shares which may be divided into classes, including preferred, common, and deferred shares, to be issued, held, and transferred, subject to the by-laws and regulations of the company.

The preferred and deferred shares may be each subdivided into various classes, each class having such special rights and limitations as will more particularly adapt them to the uses for which they are intended, subject to such relation to the shares of other classes as may be established in their issue.

The rules and regulations relating to them will embrace the following features:

6. A majority of all the shares of the company shall be held in a permanent trust approved by all the shareholders, to secure the control of the company and the faithful maintenance of the policy agreed on for conducting the business of the company in the interest and for the protection of all concerned in its affairs. The shares so held shall be designated as trust shares.

7. The capital of the company shall be the net amount of cash paid into the treasury of the company for its permanent use as the proceeds of its stock issued and sold for cash for account of capital; and no credit in excess of the amount shall be made to "capital" in accounts or statements of the company.

8. No preferred stock shall be issued except as cash to the extent of one hundred dollars for each share of such stock issued shall be paid into the treasury of the company to the credit of capital, or of surplus, or of the guaranty and redemption fund, to be created as prescribed in section 12 hereof, as may be deemed advisable.

Any of the preferred shares may be converted, at the option of the holder, into common or deferred shares by so stipulating in their issue and distinctly stating the right of conversion in the certificates representing them; otherwise they shall not be convertible.

9. The deferred shares of the company may be issued for cash, investment securities, property, services, payment of expenses, making disbursements of any kind, and in exchange for shares of other classes issued by the company at the discretion of the directors, with the written consent of the owners of a majority of the shares of the company at the time outstanding.

10. The holders of preferred stock shall be entitled to receive cumulative dividends thereon of one dollar and a half per share quarterly, in full, before any dividend shall be payable on the common stock.

11. A guaranty and redemption fund shall be created and maintained by crediting thereto all of the cash received by the company from the following sources:

(a) The proceeds of all shares of the company sold for cash by the company when issued, in excess of the amount credited to capital.

(b) The cash proceeds of all shares, securities, or other property of whatever kind acquired by the company in exchange for its shares of any class, as such proceeds may be realized, at any time, by the sale for cash of any portion of such shares, securities, or property.

(c) The proceeds of all shares, of whatever class, purchased by the application of the guaranty and redemption fund, as authorized, and resold for cash by the company.

12. The guaranty and redemption fund shall be applicable to the general uses of the company, but may be applied to buying shares of all classes, in the order of their priority or right to dividend, as stipulated, at the lowest rates at which any shares of the same class can be bought, not over one hundred and ten dollars per share, on demand of the several owners and holders of shares, respectively, made within a prescribed time after the payment of dividends; provided, notice of the intention to make such demand shall have been given to the secretary of the company thirty days before the time fixed for the declaration of dividends; and provided further, that no part of the guaranty and redemption fund shall be applied to buying, at any price, the shares of any class, so long as there may remain unsatisfied any demand made by the owners and holders of the shares of any prior class to have the same redeemed at not over one hundred and ten dollars per share.

All shares so purchased shall be placed in the treasury, to be used for the benefit of the company in such form and manner as may be determined by the directors, with the consent, in writing, of the owners and holders of a majority of the shares of the company.

13. When no shares of any class can be purchased at one hundred and ten dollars per share, the guaranty and redemption fund shall be applicable, at the discretion of the directors, to the purchase of the shares of the several classes, other than the trust shares, at such rates above one hundred and ten dollars per share as may be approved by the owners of a majority of the shares of the capital stock.

The shares of any class so purchased may, when authorized by the owners of a majority of all the shares of the company, be resold at any time, at the discretion of the directors, at any price not less than that at which they were severally purchased; or they may be retired from the classes to which they belong, and be placed in the treasury of the company, to be held, reissued, and sold for its use and benefit, subject to such conditions as the directors may prescribe, in accordance with the regulations of the company.

14. When the dissolution of the company shall be determined on, voluntarily or otherwise, the trustees, acting under the permanent trust, created and prescribed in section 6 hereof, shall be trustees to convert its assets and wind up its affairs. The proceeds of all assets received by them shall be applied by them absolutely, as the guaranty and redemption fund is required by the rules and regulations to be applied, preceding, and as may be further prescribed hereinafter.

Any portion of the guaranty and redemption fund remaining after providing for the purchase and retirement of all shares, as herein prescribed, shall be distributed to the owners of the trust shares, and of any other shares then outstanding, equally per share.

15. The owners of a majority of the trust shares, acting together, shall have the right to convey to the company, absolutely or in trust, permanently or temporarily, and subject to such conditions as may be stipulated in such transfer, any securities regularly yielding net income; provided, that the receiving and holding of such securities shall not subject the company to any prejudice, or embarrassment, or legal liability to pay any money on account thereof; and no such temporary transfer in trust shall be terminable until the well-established net income of the company from its regular business and other sources of permanent revenue shall be equal to the maximum amount to which it may be raised by such temporary transfer in trust.

16. Each holder of shares standing in his name on the books of the company shall be entitled to a certificate or certificates therefor, duly signed by the president and treasurer, with the seal of the company affixed and attested by the secretary of the company, and each owner of an interest in any of the trust shares shall be entitled to a certificate of the fact, signed by the chairman and attested by the secretary of the permanent trust, showing the extent of the interest, which interest shall be assignable and transferable on the surrender of the certificate representing it, properly indorsed, as may be prescribed by the trustees, with the approval of the directors and the owners of a majority of the trust shares.

THE UNITED STATES PIPE LINE NOT ABSORBED BY THE PRODUCERS AND REFINERS' OIL COMPANY.

I want to correct some testimony given in connection with the proposed consolidation of the pipe-line interests and which referred to the Pure Oil Company and its allied concerns.¹ Refreshing my memory, I find that it was not proposed to buy the United States Pipe Line Company. From correspondence here in this document, it seems that the facts are just the reverse, and that the United States Pipe Line Company proposed to buy, with the consent of the Producers' Oil Company, Limited, the property of the Producers and Refiners' Oil Company, the payment therefor to be made in stock of the United States Pipe Line Company, the stock of that company having been increased for the purpose from one to two millions of dollars, or it having been proposed to increase it to that amount.

THE NATIONAL TRANSIT COMPANY IN THE McDONALD FIELD.

The commission having indulged me in a wish to read a description of the conditions existing throughout the McDonald field during the time when the original company and the association were in existence, in 1891, I desire to do that before taking up the consolidation of the various interests. This is taken from the Pittsburgh Commercial Gazette, and is reprinted in the Oil City Derrick of May 5, 1892. It is entitled "A history of the manner in which the National Transit Company handled the output of oil at McDonald."

"A few days ago the superintendent of the National Transit Company's tank department made an official report, in which he said: 'A retrospect of the work done proves conclusively that vast resources are required to cope with floods of oil such as were poured forth by the Cherry Grove and McDonald fields, and that nothing short of the experienced and well-equipped organization that did the work could have accomplished it.

"In round numbers, 10,000 tons of iron, rivets, lumber, and other building material were shipped into the McDonald field by one department alone—the tankage department—and the tankage provided for at the rate of one for every ten working hours, requiring the handling, on an average, of 150 tons of material per day to keep the large force of workmen employed. Special trains were run for the accommodation of the men and no expense spared to meet the demands of the field. Rolling mills and tank shops were pressed to their utmost capacity, in many cases running night hours to meet the extraordinary demands made upon them, and second-hand tankage, wherever it could be spared, was cut down and made to do service again in the new field. Men skilled in the special work of tank building were sought for and transported to building points from Chicago, Brooklyn, and all the cities and towns of olddom, east and west, until their name was legion. More than a score of sawmills were drawn upon to furnish the lumber at the rate of thousands of feet per day to roof the huge oil receptacles.

¹ See p. 422.

"In addition to this force were the graders, turning out two and more tank grades per day. The Chartiers Valley presented a scene of activity rarely witnessed since the days when armies were similarly engaged throwing up temporary fortifications. For miles teams, laden with iron, rivets, sheet iron, etc., were seen hurrying in seemingly endless confusion, and yet all were under proper direction, each going to a designated point, arriving in such order as to prevent loss of time from want of material, for there was no surplus, no reserves. Everything was used on arrival, and special agents, laboring over overtaxed railroad officials, to hurry forward supplies, others seeking belated cars on side tracks; the wires brought into requisition; the express companies shipping rivets, plate iron, and many other articles, which ordinarily were shipped by freight. It was no longer a question of expense, but simply a question of securing supplies as fast as required, by whatever means. Scarcely time for sleep, none for recreation; it would come later, as it did. Besieged everywhere by the owner, or expected owner, of a flowing well, with the ever-present and ever-recurring question, "When will you complete the next tank?" "To-morrow," the answer came uniformly, and so did the tank, but only to be filled at once and the necessity for another equally great pressing upon us.

"This vigorous, graphic, and conservative statement is fully borne out by the facts, and gives an excellent pen picture of the excitement and fierce activity attending the development of that prolific territory. This was the work of but one department and involved merely the building of the iron tankage, which still stands in the McDonald field to show for itself what was done. But it does not involve that still mightier work of moving into the McDonald field the pipes for the miles of lines required to run this oil from the wells of the producers to the markets of the world, or where it might be fitted for such markets; it says nothing of the great pump stations which were erected at both McDonald and Greggs stations, on the Panhandle Railroad, to care for this enormous output of nature's wealth, or of the pumps in every valley of that field; the boilers and engines necessary as motive power to all this machinery needed to move into the flood of oil which poured forth from this, the most prolific white-sand field ever developed on this continent.

"The McDonald field is about 6 miles long by 2 miles wide, or contains in the vicinity of 12 square miles, yet the pipe-line company has shipped into that field 55 miles of 2-inch pipe, 41 miles of 3-inch pipe, 25 miles of 4-inch pipe, and 32 miles of 6-inch pipe, a total of 153 miles of pipe, or over 11 miles of pipe for every square mile of territory, and all this merely to carry the product from the wells to the mains of the company, which had been previously laid from the Washington field to the grand depots at Olean, in New York, on the trunk line to New York, and to Colegrove, connecting with the trunk line to Philadelphia. Neither do these figures include 70 miles of 6-inch pipe from Greggs station to Bear Creek, as an additional outlet deemed necessary, owing to the possibility that the increasing production might become greater than the capacity of these two main lines to carry.

"The field itself is but about a year old, and all this work, or by far the greater part of it, was done between the middle of July and the beginning of November, 1891. The plant is completed, with the exception of laying such lines as may be necessary to connect new wells as they come in; the pipe-line business has assumed its usual routine under the facilities provided by the gigantic system established; and while the output of the field is still large, it is handled without the slightest ripple of excitement. Not only the iron tankage with a capacity of 3,000,000 barrels of oil stand there, but the mighty pumps at the stations at McDonald and at Greggs are living and pulsating evidences of the achievement.

"There was much accomplished, however, which can not appear to the mere observer in the field. Superficial examinations in the erection of a plant of this size within such a brief period of time, a plant that is as permanent as the field itself, working with the smoothness and perfection of one which might have occupied years in its construction. Neither can a superficial observer see the expensiveness of certain features unless he be an expert in the handling of oil.

"The field itself is one succession of hills several hundred feet in height, with correspondingly deep hollows. There are wells on the hills as well as in the hollows. Very large producers were so situated that there was no advantage to the pipe lines from gravity whatever; everything had to be forced by pumps, a result of some wells being so much lower than others and the high pressure at which the lines were used, requiring the use of a pump station in every productive valley.

"The haste with which construction had to be prosecuted is faintly indicated by the growth of production in the oil field. The first well completed was the

Royal Gas Company's well, in February, 1891. It was drilled for gas, and the field has accordingly been not only a surprise, but is also an accident. This was followed by Sauter's No. 1, which wells were connected with the main discharge line of the National Transit Company by 2-inch pipes. The next well of any importance was the Matthews, situated about midway between the McDonald and the McCurdy field, already developed. It got some oil in the Gordon sand in the spring of 1891, and was a small well, say 10 or 12 barrels daily. This was connected in the usual way.

"To the beginning of July there had been no such volume of production as to cause any unusual effort to care for, or to transport. But in the early part of the month of July the Clark & Bannister well, on a town lot in McDonald, struck the fifth sand and started off at 30 barrels per hour; the Matthews, already referred to, more than 2 miles distant, struck the same sand about the middle of the month, and was credited with 40 or 50 barrels per hour. Sauter's No. 3, as if envious that McDonald should be outdone by that out-in-the-country well, went to the fifth sand also and came in with a jump at 120 barrels per hour.

"This was not a theory, but a condition that had to be faced. The production must be cared for. A pump station was begun at McDonald without delay. Transportation had to be forced. The capacity of the lines at the beginning of July was but about 3,000 barrels daily. This evidently would have been inadequate to run such an outpouring of oil as was going on. The production of oil by the middle of August was up to about 15,000 barrels per day. By the 1st of September the lines could handle 26,000 barrels per day. The production increased and exceeded that amount. By the 1st of October the lines could handle 40,000 barrels per day. The petroleum still increased; the race between production and the capacity of the company to handle it became fast and furious. By November the production on some days was up to the vicinity of 80,000 barrels per day, but by the 1st of December the capacity of the pipe line had been increased so that it was able to handle 90,000 barrels per day, if necessity should arise.

"That day has not come. The production began growing less after November, but the plant of the pipe-line company is none the less. It not only erected a plant capable of handling, but actually received and run such a volume of oil as can scarcely be comprehended. The amount of oil carried away from the McDonald field in November, if carried in cars, would have required a train of 25 full loaded cars to have been run more than once every hour, day and night, to have carried it. More than 750 cars would have been required. The plant able to move such a weight is necessarily large as well as powerful, and much machinery is necessary.

"But keeping the machinery in motion was one of the difficulties encountered in that field and successfully overcome which might have been a fatal obstacle to a less thoroughly equipped organization. The water available in the vicinity of the operations was so bad, owing to coal-mine drainage, that it could not be used for the boilers. It became necessary to pipe all the water from the Ohio River and Montour run. The injury to the boilers before the water-pipe system was completed caused the expense of a large number of boiler makers for 10 weeks. The water system from the Ohio River and Montour run covered about 7 miles, but it was subsequently found that a saving in distance could be effected by building a water station in Bridgeville, from which a 3-inch main was run and is now supplying that field.

"The conditions under which this plant was erected also involved the difficulties, delays, vexations, and additional expense of the means of transportation of material being in pressing demand by all manner of interests in the newly-developed field. Operators were anxious to get their machinery and tools to their leases at the earliest possible moment; well-supply companies were making demands for transportation with all the vehemence possible to exercise; merchants and craftsmen attracted thither added their mite to the pressure, not only upon the railroad company to various stations adjacent to the field, but also for teams to transport their boilers, engines, rig timbers, and building material, stocks of goods, supplies for man and beast, teams were brought into requisition to the number of many hundreds; the movement of teams was necessarily slow, and accident to one was the concern of all, as the delay stopped the procession of loaded wagons for miles; a single car on a switch might delay the whole train; but one side track was available at any of the stations on the railroad near the field; a veritable army of men was employed; the work went on night and day under competent direction; as one gang quit for rest and sleep another went on, gas furnishing the electric light by night, so there was no pause from the beginning of the line or of a pump station until it was completed; the whole plant including 64 boilers, some of them 80 horsepower; 145 pumps of various sizes, from the small ones in the val-

leys to the powerful works at the pumping station, with appropriate engines, all brought in, set up and put in running order, supplied with water brought through miles of an artificial water system; about 150 miles of pipe lines in the field and 70 miles of large main out of it; iron tankage, with a capacity of 8,000,000 barrels, all erected and completed within the brief period of 4 months. It is a triumph, whether viewed as an achievement of American enterprise, or the result of business organization which enables such vast resources to be placed at the disposal of productive industry so promptly, skillfully, and advantageously to the development of natural resources."—*Industrial edition of the Pittsburg Commercial-Gazette*.

At this time the Producers Oil Company, Limited, owned only a private line on the margin of the field probably sufficient to handle 2,000 barrels a day, and during the 4 months it did not increase beyond five to six thousand barrels a day. If that production had been dependent upon that one line, it would have gone to waste or not have been produced.

POSSIBLE EFFECTS OF A FREE PIPE-LINE LAW.

Q. There might have been a free pipe-line law in Pennsylvania, which was opposed by the Standard Oil Company for years, and finally granted. Do you not think that there would have been pipe lines of sufficient capacity to have taken care of the oil, if the producers had had the right to build them in our State, if they had had the right of eminent domain? Is it fair, therefore, to instance the capacity of a single pipe line, just starting up, to care for the whole field?—A. To begin with, we will have to assume that the producers, or the persons engaged in constructing the pipe lines, under a free pipe-line law, previous to 1877, would have been willing and satisfied to form a compact organization, to put in sufficient capital, and to continue to act as a unit, as the persons owning the existing pipe-line interests there have done. If all these things could have been brought about, then I believe it would have been possible to have had enough lines there, but the constant cooperation of all the parties interested would have been necessary. They would necessarily have been obliged to be united on every proposition, and that was something that was never accomplished before; nor has it been since.

Q. Do you not believe that the pipe-line industry would have held out just such inducements as the railroad industry has to the country, that there would have been two or three large competing lines in the field, and that the burden of taking care of that oil would not have been self-imposed by the Standard Oil Company?—

A. All we can judge is by what did occur at the time, when there were a great many competing organizations. There were one or two strong pipe lines, and they were owned by one or two strong railroad companies, and managed, in part or in whole, either openly or by agreement.

Q. It was then a growing industry—away back before it was monopolized?—A. It was not a growing industry. It was overproduction. There was no pipe line in the business previous to the organization of pipe lines in 1877 that had made a dollar.

Q. That was in the infancy of the business and you could not expect to have the kind of capacity you have described. Do you maintain that one company, be it the Standard or anybody else, would be better for the oil country, for producers and consumers, and all, than several large responsible competing companies, which undoubtedly would have been formed if there had been the right of eminent domain, and if the builders of pipe lines had not been opposed in getting it by the Standard Oil Company itself?—A. I never understood that the Standard Oil Company directly opposed it. The Standard Oil Company was not in the pipe-line business until the time of the great opposition and agitation for free pipe-line laws. They did not go in until 1877.

Q. Was there not a great effort made in Pennsylvania to get the right of eminent domain, and did not the Standard Oil people, or the National Transit Company, which you say is controlled by the Standard or is a part of their system, oppose the giving of the right of eminent domain? Had they not secured the right of way by purchase through the State and across railroads, and when other companies undertook to do that, did they not lease and purchase ground in front of their right of way, and did not the railroads oppose the other companies passing under or over their ground? Was it not impossible for a number of years for other people to get to the seaboard after the Standard or the National Transit Company had secured their right of way?—A. I do not so understand it. I never knew of but one instance of the right of way being secured.

Q. (By Representative LIVINGSTON.) May I ask what this testimony about the

pipe lines is leading up to, simply a history of well digging?—A. It is to show the manner in which it is done, and the uselessness of the opposition attempted by the Pure Oil Trust—its uselessness and inability to do any business where it was required.

Q. You want to show then that the oil company could not do any business on account of their being hampered by the pipe company?—A. No; they were not hampered by the pipe company. They were not able to do anything after they had taken it, and then bought a charter and were not obliged to do anything that they wanted. It was a limited concern; it was not organized under the pipe-line laws of the State; it was a private company. Its purpose was, in other words, to establish the later movement of the Petroleum Producers' Association, and was a dog-in-the-manger policy—a going into business for the purpose of annoyance, without rendering any useful service to the State.

Q. (By Mr. PHILLIPS.) I wanted to get at the reason why there were not other large companies in opposition.—A. I never knew of the Standard Oil Company placing obstructions in the way of the construction of any pipe line. I have known of individuals obstructing the Standard Oil Company's operations. I have known of that.¹

Q. After the Standard Oil Company, or rather the National Transit Company, had assumed control, were there not some twenty-odd pipe-line companies formed to supply the refineries from various local fields? It has been stated here by other witnesses that there were some twenty-odd. Now, do you admit that there were a number that went into local fields?—A. Oh, yes.

Q. After the National Transit Company had control?—A. Yes.

PREMIUMS PLACED ON OIL BY THE NATIONAL TRANSIT COMPANY.

Q. Now, is it not the rule of the National Transit Company to place a premium on oil in all those fields in order to add to the price of oil, so that the local men can no handle it? Has that been their rule or not?—A. Some instances have come under my own observation of pipe lines being constructed into new and prolific fields for special purposes. I have one in mind in Oil City. It started, I think, as the Peerless or Keystone pipe line. It changed its name so often that I could not keep track of it. That line did not come in as a competing line in the field, and the condition upon which it entered was a guaranty of a certain amount of oil at a fixed rate of pipage. The pipage rate was fixed at 5 cents below the existing rates of the National Transit Company, which was virtually a bid for that oil—a bid of 5 cents—and was in itself a premium of 5 cents. The competing company then necessarily went out and bid the same figure; the premium was a bid to get the oil.

Q. You know a few years ago there was quite a line started in the Washington field, to which you have referred. It is known, I believe, as the Craig-Elkins Line, or the Western and Atlantic. Did the Standard not put a premium on Washington County or Butler County oil while that line was in existence?—A. For the reason I have stated the oil was bid away from them by these so-called independent companies coming in.

Q. I do not so understand it?—A. That is as I understand it.

Q. Did not the National Transit Company eventually purchase that line?—A. That is the assumption.

Q. Then did they not take off the premium?—A. I do not believe there is any premium on that oil now.

Q. But did they not reduce the price of oil 7 cents per barrel to the producer the day or the next day after the purchase was made?—A. If you will give me the dates, I will refer to this book here. I can not state it from memory.

Q. I can not at this time. You have no knowledge?—A. I have no knowledge on that subject.

Q. There has been a new field, called the Scio field, opened up in the last two years. Is there not an independent pipe line in that field?—A. I have heard there were some people bidding for oil there.

Q. Is there a premium placed on that oil?—A. I believe there is.

Q. Is that oil better than any other oil?—A. It is said to be; it is said to be equal to the Clarendon oil.

Q. Has there not very frequently been a premium put on oil, it being claimed that it was better, which was afterwards taken off when the opposition ceased?—A. I have knowledge of premiums being placed on oil, and I have knowledge of premiums being taken off; but I have no knowledge of the purpose of those premiums.

¹ See p. 486.

PIPE LINES WHICH HAVE PAID REBATES.

Q. (By Mr. FARQUHAR.) What pipe lines have paid rebates to producers, and when and how did they pay them?—A. The Mutual Pipe Line paid a rebate of 5 cents a barrel.

Q. (By Mr. SMYTH.) Is that an independent pipe line?—A. They were all independent pipe lines in those days. They entered into a contract. I have some figures here on the subject. These rebates to which I refer now were a matter of common knowledge so far back as 1878. Some time after the close of that movement one of the persons connected with it made a demand upon the Union Pipe Line for a rebate and gave his reasons, which will appear from the following correspondence. I am reading now from a letter head of the Bear Creek Refining Company, Limited:

REBATE.

B. B. Campbell, chairman. R. P. Crawford, treasurer. Bear Creek Refining Company, Limited, refiners of petroleum. City office, corner Etna and Eleventh streets. Pittsburg, Pa., October 22, 1884.

The following correspondence demanding rebates on pipage passed between R. P. Crawford, treasurer of the Bear Creek Oil Refining Company, and Mr. O. P. Swisher, of the United Pipe Lines Company. Then the correspondence was transferred from Mr. Swisher to Mr. Henry McSweeney, solicitor for the United Pipe Line:

Letter No. 1. Under the above letter head, with a Pittsburg date line, on the date above mentioned, Mr. Crawford writes:

MR. O. P. SWISHER.

DEAR SIR: I am informed that your former attorney, Mr. Hancock, has been superseded by Mr. McSweeney. I wish the latter to get the inclosed. If not addressed properly, please see that it gets in the proper hands.

Yours, sincerely,

R. P. CRAWFORD.

Letter No. 2, written under the letter head of the Bear Creek Refining Company, on even date with the above. Mr. Crawford writes:

H. MCSWEENEY, Esq.

SIR: I met Mr. J. R. Campbell three weeks ago on a train to Oil City. I told him I was anxious to get an old unsettled matter fixed upon a matter of over-charge of pipage on oil from some small producing wells near the mouth of Clarion River. Mr. Campbell told me to write you on the subject. In the days of the old Mutual Line (G. R. Harms, manager) we found oil on a lease obtained from Hon. Thomas Mellon and R. Galey, sr., about one mile from the mouth of Clarion River. We had completed our arrangements to lay our own pipe lines to the railroad. Mr. Harms came to see me, and he agreed to 15 cents pipage for all the oil from the lease above referred to, but not to extend to any other leases. The pipage at that time was settled monthly. I have the papers to show such settlement. The Union, Empire, United, and National Transit have, in succession, fallen heir to the arrangement. It has been investigated several times—by Mr. Hatch for and in behalf of the Union (afterwards the Empire) Line, by the pipe lines when operated in the pooling arrangement, and by Mr. Waller in behalf of the United, after the purchase by the latter of the Empire Line.

The wells are called Mellon (or Andes) and Brett. The last paid by the United was, up to and including the runs for April, 1879, as follows:

April runs, Mellon, 908.66 barrels, at 5 cents.....	\$45.18
April runs, Brett, 133.01 barrels, at 5 cents.....	6.65

The charge of 20 cents pipage being in excess, we claim an allowance of 5 cents per barrel on all oil runs since that date, and to continue as long as we produce from that particular territory. The wells have run down to a small business, but small as the claim may appear I must get it settled, either amicably or by law. I much prefer the former, but one of my partners is a lawyer (B. B. Campbell), and, like all lawyers, is ready for the job. I write this in a spirit of kindness and fairness, as one business man should to another, and trust it will receive your prompt and careful consideration.

R. P. CRAWFORD, *Trustee*.

To which Mr. McSweeney makes reply under date of Oil City, October 23, 1884.

R. P. CRAWFORD, Esq., *Pittsburg, Pa.*

DEAR SIR: Your letter of the 22d instant claiming overcharge of pipage is received. Please send me copies of all papers upon which you base your claim, as well as a full and specific statement of the amount alleged to be due you, etc. As soon as I hear from you I will carefully examine your claim and advise you as to the result.

Yours, truly,

H. MCSWEENEY.

Letter No. 4, written on the letter head of the Bear Creek Refining Company, Limited:

PITTSBURG, PA., *November 14, 1884.*

Mr. H. MCSWEENEY,

DEAR SIR: I answer yours of 23d ultimo as follows: I inclose sheets marked Nos. 1 and 2, showing runs from Mellon or Andes wells (two numbers), and from Brett wells, upon which there is due 5 cents per barrel:

Andes or Mellon, 25,199.65 barrels, at 5 cents.....	\$1,259.98
Brett, 2,061.84 barrels, at 5 cents.....	103.09
Total	1,363.07

I also inclose sheet No. 4, showing a few runs from each Mellon and Brett, running backward of runs upon which the 5 cents per barrel overcharge was paid, to give you a start toward tracing it. As to the contract, I refer you to Charles P. Hatch, Roanoke, Roanoke County, Va., formerly manager of the Empire Pipe Line, also John T. Galey, who was stockholder in the contemplated pipeline from these wells. Thomas F. Galey, Pollock post-office, Clarion County, Pa., can give John's address. I do not know where G. R. Harms is at present. The last I heard from him he was at Cincinnati, Ohio. There is no doubt about this claim being a just one. It is just what Mr. Hatch called it, "an overcharge," and knowing all about it, I say the same thing. I think Mr. O. P. Swisher could tell you something about it, if he will be kind enough to freshen his memory.

Hoping to hear from you soon, I am, yours, respectfully,

R. P. CRAWFORD, *Superintendent.*

Letter No. 5, on letter head of Bear Creek Refining Company, Limited:

PITTSBURG, PA., *November 15, 1884.*

H. MCSWEENEY.

DEAR SIR: In making up the account for overcharge pipage, which I mailed to you yesterday, I left out the old Galey well, which was included in the contract. It is a very small producer, and if the others are settled I will let it go. I sold it last spring and have nothing to do with it now.

I wish to say to you frankly that we made a mistake agreeing to 15 cents per barrel pipage from those regions, as we should have built the line, which would have been but a fraction over 1 mile, and pumped our oil to the railroad at less than 5 cents per barrel. But the contract was made, complied with for years, and now I only ask for compliance and continuance of same.

Respectfully,

R. P. CRAWFORD, *Superintendent.*

Letter No. 6, on letter head of the Norfolk and Western Railway Company, Charles F. Hatch, general freight agent:

ROANOKE, ROANOKE COUNTY, VA., *November 24, 1884.*

H. MCSWEENEY, Esq.,

Solicitor National Transit Company, Oil City, Venango County, Pa.

DEAR SIR: I have your favor of 20th, referring to the matter of the claim of R. P. Crawford against the National Transit Company on account of alleged overcharge on pipage of oil produced from wells drilled on lands leased from Hon. Thomas Mellon and Robert Galey, on Clarion River, about 1 mile from the mouth.

When the Empire Transportation Company purchased the Mutual Pipe Line in 1872, we found among others was a contract, entered into by Messrs. Martin

and Harms, owners of the Mutual Pipe Line, and R. P. Crawford and others upon the subject mentioned, by which the Mutual Pipe Line agreed to transport the oil from the wells mentioned at a rate of 15 cents per barrel.

This agreement was an oral one and there was no written agreement embodying it, but the facts were conceded upon the representation of Mr. Crawford, as well as Mr. Harms, representing the respective interests. Following this the Mutual Pipe Line and its successor, the Union Pipe Company, continued to transport the oil mentioned at the 15-cent rate. The Union Pipe Company was the name given to the pipe-line interests in the lower country belonging to the Empire Transportation Company. When the Empire Transportation Company sold its pipe-line property in 1877, all papers and agreements were turned over to the representatives of the Standard Oil Company, or the United Pipe Lines, and, if my recollection serves me right, I gave their representative a statement showing the special contracts and rates for the transportation of oil, among which, I think, was the one to which you refer.

There is no doubt that the agreement referred to was made between Mr. Crawford and Messrs. Martin and Harms, and that it was fully observed, as they owned the pipe line, and that this oral agreement was fully respected by their successors up to the time of the sale of the pipe interests of the Empire Transportation Company in 1877. The reason for this contest rests upon the fact that, at the time Messrs. Martin and Harms had built their pipe lines, the parties owning the wells on the Clarion River, mentioned above, projected the construction of a short line from the wells to the railroad, and the agreement entered into, establishing a 15-cent rate, was a compromise under which Mr. Crawford and others abandoned their project of constructing the Clarion line.

Yours, very truly,

CHARLES P. HATCH.

Letter No. 7, dated Oil City, November 20, 1884:

R. P. CRAWFORD, Esq.

DEAR SIR: Your favor of the 14th instant, in relation to the alleged overcharge of pipage, was duly received. I will investigate the matter and advise you of the course this company will pursue as early as possible.

Yours, truly,

H. MCSWEENEY.

Letter No. 8, on letter head Standard Oil Company, 44 Broadway, S. C. T. Dodd solicitor, dated New York, September 15, 1884:

H. MCSWEENEY, Esq., *Oil City, Pa.*

DEAR SIR: About the year 1879 R. P. Crawford, B. B. Campbell, and others caused a quo warranto to be filed against the United Pipe Lines, asking for a forfeiture of its charter upon this ground, among others, that it had made discriminations in its pipage charges. About the same time actions were brought in the supreme court of the State against the Standard Oil Company and the United Pipe Lines and various railroads, the burden of the complaint in each case being discrimination. A criminal action was begun in Clarion County against J. J. Vandergrift, J. D. Rockefeller, and others upon the charge that they had conspired with the railroads to give and receive discriminations in freight. R. P. Crawford was a leading man in all these proceedings. When I investigated the facts, so far as the United Pipe Lines were concerned, I discovered that the only discrimination of which it had been guilty was in reference to several contracts which it had inherited, one of which was the contract to which you refer, between R. P. Crawford, or the Bear Creek Oil Company, and the Mutual Pipe Line Company. The parties who were making all this fuss about the discriminations were the only parties receiving any benefit from the discrimination. They claimed that the discrimination was not only contrary to public policy but was absolutely criminal. I agreed with them so far as the public policy was concerned, and I directed the United Pipe Lines to repudiate all such contracts. R. P. Crawford applied to me frequently in relation to this matter, and I always gave him the same reply, that we would charge the same rate of pipage to every man, and would recognize no contracts whatever for a less rate. I do not think that we ought to depart from this line of policy, and particularly not in favor of R. P. Crawford. I would be glad to have him bring suit. If such contracts are good in law I would like to have it so established at the suit of R. P. Crawford or B. B. Campbell, the parties who so few years ago were endeavoring to put us in the penitentiary for the very thing for from which they now claim the benefit.

Yours, truly,

S. C. T. DODD.

Letter No. 9, dated Oil City, Pa., December 17, 1884:

R. P. CRAWFORD, Esq., *Pittsburg, Pa.*

DEAR SIR: After a careful consideration of the matter I have decided that this company must decline to recognize the claim made by you on account of alleged overcharges of pipage.

Yours, truly,

H. MCSWEENEY,
Solicitor United Pipe Line.

PREMIUMS AND REBATES COMPARED.

Q. What is the difference between putting a premium on a given field when the oil is sold and allowing a rebate to another? Was that done to evade the law?—A. I think I have already given my view of the question of premiums. I have stated that they are of the nature of a bid when there is competition for a particular grade of oil.¹

Q. You do not know of your own knowledge, then, of any premiums being paid where the oil was not any better in one field than another?—A. Oh, as to the quality of the oil I am not competent to speak. I am a producer only in a very small way, and I do not care to testify as to the quality of the oil; but I know that the practice of paying a premium was at one time general over the whole region.

Q. (By Mr. SMYTH.) Who paid those premiums?—A. The purchasers of the oil.

Q. It was the custom of the trade at that time?—A. Yes; anyone buying oil was obliged to pay a premium.

Q. (By Mr. PHILLIPS.) Did the National Transit Company or the Standard purchasing agency pay this premium on all credit balances? Have they not made it a rule to buy all credit balances at the market value, whatever it was, on the exchange?—A. I think that rule was abandoned in 1895.

Q. Well, for a great many years previous to that it was the custom?—A. Previous to 1895 they did buy at the ruling price of the exchange.

PRICE OF CRUDE OIL DETERMINED BY THE PRICE OF REFINED.

Q. Now, they fixed the price themselves, but the time to which we alluded there was this great discrimination?—A. If I am expected to answer as to my understanding of the point of their fixing the price, I will say that I do not understand that they fixed the price. The price was fixed by demand, the price of crude oil being reflected in the price of refined.

Q. Who reflects both the price of crude and refined?—A. The consumer makes the price. He is the man who states what he will pay.

Q. (By Mr. SMYTH.) You stated that it was largely caused by the export demand?—A. Yes; wherever the consumer is.

In your judgment the price is fixed by the foreign demand?—A. Yes.

(By Mr. PHILLIPS.) Then, when the Standard Oil Company marks refined oil up 10, 15, or 20 points, that is fixed by the consumer, is it?—A. My reply was to a different question entirely. I think it is taking advantage of a witness to put it in that way. I have not testified on that branch of the question.

Q. I do not wish to take any advantage of you.—A. I stated a little while ago that in my opinion the premium is the result of a bid for oil where there is a demand. In districts where there is a demand for oil a premium is usually placed on it just as a premium is placed on leases where there is a demand for land. The producer is carrying out the same idea in competition.

Q. For 15 or 20 years past has there been any special demand by outside refiners? Have not the Standard Oil Company and the National Transit Company handled the great bulk of it?—A. You have just mentioned a great line in the Washington field, the Western and Atlantic; that was a demand. It brought capital in large quantities. It employed several millions of dollars.

PRICE OF OIL DETERMINED BY THE DEMAND AND SUPPLY.

Q. (By Mr. SMYTH.) Do you think that the fluctuation in the market price of oil is caused by the demand for oil, or is it the result of manipulation on the part of the refiners?—A. It is unquestionably the demand for oil.

Q. A larger demand for oil, in your judgment, causes an advance in prices?—A. Yes.

Q. And when the demand slackens the production decreases?—A. The supply

¹ See pp. 576, 577, 582.

and demand regulate the price. In the documents which I read this morning the complaint of the producers, from the first movements down, has been overproduction, and it has been generally admitted that the price is determined by supply and demand.

Q. (By Mr. PHILLIPS.) Has that law worked well in the case of the Standard Oil Company? Have their profits gone down on account of overproduction? Has the business not been continually profitable to them, regardless of this law of supply and demand? Do you know any one year, of your own knowledge, in which they have lost money?—A. I know nothing about their commercial business at all.

Q. (By Mr. SMYTH.) I do not suppose they would admit it.—A. I do not suppose anybody would.

Q. (By Mr. FARQUHAR.) It would simply be a matter of rumor?—A. Yes.

Q. Have you, of your own knowledge, ever known of a single statement issued, giving away their business to anybody?—A. If it were generally known that any company was losing money its stocks would tumble very rapidly.

Q. Have you ever known of any statement being given out by the Standard under any of the three organizations in which they have been?—A. I never have.

THE VALUE OF THE STOCK OF THE STANDARD OIL COMPANY.

Q. (By Mr. PHILLIPS.) What was the capital stock of the Standard Oil Company 6 or 10 years ago? Was it more or less than \$100,000,000?—A. I think a little less.

Q. How much less?—A. Three or four millions, possibly.

Q. Do you know the highest point or about the highest point that stock ever reached on the market?—A. I have heard it stated that it was very close to 500.

Q. Five hundred millions of dollars?—A. Yes.

Q. Then the law of supply and demand has not affected them very materially in a great many years?—A. Is that for the purpose of showing profits in their business?

Q. I presume that the stock would not be there unless it was earning that; it would not reach that price without having the earning capacity.—A. I might say in the same connection that opposition companies show even a greater increase in values. The stock of the Tidewater Pipe Line Company is quoted at from 1,000 to 2,000, I think.

Q. (By Mr. SMYTH.) Will you give us the particulars there? What is the capital stock?—A. The capital is \$10,000,000.

Q. What is the market value?—A. Two thousand.

Q. (By Mr. PHILLIPS.) Is not that absolutely under the control of the Standard Oil Company?—A. No.

Q. Have they not running rates or agreements with the Standard Oil Company?—A. There may be agreements, but it is controlled by themselves.

Q. Are they not limited as to the amount of oil shipped through their lines?—A. By agreements—possibly there are agreements there.¹

Q. Without an agreement with the Standard have you any idea, from your knowledge of the business, that the stock would have gone to that price?—A. Well, that involves an opinion that I do not care to express. I have no knowledge on the subject.

SUITS AGAINST THE PENNSYLVANIA TRANSPORTATION COMPANY.

Q. (By Mr. KENNEDY.) You stated yesterday that you knew of one particular pipe line that had been sued on account of misrepresentation in regard to the quantity of oil on hand. Will you now state the name of that pipe line and the circumstances surrounding that suit?

Q. (By Mr. PHILLIPS.) And the date of it?—A. The pipe line was the Pennsylvania Transportation Company, and it was some time in the summer of 1876. The suit was brought in connection with the gauging movement, in which false reports had been made about the quantity of oil in the storage tanks, a discrepancy of some 50,000 barrels. The examination of the gauging tanks was a public one. It was a test or an examination of the integrity of the pipe lines at the time, and all lines were examined by agreement of the oil exchanges. A statement was issued by the gaugers of the Pennsylvania Transportation Company that it had 50,000 barrels in excess of the actual quantity on hand, making a misrepresentation to that extent to the trade. Suits were entered against the gaugers, involving the president of the line and the superintendent. Criminal action was brought, I think, in Kittanning, but the case was never tried. But it was common in those days, the early pipe-line days, under the wildcat pipe-line systems, for pipe lines

¹ See Mr. Emery, p. 630; Mr. Rice, p. 738.

to be short. Subsequently to 1874, when the pipe-line law, requiring the publishing of statements of the condition of the line and its responsibility, went into effect, a great number of them were caught. One was the Atlantic Pipe Line which was found short 6,000 barrels on one occasion.

Q. (By Mr. KENNEDY.) Do you know of any such shortages in recent times?—A. No; there have been no such shortages. There have been suspected shortages. There have been several gauge movements organized by the oil exchanges to verify the statements of the National Transit Company. There was one very prominent one in 1884, when the stocks amounted to nearly 40,000,000 barrels. An examination of the thousands of tanks in which this oil was stored in various parts of the region proved the correctness of their statement. The report of the gaugers was accepted by the various oil exchanges, and the public mind quieted as to the rumors of shortage.

THE CAPACITY OF THE NATIONAL TRANSIT PIPE LINE.

Q. (By Mr. PHILLIPS.) Have you any knowledge of what it requires to fill the National Transit Line, and of the residuum in the bottom of the tanks which would not be called merchantable oil?—A. No. My knowledge of that would be hearsay and estimation altogether. I doubt if that experiment has been conducted. There have been estimates based on the capacity of the line.¹

Q. Would it take three million or four million?—A. I have heard it estimated higher than that.

Q. Higher than four million?—A. I have heard the quantity required to fill the line estimated at more than four million barrels.¹

Q. Do you know about how much oil was in the United Pipe Lines when oil took such a sudden advance, about two or three years ago?—A. Well, I think the capacity of that line was fully represented in transit.

Q. Do you know about how much oil they had on hand at that time?—A. We ought to be able to show it to you.

Q. We should be very much obliged for that information for about April, 1895.—A. The amount of the stock in April, 1895, was 4,545,784 barrels.

Q. Do you know how many certificates of the Standard were outstanding at that time?—A. I can not tell that.

Q. Do you know the amounts that were on hand at that time belonging to other people?—A. I can not state that. Only the monthly pipe-line report will show that.¹

Q. Have you not the pipe-line report there for that month?—A. I am reading from the stocks. This book runs by shipments.

Does it not show the credit balance for each month?—A. I do not think so.

Are not the certificates shown?—A. I think not; simply runs, shipments, and stocks.

Q. Well, you stated that you have heard it estimated at between four and five million barrels. Could that and the indifferent oil in the bottom of the tanks be delivered to the purchaser, if there were a purchaser?—A. If all production were stopped at a given hour and everything entirely shut off they would probably not be able to continue operation beyond a day or two at the outside; but the production at this period was upward of 85,000 barrels a day, and that going constantly into the line equalled the shipments required to meet the demands of the trade.

Q. To meet the demands?—A. That going into the line constantly, day by day, met the demands of the trade.

SHORTAGES IN PIPE LINES.

Q. Did the Standard own all that went in day by day at that time?—A. As I stated before, we have no means of showing that except by the statement published every month. To return to Mr. Kennedy's question, I will say that reports of this kind were not at all infrequent in the days of wildcat pipe lines, but they were not alarming to the trade when made. It was a condition that was met with anywhere, but it shows at the same time that the pipe lines then ran very close to shore. They used oil wherever they had it and expected to make it up in the future. A report of the Atlantic Pipe Line was posted in Titusville, March 17, and quoted by the Oil City Derrick, March 18, 1876, under the head of "Titusville Doings. Pipe Line Returns." (Reading:)

From our special reporter. Titusville, March 17. The Atlantic Pipe Line, with headquarters at St. Petersburg, and no connection with the associated lines, makes substantially the subjoined report in round numbers. It will be seen that

¹ See pp. 563, 564.

a shortage of 6,000 barrels appears, the actual loss in handling over and above the 2 per cent deducted for this cause by each line in the regions.¹ This, however, is amply covered by the purchase from reliable parties of 15,000 barrels, paid for and ready for delivery when required. Notwithstanding the very large percentage of certificates in proportion to the total stocks, the line is in the most prosperous condition, and by the 1st of May is expected to be entirely free of debt, with the whole cost of construction fully liquidated. During February the receipts were above the usual average, footing up to 55,000 barrels. The statement for the month is as follows:

	Barrels.
Total amount of crude oil in the pipes and tanks of the company, February 29, 1876.....	84, 045
Total amount of crude oil for which the company was liable on the 29th of February, 1876.....	90, 000
Represented by certificates.....	78, 000
Represented by credit balance.....	12, 000
Purchased from reliable parties and paid for oil to be new from the wells.....	15, 000
Total amount of crude received during the month.....	55, 500

Then follows a line of figures showing that there was an existing shortage at that time of about 6,000 barrels on less than 2,000 barrels a day of business. And that was a very common experience in the days of wild-cat pipe lines.

"IMMEDIATE SHIPMENT" EXPLAINED.

Q. (By Mr. PHILLIPS.) Have you anything else to say?—A. There are other points of interest upon which the public mind has been befogged that I should like to discuss. The question of premiums has already been discussed. Now there is another one which occurred during the period of the Bradford development that created a great deal of discussion, and that was immediate shipment.

Q. (By Mr. SMYTH.) What was that?—A. Immediate shipment.

Q. Immediate?—A. An order known as "immediate shipment." Oil was produced so rapidly at one period in the Bradford field that the tankage system of all the pipe lines, as well as the private tankage of the country, was insufficient to take care of it; and the clamor to have their oil cared for compelled the pipe lines to issue an order for immediate shipment. That is, they would take oil for immediate shipment, and then the purchaser might come into the market owning tankage and having cars to ship his oil to market, and would be able to purchase it at a lower price than the regular prices offered in the oil exchanges. That was called an immediate shipment order. And the point upon which the public mind was befogged at this time, is the supposition that it was the only time when immediate shipment ever went into effect. The first immediate shipment went into effect in the fall of 1873, following the 30-day shut down, or very close upon the heels of the 30-day shut down. Epizootic, which was then a new disease among horses in our region, was epidemic, and there was a compulsory shut down of almost 30 days more following the shut down by agreement. It was during this period that the Empire Pipe Line established the order of immediate shipment. The field gaugers were instructed by orders from the general office at Parkers Landing what oil to ship and the quantity, regardless of the practice customary at the time; the office directed the quality, the quantity, and the time the oil should be taken, precisely as was done 6 years later in the Bradford field and also in Butler County.

WHY 2,000,000 BARRELS OF OIL WAS SET APART FOR THE BENEFIT OF LABOR BY THE STANDARD.

Q. (By Mr. KENNEDY.) You spoke yesterday about several million barrels of oil having been set apart by the Standard Oil Company and the producers for the benefit of the drillers, I believe?—A. For benefit of the oil-well workers, the drillers and tool dressers, etc.

Q. Was that the natural result of a philanthropic impulse on the part of the Standard Oil Company and the producers, or was it for the purpose of keeping those workers from engaging in work in other fields and developing them? A. Well, I might say that both motives suggested in your question operated. The purpose was to do justice to labor on the one hand, and give it an inducement—

Q. (By Mr. PHILLIPS.) And to have cooperation on the other? A. Yes, for their cooperation.

Q. (By Mr. KENNEDY.) There was an idea though of keeping them out of the other fields? A. Oh, yes; that was the central idea.

¹ See p. 334.

Q. That was the central idea?—A. Yes, because the practical men can always obtain the necessary capital where there is any inducement for the drilling of wells.

Q. That, rather than philanthropy, was the motive?—A. The idea was to prevent labor engaging in other employment to their detriment. But I will say this for the producers in the oil regions, that labor is nowhere better cared for than it is there, or more loyal to the producers; that is true of both the producers and the Standard. Labor has no kick there.

Q. Are they organized?—A. Yes, there is a well drillers' organization. I believe it is in existence, but I do not think they hold meetings very often.

Q. (By Mr. PHILLIPS.) Was it not generally stated that it would be a great injustice to labor to shut down for a period of a year without any compensation, leaving them out of work?—A. That was stated; but I will say furthermore that it was the custom in previous shut downs to take care of labor.

Q. (By Mr. KENNEDY.) Your testimony is that the central idea was to keep these men from engaging in the work of developing wells elsewhere?—A. Well, if placed upon their own resources without the means of livelihood, nothing would be left but to engage in the first movement that offered. The laborers shared in this entire movement, as a matter of justice to labor, I think, as much as anything else. That is the view that I have always taken.

NUMBER OF MEN AFFECTED AND THEIR WAGES.

Q. (By Mr. RATCHFORD.) Are we to understand that labor received compensation during the period that it was thrown into idleness by the shut down?—A. They received compensation, yes.

Q. Equal to their wages?—A. Well, I shall have to answer that by an explanation. The labor in the oil country is for the most part contract labor. While the drillers receive so much per day, the competition is so great that they are rushed with their work. The aim is to drill a well in as short a period as possible. The interval between wells is often extended, so that it is very difficult to arrive at any estimate of what the drillers' year would be. It might be estimated at 200 days, and wages at the prevailing prices for first-class men at about \$1,000 a year.

Q. (By Mr. PHILLIPS.) At that period it was about \$3 to \$3.50?—A. Yes.

Q. And when it closed it was advanced to \$4.50?—A. An advance took place.

Q. (By Mr. RATCHFORD.) Are you prepared to state how much they got, what the average pay offered them was?—A. I believe it will appear in the testimony of the secretary of the Well Drillers' Union, in connection with the report of the committee of Congress in 1888. That subject is fully gone into there, and I believe some figures are to be found in that report.

Q. Will you state the number of men involved?—A. The number of men, as stated in that report, was, I think, about 2,000. I think it was more than 2,000. The testimony of Henry Webster will throw some light on that question.

Q. (By Mr. KENNEDY.) It is so extraordinary for corporations to care for the interest of workmen in this way that I should like to have a better understanding in regard to it. You say that the motive of philanthropy on the part of the Standard and the producers was one consideration and that keeping the men out of work in other fields was another consideration. I should like to ask you which you consider overbalanced the other, the matter of philanthropy or the matter of self-interest on the part of the oil interests?—A. Inasmuch as it was a business arrangement, I think that the business consideration had a great deal to do with it. It was purely a business consideration, and you might call it a selfish one in that respect and to that extent.

Q. (By Mr. FARQUHAR.) Have not the parties taken credit for sympathy and philanthropy in granting the terms that they proposed to the drillers?—A. Oh, yes; there is some credit taken in that way.

LABOR ORGANIZATIONS NOT PROMINENT IN THE OIL INDUSTRY.

Q. (By Mr. KENNEDY.) Do the Standard Oil Company and the independent companies look with favor upon labor organizations?—A. So far as I am informed on the subject, I believe they do, although so far as labor organizations apply to the oil industry, we have very little of it. It is a matter of individual contract, and the wage is dependent usually upon the skill of the operator. For that reason we have very little of the union of labor there. The question of uniting enters less; perhaps, in the oil industry than any other, because all men are not placed exactly upon the same plane. Now, in drilling, you can take a firm employing a dozen drillers, and half a dozen may receive 50 cents a day more than the other half. It

is a matter of skill, but when it comes to the operation of lifting oil, the wage is pretty generally uniform on that. The pumpers receive uniformly from \$40 to \$55 a month.

Q. (By Mr. CLARKE.) You have stated that, when there was a curtailment of production, through a cessation of drilling new wells, labor was the one interest which suffered?—A. In that connection, yes.

Q. Do you mean the labor that would have otherwise been employed in drilling new wells?—A. In drilling new wells.

Q. Or all the labor in the oil industry?—A. I mean to say it was the labor employed in drilling 800 fewer wells than were drilled the year previous. In that connection I said there were 800 fewer wells drilled during the year 1888 than there were the year previous. The labor suffered to the extent of the wage involved in drilling 800 wells.

Q. (By Mr. PHILLIPS.) Less what they received in the sale of the oil?—A. In the sale of oil?

Q. I believe you said yesterday that they received more than the producer did in the way of profit?—A. Well, it was my impression that they received considerable more; their oil sold at a higher rate; it was sold at different times.

Q. (By Mr. CLARKE.) If then, that curtailment was for the interest of the oil producers, it benefited certain portions of labor as well as injured certain portions?—A. It certainly benefited the producers. Labor was benefited equally with the producers, in my opinion, because drilling did not entirely cease, and drillers could get permission from their union to engage in drilling on gas wells and wells outside of the prescribed territory. The prescribed territory was limited to the oil produced from the sedimentary rocks—that is, New York, Pennsylvania, southern Ohio, and West Virginia. In the oil produced from the Trenton rock was not included that of Ohio and Indiana. I presume during this period 50 wells a month were drilled in the country at large for gas, furnishing constant employment, 4 men to a well, for 200 men. I think that is not overestimated.

PRESENT CONDITION OF THE OIL INDUSTRY.

(By Mr. SMYTH.) What would you say was the present condition of the oil industry?—A. I should say that it was exceedingly satisfactory to the oil producers.

Q. Both to the independents and the Standard?—A. Both to the independents and the Standard; all the interests together are satisfied with existing conditions.

Q. (By Mr. RATCHFORD.) How is it as compared with some periods that we might name, say, for instance, 3 or 5 years ago?—A. There was a brief period 4 or 5 years ago when it was better. Oil temporarily ran up to \$3 a barrel.

Q. You say that was 2 or 3 years ago?—A. Well, it was equally favorable 2 years ago.

THE OIL INTERESTS IN COLORADO.

Q. You made a statement yesterday that I should like to have you explain. The statement was, I believe, that were it not for the cost of transportation, oil might be sold by the Standard Oil Company in Denver, Colo., as cheaply as at the initial point of production, or the refinery.—A. Yes.

Q. Are you familiar with the oil interests of Colorado and their relation to the Standard?—A. Only in a general way.

Q. Are you aware of the operations of the Standard in that State?—A. No.

Q. The commission has testimony bearing upon that subject to the effect that the producers of Colorado have found it to their advantage to sell all of their crude product to the Standard Oil Company. Do you wish to say anything on that?—A. Well, I have not understood that the Standard were manufacturing oil in Colorado.

Q. (By Mr. FARQUHAR.) They are the producers of the manufactured oil?—A. I understood them to be the purchasers of the manufactured and the distributors of the oil. I am not familiar with the prices of crude oil in Colorado. The field is so distant that there is no relation between their product and ours. There is no intercourse between the oil fields of the east and those west of the Mississippi River. One does not enter into any consideration with the other, so far as I am aware, and therefore we pay no attention to the product of that region. If it entered into competition with us in the east, we should have reporters there and know all about it, but until it does that there is no occasion to be at the expense of getting reports.

Q. (By Mr. PHILLIPS.) Are they not prohibited, in a sense, from refining oil in the western field? Is not oil confined to fuel products, sold for fuel, and seldom refined?—A. I do not know as to that. I am not familiar with the operations west of the Mississippi River.

SOURCES OF STATISTICS OFFERED IN EVIDENCE.

Q. (By Mr. JENKS.) I wish to ask one or two questions with reference to the sources of the statistics, etc., that you have submitted, so far as that does not appear on the papers themselves. Have you been actively engaged in the oil business either as a producer or a refiner?—A. I am a producer now to a small extent.

Q. How long have you been in the business as a producer?—A. In and out of it always.

Q. So that a part of the information you have given is your own personal experience?—A. My own personal experience and observation.

Q. Have you been associated with any of these different producers' associations of which you have spoken?—A. Never with any of them.

Q. You have always been entirely independent?—A. I was never a producer to the extent that would entitle me to belong to them, because most of these associations elect their members.

Q. You have not been a refiner of oil at all?—A. No.

Q. As regards the statistics we find in this book,¹ from what sources in the main are they? For example, the export prices come from where?—A. They come from the Government reports here.

Q. And what is the source of the figures you submitted with reference to the profits of the producers of oil, the amount produced, the price, etc.?—A. They are deductions made from the figures given in these reports.

Q. That is, you have taken the official Government figures and made your deductions from them?—A. No; we get no official figures on crude oil from the Government.

Q. The figures you get from the Government are on the export oil?—A. Yes.

Q. Where do the figures on the crude oil come from?—A. From the pipe-line statement. Since 1874 the statistics have been posted. Every transportation company is required by legislative enactment to post their statements.

Q. Then, the information that is given concerning profits is really a deduction based upon these figures of the pipe lines and upon the official prices?—A. And upon the official prices; yes.

Q. Have you any other papers whose sources are different from those you have mentioned?—A. Different in what respect?

Q. I mean coming from different sources.—A. Oh, yes; in arriving at the conclusions here.

Q. At the conclusions you have given in your testimony?—A. We have ransacked every source of information—the trade journals and State Geological Survey, the State made an exhaustive research into the early development.

Q. You have cited them?—A. These papers were made up from the daily press at the time—the daily publications of eastern cities.

Q. In every case in each of these documents do the sources of information appear? That is the special point I wish to get at.—A. Oh, we might cite them from the Derrick Handbook. They all come from the Handbook.

Q. So if the Derrick Handbook is cited we can find the original sources, can we?—A. Yes.

Q. And the Handbook itself will tell where you got the figures?—A. On crude oil you will get it from the statistics of prices in the daily press, which gives the annual price and the average price.

Q. When you cite the Derrick Handbook, however, that will give us the sources from which the Derrick Handbook got its information?—A. Oh, yes; we can furnish the information.

METHODS OF COMPETITION EMPLOYED BY THE STANDARD.

Q. With reference to the question of special cuts made by the Standard Oil Company for the purpose of selling its oil in certain localities, I believe you said yesterday that you had no specific knowledge at all excepting your observation in your immediate locality?—A. We have information as to the periods when the cuts were made and the amounts; we know of that; we have all that.

¹ The Derrick's Handbook of Petroleum, Oil City, Pa., 1898.

Q. I refer to special cutting of rates to drive out competitors?—A. Do you refer to crude oil?

Q. No; refined.—A. I have no further information whatever on that. Refined oil enters into our calculations in the oil country to a very small extent.

METHODS OF THE STANDARD'S COMPETITORS.

Q. Have you any specific information with reference to the methods employed by the Standard Oil Company for obstructing the completion of the independent pipe line to the seaboard?—A. I never understood that; but I have information on the other side concerning the stopping of operations by the Standard Oil Company. In 1874 the National Transit Company undertook to lay a pipe line from Parkersburg to Macksburg, and they were stopped at several points by Mr. George Rice, who obtained a lease across the track of their right of way; that is, Mr. Rice employed a man to take rights of way across the track of the pipe line, a man by the name of Ogle.

Q. What is the source of your information—Mr. Ogle himself?—A. No; I was present. Mr. Ogle first informed me that he was engaged in the work and he showed me his contract.

Q. With Mr. Rice?—A. No, with the farmers; he made contracts with the farmers for getting these exclusive rights. An exorbitant sum was named for this exclusive right, when the pipe line was to be laid. He had the exclusive right of it, but no consideration passed to him until the work was done.

Q. And he himself informed you that he was doing this work for Mr. Rice?—A. Yes; he informed me that he did it in Mr. Rice's name. The work was done in Mr. Rice's name.

Q. The special purpose being to shut off the National Transit Company?—A. To shut it off from its destination.

Q. Did Mr. Rice intend to build a pipe line?—A. No; not under those contracts. He built a pipe line, but not under those contracts.

Q. (By Mr. KENNEDY.) Did Mr. Rice succeed in preventing the building of that pipe line?—A. No; the line was laid; Mr. Rice was outbid. That is the only case that has come under my observation.

Q. (By Mr. JENKS.) It has been stated here that the Standard has sold different grades of oil at the same price. Have you any knowledge of the methods of the Standard in selling refined oil?—A. No; that would come within the domestic trade department; it does not enter into our business at all.

INVENTIONS AND IMPROVEMENTS IN PRODUCTION.

Q. You mentioned a number of very valuable inventions that have been made in developing the oil regions.—A. Yes.

Q. In your judgment, have the most important improvements been made by men working with the Standard or the independents?—A. Well, so far as the Standard and the independents are concerned, neither has a monopoly on genius. Everybody buys from inventors wherever they can. The Standard is undoubtedly entitled to more credit than it has received for its achievements in refining Lima oil.

Q. The chief movements along that line have come from the Standard?—A. They have come from the Standard in the manufacture of Lima oil.

Q. (By Mr. PHILLIPS.) Did not George Van Vleck and some others make very good oil?—A. I am very glad you asked that question; their process was not a new one; it was a very old one.

Q. It was not used by the Standard prior to that time?—A. No; it was used by other people. Allow me to explain that the process of Van Vleck was applied by some professor in Buffalo. That metallic oxide process has been used by gas men in the purification of gas ever since the manufacture of gas began; but as early as 1861 Homer T. Yaryan used that same process in the manufacture of Canadian oil. The Standard's process is very different from that and far more successful.

Q. That enters largely into it, does it not?—A. Oh, yes; those appliances enter into it very largely.

NO KNOWLEDGE OF RECENT RAILROAD DISCRIMINATIONS.

Q. (By Mr. JENKS.) Statements have been made concerning the railroad discriminations in favor of the Standard Oil Company in the early days. You have yourself made some statements of the kind. Have you any knowledge of discrimi-

¹ See Mr. L. 397; Mr. Phillips, p. 503; Mr. Emery, pp. 650-655, 662; Mr. Archbold, p. 529.

nation in freight rates, say, within the last 15 years?—A. No; but I have some records here to show where railroads went into contracts with pipe lines to furnish them rebates of 10 cents a barrel on all oil shipped except shipments on a certain line.

Q. Within what period?—A. Oh, that was 30 years ago.

Q. You have matters of record of that kind in general?—A. Yes.

Q. Have you any instances different from those brought out before the Congressional committee?—A. All I have is the averments of the Pennsylvania Transportation Company in its litigation with the Oil Creek Railroad.

Q. You have not anything in that line within the last 10 years?—A. No.

Q. In your judgment, have there been any special discriminations made in favor of the Standard Oil Company or in favor of the independent refiners, particularly within the last 10 years?—A. I am told there is not; I do not know anything about it. I am told there are no discriminations anywhere.

THE STANDARD OIL COMPANY AND THE NEWSPAPERS.

Q. You have heard the charge, of course, that the Standard Oil Company has at different times used its influence with the press to further its own interests, by having special articles put in as editorials, for example, that were paid for as advertisements and matter of that kind. Have you any knowledge on that subject?—A. Yes; I have some knowledge of such a business arrangement with certain newspapers in Pittsburgh.

Q. Can you give us some information?—A. Only concerning existing contracts for advertising their products. The Standard has at various times been viciously attacked by persons associated with the Producers' Association, and they have replied, and the replies have been paid for while the attacks were received free.

Q. By what papers?—A. By all of them. Not one of them will receive a line from the Standard Oil Company except at advertising rates. I do not know of a single paper in Pittsburgh that will receive a line in contradiction of the most outrageous and infamous lies.

Q. You mean to say, if I understand you, that the Standard instead of buying up the papers is practically blackmailed?—A. I have not said so; no.

Q. You did not intend to make any charge?—A. No; but I make this assertion: The Standard does not receive the same courtesy from the press that other corporations and individuals do.

Q. With respect to your own paper—it is, perhaps, a fair question—does the Standard receive the same courtesies that the other producers do, the other oil interests?—A. Exactly the same. I have rendered a bill to no man for a courtesy since my connection with it.

Q. Both parties were treated the same?—A. Both parties have been treated alike.¹

WITNESS PROSECUTED FOR LIBEL.

Q. Have you been attacked legally in your paper?—A. Oh, yes.

Q. Can you give us some account of that?—A. Some little account, I guess. [Witness produces bulky package of papers.]

Q. You can, perhaps, state the substance of that and put in the exhibits. [Laughter.]

Mr. SMYTH: No; let us have the whole thing.

A. I have a great many records here, gentlemen.

Q. (By Mr. PHILLIPS.) Court records?—A. Yes; they are all court records.

Q. (By Mr. JENKS.) Can you make a brief statement as to these legal proceedings?—A. If you ask me a particular question concerning any particular suit, at a given time, I can, but to go into the general question—

Q. How many suits have you had for libel?—A. Oh, half a dozen, I suppose. All by the same persons and the same influences.

Q. Who are those persons?—A. Well, the officers and members of the Producers' Protective Association.

Q. What has been the result of those suits?—A. Conviction was obtained in two of them, in two others there was a confession of judgment, and in one other a failure to convict. Those suits were all taken into a foreign county where their own element was the strongest, where prejudice was the greatest. I do not think anything more infamous was ever practiced on the press since the first newspaper was published than the proceedings of these men who call themselves gentlemen in trying to muzzle the press by dragging it before hostile courts and juries. They did not possess the decency to give me a trial at home in my own courts where I could stand up with my neighbors and be judged by them according to

¹ See p. 404; Mr. Monnett, pp. 312, 321; Mr. Lockwood, p. 399; Mr. Rogers, p. 587.

my own merits. The very judge in one instance who attempted conviction was a partner of at least two of the men who brought suits, and yet he had the hardihood to sit there in judgment, just filled with prejudice, poisoned with it.

Q. (By Mr. PHILLIPS.) Will you name that judge?—A. No, I do not care to name that judge. No, I will not name anybody in connection with these suits, except where it becomes necessary.

Q. You can perhaps give us a citation of the cases?—A. I have not the citations here. Senator Lee, in his capacity as president or director or officer of one of these companies, sued me for some expressions in my newspaper. In that case there was a confession of judgment. A. D. Wood, an officer, treasurer of all these companies, sued me for expressions in the newspapers, and on the first trial of that case before a hostile court and before a packed jury, I was convicted, but obtained a new trial on the judge's charge. Upon the second trial there was a failure to convict.

STANDARD OIL COMPANY A BENEFIT TO THE COUNTRY.

Q. (By Mr. SMYTH.) Are we to understand from your testimony that you do not consider the existence of the Standard Oil Company detrimental to the development of the oil industry in Pennsylvania, Ohio and other States?—A. It certainly has not been; it has been very beneficial to the industry as a whole; the organization effected by the Standard Oil Company could not be duplicated in the whole world.

Q. Do you consider the existence of the Standard Oil Company to be a marked benefit to the American people?—A. It has been a very great benefit in the development of an industry that requires organizing capacity and great mercantile ability. I give them no credit for manufacturing. Others manufacture just as cheaply and as well; but where others fail is in their organizing ability and their mercantile capacity. The Standard Oil Company are the greatest merchants on earth.¹

Q. Do you not consider the Standard Oil Company a trust?—A. Not now.

Q. Why not now?—A. The trust has been dissolved and the companies have gotten back into their original positions. The trust agreement under which they operated prior to 1892 has been dissolved and a number have returned to their individual organizations and are operated as separate concerns.

Q. Is there any trust in existence now in kerosene oil?—A. The Pure Oil Trust is a step in that direction, not wholly accomplished, but then it is hoped to be accomplished.

Q. That is the company that you were talking about before?—A. Yes.

THE STANDARD OIL COMPANY HAS MANY COMPETITORS.

Q. That is the only organization in opposition to the Standard Oil Company?—A. Oh, no; there are several. There are a great many companies in opposition to the Standard Oil Company, but it is the only one that copies the Standard's organization from beginning to end, even to the trust. After the Standard relinquished the last, the Producers' Protective Association picked it up where they left off and are attempting to carry out, under various nom de plumes and pretenses and fictions of the law, just what the Standard did in a public, open way.

Q. I understood you to say that the Standard Oil Company controlled about 80 per cent of the output?—A. Well, I should think that would be a very liberal estimate for them.¹

Q. The other 20 per cent is controlled by how many companies?—A. I should think 50 or 60.

Q. Fifty or 60?—A. Yes.

Q. Independent and selling their products?—A. Yes.

Q. Both in this country and abroad?—A. Yes.

Q. Have they rivals in selling their oil for export?—A. Well, the Pure Oil Company is selling in rivalry.

Q. Any others?—A. I am not familiar with that branch of the business.

WHY THE STANDARD IS SUPERIOR TO OTHER CONCERNS.

Q. You think the great profits of the Standard Oil Company have come from its superior organization?—A. That states the case precisely; from their great mercantile ability, their commercial ability.

Q. In other words, in putting their oil on the market they have hired the best brains they could find?—A. Yes; they have experience of their own to start with, and they keep adding to their mental talent right along.

¹ See Mr. Archbold, p. 540.

Q. (By Mr. PHILLIPS.) Do you not think, if the oil fields had been opened to competitors without monopoly and without discrimination, that talent equal to what is exhibited by the Standard now would have been developed? Do you not believe that the difficulty with the region was too much competition—overcompetition?—A. Competition, in fact, resulted in what the Standard has accomplished; it was a weeding out, a survival of the fittest, that made the Standard. Darwin's theory of the survival of the fittest was never better illustrated than in the organization of the Standard Oil Company; it represents the best element in all branches of the trade.

Q. Since it was organized have they kept the best element or have they proscribed men of equal ability by their methods?—A. Well, there are men in the oil business who have superior abilities to any men in the Standard Oil Company for certain purposes. There are men who can beat them in producing; but your question leads to but one answer. What they have done answers you. What you ask has been done by the Standard Oil Company. If there were others who could do that, the only reply is others did not. It is a case of Columbus and the egg over again. Lots of people could sail the ocean and do now, but only Columbus sailed in 1492.

Q. Now, do you want to inform this commission that 20 years ago the fittest got together and that there would not have been competition equal in ability if it had not been for the monopoly of pipe lines and rates?—A. Can you tell me why the others did not go in together? That is the best answer to your question; if you can tell me why they did not get together I will answer your question.

Q. Before the free pipe-line law was passed did they have an opportunity to get together?—A. Exactly the same opportunity that the Standard had.

Q. I mean after they got to the seaboard?—A. I am stating why they did not before that time when the region was in a state of chaos. Transportation was in a topsy-turvy condition, the Standard came in with three millions of capital and organized one pipe line that did the business of 15 or 20. That was all that was represented in the transportation department at that time.

Q. (By Mr. SMYTH.) Was there any risk—was it considered experimental in any sense?—A. It was considered a very great risk.

Q. Was the risk such that other people did not go in?—A. That was the very reason why other people did not go in, the amount of money required, and the risk involved.

Q. The Standard Oil Company has blazed the way there?—A. They blazed the way; they had energy and courage and ability.

Q. (By Mr. PHILLIPS.) Did they start the pipe-line system, which has become the mode of transporting oil?—A. They merely developed it; others started it.

Q. And when others got there they controlled the line to the seaboard and control it now and limit its output?—A. Oh yes, they do it, but that is merely an incident in the business. It cuts no figure; it is a source of vexation even to its stockholders; they are not agreed in matters of policy.

THE STANDARD AS A PRODUCER OF CRUDE OIL.¹

Q. (By Mr. A. L. HARRIS.) I wish to know what per cent of the 80 per cent which the Standard Oil Company consumes in refining is produced by it.—A. Well, in Pennsylvania, I think 25 per cent is conceded to them.

Q. Where do they get the other 75 per cent?—A. By purchase from the producers.

Q. In the market from the producers?—A. In the market from the producers.

Q. Is the price satisfactory to the producers?—A. It seems to be satisfactory. There is no complaint now on the question of price; the price is higher now than it has been for a year or two.

Q. They are open competitors with others?—A. Oh yes, there are other buyers in the field.

Q. (By Mr. PHILLIPS.) What part of the Ohio field do they control; that is, the crude oil of Ohio?—A. What proportion?

Q. What proportion, about, in Ohio?—A. Well, I should think it would be 50 per cent, at least.

Q. They control therefore much more of the Ohio field than they do of the Pennsylvania and West Virginia fields?—A. The Ohio oil does not come in competition to a very great extent with West Virginia.

Q. You stated a moment ago that the original trust had been dissolved. Have they reorganized under the New Jersey laws recently?—A. I believe they are in process of reorganization; that is the opinion at the present time.

¹ See Mr. Archbold, pp. 560, 561.

Q. At the present time where do they get their corporate powers?—A. From the individual companies.

Q. Organized in different States?—A. Organized in different States for different purposes and with different managers.

PRICE OF CRUDE OIL NOT CONTROLLED BY THE STANDARD.

Q. (By Mr. SMYTH.) You do not agree, then, that the Standard Oil Company controls the price of crude petroleum?—A. No.

Q. Have they any means of controlling prices and forcing producers to sell?—A. The only means to force the producers is by increasing their price.

Q. Paying over what seems to be the market value?—A. Paying over what seems to be the market value at the time.

Q. Do you believe that has been done?—A. It has been done.

Q. They buy crude oil in the open market?—A. Yes.

Q. (By Mr. PHILLIPS.) Is there any purchaser of crude oil in the Standard lines to-day excepting the Standard themselves?—A. Well, I can not answer that question; I am not familiar with the Standard's business; I do not know from whom they buy or to whom they sell. In a general way, I know they buy all oil offered to them, but I do not know to whom it is sold.

THE PRODUCERS OF CRUDE OIL ARE PROSPEROUS.

Q. (By Mr. SMYTH.) Is there any complaint from the producers of crude oil of lack of buyers?—A. No; none whatever.

Q. Are they making money to-day?—A. The producers are prosperous to-day.

Q. Are they satisfied with the price they are getting?—A. They are satisfied with the price so far as we have observed.

Q. Then the fact is the Standard is the only buyer and you maintain they are paying a fair, legitimate price for the oil?—A. I think they pay all it will bear, and that condition has existed since 1895, as I have submitted the figures to show.¹

Q. Since the Standard Oil Company is the only buyer, what would become of the product if they did not buy?—A. It would mean failure.

Q. Insolvents by hundreds?—A. On every hand.

Q. Great want?—A. Great want would undoubtedly result from it.

THE STANDARD HAS MADE THE OIL INDUSTRY WHAT IT IS.

Q. You want this commission to understand that in your judgment the Standard Oil Company has been a large factor in developing the oil business, and that without the Standard it could not have attained the present enormous proportions?—A. I do not wish to be understood as saying anything different. But for the Standard Oil Company you would not have the oil business that exists to-day.

Q. It would be on a smaller scale?—A. On a smaller scale, with competition such as existed 80 years ago.

Q. (By Mr. PHILLIPS.) Was not that in its infancy? If one railroad had control of all the business they could bring disaster and ruin by stopping?—A. I do not know what you call infancy in a business 20 years old.

Q. The pipe-line business did not come into existence for quite a number of years after the discovery of oil, as explained yesterday?—A. The pipe-line business cuts a very small figure in the general success of the Standard Oil Company; it is only one of the lines upon which it has been successful.

Q. Could it exist without the pipe-line system?—A. Oh, no; but it is only one of the means of their success. Their great success is due to their capacity to find markets.

Q. Is not the transportation the principal factor in their great success?—A. I do not know that it is. I am not going to split hairs and express an opinion on that ground. The principal result is that to-day the business is greater than any other business in any other country. It is due to the organization of capital and the intellect and industry of the persons who manage it.

Q. (By Mr. SMYTH.) You think brains come in there too?—A. Brains come in more than anything else. That is what I mean to say. The Standard Oil Company was unknown when the pipe lines were organized; they came as strangers into the business.

¹ See pp. 437-440.

WASHINGTON, D. C., September 8, 1899.

TESTIMONY OF B. A. MATHEWS.

At a meeting of the Industrial Commission, held at its offices in the Bliss Building, on September 8, Vice-Chairman Phillips presiding, Mr. B. A. Mathews appeared, at 4.25 p. m., and, after being duly sworn, testified concerning the oil industry:

Q. (By Mr. JENKS.) Kindly state your name and address.—A. B. A. Mathews, Columbus, Ohio.

Q. What business are you engaged in?—A. I have charge of the marketing of the products of the Standard Oil Company in a portion of Ohio.

Q. What is the official statement of your position?—A. I bear no official title.

Q. General manager for the State of Ohio, you are ordinarily called?—A. I am what is generally understood as a manager, but bear no title.

Q. How long have you been in the position you now hold?—A. I have been in Columbus about six years.

Q. Have you been in your present position, managing the business, for that time?—A. I have been managing the business for central and southern Ohio for six years. I have been engaged as manager in other departments previous to that.

Q. I understood you had some statement to make with reference to certain statements that Mr. Clark made regarding your actions with him and the business. You may make that statement as you please.

CONNECTION OF W. H. CLARK WITH THE STANDARD OIL COMPANY.

The WITNESS. Mr. W. H. Clark, of Newark, Ohio, who has given testimony before this commission,¹ was hired, when a youth, to work at Marietta as office and warehouse boy, at a salary of \$15 per month to learn the business, and as fast as he became proficient in the work was promoted in salary and position, until he became local agent at Newark, at a salary of \$2.25 per day. While at Newark he became short in his accounts, was discovered and discharged, which is the only incentive that I can discover for the series of untrue and malicious statements made by him before the commission.

I have looked over his testimony carefully and desire to answer his statements seriatim.

THE "FARMER STORY"—TESTIMONY OF WILLIAM EBRIGHT.

His statements about competition and variation in prices at Marietta are untrue.² His position of office and warehouse boy did not bring him in contact with the trade; he could not be informed; therefore would know nothing about methods of marketing oil or prices. Davis, the peddler referred to, has never been in the employ of the company, and the "farmer story" has been refuted by Mr. Ebright. I have a certified transcript of his testimony, which I submit.

EXHIBIT 1.

Certified transcript of portions of testimony of William Ebright, selected by B. A. Mathews, taken in the case of The State of Ohio, ex rel. F. S. Monnett, v. The Standard Oil Company.

Q. Didn't you play the farmer there?—A. No, sir.

Q. Didn't you have a barrel and a wagon and play the farmer?—A. I had a barrel and got a wagon until I got my cans.

Q. Didn't you sell the oil as an independent dealer—as a farmer?—A. No, sir.

Q. What were your instructions about selling oil? Where were you to sell?—A. I was to sell to everybody I could.

Q. Were you not to cut the prices?—A. There was no cut in the prices; they were the same.

Was you not there to run out Curtiss, the colored man?—A. No, sir.

When you drove him to buying oil of the Standard Oil Company, then you left?—A. No, sir; the wagon was still there—I sold out to another man.

Q. That was after Curtiss was buying from the Standard Oil Company?—A. I don't know this man.

¹ See p. 331.

² See p. 231.

Q. You knew after you got there who you was running out?—A. I didn't see that I was running out anybody.

I hereby certify that the above is a true and correct copy of portions of the testimony of William Ebright, selected by B. A. Mathews, taken before me, the undersigned, in the case of *The State of Ohio, ex rel. F. S. Monnett, v. The Standard Oil Company.*

[SEAL.]

L. R. PUGH, *Notary Public.*

UNTRUE THAT EIGHT GRADES OF OIL ARE DRAWN FROM TWO TANKS—THE FACTS.

His statements that we market eight grades of oil at eight different prices from two storage tanks at Marietta, and that the manager (meaning me) gave him such instructions, are false.¹ Not being agent, no instructions would be given him concerning prices. The facts are, we have three grades of oil at Marietta and eight names—Ohio State Test and Prime White are two names for the same grade of oil, both sold at the same price. Ohio State Test is a brand adopted by some of the trade when Ohio passed its inspection law, while others adhered to the previously well-known trade name, Prime White, thus creating two brands for the same oil. Water White, Red Star Water White, Silver Light, and Crystal, are four names for the same grade of oil, and are sold at the same price. These four brands are trade names, having been established by custom in different localities to meet the requirements of the local demands. Eocene and Hyperion are not the same oil, but are two different grades of oil; Eocene being manufactured in Cleveland and Hyperion at Parkersburg, the Eocene being sold at one-half cent per gallon above the price of Hyperion and kept in storage at Marietta, while Hyperion is shipped direct to the trade from Parkersburg refinery. There are a few points near Marietta where it pays better on account of saving in freight to give the buyer Eocene (a better oil) under the Hyperion brand, rather than make the shipment of Hyperion from Parkersburg at a lower cost for the oil. Water White was furnished to one of the jobbers at Marietta under the brand of "Crystal Oil," and sold to him at the Water White market, and was his trade-mark brand.

UNTRUE THAT THE WITNESS ADULTERATED TURPENTINE WITH GASOLINE.

His statement about mixing gasoline with turpentine¹ is absolutely false and malicious. Instructions to all my people have been to give the purchaser what he buys, both in quality and quantity. The officers of the company have always impressed me with the importance of this principle; further, a buyer can determine adulteration of turpentine with gasoline in a variety of ways.

Illeged "trick" I taught him is emphasized by the position I and office boy, the agent being the only one who received instructions. I have the affidavit of W. A. Reed, local agent at Marietta at the time Clark was there, which I submit, marked Exhibit 2. Mr. Reed is not in our employ at the present time.

EXHIBIT 2.

THE STATE OF OHIO, *Washington County, ss:*

W. A. Reed, of lawful age, being duly sworn, upon his oath says:

I was local agent for the Standard Oil Company of Ohio, at Marietta, during the entire time that W. H. Clark worked there. He was an office and warehouse boy, and not in a position to know how the business was carried on.

Referring to the testimony of Clark before the Industrial Commission, given in Washington on June 8, 1899, I would state that it is not true that Mr. Frank Davis was ever in the employment of the Standard Oil Company. Davis wished to go into the oil-peddling business, and we sold him a wagon. We sold Davis his oil outright at the ruling market prices, and he sold it at retail in competition with other peddlers and retail grocers at Marietta, and at the prices fixed by himself, the Standard Oil Company having nothing whatever to do with regulating his or the retail price. Davis continued this business until his death, when his father sold the wagon to a man named Twiggs, who soon after sold it to the Producers' Refining Company, which ran the wagon until it discontinued business.

¹ See p. 381.

Curtis was also a peddler, buying and selling oil in the same way at Marietta. It is not true that he purchased his supplies from the Argand Refining Company. He bought his supplies from the Producers' and the Rice companies until those companies shut down, after which time he purchased his oil from the Standard Oil Company.

It is not true that we played the farmer or any other racket with Mr. Ebright. Ebright was another peddler, who bought and paid me for his oil supplies the same as any other peddler, and sold the oil thus purchased at retail in Marietta.

I had nothing whatever to do with retail prices of oil in Marietta, which were regulated entirely by the competition between the peddlers and the retail grocers of that city.

The statement is absolutely false that we sold oil from the same tank at different prices, representing it to be of different grades, or that we mixed gasoline with turpentine, or practiced any deception of any kind whatever with regard to the quality of our products in selling the same.

W. A. REED.

Subscribed and sworn to by said W. A. Reed before me, this 31st day of August, 1899.

[SEAL.]

FRANK PANHORST,

Notary Public, Washington County, Ohio.

STATEMENTS AS TO DECEPTION OF CUSTOMERS.

His statements about instructions given George Blazer, and cause of his leaving Springfield,¹ are malicious falsehoods. I have the affidavit of Mr. Foley and Mr. Foutz, which I submit, marked Exhibits 3 and 4. Mr. Foley was the local agent at the time Mr. Clark was there, and he is still the local agent at Springfield.

EXHIBIT 3.

THE STATE OF OHIO, *Clark County, ss.*

C. W. Foley, of lawful age, being duly sworn, upon his oath says:

I am local agent of the Standard Oil Company at Springfield, Ohio, and was while W. H. Clark was employed there. It is not true that I ever had any conversation with Mr. Cragin, who is now dead, or anyone else with reference to informing Blazer or any other person about drawing different grades of oil from the same tank and charging different prices for it. It is not true that we ever sold any oil at this station in that manner. All our grades of oil were sold for precisely what they were, and no deception of any kind was practiced upon our customers as to the quality or price of the oil furnished them. It is not true that Blazer quit the employment of the company because he was required by that employment to deceive customers as to the quality or price of the oil sold. The only reason given by Mr. Blazer when he quit, was that the work was too hard for him.

C. W. FOLEY.

Subscribed and sworn to by said C. W. Foley before me, this 29th day of August, 1899.

[SEAL.]

W. R. HOMER,

Notary Public, Clark County, Ohio.

EXHIBIT 4.

THE STATE OF OHIO, *Washington County, ss.*

R. A. Fouts, of lawful age, being duly sworn, upon his oath says:

I reside in Marietta, Ohio, and went to Springfield and had an interview with George Blazer. He stated that he resided at Springfield, Ohio, and worked for a short time for the Standard Oil Company while W. H. Clark was there. He stated that he never said to Mr. Clark or anyone else that if he could not work for an honest company he would quit, and for that reason must leave the Standard Oil Company's employment; or that he was leaving or had left the Standard Oil Company's employment because he could not conscientiously draw different grades of oil from the same tank. He also stated he left the employment of the Standard

¹ See p. 322.

Oil Company because he did not like the tank-wagon work, and for no other reason. He made the above statement to me, but declined to make affidavit.

R. A. FOUTS.

Subscribed and sworn to before me this 4th day of September, 1899.

[SEAL.]

O. C. MIDDLESWART.

Notary Public, Washington County, Ohio.

His statement that we drew four different grades of oil out of the same tank, and charged four different prices,¹ is absolutely false. Mr. Clark, as well as all other tank-wagon drivers, was not allowed to discriminate between one buyer and another, but was to charge all customers the same price for the same grade of oil. The proof of this: In making his returns at night to the cashier his total sales had to be accounted for on the basis of the ruling market. Therefore he could not cut the price to any buyer without paying it out of his own pocket, and it goes without saying that no retailer would pay more than the market. I have the affidavits of Mr. Toland and Mr. McMahon, both tank-wagon drivers at the time Clark was at Springfield, the only two men who were doing the same kind of work that Clark did at Springfield, showing their method of conducting the business, which I submit, marked Exhibits 5 and 6.

EXHIBIT 5.

THE STATE OF OHIO, *Lawrence County, ss.*

W. W. McMahon, of lawful age, being duly sworn, upon his oath says:

I worked for the Standard Oil Company as tank-wagon driver at Springfield during the time that W. H. Clark worked there as tank-wagon driver.

I never had any instructions from Mr. B. A. Mathews, manager, C. W. Foley, local agent, Mr. Cragin, or anyone else connected with the Standard Oil Company, to deceive any customers by turning the faucet in different directions to draw different grades of oil out of the same tank.

All of our grades of oil were sold for precisely what they were, and no deception of any kind was practiced upon our customers as to quality or price of oil furnished them, and all customers paid me the same price for the same grade of oil.

W. W. MCMAHON.

Subscribed and sworn to by said W. W. McMahon before me, this 31st day of August, 1899.

W. D. HENRY, *Notary Public.*

EXHIBIT 6.

THE STATE OF OHIO, *Clark County, ss.*

C. M. Toland, of lawful age, being duly sworn, upon his oath says:

I am now and was in the employ of the Standard Oil Company as tank-wagon driver at the time W. H. Clark worked as tank-wagon driver for the Standard Oil Company at Springfield, Ohio.

In accordance with instructions received from B. A. Mathews, manager, my prices have always been uniform, selling one grade of oil at the same price to all dealers, and I have never deceived my customers by turning the faucet in different ways in order to draw different grades of oil from the same tank.

C. M. TOLAND.

Subscribed and sworn to by said C. M. Toland before me, this 29th day of August, 1899.

[SEAL.]

GEO. S. DIAL, *Clark County, Ohio.*

REBATES—HOURS OF LABOR.

His statement with reference to rebates² at Springfield is untrue. We did not allow Mr. Clark, while at Springfield, to make rebates.

His statement concerning hours of labor³ is misleading and untrue. Our tank-wagon work is planned with the view of a day's work constituting ten hours. In making drives to country towns, from 8 to 14 miles, it is understood that when a driver returns his day's work is completed.

QUALITY NOT DETERMINED BY FIRE TEST.

His statements about fire test governing the quality of oils⁴ are not true. One hundred and twenty degrees of fire test, by Ohio law, is the equivalent of 150°

¹ Compare pp. 331, 332.

² See pp. 333, 343, 349.

⁴ See p. 333.

by the Tagliabue open cup. Concerning our three grades, there is no difference in the fire test of the same. His statement that there is 10° difference is false. They are all 150° fire test by the Tagliabue open cup, or 120° fire test by the Ohio State test Foster cup, which is the State test required by Ohio.

The fire test of oil required by Ohio statutes does not represent quality, but simply safety. Oil may be exactly the same fire test, but different in illuminating power.¹ The quality of an oil is distinguished by its illuminating quality.

His statement that he was promoted to the position of cashier at Columbus and had charge of the work around warehouse is false and absurd, for the reason that his position was simply shipping clerk, under a superintendent, who had entire charge of everything around the works.²

BOILED LINSEED OIL NOT ADULTERATED.

His statement concerning boiled linseed oil³ is false and malicious. The dryer used in boiling was a pure linseed oil dryer, which cost 10 cents per gallon more than linseed oil, and increased the cost, instead of decreasing it, and improved the quality, instead of adulterating it, as testified by Clark.

MINER'S OIL; ITS COMPOSITION—LUBRICATING OIL.

His statement that miner's oil is made by compounding cotton-seed oil with 40 per cent petroleum⁴ is false and malicious, because the Ohio law prohibits such a large percentage of petroleum being used. The law is rigidly enforced on gravity and smoke qualifications, which would absolutely prevent more than 14 per cent of petroleum. Miner's oil is known to the Ohio State officials to be cotton-seed oil compounded with petroleum. The price of miner's oil is regulated by the price of cotton-seed oil, and runs about 2 cents per gallon below. It was malicious for Clark to state that a dealer would pay 34 cents for miner's oil, when the dealer could buy cotton-seed oil for 24 cents.

His statement that lubricating oil is received in blank heads at Columbus and shipped out to meet the requirements of the trade without regard to contents⁵ is untrue and absurd, because if the barrels came unbranded it would be impossible for the warehouseman to tell the contents, and an order for cylinder oil might be filled with a barrel of sewing-machine oil, or vice versa, if Clark's statement were true. I have the affidavit of Adam Paulus, referred to by Clark as "mixer," which I submit. (See Exhibit 7.)

EXHIBIT 7.

THE STATE OF OHIO, *Franklin County*, ss:

Adam Paulus, of lawful age, being duly sworn, upon his oath says:

I am in the employment of the Standard Oil Company of Ohio, and am the person referred to in the testimony of W. H. Clark before the Industrial Commission at Washington. While Mr. Clark was employed at Columbus I did the mixing of linseed and cotton-seed oils.

It is not true that our lubricating oils came from Cleveland in blank heads, but all barrels were branded to designate the contents of the package. In preparing boiled linseed oil it is not true that we used a cheap japan dryer, but we did use a pure linseed oil dryer, which improved the quality of the linseed oil. Heated the oil to 225° instead of 125°, as stated by him.

In compounding miners' oil it is not true that we used 8 barrels of cotton-seed oil to 2 barrels of miners' stock, being a percentage of 40 per cent of the latter. We only used 1 barrel of miners' stock to 6 barrels of cotton-seed, or about 14 per cent.

It is not true that Mr. Clark had charge of the stock from which these compounds were made, or that I had to go to him to get it. The warehouse and stock were in charge of a superintendent, from whom I received all my instructions. The stock I got out myself, as directed by the superintendent.

ADAM PAULUS.

Subscribed and sworn to by said Adam Paulus before me this 29th day of August, 1899.

[SEAL.]

W. A. MARSH,

Notary Public, Franklin County, Ohio.

¹ See Mr. Emery, p. 638.

² See p. 334.

CUT PRICES AND REBATES.

In reference to his statement concerning cut prices and rebates at Columbus,¹ as he was only a shipping clerk (and absolutely without knowledge regarding marketing matters), his statements are purely malicious. On the general question of competition we always seek to protect our trade, and when any competitor makes a cut price for the purpose of taking our business away from us (quality considered) we do not hesitate to meet it.

DAILY DELIVERIES FROM TANK WAGONS.

The statement that Mr. Gradwohl took in as high as \$200 a day with his tank wagon² is untrue.

The largest delivery made by any tank wagon is about \$100 per day, and would not average over \$50 per day. To deliver 3,000 gallons, or \$200 worth, a day would average one 5-gallon bucket every minute, ten hours per day, which would be a physical impossibility. I have Mr. Gradwohl's affidavit, which I submit. (See Exhibit 8.)

EXHIBIT 8.

THE STATE OF OHIO, *Franklin County*, ss:

Moses K. Gradwohl, of lawful age, being duly sworn, upon his oath says: I am a tank-wagon driver in the employ of the Standard Oil Company at Columbus, Ohio, and was there at the time Mr. Clark was shipping clerk, and am the "Mose Gradwohl" referred to in his testimony before the Industrial Commission at Washington. It is not true that I ever took in \$200 a day from my wagon. The largest day's delivery I ever made was about \$100, and my average daily deliveries about \$50.

MOSES K. GRADWOHL.

Subscribed and sworn to by said Moses K. Gradwohl before me this 30th day of August, 1899.

[SEAL.]

CHARLES S. M. THRUMM,
Notary Public, Franklin County, Ohio.

STATEMENTS AS TO ARRANGEMENT WITH COMPETITORS AT COLUMBUS, COMPETITIVE BRANDS, AND PRICES OF EMPTY BARRELS.

His statement with reference to having an arrangement with competitors to advance markets at Columbus³ is false. Strong competition still exists, which in itself contradicts his statement. He had no knowledge on the subject, being only shipping clerk at the works, located a mile and a half away. Therefore he would know nothing of what was going on in the office.

His statement naming competitive brands of oil at Columbus is untrue,⁴ their brands being Ohio State Test, Prime White, People's Headlight, Suncene, Water White, and Diamond Light—not Penoline, Safety Light, and Electric Light, as stated by him. Ohio State Test, Prime White, and People's Headlight cover one grade of oil; Suncene and Water White another; Diamond Light a third, showing clearly their trade requirements.

His statements concerning the hiring of a boy to watch tank cars and being paid by him⁵ are false.

His statement that we took empty barrels at an exorbitant price in order to hold trade on oil⁶ is false. He had nothing to do with the purchasing or handling of empty barrels, and had no knowledge whatever about empty-barrel prices. Our price at Columbus is strictly uniform on empty barrels to all customers.

His statement that he was manager at Urbana⁷ is untrue. His position was simply local agent, three-quarters of his time being occupied in driving a tank wagon. He did not have full charge of all the business as stated.

THE CASE OF WILLIAM HELMICK.

His statement about William Helmick at Urbana is untrue.⁸ Mr. Helmick bought only one carload of competitive oil, and after he had sold about half the car he became satisfied that he would lose money on account of leakage and poor quality. We helped him out by purchasing the other half of the car, and he dis-

¹ See pp. 324, 325.

² See p. 325.

³ See pp. 325, 326.

⁴ See p. 326.

⁵ See p. 327.

continued jobbing oil, but remained in the oil business as a peddler for about two years thereafter. We did not at any time drop the price while he was in business. On the contrary, what little oil Helmick marketed was sold by him at a cut price. No threats were made by Mr. Hollingsworth or Mr. Welsh as stated by Clark. I have their affidavits, which I submit, and also the affidavit of W. H. Hurley.

EXHIBIT 9.

THE STATE OF IOWA, *Louisa County*, ss:

H. S. Hollingsworth, of lawful age, being duly sworn, upon his oath, says:

I am in the employ of the Standard Oil Company, at Columbus, and have been for several years. It is not true, as stated by W. H. Clark in his testimony before the Industrial Commission at Washington, that I ever made any threats of any kind to William Helmick, either alone or in company with Mr. Welsh and Mr. Clark, or either of them.

H. S. HOLLINGSWORTH.

Subscribed and sworn to by said H. S. Hollingsworth before me, this 30th day of August, 1899.

[SEAL.]

W. H. HURLEY, *Notary Public*.

EXHIBIT 10.

THE STATE OF OHIO, *Champaign County*, ss.:

William Welsh, of lawful age, being duly sworn, upon his oath says:

I am agent of the Standard Oil Company of Ohio at Urbana, and am the person referred to in the testimony of W. H. Clark before the Industrial Commission as a cooper man from Springfield, Ohio, where I did formerly work for the company in the cooper shop.

It is not true that I ever made any threats of any kind to William Helmick, of Urbana, Ohio, either alone or in company with Mr. Hollingsworth, or Mr. Clark, or either of them, but the statement of Mr. Clark in that respect is absolutely false.

WILLIAM WELSH.

Subscribed and sworn to by said William Welsh before me, this 28th day of August, 1899.

[SEAL.]

W. M. ROCK,

Notary Public, Champaign County, Ohio.

EXHIBIT 11.

STATE OF IOWA, *Louisa County*, ss:

I, W. H. Hurley, a resident of Wapello, Louisa County, Iowa, on oath state that I am a notary public in and for Louisa County, Iowa, and at the instance of H. S. Hollingsworth did request one William Helmick to make a deposition in regard to his relations and transactions with the Standard Oil Company of Ohio, at Urbana, Ohio. He was shown a copy of the testimony given by W. H. Clark before the Industrial Commission at Washington, D. C. He declared that the testimony, as shown him, in reference to himself was false and untrue, and particularly referred to the causes as therein set forth in regard to his going to the poor-house, and that it was not brought about through any agency of the Standard Oil Company, but declined to make affidavit as to said falsity until he had communicated with the above referred to W. H. Clark. I state further that he made the above statement in the presence of myself and H. S. Hollingsworth.

The copy of testimony referred to as having been shown to the said William Helmick is hereto attached and marked "Exhibit A."

W. H. HURLEY.

Subscribed in my presence and sworn to before me by W. H. Hurley this 1st day of September, A. D. 1899.

[SEAL.]

J. DON. DARROW,

Notary Public for Louisa County.

[Here follows a copy of the part of Mr. Clark's testimony in question.]

STATE OF IOWA, *Louisa County*, ss:

I, H. S. Hollingsworth, first being duly sworn on oath, state that the above is a true copy in part of the stenographer's report of the testimony of W. H. Clark

before the Industrial Commission at Washington, D. C., and is the copy that was shown Wm. Helmick when he was requested to make a deposition as to truth or falsity of the statements therein contained.

H. S. HOLLINGSWORTH.

Subscribed in my presence and sworn to before me by H. S. Hollingsworth this 1st day of September, A. D. 1899.

[SEAL.]

W. H. HURLEY, *Notary Public*.

EXHIBIT 12.

THE STATE OF OHIO, *Franklin County, ss:*

H. S. Hollingsworth, of lawful age, being duly sworn, upon his oath says: I reside at Columbus, Franklin County, Ohio. I have read the testimony of W. H. Clark before the Industrial Commission at Washington, D. C., in which he states that Wm. Helmick, formerly of Urbana, Ohio, has been unable to earn a livelihood in consequence of having been driven out of the wholesale oil business at Urbana, Ohio, about four years prior to the present time. Deponent further saith that said Wm. Helmick, after quitting the wholesale oil business, continued in the retail oil business for a period of about two years, to the best of his knowledge and belief, and bought his supplies from the station of the Standard Oil Company, at Urbana, Ohio. Subsequently, said Wm. Helmick retired from the retail oil business, and removed to Louisa County, Iowa, where, on or about August 31, 1899, I found him employed in the canning factory of Baxter Bros., at Wapello, Iowa, at his trade, that of a tinsmith, working at hard labor from ten to eighteen hours per day. I was informed by said Wm. Helmick and by Mr. Colby, the superintendent of the factory, that he, said Wm. Helmick, had first been employed in his present capacity in 1898.

Further deponent saith not.

H. S. HOLLINGSWORTH.

Subscribed and sworn to by said H. S. Hollingsworth before me this 4th day of September, 1899.

[SEAL.]

H. N. STANDART, *Notary Public*.

Helmick's so-called warehouse that Clark refers to was simply a temporary shed made of refuse, old car lumber. It had no value except for kindling wood, and Helmick afterwards used it for that purpose. I have Mr. Thomas Powers's affidavit, which I submit. (Exhibit 13.)

EXHIBIT 13.

THE STATE OF OHIO, *Champaign County, ss.*

Personally appeared before me, a notary public in and for said county, Thomas Powers, of lawful age, who, being duly sworn, deposes and says that he is a resident of Urbana, Champaign County, Ohio, and has been engaged in the business of draying for the past seventeen years; that he was acquainted with William Helmick, of Urbana, Ohio; that about three years ago he hauled a part carload of oil to a shed belonging to said Helmick, situated in the north part of the city of Urbana, near the city limits. The said shed was built of refuse lumber and material, and in his opinion said shed was not worth more than ten dollars.

THOS. POWERS.

Subscribed and sworn to by said Thomas Powers before me this 28th day of August, 1899.

[SEAL.]

W. M. ROCK,
Notary Public, Champaign County, Ohio.

Mr. Helmick did not lose any money during the few days he was trying to wholesale oil, therefore it is absurd and malicious for Clark to state that any action of ours drove Helmick to the poorhouse. The loss of his money was due to an entirely different cause. I have the affidavit of N. P. Cone, which I submit. (Exhibit 14.)

EXHIBIT 14.

THE STATE OF OHIO, *Champaign County, ss:*

N. P. Cone, of lawful age, being duly sworn, upon his oath says: I am a township trustee of Urbana Township, Champaign County, Ohio, and have been for

eight years. I am acquainted with William Helmick, formerly of Urbana, Champaign County, Ohio, and have been for twenty-five years past. I knew of his domestic troubles, having been informed of them by himself, and have frequently heard him complain of the extravagance of his family. On March 26, 1898, I signed an order committing said William Helmick to the county infirmary of Champaign County, Ohio, upon the report of several reputable citizens of Urbana, Ohio, of his destitute condition. The affiant further makes oath and says that he believes the cause of destitution of said William Helmick to have been the extravagance of his family and other domestic troubles as complained of by him, and due to no other cause.

N. P. CONE.

Subscribed and sworn to before me by the said N. P. Cone this 29th day of August, 1899.

[SEAL.]

W. M. ROCK,
Notary Public, Champaign County, Ohio.

AMOUNT OF OIL SOLD AT URBANA AND AT NEWARK.

His statement that the business at Urbana ran about 40,000 to 50,000 gallons per month¹ is false, the average being only about one-half.

His statement that he held the position of manager at Newark¹ is false. His position was that of local agent, same as at Urbana, three-fourths of his time being occupied in driving tank wagon and dray.

His statement that the average monthly output at Newark was 80,000 gallons¹ is not true, the correct figures being less than one-half that amount.

AS TO SELLING GASOLINE AND OIL AT DIFFERENT PRICES TO DIFFERENT CUSTOMERS.

With reference to variation in prices at Newark on stove gasoline,¹ the same situation was true elsewhere on account of the marked advance in price of gasoline. Many dealers at the time of the advance were under contract for a period of time; consequently the advance only applied to those who were not under contract, but as contracts expired the advance in price was charged to them as well as others.

Answering the general statements made by Clark relative to selling refined oil at cut prices at Newark,¹ all dealers were treated alike. His statement that at Newark we charged Mr. Rankin 6 cents for oil and Showman Brothers 7½ cents is false. The facts are Showman Brothers bought their oil in bulk from the tank wagon, while C. C. Rankin bought oil in barrels and paid 1½ cents per gallon more than Showman Brothers paid for the same oil; but we allowed Rankin 75 cents when he returned the empty barrel, the equivalent of 1½ cents per gallon, which made the net cost to both dealers the same.

His statement that Hagmeier, a dealer at Newark, was rebated 1 cent per gallon on gasoline and 2 cents on oil¹ is false. Clark was given special permission to pay a rebate which was one-half cent per gallon on both oil and gasoline, under a contract. Mr. Clark paid the one-half cent himself, and then testified here that he paid 1 and 2 cents. He also presented a letter from George J. Hagmeier stating that he had received rebates, and I have an affidavit from Mr. Hagmeier showing how that letter was procured. (See Exhibit 15.)

EXHIBIT 15.

STATE OF OHIO, *Licking County*:

Before me, a notary public in and for said county, personally appeared George J. Hagmeier, who is well known to me, and being first duly sworn, deposes and says, that he has read the testimony of William H. Clark, given before the Industrial Commission at Washington, D. C., wherein said Clark read a certain note or statement purporting to be signed by him. That on or about the 18th day of February, 1898, said Clark came to him with a certain note or statement, which said Clark had previously prepared, and which said Clark requested affiant to

¹ See p. 336.

sign. That to the best of this affiant's recollection, said note or statement was in the following language and figures, to-wit:

"Feb. 18th, 1898.—Mr. Clark, Ag't Standard Oil Co., has paid me a great many rebates on goods which were receipted for when given."

Said Clark thereupon said to this affiant, and assigned as his reason for requesting affiant's signature thereto, that he, said Clark, was short in his accounts with said Standard Oil Company, and that said shortage had been occasioned, in fact, by the payment of the rebates in said statement mentioned to this affiant, and that he desired to use said statement in accounting to said company for said shortage in his accounts. That said Clark assigned no other reason for desiring affiant's signature to said statement, and thereupon, and in order to assist said Clark in straightening his accounts with said company, affiant signed said statement as presented to him by said Clark, and in substance as above set forth. And further affiant saith not.

GEO. J. HAGMEIER.

Sworn to before me and signed in my presence by George J. Hagmeier this 2d day of September, A. D. 1899.

WALTER A. IRVINE,

[SEAL.]

Notary Public in and for Licking County, Ohio.

I have another affidavit from Mr. Hagmeier regarding rebates, which I submit. (See Exhibit 16.)

EXHIBIT 16.

STATE OF OHIO, *Licking County*, ss :

George J. Hagmeier, of lawful age, being duly sworn, upon his oath says:

I am a merchant operating the Pittsburg grocery stores, at different points. At the Newark branch I have had numerous business dealings with the Standard Oil Company through its former local agent, W. H. Clark. Under contract for a large quantity (my entire consumption for a certain period), I have received a rebate of $\frac{1}{4}$ cent per gallon on both oil and gasoline. It is not true that I ever received a rebate of 1 cent per gallon on gasoline and 2 cents per gallon on oil. I never received more than the $\frac{1}{4}$ cent per gallon as per contract as aforesaid.

GEO. J. HAGMEIER.

Subscribed and sworn to by said Geo. J. Hagmeier before me, this 30th day of August, 1899.

[SEAL.]

DAVID M. KELLER, *Notary Public*.

NO FRAUDS OR TRICKS IN LAMP TESTS.

His statement that we used a trick in making lamp test is untrue.¹ Competitors marketed an oil from Ohio crude, which was full of sulphur, at a reduced price; and as the dealers mixed this high-sulphur oil with our oil in their storage tank, and as the consumers were complaining about the quality, we were compelled to ask the dealers to keep our oil separate, that they might know whose oil was producing the trouble when their customers complained. It seemed impracticable in some cases for the dealers to have two storage tanks, so we were compelled, at a very large expense, to put on canvassers to visit the consumers and prove to them, by actual demonstration, that the standard quality of our oil had not been changed. Similar tests were made with the retail storekeepers, and it is the height of folly for any man to say that the people could be humbugged by the turning up of one flame higher than the other. That you gentlemen may fully understand the falsity of the statement made by Clark in relation to the drawing of several grades of oil from one tank by a "twist of the wrist," I wish to say that we have a tank wagon at Newark with three compartments, showing conclusively that we carry three grades of goods.

He states that D. J. Hull, H. S. Hollingsworth, E. G. Mathews, W. W. Hughes, and W. A. Reed, all employees of the Standard Oil Company, had knowledge of frauds as testified to by him in making lamp tests.² Mr. W. A. Reed is not in our employ and was not at the time Mr. Clark testified. I submit the affidavits of all these gentlemen to prove the falsity of Clark's statements.

¹ See p. 346.

² See p. 347.

EXHIBIT 17.

THE STATE OF OHIO, *Champaign County*, ss:

D. J. Hull, of lawful age, being duly sworn, upon his oath says: I am in the employment of the Standard Oil Company of Ohio, and have been for several years. I have read the statement of the testimony of W. H. Clark before the Industrial Commission at Washington with reference to testing Ohio and Pennsylvania oils, and giving my name as one who could corroborate his statements. I desire to say that his statements as to the method of these tests are absolutely false. I never heard of any instructions or any practice of the character stated by him. When these comparative tests are made, lamps of the same size, burners of the same kind, wicks of the same make, and chimneys of the same make are always used, and at the beginning of the test the height of the flame in each lamp is precisely the same. I never knew of any deception being used in these tests.

D. J. HULL.

FRANK PANHORST,
Notary Public, *Washington County, Ohio*.

LUBRICATING OILS.

Concerning his general statement on lubricating oils,¹ he refers to our trademark brands on which there is no competition and for which we have a regular schedule, the price varying only in accordance with the quantity used and the cost of delivering same to customers. Inasmuch as no competitor can sell these oils, there is no necessity for our making any different price other than our schedule.

THE ALLEGED PURCHASE OF A WAREHOUSE TO DRIVE A COMPETITOR OUT OF BUSINESS.

His statements concerning the purchase and removal of an alleged warehouse at Newark, in order to drive out a competitor,² are false. After the so-called warehouse was purchased, Donaldson, the person whom Clark claimed we drove out of business by the purchase of a shed from its owner (without Donaldson's knowledge), continued in business by renting a barn. Further, Clark purchased the shed unknown to and unauthorized by me or Mr. Hollingsworth, and moved the building to his (Clark's) own private lot, for his own private use, and paid for by him, and not by us.

We derived no benefit from the transaction, and I criticised Clark severely when the subject came to my notice. This so-called warehouse, emphasized so largely by Clark, was only an old shed, about 4 feet by 4 feet, with capacity for

¹ See pp. 339, 504, 505.

² See p. 340.

simply one barrel of oil. I have photograph of shed and Mr. Hollingsworth's affidavit, which I submit.

EXHIBIT 22.

THE STATE OF IOWA, *Louisa County*, ss:

H. S. Hollingsworth, of lawful age, being duly sworn, upon his oath, says: I am in the employ of the Standard Oil Company of Ohio, and have been for several years. With reference to the purchase of a warehouse at Newark, which W. H. Clark, in his testimony before the Industrial Commission, mentions, I desire to say that I did not authorize this purchase, nor did I know of it before it was made, and it is not true that I offered Mr. Clark a two-weeks vacation on salary, or any consideration of any kind whatever, if he would get Donaldson out of the business. The first I knew of the transaction, Clark had purchased the building for \$2.50, and moved it on to his own private lot, and Clark stated to me that he bought the shed on account of needing it for an outhouse. The so-called "warehouse" was about 4 feet by 4 feet, with a capacity for storing a single barrel of oil, and in my judgment \$2.50 was an excessive price for it. The purchase of the shed did not drive Donaldson out of the business, for he rented a barn afterwards in which to store his barreled oil.

H. S. HOLLINGSWORTH.

Subscribed and sworn to by said H. S. Hollingsworth, before me, this 30th day of August, 1899.

[SEAL.]

W. H. HURLEY, *Notary Public*.

Referring to his statement concerning Mr. King, and others at Newark, running tank wagons,¹ it is very misleading because the term generally applies to our method of delivery to the retail trade, whereas they were peddlers who ran their own wagons, bought their oil from us and made whatever price to the consumer they desired and were practically regulated by the price made by retail stores. We had nothing whatever to do with fixing such prices—these peddlers all working for themselves.

¹ See p. 342.

CIRCUMSTANCES UNDER WHICH MR. CLARK LEFT THE STANDARD.

Mr. Lockwood was not a manager¹ nor a special inspector, but simply a traveling auditor, whose duty it was to visit stations, check up stocks, balance cash, check accounts, and see that our agents were conducting the business honestly. Mr. Clark's reports were not received regularly, and after I had requested him repeatedly to give the matter prompt attention (and he had failed to do so), at my request Mr. Lockwood was sent to Newark to check Clark up. He did so, and after balancing the cash (which is the first thing an auditor does) he found it short. This was reported to me and I suspended Clark until Mr. Lockwood had completed his examination. Further investigation disclosed the fact that collections had been made by Clark and not reported. Some of these items were made good by Clark from day to day by payments to Mr. Lockwood on the theory that they were errors. They, however, became so numerous that Mr. Lockwood finally refused to receive any more payments until he had completed his examination, when, according to custom, he would make a final report and leave the adjustment to the officers of the company.

From the time I suspended him up to date I have never tried to reengage him, directly or indirectly, through Mr. Fouts or anyone else.² I submit Mr. Fouts's affidavit showing that he has not.

EXHIBIT 23.

THE STATE OF OHIO, *Franklin County*, ss:

R. A. Foutz, of lawful age, being duly sworn, upon his oath says: I am in the employ of the Standard Oil Company, and am the person referred to in the testimony of W. H. Clark before the Industrial Commission. It is not true, as stated by him, that since Clark's discharge by the Standard Oil Company I have asked him to reenter the company's employ, or ever asked him how he would work for the company again. I am a traveling man and have no authority whatever to employ for the company, and I have never had any talk of any kind whatever with Mr. Clark upon the subject.

R. A. FOUTS.

Subscribed and sworn to by said R. A. Foutz before me this 28th day of August, 1899.

[SEAL.]

E. L. PEASE,
Notary Public, *Franklin County, Ohio*.

Nor is there any truth in his statement concerning our methods of deducting from his salary errors which others made.³

The inspector's report referred to,⁴ a copy of which he filed with you, is not a part of the auditor's work, nor did the auditor have anything whatever to do with it, nor was it made out by him at that time, nor at any other time; consequently Clark's statements concerning it are false. The blank referred to is the one that I require filled out by a special agent as occasion requires. Since my arrival in Washington I have examined the inspector's report submitted by Clark, and find that it is signed by H. S. Hollingsworth,⁵ who made the inspection and filled out the blank.

The final report of our auditor showed Mr. Clark's shortage to be \$231.57. He made good \$121.93. The balance, \$109.64, was paid in full by his bonding company after they had examined the report and found it correct.

He was finally arrested by the bonding company, who had signed his bond as agent.

Q. (By Mr. PHILLIPS.) What became of him after his arrest?—A. He was arrested on a charge of embezzling \$109.64, which is a sum largely in excess of the amount, \$35, required under Ohio laws to constitute a felony. He was bound over by the examining magistrate. It appears that the aggregate was taken in small sums, and at different times, no one amounting to \$35, or sufficient to constitute a felony under the Ohio statutes. Therefore, I understand the grand jury failed to indict, on the ground that the offenses could not be joined together, and no felony had been committed; only petty larceny.

DIFFERENCES OF PRICE.

Q. (By Mr. JENKS.) One or two questions as to the general method of doing business. You state in your testimony that wherever you have known of rivals cutting rates you intended to meet them to protect yourself. It is true, I sup-

¹ See p. 342.

² See p. 344.

³ See p. 345.

⁴ See p. 343.

⁵ See Mr. Hollingsworth's signature, p. 344; also date of inspection report, 2 years and 4 months before Mr. Clark was dismissed.

pose, that you had some special contracts, and in that way sold at somewhat different rates to different dealers?—A. Occasionally we have a special contract, the consideration being that the dealer buys his entire supply from us. But these contracts are very limited in number, and the concession very rarely exceeds one-half cent a gallon.

Q. So that it would be possible that Mr. Clark would have received instructions from you to sell the same quality of oil to different dealers at different rates under these contracts you had made?—A. As I stated, we had contracts on stove gasoline, two or three of them, in Newark, at a time gasoline advanced, and the advance did not apply to these dealers until the contract expired. That made two different prices at Newark on stove gasoline at that time.

Q. You would not be likely, then, you think, to have contracts with different dealers in the same place, covering the same time, under which the same grade of oil would be sold at different prices?—A. There might be an exceptional case of that kind.

Q. The different prices being granted, as you have suggested, in consideration of the buyers purchasing their entire supply of you?—A. Yes.

Q. Do you recollect special instances, for example, of instructions to sell Capitol cylinder oil to these different parties, Mr. Lingafelter and the Newark Water Works, at 82 and 81?—A. I do not remember. These contracts on lubricating oil are largely conditioned upon the quantity of oil purchased by the consumer and the expense of delivering.¹

Q. Some slight variation on that account made from time to time?—A. Yes.

Q. (By Mr. SMYTH.) Such a variation as that might arise in any business, might it not?—A. Certainly.

Q. (By Mr. CLARK.) That, you say, is confined to lubricating oil?—A. These are lubricating prices.

Q. (By Mr. JENKS.) The variations in prices, I understand you to say, are much less than 1 cent a gallon?—A. On illuminating oil, I do not recall any case where it is more than a half cent.

WATCHING RIVALS' BUSINESS.

Q. Reference was made by Mr. Clark,² and reference has also been made by other witnesses,³ to the way in which the Standard Oil Company has secured information regarding the business of its rivals. You yourself have referred to it; it is your custom to have reports from your different agents?—A. We ask our salesmen and our agents to keep their eyes open and keep us informed of the situation in their respective fields. We ask our agents, as they visit the trade, to make reports to us of whom the different parties are buying; principally to know whether our agents are attending to their business or not. If they are letting too much business get away from them, it looks as if they were not attending to their business. They get it from what they see as they go around selling goods.

Q. (By Mr. JENKS.) Where competition is fierce do you engage anyone to follow the competitor's wagon about to find out what prices he sells at and to whom he sells?—A. No, sir; I do not recall any case of that kind.

Q. Have you yourself secured reports, or has there been any case that you know of in which reports of rivals' business have been secured from employees of those rivals?—A. No, sir; never.

Q. You instruct your local agents, I infer from what you state here, as to the prices at which they are to sell lubricating oil to different dealers?—A. The prices they are to receive represent either an arrangement or contract made with the different firms for oil at certain periods at these prices, and the arrangement is made with the understanding that we are to have the entire business for a certain period, possibly a year.

Q. (By Mr. SMYTH.) Have you not under these contracts reduced the price during the year when you had a contract, say 82 cents for Capitol cylinder oil—have you not voluntarily reduced the price one-half cent?—A. Notwithstanding the contract, we may have done that on a declining market.

Q. (By Mr. JENKS.) In the selling of lubricating oils to railroads, do you, in the same way, instruct your agents as to the prices they are to charge?—A. I do not have anything to do with railroad oils; they are handled by our people in Cleveland.

Q. You have no knowledge on that subject at all?—A. I have no knowledge on that subject.

¹ See pp. 339, 502.

² See pp. 335, 336, 341.

³ See pp. 313, 319, 356, 368.

⁴ See pp. 315, 341.

⁵ See pp. 316, 356.

Q. (By Mr. PHILLIPS.) Is it your custom to put down oil in one locality, where there is competition, as a rule? Do you make that a rule?—A. No, sir; we never do it unless the competitor makes the cut in price first and forces us to it. When the competitor makes a cut in prices we do not hesitate to meet the price to hold our business.

Q. You do not take the lead in the State of Ohio, under your jurisdiction, then, in cutting prices when there is an independent refinery that ships oil into that locality?—A. No, sir; we do not.¹

Q. (By Mr. RATCHFORD.) In what capacity are you serving the Standard Oil Company now?—A. I have charge of a marketing department of the company.

Q. For the State of Ohio?—A. The central and southern portions of Ohio.

Q. You have presented a dozen or more affidavits from the gentlemen whose names are signed. Are all those gentlemen employees of the Standard Oil Company?—A. Not all of them; probably three-fourths.

Q. Have the affidavits come to you voluntarily from these men?—A. Yes.

Q. Without any solicitation?—A. Simply upon being shown the testimony and being asked if correct, and whether they desired to make affidavit. It has all been voluntary on their part.

Q. I see the affidavits you have read are similar both in language and appearance. Were they gotten up in your office or some office of the Standard Oil Company and sent to the employees?—A. Some of these affidavits—not all of them, but a number of them, were gotten up in my office, covering the points of Clark's testimony, and were then submitted to the person concerned, and he was asked whether the facts contained in the affidavit were true, and if they were, whether he was willing to sign it.

Q. (By Mr. SMYTH.) I suppose that was largely a matter of convenience?—A. Yes.

Q. (By Mr. RATCHFORD.) Were there any affidavits asked from employees who refused to give them?—A. No.

Q. They gave an affidavit in every case?—A. Yes, sir; every one.

(Testimony closed.)

WASHINGTON, D. C., September 8, 1899.

TESTIMONY OF MR. JOHN D. ARCHBOLD.

At a meeting of the United States Industrial Commission, held in Washington, D. C., September 8, 1899, Vice Chairman Phillips presiding, Mr. John D. Archbold, after being duly sworn, testified on the subject of trusts, as follows:

Q. (By Mr. JENKS.) Will you kindly give your name and address to the stenographer?—A. John D. Archbold, New York City.

Q. What is your relation with the Standard Oil Company?—A. I am vice-president of the Standard Oil Company of New York.

Q. How long have you been connected with the Standard Oil Company?—A. Since 1875.

Q. Have you, in anticipation of this examination, prepared any special statement for the use of the commission?—A. I have.

Q. I shall be glad if you will give that first, and then we will question afterwards.—A. The general statement in answer to specific inquiries is not quite ready, and that will be furnished you within a few days.

Q. You mean in answer to the general schedule?—A. Yes.

Q. (By Mr. SMYTH.) I think it would be well to ask Mr. Archbold just at this stage to give us some detailed account of the organization of the Standard Oil Company—its different departments. We do not want the names of the individuals, but your transportation department—how is it managed?—A. That will all be furnished—all a part of the statement just in course of preparation.

Q. (By Mr. JENKS.) You will give a general statement in your own way of the points you care to bring out.

The WITNESS. It would be a matter of preference to me, and I think it would make what I have to say more intelligible to you all, if I might first be allowed to answer the criticisms of the witnesses who have appeared, and so let my answers lead up to a short general statement which I might make at the last.

The CHAIRMAN. Certainly.

The WITNESS. Shall I proceed?

The CHAIRMAN. Yes.

J. W. LEE THE HEAD OF A TRUST.

The WITNESS. I answer first the testimony of Mr. J. W. Lee of Pittsburg. It is rather remarkable, gentlemen, that the first witness to appear before you as a special critic of our business on the ground of its being a trust, should, at the outset, have acknowledged himself to be not only a member of, but the real head of a trust. This Mr. Lee specifically does acknowledge,¹ and I may say for your information, that Mr. Lee and his associates have gone a step further than any other company that I know of, in that they have bound themselves together, not only by the ordinary trust ties, but in a voting trust, made up of a majority of the stock of their principal companies, with a view to perpetuating their faction in power indefinitely, and practically disfranchising the minority. I make this statement, gentlemen, not as a criticism, but as rather a striking evidence of the irresistible tendency toward combination.

VOTING TRUST CONTRACT OF THE UNITED STATES PIPE LINE COMPANY.

I hand you a copy of the voting trust of the United States Pipe Line. The original trustee under it was a Mr. Wood, who has since died. He has been succeeded, under this voting trust, by three trustees, viz, Thomas W. Phillips, L. Emery, jr., and Hugh King.

Agreement made April 26, 1893, is as follows:

"Whereas each of the undersigned is a subscriber to the capital stock of the United States Pipe Line Company, and is now a stockholder thereof, and each is interested pecuniarily in the oil business either as refiner, producer of crude, exporter, owner of terminal facilities at or near tidewater, or dealers in petroleum and its products for domestic consumption;

"And whereas we have each of us entered into the organization of the said United States Pipe Line Company for the purposes expressed in its charter, and with the further intent and purpose to secure and furnish to each of us an independent outlet for our products, both crude and refined, not controlled or influenced by others hostile to our respective business interests, and to secure cheaper and better transportation facilities and available markets for our respective products;

"And whereas, to that end, the owners of several oil refineries located in the interior and at the seaboard, in which said refineries some of the undersigned are owners in whole or in part, have by agreements based upon lawful and sufficient considerations entered into contracts to furnish to the said United States Pipe Line Company the product of said refineries for transportation, and said company has also contracts for crude oil for transportation from the wells, and for furnishing terminal and export facilities at tidewater, as by said contracts and agreements will fully appear;

"Now, therefore, in consideration of the premises and of good, lawful, and sufficient pecuniary and other considerations mutually and severally received, and in order to secure the successful completion of the oil-pipe lines projected and now being laid by the said United States Pipe Line Company, with storage tanks, terminal, transportation and export facilities, and to each of us in his business, the benefits of the several contracts, agreements, plans of operation, secured or being negotiated, made or in contemplation, and to keep the control of the stock of the United States Pipe Line Company in hands friendly to the interests of the undersigned as aforesaid, we the undersigned do bind ourselves, each for himself, severally and not jointly, and each to the others jointly, to the following stipulations, covenants and agreements, each in the sum of one hundred (100) dollars for each share of stock now held by each subscriber, the amount of which is by him now placed opposite his signature hereto, to wit:

"1. We and each of us agree, in manner aforesaid, that all of our interests as subscribers to the capital stock of the United States Pipe Line Company, and our rights under our respective contracts of subscription, and all of our stock as soon as paid up, the certificates therefor and the receipts for the installments paid, be vested in and issued to A. D. Wood, trustee, who shall hold the same for each of us proportionately in trust for the term of five years from the first day

¹ Compare Mr. Phillips, pp. 569, 581, 586.

of April, 1893, at which date, unless this agreement should be extended for a further term, said trustee shall assign and transfer to each of us the stock and certificates so held, unless sooner terminated by a vote of three-quarters of the stock so held in trust.

"2. We further agree and bind ourselves that each of us, not more than 30 days prior to each regular annual meeting of stockholders, or before any lawfully called special meeting thereof, will make and mail or deliver to said trustee a power of attorney or proxy to vote for each of us at such meeting or any adjournments thereof, and in case said trustee shall not receive said power of attorney or proxy, in time for use at the same, each hereby constitutes the said A. D. Wood attorney in fact to make and sign said proxy or power of attorney in our names for each of us, empowering him, the said trustee, to vote at said meeting or meetings for each.

"3. It is further agreed that upon request in writing of any of the undersigned to said trustee, that he as the equitable owner of said stock or interest in capital, desires to pledge the same for a loan of money to the said equitable owner, the said trustee shall, within 48 hours after receiving notice of the name and location of the lender of said money, acquaint a majority of the board of directors of said request and of the name and address of said proposed lender, and shall within thirty (30) days thereafter either lend or furnish to the said applicant an equal amount of money, upon the same time, at the same rate of interest, upon the security of said stock or interest in capital, or else shall in proper legal form assign or pledge the said stock or part thereof, to the lender designated by the said equitable owner of said stock.

"4. It is further agreed that no sales of stock so held in trust shall be made by the equitable owner thereof during the continuance of this trust.

"5. In the event of the death, resignation, or disability of the trustee herein named, his successor shall be appointed by the vote of three-quarters in interest of the signers hereof. The said successor, when appointed, shall have all the powers and shall perform the duties of the trustee herein designated, failing to do which, he, or the trustee hereby appointed, may be removed by a three-quarter vote of the stock in interest hereof.

"In the event of suit being brought to enforce this agreement, or for the stipulated damages for breach thereof, the same shall be in the name of the said trustee and for the benefit of all not delinquent, as hereinbefore provided.

"The said trustee, who shall be a stockholder in the United States Pipe Line Company, shall not be held liable, personally, except for gross negligence or for the violation of this agreement in its letter or spirit. He shall, before entering upon his duties, accept this appointment in writing, and at the same time enter into a bond or obligation of five thousand (5 000) dollars that he will faithfully discharge his duties in accordance with the terms and spirit of this contract.

"It is further understood and agreed that in voting said stock the parties hereto and said trustee shall vote for persons as directors, interested in the business of refining, producing, and exporting oil, as herein stated and as near as may for members of each in proportion to the interest of each class of capital.

"In witness whereof the said parties have hereunto set their hands and seals the day and year first above written.

"I, _____, named as trustee in the foregoing instrument, do hereby accept the duties of the trust, and bind myself to perform the same in accordance with law and the letter and spirit of said agreement, in the sum of five thousand (5,000) dollars, to be paid upon breach hereof.

"_____. [L.S.]

"April _____, 1893."

VOTING TRUST AGREEMENT OF THE PURE OIL COMPANY.

I present, also, as being, perhaps, more easily understood, a printed copy of the trust agreement in full, the voting trust in full, of the Pure Oil Company.¹

"This agreement, made and entered into by the Pure Oil Company, a corporation organized and existing under the laws of the State of New Jersey; David

¹ A later modified form of this trust agreement, involving many verbal changes and some important ones, is furnished to the commission by Mr. J. W. Lee. It is as follows:

This agreement, made and entered into by the Pure Oil Company, a corporation organized and existing under the laws of the State of New Jersey, David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee, and David Kirk,

Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Charles H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee, and David Kirk, trustee for the McCalmont Oil Company, severally subscribers to and owners of the capital stock of the said Pure Oil Company; and Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison, parties mutually agreed upon to exercise the trusts created hereunder.

"Witnesseth. That whereas, the said Pure Oil Company is formed for the purpose of engaging in directly and of aiding other companies and parties engaged in the production, transportation, storage, manufacture and sale of crude petroleum and its products, and in any business incident thereto, and it is desired to enlist therein the co-operation of other parties, and to procure capital to be invested in the shares of its capital stock, and in such other ways as may be desirable, which investments are to be solicited from parties not now interested in the company; and 'whereas, it is advisable, equitable, essential, and intended for the safety and advantage of all interests that the control of the said Pure Oil Company

trustees for the McCalmont Oil Company, and Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Lewis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus Hoch, Ferdinand Reiber, and Walter A. Dennison, parties mutually agreed upon to exercise the trusts created hereunder:

Witnesseth, that whereas the said Pure Oil Company is formed for the purpose of engaging in, directly, and of aiding other companies and parties engaged in the production, transportation, storage, manufacture and sale of crude petroleum and its products, and in any business incident thereto; and it is desired to enlist therein the cooperation of other parties, and to procure capital to be invested in the shares of its capital stock, and in such other ways as may be desirable, which investments are to be solicited from parties not now interested in the company, and,

Whereas it is advisable, equitable, essential, and intended for the safety and advantage of all interests that the control of the said Pure Oil Company shall be so created as to prevent and render impossible at all times the diversion of its resources and business from their intended use and course, in opposition to monopoly in the business, and to protect and maintain what are known as "the independent interests" in the petroleum industry, and to maintain the policy agreed on for conducting the business of the company, created by mutual agreement of shareholders or by operation of law;

Therefore the said parties hereto, in consideration of the sum of one dollar by each to each of the others paid, the receipt of which is hereby acknowledged by each, and in further consideration of the mutual benefits received, to be received, or expected from the agreements, covenants, and trusts hereinafter contained, and from the undertakings and business to be promoted, do hereby agree and consent to the various acts and things hereinafter set forth; provided, however, that no party hereto shall be bound to do any act or thing or be responsible for the results or consequences of any act or thing done or omitted to be done, except so far as relates to such act or things as he himself expressly undertakes to do and perform; and do further agree as follows:

First. The capital stock of the Pure Oil Company as authorized in its certificate of organization, is to be one million (\$1,000,000) dollars, represented by two hundred thousand (200,000) shares, of the legal par value of five (\$5.00) dollars each, divided into classes, and to be issued, held and transferred, subject and according to law and the by-laws, rules and regulations adopted and approved by all the shareholders of the company, a copy of which is hereto attached and referred to.

Second. The said David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee, and David Kirk, trustee for the McCalmont Oil Company, are the owners of all the shares of the capital stock now subscribed, amounting to three thousand (3,000) shares, of which they hereby transfer to the said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Chas. H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison, sixteen hundred (1,600) shares, being more than a majority of the shares of the company now subscribed, and agree that one-half of all the shares hereafter subscribed and issued shall be transferred in like manner to the said parties and their associate trustees, as any may be appointed, to be by them held *in trust*, for 20 years from organiza-

tion of shall be secured permanently, as to prevent and render impossible at all times the diversion of its resources and business from their intended use and course, in opposition to monopoly in the business, and to permanently protect and maintain what are known as the 'independent interests' in the petroleum industry, and to maintain the policy agreed on for conducting the business of the company in the interest and for the protection of all rights in the company, created by mutual agreement of shareholders, or by operation of law; therefore the said parties hereto, in consideration of the sum of one dollar by each to each of the others paid, the receipt of which is hereby acknowledged by each, and in further consideration of the mutual benefits received, to be received, or expected from the agreements, covenants, and trusts hereinafter contained, and from the undertakings and business to be promoted, do hereby agree and consent to the various acts and things hereinafter set forth; provided, however, that no party hereto shall be bound to do any act or thing, or be responsible for the results or consequences of any act or thing done or omitted to be done, except so far as relates to such act or thing as he himself expressly undertakes to do and perform; and do further agree as follows:

"First. The capital stock of the Pure Oil Company, as authorized in its certi-

tion of the company, for the uses and purposes herein proposed, and subject to the terms and conditions as follows:

1. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement. Such ownership of the shares or interests therein may be sold at the will of the holder, but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any rights other than are provided for in the by-laws, rules, and regulations of the company, and in accordance with this trust. The trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares, to carry into effect the purposes of this trust, and all equitable owners of the trust shares or interests therein shall specifically agree in writing to the terms of this trust; and no transfer of any such shares or interests shall be made, or be effected, if made, until the transferee of any such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust.

2. At all meetings of the company for the election of directors, or for any other purposes, to cast the entire number of votes which, as holders of the said shares, they would be entitled to cast.

3. Each trustee at such meetings shall be entitled to cast an equal number of all the votes which all of the trustees would be entitled to cast in the aggregate, if present, except as hereinafter provided.

4. In case of differences of opinion among the trustees present at any such meetings as to how such votes shall be cast in regard to any matter or thing to be voted on, they shall be cast as the representatives of four-fifths of all the shares held under this trust may direct in writing, if so demanded in writing by any of the trustees.

5. Any trustee unable to attend any meeting of shareholders and to personally cast the votes he would be entitled to cast if present, may authorize any other trustee to cast the vote which he would be entitled to cast if personally present, which authority shall be in writing, approved by three-fifths of the trustees other than himself.

6. When none of the trustees can be present at any meeting of the stockholders, legally held, they may be represented in proxy by an attorney appointed in writing, executed by three-fifths of the trustees.

7. The trustees may exercise such consent in writing as in their opinion it may be right and proper for them to do in the interests of the Pure Oil Company, and of the owners of the shares held by them in trust; provided that no such consents shall be executed against the objection of the equitable owners of 10 per cent of the shares held by them in trust, unless after the question of executing such consent shall have been submitted in person, or by writing properly addressed, to the several equitable owners of the shares held in trust, and approved in writing by such owners of three-fifths of such shares.

8. The number of trustees may be increased or diminished at any time, and one-third of the trustees shall retire each year and their successors in the trust elected at each annual meeting of the company. Those of the trustees whose names first occur in alphabetical order shall retire at the next annual meeting, and so on, and their successors shall be elected in the same manner as directors are elected, but nothing herein shall render any trustee ineligible to reelection. Any trustee may be removed, without assignment of cause or reason therefor, by three-fifths of the trustees and the written consent of the equitable owners of three-fifths of the shares held in trust hereunder; and upon such removal, or on the filing of such

cate of organization, is to be one million (\$1,000,000) dollars, represented by two hundred thousand (200,000) shares of the legal par value of five (\$.50) dollars each, divided into classes, and to be issued, held, and transferred, subject and according to law and the by-laws, rules, and regulations adopted and approved by all the shareholders of the company, a copy of which is hereto attached and referred to.

"Second. The said David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westage, William L. Curtis, James W. Lee, and David Kirk, trustee of the McCalmont Oil Company, are the owners of all the shares of the capital stock now subscribed, amounting to three thousand (3,000) shares, of which they hereby transfer to the said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison sixteen hundred (1,600) shares, being more than a majority of the shares of the company now subscribed, and agree that one-half of all the shares hereafter subscribed and issued shall be transferred in like manner to the said parties and their associate trustees, as any may be appointed, to be by them held in trust for

written consent with the secretary of the company, and on the notice in writing delivered to the party so removed, or sent by registered letter to his proper address, the rights, duties and obligations of such party as trustee shall immediately cease.

9. In case of the death, resignation, or removal of any of the trustees, the trust shall be exercised by the remaining trustees until the vacancy be filled by the appointment of new trustees for that purpose, on the nomination of the equitable owners of a majority of the shares previously represented by the trustee whose place is vacated, with the consent in writing of the equitable owners of three-fifths of the shares held under this trust and the approval of three-fifths of the trustees.

10. No trustee has any such beneficial interest in this trust personally as to entitle him to maintain any action at law or in equity to enjoin, delay, hinder, or prevent his removal from the trusteeship, or to recover any damages on account thereof from the company or the trustees, or from the individual stockholders by whose action he may have been removed.

11. The trustees shall appoint a chairman and secretary, who shall hold these offices for one year, and until their successors shall be qualified; and shall keep regular accounts, showing the ownership and residences of the various equitable owners of the shares held by them in trust; and shall execute and deliver to such several owners certificates in due form, approved by the directors of the company, evidencing the number of shares held by them in trust for each of the several owners; and shall make such transfers of any of the shares as they may be requested to do by such several owners, on the surrender of such certificates representing such shares, properly indorsed, assigning for transfer, subject to the terms of this trust, any of the shares thereby represented, in the manner prescribed for making such transfers.

12. The trustees shall immediately advise the company by writing, addressed to the secretary, of any transfer of ownership of any of the shares held by them; and shall, on written request of the treasurer of the company, certify to him the names and residences of all equitable owners of shares held by them in trust; and shall sign warrants for the payment to such owners, severally, of any dividends to which they may be entitled to on the shares so held in trust.

Third. This agreement may be changed at any time only with the consent in writing of the Pure Oil Company, three-fifths of the persons acting at the time as trustees hereunder, and of the equitable owners of three-fifths of the shares held in trust hereunder.

Fourth. This agreement may be canceled, and the trust hereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of three-fifths of the shares held in trust hereunder and of three-fifths of all the other shares of the company, after providing in full for the redemption or purchase at one hundred and ten dollars per share, in cash, of all the preferred shares of the company at the time outstanding.

Fifth. The said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Chas. H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison hereby accept the trust herein conferred and imposed on them.

In witness whereof the parties hereto have severally signed this agreement as of the — day of —; A. D. 189—.

the uses and purposes herein proposed, and subject to the terms and conditions as follows:

"1. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement; such ownership of the shares or interests therein may be sold at the will of the holder, but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any rights other than are provided for in the by-laws, rules, and regulations of the company, and in accordance with this trust. The trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares to carry into effect the purposes of this trust, and all equitable owners of the trust shares or interests therein shall specifically agree in writing to the terms of this trust; and no transfer of any such shares or interest shall be made, or be effective if made, until the transferee of such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust.

"2. At all meetings of the company for the election of directors, or for any other purpose, to cast the entire number of votes which, as holders of the said shares, they would be entitled to cast.

"3. Each trustee at such meetings shall be entitled to cast an equal number of all the votes which all of the trustees would be entitled to cast in the aggregate, if present, except as hereinafter provided.

"4. In case of differences of opinion among the trustees present at any such meetings as to how such votes shall be cast in regard to any matter or thing to be voted on, they shall be cast as the representatives of four-fifths of all the shares held under this trust may direct in writing, if so demanded in writing by any of the trustees.

"5. Any trustee unable to attend any meeting of shareholders and to personally cast the votes he would be entitled to cast if present, may authorize any other trustee to cast the vote which he would be entitled to cast if personally present, which authority shall be in writing, approved by three-fifths of the trustees other than himself.

"6. When none of the trustees can be present at any meeting of the stockholders, legally held, they may be represented in proxy by an attorney appointed in writing, executed by three-fifths of the trustees.

"7. The trustees may execute such consents in writing as in their opinion it may be right and proper for them to do in the interest of the Pure Oil Company and of the owners of the shares held by them in trust, provided that no such consents shall be executed against the objection of the equitable owners of 10 per cent of the shares held by them in trust, unless after the question of executing such consent shall have been submitted in person, or by writing, properly addressed to the several equitable owners of the shares held in trust, and approved in writing by such owners of three-fifths of such shares.

"8. The number of trustees may be increased or diminished at any time, or any trustee may be removed, without assignment of cause or reason therefor, by three-fifths of the trustees and the written consent of the equitable owners of three-fifths of the shares held in trust hereunder; and upon such removal, or on filing of such written consent with the secretary of the company, and on notice in writing delivered to the party so removed or sent by registered letter to his proper address, the rights, duties, and obligations of such party as trustee shall immediately cease.

"9. In case of the death, resignation, or removal of any of the trustees, the trust shall be exercised by the remaining trustees until the vacancy be filled by the appointment of new trustees for that purpose, on the nomination of the equitable owners of a majority of the shares previously represented by the trustees whose place is vacated, with the consent, in writing, of the equitable owners of three-fifths of the shares held under his trust and the approval of the three-fifths of the trustees.

"10. No trustee has any such beneficial interest in this trust, personally, as to entitle him to maintain any action at law or in equity to enjoin, delay, hinder, or prevent his removal from the trusteeship, or to recover any damages on account thereof from the company or the trustees, or from the individual stockholders by whose action he may have been removed.

"11. The trustees shall appoint a chairman and secretary, and shall keep regular accounts showing the ownership and residence of the various equitable owners of the shares held by them in trust, and shall execute and deliver to such several owners certificates in due form, approved by the directors of the company, evidencing the number of shares held by them in trust for each of such several owners, and shall make such transfers of any of the shares as they may be requested to do by such several owners, on the surrender of such certificates

representing such shares, properly endorsed, assigned for transfer subject to the terms of this permanent trust, any of the shares thereby represented in the manner prescribed for making such transfer.

"12. The trustees shall immediately advise the company, by writing, addressed to the secretary, of any transfer of ownership of any of the shares held by them; and shall, on written request of the treasurer of the company, certify to him the names and residences of all equitable owners of shares held by them in trust; and shall sign warrants for the payment to such owners, severally, of any dividends to which they may be entitled on the shares so held in trust.

"Third. This agreement may be changed at any time only with the consent, in writing, of the Pure Oil Company, three-fifths of the persons at the time acting as trustees hereunder, and of the equitable owners of three-fifths of the shares held in trust hereunder.

"Fourth. This agreement may be cancelled, and the trust hereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent, in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase, at one hundred and ten dollars per share, in cash, of all the preferred and common shares of the company at the time outstanding.

"Fifth. The said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison hereby accept the trust herein conferred and imposed on them.

"In witness whereof the parties hereto have severally signed this agreement as of the 6th day of November, A. D. one thousand eight hundred and ninety-five.

"PURE OIL COMPANY,

"DAVID KIRK, *President*.

"C. H. DUNCAN, *Treasurer*.

"Incorporators: David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, C. H. Duncan, Theodore B. Westgate, James W. Lee, David Kirk, trustees for McCalmont Oil Company; W. L. Curtis, Thomas W. Phillips, David Kirk, Marcus L. Lockwood, Clarence Walker, James W. Lee.

"Trustees: Walter A. Dennison, Jerome B. Akin, C. H. Duncan, Adolphus A. Hoch, Ferd. Reiber, Louis Walz, Rufus Scott, Lewis Emery, jr., M. Murphy, H. King."

DID NOT ISSUE CIRCULARS AGAINST FREE PIPE LINE LAW.

Mr. Lee charges that we fought the passage of the free pipe bill in the Pennsylvania legislature, and that we caused "dodgers" or small handbills to be circulated, saying that if the free pipe bill became a law the orchards would be destroyed, springs polluted, death lurk in their doorsills.¹ I want to deny this *in toto*. In those early days to which he referred we were in favor of the passage of the free pipe law in Pennsylvania. We greatly desired it. We were entering the pipe-line business, fully understanding its great importance to the future of the petroleum trade, and it is not likely that we would be prejudiced by any such action as Mr. Lee claims.

Q. (By Representative LIVINGSTON.) You deny the issuing of the circular?—A. I deny the issuing of the circular *in toto*. I never heard of any testimony of that kind.

Q. (By Mr. SMYTH.) Do you know whether such circulars were issued?—A. I do not.

Q. If you did not issue them, who did?—A. I do not know that they were issued.

EMPIRE TRANSPORTATION COMPANY.

He refers, in the way of criticism, to our course regarding our relations with the Pennsylvania road in connection with the Empire Transportation Company refinery.² I may say, in a word of explanation, that at the time specified the people prominent in official relations with the Pennsylvania road engaged in the petroleum business on their own account. We, deeming that outside of the regular province of the railroad company, of which we were large patrons, discontinued our shipments over the Pennsylvania road, transferring them to the

¹ See p. 262; Mr. Emery, pp. 659, 660.

² See p. 263.

other great lines. This loss of traffic finally brought the Pennsylvania officials proper to a negotiation regarding this special refining business, to which I have referred, and those negotiations resulted in our purchase of those refineries and our again becoming a patron, in the way of transportation, of the Pennsylvania Railroad. That is the exact history of the case simply told. I will refer now to—

Q. (Interrupting.) Are you willing to state what the negotiations were?—A. I would be glad to if I had it in mind; but it is a transaction of nearly 20 years ago, and I cannot, from memory, give any really exact outline of it.

Q. Were there considerable advantages offered to the Standard Oil Company over other shippers?—A. There were no advantages offered to the Standard Oil Company. The advantage was in favor of their own people, as we felt it to be, and was the prime particular reason for our discontinuing our shipments over it.¹

Q. After these negotiations did the Standard Oil Company enjoy secret rates or better rates than other refiners?—A. I go into that fully in answer to the specific charges to that effect.

Q. (By Mr. FARQUHAR.) Were the Pennsylvania Railroad holders of oil participants with you in transportation at the same time you made arrangements with the Pennsylvania?—A. No, their relations ceased.

Q. (By Mr. JENKS.) You can furnish that account more in detail, can you not?—A. Undoubtedly, if you desire it.

The Empire Line and Green Line were corporations doing freight business over the Pennsylvania Railroad, the stocks of which were owned by the officers and managers of the railway. Through these companies the railway became interested both in transportation of oil by pipe lines and in the refining of oil. The Standard Oil Company claimed that the railway discriminated in freights in favor of its own refineries, and refused to ship over that road. This led to negotiations for the sale of the pipelines and refineries to persons interested in the Standard. This sale took place October 1, 1877. The railway first purchased from the Empire and Green lines all the pipe lines and refineries which they owned, which it was empowered to do by virtue of an existing contract, and then conveyed the pipe lines and refineries to the Standard parties.

MR. EMERY'S ESTIMATE OF \$10,000,000 REBATES.

Mr. Lee goes quite into detail with reference to allegations regarding preferential railroad rates to us during that early period of the oil business.² I want to answer all his charges made at different times during his testimony as is indicated, and by referring to the various pages at once and as definitely as possible. He treated first the well-worn statement regarding deductions, originally made by Mr. Emery, or alleged to be made by him, from the testimony of Mr. Cassatt, an official of the Pennsylvania road, covering alleged rebates paid to our company for a certain period. I have here, and desire to submit and leave with you, a statement of the analysis of Mr. Cassatt's testimony in that regard, prepared by our counsel at the time, showing the utter falsity of Mr. Emery's statement. Mr. Emery's statement was made on an absolutely false hypothesis throughout. There never was any foundation for it. It was one of those catching statements which take hold and travel fast. It has been denied over and over again; but the people who have agitated these questions have adopted it as one of their stock features in trade, and keep on repeating it. I desire to submit this analysis, but I will read:

"The assertion that Mr. Cassatt testified that \$10,000,000 was paid to the Standard Oil Company as rebates from October 17, 1877, to March 31, 1879, was first made by Mr. Lewis Emery, and in examination before the Committee on Manufactures of the Fiftieth Congress, May, 1888, he shows how he deduced these figures from the testimony referred to. I quote from page 241:

"Q. You were also the authority, were you not, for the statement which is referred to in Mr. Dodd's book that it was proved during that examination that in a period of, I think, 17 months—

"The witness (interrupting). Seventeen and one-half months.

"Q. (Continuing.) The four railroad companies had paid to the Standard Oil Company \$10,000,000 as rebates on the oil carried by them, were you not?—A. Yes, sir.

"Q. Look at that paper [handing paper to witness] and state whether you made an analysis—an examination of the testimony given by Mr. Cassatt, the Standard Oil Company people, and other railroad officers in that suit, in order to

¹ See statement of G. R. Blanchard, p. 642, footnote.

² See p. 264, 287. Compare also Mr. Emery, pp. 660, 661.

ascertain what the total amount of money paid over as discrimination during that period of 17½ months was?—A. I did."

The witness then presented a paper prepared by himself, which, if true, showed a rebate to the Standard Oil Company of 64½ cents per barrel on refined oil, 29 cents on crude oil from 1 district, 26½ cents on crude oil from another district, and 22½ cents per barrel on crude oil paid to the American Transfer Company. He added these figures, divided them by 8, and claimed 55 cents as the average rebate to the Standard. He then took the total consumption of oil from October 17, 1877, to March 31, 1879, to wit, 18,556,277 barrels, and multiplying by 55 cents produced \$10,155,218, which, he claimed, showed was the amount of discriminatory rebates paid to the Standard in 17 months.

Mr. Emery did not pretend to have any personal knowledge of the subject. He pretended to compile his figures from the evidence of Mr. Cassatt. That evidence is published in the same volume which contains Mr. Emery's evidence. To reach this result Mr. Emery had to make these absurdly false assumptions:

"I. That all oil consumed was shipped eastward over four trunk lines, and was all shipped by the Standard Oil Company.

"II. That all these trunk lines paid the same rebate as the Pennsylvania Railroad Company.

"III. That the shipments of oil of the class on which the rebate was 64½ cents was equal to the shipments of oil of the class on which the rebate was 26½ cents."

Eliminate these gratuitous assumptions from Mr. Emery's statements, and his conclusion is shown to be ridiculous.

These gratuitous assumptions are as nothing, however, compared to the gratuitous falsehoods embraced in the figures given. The claim is that a discriminating rebate, averaging 55 cents, was paid to the Standard Oil Company from October, 1877, to March 31, 1879, by 4 trunk lines.

The evidence of A. J. Cassatt, which is referred to for the truth of these statements, refers only to 1 trunk line, Pennsylvania Railroad, and shows:

"I. That the Standard Oil Company shipped no oil over the Pennsylvania Railroad until July, 1875. That the Pennsylvania Railroad was then interested in refining in competition with the Standard, and not only allowed the Standard no preferences, but discriminated against it to such an extent that the Standard stopped shipping over the road in March, 1877.

"II. That in October, 1877, the Pennsylvania Railroad and the Standard entered into an agreement by which the Standard Oil Company was to have a commission of 10 per cent on all freight furnished by it in consideration of the Standard agreeing to equalize oil freights on the 4 trunk lines.

"III. That this agreement did not effect a discrimination even to that extent as against other shippers over the Pennsylvania Railroad prior to May 1, 1878, because said shippers had contracts extending to that date, which were excepted in the contract with the Standard.

"IV. That the Pennsylvania Railroad was willing and offered to carry oil for all shippers on the same terms with the Standard, excepting only 10 per cent commission, for which it demanded like considerations.

"V. That it did continue to carry for all shippers who did all their business over its line as low as for the Standard, commission included.

"VI. That shippers not using the Pennsylvania Railroad were able, after May 1, 1878, to get oil east by the Erie Canal lower than by rail, and shipped their oil by that route, in consequence of which the Pennsylvania Railroad shippers were paying greater freight rates than other shippers.

"VII. In consequence the Pennsylvania rate was reduced to those who continued to ship by that line 44½ cents on refined, making the net rate \$1, said 44½ cents being paid as rebate.

"VIII. For the same reason, namely, to meet canal rates, in July, 1878, the rate to those who shipped by rail was further reduced 20 cents, the 20 cents being paid as a rebate, and refunded back to May 1, 1878.

"IX. That these rebates were paid to all shippers who shipped entirely by rail, and were for the express purpose of putting them on an equality with those who shipped by canal.

"X. The same is true of the rebate allowed on crude oil during the same period, except 10 per cent paid to Standard and 22½ cents paid to the American Transfer Company, the latter being the pipe line's share of a through rate.

"XI. That the rebates which were paid from May 1, 1878, to equalize rail and canal shipments were discontinued December 8 of the same year, when the canal was closed.

"XII. All payments of rebates entirely ceased March 31, 1879."

The result of the testimony is that while there was an agreement for a 10 per

cent commission between the dates referred to there was in fact no discrimination against shippers by the Pennsylvania Railroad; that the rebates paid were paid to all shippers over that line, and that they were paid to put shippers by that line on an equality with shippers by canal.

Q. (By Mr. SMYTH.) You will make that a part of your testimony, will you?—A. I will make that a part of my testimony, and I hope it will be in the record of the proceedings of this commission as simple final answers to these lusty old lies about the \$10,000,000 rebates.

Q. (By Representative LIVINGSTON.) You say now, in your place as a witness, that there never have been any rebates in favor of the Standard Oil Company?—A. I am proceeding with the statement.

Q. I understand you deny everything that has been said here before about rebates?—A. I will go right into that and be glad to answer questions about that.

AS TO FAVORITISM IN BUYING LUBRICATING OILS.

Mr. Lee makes the statement that the railroad companies are now systematically robbed by their own officers through the making of discriminatory contracts with the Standard Oil Company for lubricating oils.¹ I had never heard of this allegation brought out here by Mr. Lee and some other witnesses until told before you. I want to deny it absolutely and entirely as being utterly untrue, and I challenge him to produce a scintilla of evidence in support of their allegations.

Q. (By Mr. JENKS.) Perhaps you will note that Mr. Lee says that he does not state that to be absolutely true, but it is a matter of belief with him.—A. It is the same old method—he does not know it to be true, and he can not say it is true, and I challenge him to make any showing of any such thing at any place or any time.

Q. You say it is not true?—A. I say it is not true.

NO DISCRIMINATORY RATES.

In answer to questions as to whether the Standard Oil Company is now receiving discriminatory rates, he does not answer directly, but goes back to the 1889 case,² in which the Standard Oil Company was in no way involved; was not, indeed, in the case referred to by Mr. Lee, and the same is true in a number of other cases also. It was not shown that there was any discrimination in favor of the Standard Oil Company, and as a matter of fact the Standard Oil Company were not given any such discriminatory rates. I make that answer more specifically with reference to the case of the period to which he referred, in answer to the testimony at that time.

Q. (By Mr. SMYTH.) If there had been any such rates, you would have known it?—A. I should have known it.

Q. It would have been impossible for any such rates to be in existence without your knowing it?—A. It would. Further, the cases referred to in Mr. Lee's testimony³ as pending in the United States court to recover discriminations are really cases to recover freight which the railroad charged refiners on barrels. The Interstate Commerce Commission decided that railroads carrying both in tank cars and in barrels should carry barrels free; and the railroads, refusing to accept such a decision, are testing the question in the United States court. It is fair to say that the same charge for carrying barrels was made against the Standard Oil Company, and if the refiners are successful in recovering the Standard Oil Company will have a claim for a very large amount.

Q. (By Mr. JENKS.) Against the railroads?—A. We shall be in the same position as the other shippers if it is decided in the interest of the refiners.

Q. (By Mr. SMYTH.) You will claim a rebate of the freight on the barrels of the refined?—A. Yes; we are in the same position as they are on that question. I may say, in my personal opinion, it is a most unjust decision for any court to make; but it is not for me to decide it.

In answer to inquiry as to whether the Standard Oil Company were paid rebates on shipments of other people, Mr. Lee answers in an untruthful and disingenuous way, and refers finally to the Rice Case as the only possible support of his assertion.⁴ The Rice Case will be fully answered in connection with the testimony of another witness.⁵

THE STANDARD HAS STRICTLY OBEYED THE INTERSTATE-COMMERCE LAW.

It is fair to say here, however, and I will make this statement covering the entire question of freight rates prior to the passage of the interstate-commerce

¹ See p. 208. See also Mr. Davis, p. 359; Mr. Rice, pp. 699, 700; Mr. Page, pp. 756-759.

² See p. 287.

³ See p. 556.

law, in 1887, that the shipment of oil or any considerable freight over the roads was a question of special contract. While tariffs were nominally issued, every shipper knew that a special contract could be had, and it was universally the rule that special contracts were made for the shipment of any considerable freight. Since the passage of the interstate-commerce law we have strictly obeyed it. I want to say further in this connection that during the period before the passage of the interstate-commerce law every and any rate of freight was uniformly considered in the fixing of prices at which the oil was sold. I want an exhibit—

Q. (Interrupting.) Are your books open to verify that statement?—A. To the very utmost. I have thought it worth while, in view of the hard downing of this old ghost, to go into some considerable collateral proof to show the falsity of the charges in reference to discriminatory rates. I now beg leave to submit to you, and I of course will leave them with you—

Q. (By Representative LIVINGSTON.) (Interrupting.) If you will pardon me just now—is there a suit pending or anything of the kind on the part of the Interstate Commerce Commission against the Standard Oil Company for rebates now, or has there been since the passage of the act?—A. There have been various actions instituted regarding some special features of the carrying law, but I do not know that there are any now pending. I think they have all, so far as relates to our interest directly, been adjudicated.

LETTERS FROM RAILROAD OFFICERS DENYING THAT THEIR ROADS GIVE PREFERENTIAL RATES TO THE STANDARD.

I submit here, in answer to direct queries—and they are only a small part of the entire number I might have had for the asking—letters from prominent railroad officials representing the railroads in this country, North, South, East, and West, answered on their own part and over their own signatures, with reference to the charge of discrimination in any way. These letters are of the most specific character on this subject. I thought it best not simply to rest on our own denial on the charge of discrimination, but to leave these with you as collateral evidence of the falsity of these statements which our enemies and competitors in the business are continually making on this question. I will, with your permission, read a list of these letters, and I will submit a map,¹ colored in lines, showing the different sections of the country reached by the railroads which are represented in these letters, and which deny any preferential relations with the Standard Oil Company.²

[Standard Oil Company, 26 Broadway, New York.]

DEAR SIR: During May and June of this year the Industrial Commission (a body appointed by Congress) had a hearing in Washington. Before this body appeared a number of oil producers and refiners who testified, generally, that it was their belief that the railroads of the United States were giving the Standard Oil Company and its interests many advantages on its shipments of petroleum and its products as compared with those of other oil shippers.

We are now and have been, as you know, large shippers of petroleum and its products over your rails, and we would be glad if you would write me a letter stating as fully as you can whether or not, since the passage of the interstate-commerce law, you have in any way given to the Standard Oil Company or any of its representatives any lower rates of freight, either by direct tariff, rebate, underbilling, or in any way given to it or its representatives any advantages in the carriage of its shipments over your rails as against any other oil shipper. In other words, have not the Standard Oil Company and its interests paid the same rate per 100 pounds on its shipments, whether in tank cars, carloads, or less than carloads, as you have charged other shippers between the same points, and has there been since the passage of the interstate-commerce law, or is there now, any arrangement or device by which the Standard Oil Company have in any way received any advantage in the transportation of its oil, per 100 pounds, as compared with any other shipper over your road between the same points?

If you, yourself, have not full knowledge of the matter referred to, we would be glad if you would confer with your traffic department before answering. It may be that we will show this letter and your reply to the Industrial Commission, and would like for your reply to be as full and explicit as possible. Kindly reply at your earliest convenience and oblige,

Yours, truly,

HOWARD PAGE.

¹ Omitted.

² See Mr. Emery, pp. 642, 643.

I will not weary you, unless it is your desire, by reading all these letters, but I will read two or three of them. I will first read the list: Atchison, Topeka and Santa Fe Railway, Paul Morton, second vice-president, Chicago, Ill.; Baltimore and Ohio Railroad, Oscar G. Murray, first vice-president, Baltimore, Md.; Boston and Maine Railroad, W. F. Berry, second vice-president and general manager, Boston, Mass.; Chicago and Alton Railroad, C. A. Chappell, vice-president and general manager, Chicago, Ill.; Chicago, Milwaukee and St. Paul Railway, A. J. Earling, second vice-president, Chicago, Ill.; Chicago, Burlington and Quincy Railroad, Thomas Miller, general freight agent, Chicago, Ill.; Cleveland, Cincinnati, Chicago and St. Louis Railway, E. E. Cost, freight traffic manager, Cincinnati, Ohio; Delaware, Lackawanna and Western Railway, W. H. Truesdale, president, New York City, N. Y.; Erie Railroad, G. G. Cochran, fourth vice-president, New York City, N. Y.; Great Northern Railway, D. Miller, second vice-president, St. Paul, Minn.; Lake Shore and Michigan Southern Railway, W. H. Newman, president, Cleveland, Ohio; Louisville and Nashville Railroad, S. R. Knott, first vice-president, Louisville, Ky.; New York Central and Hudson River Railroad, S. R. Callaway, president, New York City, N. Y.; Northern Pacific Railway, C. S. Mellen, president, St. Paul, Minn.; Pennsylvania Railroad, W. H. Joyce, freight traffic manager, Philadelphia, Pa.; St. Louis and San Francisco Railroad, D. B. Robinson, president, St. Louis, Mo.; Southern Pacific Company, J. C. Stubbs, third vice-president, San Francisco, Cal.; Southern Railway, J. M. Culp, traffic manager, Washington, D. C.; Union Pacific Railroad, H. G. Burt, president, Omaha, Nebr.; Wabash Railroad, S. B. Knight, general freight agent, St. Louis, Mo.; Western New York and Pennsylvania Railroad, E. T. Johnson, general freight agent, Buffalo, N. Y.

I will read, if you please, first, as representing the different sections of the country, a letter from the New England States, Boston and Maine Railroad:

[Boston and Maine Railroad, traffic department.]

BOSTON, MASS., *August 18, 1899.*

DEAR SIR: Replying to your esteemed favor of the 15th instant, you ask me to state whether or not since the passage of the interstate commerce law the Boston and Maine Railroad have in any way given to the Standard Oil Company, or any of its representatives, any lower rate of freight either by direct tariff, rebate, or underbilling than has been openly quoted to all other shippers of oil, and I am pleased to be able to state that we have not.

Yours, truly,

W. F. BERRY,

Second Vice-President and General Traffic Manager.

MR. HOWARD PAGE,
26 Broadway, New York, N. Y.

[Chicago and Alton Railroad Company, C. A. Chappell, vice-president and general manager.]

CHICAGO, ILL., *August 17, 1899.*

DEAR SIR: I take pleasure in stating to you, as I have frequently stated to others, and am willing to state before the Interstate Commerce Commission, or any other authority, that, in my judgment, the Standard Oil Company has obeyed the interstate law better than any other large shipper in the country.

So far as the Chicago and Alton is concerned, the Standard Oil Company has not only declined to accept concessions of any name or nature, but has used its influence with the railroads to maintain agreed and tariff rates, and there has been no arrangement, device, or any other plan by which the Standard Oil Company received less rates than other shippers. The rates granted the Standard Oil Company have been the same that all other oil shippers have had, whether in tank cars, carloads, or less than carloads.

I have frequently stated to the Interstate Commerce Commission, and to others, that if all the large shippers of the country would cooperate in the enforcement of the interstate law, as the Standard Oil Company has done, we would have an ideal condition.

Yours, very truly,

C. A. CHAPPELL,

Vice-President and General Manager.

MR. HOWARD PAGE,
Standard Oil Company, New York.

[Louisville and Nashville Railroad Company, office of the first vice-president.]

LOUISVILLE, KY., August 19, 1899.

DEAR SIR: Please refer to your favor of the 15th instant.

Having been since January, 1888, in one position or another, charged with the direct supervision of the traffic affairs of the Louisville and Nashville Company, and having been for several years prior to that time directly connected with that department of the company's business, I feel I am in position to speak most authoritatively upon the subject mentioned in your letter.

I beg to say that the Louisville and Nashville Railroad Company has not in any way given the Standard Oil Company, or any of its representatives or allied interests, any lower rates of freight, either by direct tariff, rebate, refund, underbilling, or any other subterfuge or device, than it was at the same time extending to any and all other shippers handling the same or similar traffic and subject to the same rules, regulations, and conditions. In other words, the Standard Oil Company has been required to pay and has paid to the Louisville and Nashville Railroad Company the same charges for the same transportation rendered as any other shipper, and there is no arrangement between it or any of its agents and the Louisville and Nashville Railroad Company by which any advantage accrues to it over any other shipper handling similar traffic between the same points over this company's rails.

Yours, truly,

S. R. KNOTT,
First Vice-President.

Mr. HOWARD PAGE,
Standard Oil Company, New York.

[The Atchison, Topeka and Santa Fe Railway System, Great Northern Building, 77 Jackson street, Chicago, second vice-president's office.]

AUGUST 17, 1899.

GENTLEMEN: It is with a great deal of pleasure and satisfaction that I write you in regard to the general belief that the railroads of the United States are giving the Standard Oil Company and its interests many advantages on its shipments of petroleum and its products as compared with shipments of other oil producers.

For nearly four years I have had charge of the freight business of this company, and never in all that time has the Standard Oil Company's representatives asked for, or received, better rates than other shippers of oil secure. From my own experience I know that the Standard Oil Company does not ask for rebates, and I know further that the chief aim of the freight representatives of your company has been to have the railroads of the West absolutely maintain the tariff. I wish that other large shippers would take the same position in regard to this matter that your company does. If the terrible pressure from gigantic shippers for inside rates could be relieved the transportation problem of the country would be a very easy one to solve.

The position of your company in not asking for special rates, and in declining to receive rebates, and its effort to keep the rates on oil and its products up, has been a common topic of discussion among western traffic men ever since the interstate commerce law became enacted.

I take this occasion to thank you, on behalf of the railroad I represent, for the broad-gauged position that you have taken in this matter.

Yours, truly,

PAUL MORTON,
Second Vice-President.

STANDARD OIL COMPANY,
New York City.

[Great Northern Railway Company, office of second vice-president.]

ST. PAUL, MINN., August 23, 1899.

DEAR SIR: Replying to your favor of the 15th instant, I herewith hand you a letter from our general traffic manager, Mr. F. B. Clarke, under date of the 21st instant, which, I think, covers your inquiry fully so far as this company is concerned.

I have no hesitancy in stating that since my connection with this company, in November last, the Standard Oil Company have paid the full legal tariff on all shipments made by it over this line, and there have been no arrangements by which any less rates were secured.

I can also make the same statement with regard to the shipments of the Standard Oil Company over the Missouri, Kansas and Texas Railroad during my connection with that road, from May, 1898, to November, 1898.

If there is any further information desired, kindly advise and I will take pleasure in furnishing same.

Yours, truly,

D. MILLER,
Second Vice-President.

Mr. HOWARD PAGE,
Standard Oil Company, New York City.

[Great Northern Railway, traffic department.]

ST. PAUL, MINN., August 21, 1899.

DEAR SIR: Referring to the inclosed inquiry from the Standard Oil Company with respect to the rates charged on shipments forwarded over the Great Northern Railway since the passage of the interstate commerce law.

My connection with this company dates from December, 1896, since which time I know personally that the Standard Oil Company has paid our company full tariff rates on all shipments we have carried for them. I have made inquiry of those connected with the general freight department who were in the service prior to my connection with the company and who have had opportunities to know what rates were being charged on the shipments of the Standard Oil Company, and have received assurances that the Standard Oil Company has always paid our company the full published tariff rates on their shipments, and that we have yet to receive the first intimation that the Standard Oil Company desired less than the published tariff rates charged other shippers of the same class of goods.

Yours, truly,

F. B. CLARKE,
General Traffic Manager.

Mr. D. MILLER,
Second Vice-President.

[Erie Railroad Company, 21 Cortlandt street, New York.]

AUGUST 29, 1899.

DEAR SIR: In answer to your letter of the 15th instant to President Thomas, I desire to say, in his absence, that the Standard Oil Company has evinced the strongest disposition to cooperate with the railroad companies to the extent of paying fair and reasonable rates for transportation of all of its products based upon and in conformity with the interstate commerce act, and based on my own knowledge and information obtained from other officers of this company that said Standard Oil Company has not been afforded lower rates of freight upon such traffic than the tariffs open to and offered for the carriage of like products between the same points to any other shippers of oil over this company's lines.

Yours, truly,

GEO. G. COCHRAN,
Fourth Vice-President.

Mr. HOWARD PAGE,
26 Broadway, City.

[Delaware, Lackawanna and Western Railroad Company, office of president.]

AUGUST 22, 1899.

DEAR SIR: I noted with some interest that during a hearing before the Industrial Commission in Washington during May and June of this year certain parties appeared before that body who testified in a general way that they believed that the railroad companies of the United States were giving the Standard Oil

STANDARD OIL COMBINATIONS:—ARCHBOLD.

Company, or its interests, many advantages on its shipments of petroleum oil and its products over those accorded other shippers of similar commodities.

These statements or this testimony, if it may be so considered, is so much at variance with the facts and the truth as I know them to be that I feel compelled to write you and state the facts as I know them to exist, and to say that I am willing you should make such use of this letter as you may desire in refuting the false statements referred to.

This company has not since the passage of the interstate commerce act, so called, given the Standard Oil Company or any of its interests or anyone for it any reduced rates or advantages of any character whatever on its shipments of petroleum oil and its products different or in any way more favorable than was at the same time accorded other shippers of similar commodities. As I am advised by our people, no one for the Standard Oil Company has since the passage of said act ever solicited any concession in any way, shape, or form from the regular, established rates, rules, and regulations governing the transportation of petroleum oil and its products.

Furthermore, I take pleasure in certifying that at the time of the passage of the interstate commerce act and until 1894 I was in charge of the Minneapolis and St. Louis Railway, and from 1894 until 1899 was vice-president and general manager of the Chicago, Rock Island and Pacific Railway Company in charge of its freight traffic; that during my connection with the Minneapolis and St. Louis and the Chicago, Rock Island and Pacific railways, as aforesaid, neither of those companies ever granted to the Standard Oil Company or anyone in its interests or for it any concessions from the regular, established rates on its shipments of petroleum oil and its products, nor did any official of the Standard Oil Company, or anyone else in its interests, ever ask special rates or advantages on its shipments, as against those accorded other shippers of the same commodities.

Should it be found necessary or desirable to have the foregoing statement of facts put in the shape of an affidavit or deposition I shall be very much pleased indeed to put my knowledge of this matter in that shape and place it at your disposal for such use as you deem best.

Yours, truly,

W. H. TRUESDALE,
President.

Mr. HOWARD PAGE,
Standard Oil Company, 26 Broadway, City.

[Cleveland, Cincinnati, Chicago and St. Louis Railway Company.]

AUGUST 28, 1899.

DEAR SIR: I have your letter of the 15th in relation to certain testimony that was given before the Industrial Commission during May and June of this year regarding shipments of petroleum and its products.

If I mistake not, this company is the recipient of a fair share of the traffic shipped by your company in all directions, and we can most positively state, and are prepared to support same by an affidavit, that we have not, since the inception of the interstate law, paid the Standard Oil Company or any of its agents or branches in any manner, shape, or form one mill for the purpose of influencing business via our line, and that the Standard Oil Company have paid full tariff rates on all shipments over the line of the Cleveland, Cincinnati, Chicago, and St. Louis Railway, whether in tanks, carloads, or less than carloads.

I do not know what further I can say on this subject, only that if the other large shipping interests would pursue the same policy as the Standard Oil Company in relation to the strict maintenance of published rates, it would eliminate the strife and contention among the railroad companies which often produces unhealthy competition and ruinous rates.

Very truly, yours,

E. F. COST.

Mr. HOWARD PAGE,
26 Broadway, New York.

[Chicago, Milwaukee and St. Paul Railway Company, office of second vice-president.]

CHICAGO, August 18, 1899.

DEAR SIR: In the absence of President Miller your letter of the 15th instant has been handed to me. In reply I desire to say that since the passage of the interstate commerce act the Chicago, Milwaukee and St. Paul Railway has carried a

satisfactory share of the business of the Standard Oil Company to all competitive points reached by its lines, and I also desire to say that the full, lawfully published tariff rates have at all times been exacted, and that no concessions or deviations from such lawfully published rates have been granted by this company in any manner or by any device whatsoever; nor has the Standard Oil Company asked for any concessions or suggested any deviations from the lawfully published tariffs. I wish, further, to state that there has been no discrimination practiced by this company in connection with the business of the Standard Oil Company and that of other shippers of petroleum and its products.

Yours, truly,

A. J. EARLING,
Second Vice-President.

MR. HOWARD PAGE,
Standard Oil Company, 26 Broadway, New York City.

[Chicago, Burlington and Quincy Railroad Company, general freight department.]

CHICAGO, August 22, 1899.

DEAR SIR: Answering your letter of the 15th instant, I have to say that there never has been a request made by anyone representing the Standard Oil Company since the passage of the interstate-commerce law for a reduction in our tariff rates, directly or indirectly, either by tariff, rebate, underbilling, or otherwise, and no concessions have been made by this company of any character whatsoever on the business transported by us for account of the Standard Oil Company. It has all been done at published tariff rates, which are open to the inspection of everybody.

Yours, truly,

THOS. MILLER,
General Freight Agent.

MR. HOWARD PAGE,
Standard Oil Company, New York.

[The Baltimore and Ohio Railroad Company.]

BALTIMORE, MD., August 22, 1899.

DEAR SIR: Replying to your favor of August 19, in relation to rates charged to and collected from the Standard Oil Company on their shipments of oil over the road, we invite your attention to next-attached communication from our manager freight traffic, Mr. Wight.

With reference to the Cleveland, Cincinnati, Chicago and St. Louis road, as you know, it has been a number of years since my connection with that company was severed, and it is therefore suggested you take the matter up direct with them.

Yours, very truly,

OSCAR G. MURRAY,
First Vice-President.

MR. HOWARD PAGE,
Standard Oil Company, New York, N. Y.

[The Baltimore and Ohio Railroad, office of manager of freight traffic.]

BALTIMORE, August 21, 1899.

DEAR SIR: With return of attached letter from Mr. Howard Page, of the Standard Oil Company, would advise that since the interstate-commerce law became effective the Baltimore and Ohio Railroad has not to my knowledge given the Standard Oil Company or any of its representatives any rate less than published tariffs on oil, whether in tank cars or barrels or by any subterfuge whatever, all such tariffs being filed with the commission and the rates named therein being applicable on all shipments, whether made by the Standard Oil Company or its competitors.

Yours, truly,

C. S. WIGHT,
Manager Freight Traffic.

OSCAR G. MURRAY, Esq.,
First Vice-President.

[Western New York and Pennsylvania Railway Company, general freight department, Mooney-Brisbane Building.]

BUFFALO, N. Y., August 29, 1899.

DEAR SIR: I am in receipt of your letter of 23d instant, relative to testimony given by Oil Creek producers and refiners before the Industrial Commission in Washington.

In reply to your letter would say that on any shipments of petroleum or its products forwarded by the Standard Oil Company, from or via Western New York and Pennsylvania Railway, the Standard Oil Company have not and are not obtaining any advantage in any way, shape, or manner as compared with other shippers of petroleum and its products. The shipments of the Standard Oil Company are charged exactly the same rates and the same weights as the shipments of any producer or refiner between the same points, and no lower rates are given the Standard Oil Company, or to any of its representatives, or through any other party, either through tariff, rebate, underbilling in quantity or in weight, or through any device whatever; and the charges on such shipments against the Standard Oil Company have been upon exactly the same basis between the same points as charged any other refiner or producer since the interstate-commerce law was put in force.

If it is desired I am willing to appear before any United States commissioner in Buffalo and make affidavit to the above facts.

Yours, truly,

EDWARD T. JOHNSON,
General Freight Agent.

Mr. HOWARD PAGE,
26 Broadway, New York City.

[The Wabash Railroad Company.]

ST. LOUIS, August 18, 1899.

DEAR SIR: I note that in the course of the investigation before the Industrial Commission, during May and June of this year, evidence was submitted to the effect that the Standard Oil Company had received advantages in the shipment of petroleum and its products as compared with other oil shippers.

I do not understand that specific reference was made to any railroads thus favoring the Standard Oil Company, but I would like to testify in defense of the Wabash Railroad Company that we have not contributed in a discriminatory manner to the Standard Oil Company, and that we have not since April 5, 1887—when the interstate-commerce law became effective—deviated from our published tariffs in the way of rebates or irregular departure from said tariff in a single instance in the handling of shipments of the Standard Oil Company. We have had but one tariff, which applies alike to all oil shipments handled by the Wabash Railroad Company from that period up to the present time.

Yours, truly,

S. B. KNIGHT,
General Freight Agent.

Mr. HOWARD PAGE,
Standard Oil Company, 26 Broadway, New York.

[Union Pacific Railroad Company, office of president.]

OMAHA, NEBR., August 25, 1899.

MY DEAR SIR: Returning to Omaha after an absence, I find your letter of the 15th instant.

In reply permit me to say that as far as my personal knowledge is concerned, and from all the information I am able to obtain from other officers of this company, the Standard Oil Company has at all times since the passage of the interstate-commerce act evinced the strongest disposition to cooperate heartily with the railroads to the extent of paying fair and reasonable rates for transportation of all of its products. I am unaware that the Standard Oil Company has been in any manner afforded lower rates of freight than the tariffs open to and offered for the carriage of like products for any other shippers of oil over this company's lines.

Yours, truly,

HORACE G. BURT, President.

Mr. HOWARD PAGE,
Standard Oil Company, New York City.

[Northern Pacific Railway Company, office of the president, St. Paul, Minn.]

NEW YORK, August 23, 1899.

DEAR SIR: In reply to your favor of August 15, I take pleasure in saying that so far as the Northern Pacific road is concerned it has not in any way allowed you any rebate or concession on your shipments of oil as compared with any other shipper of oil between the same points; and there is no arrangement or understanding, expressed or implied, by which you receive any concession or consideration not open to every other shipper of the same commodities between the same points upon our line.

The same is also true, so far as I can recall, with regard to the relation of your company with the New York, New Haven and Hartford Railroad, during the time I was connected with the same as second vice-president, in charge of its traffic.

Yours, truly,

C. S. MELLEN, *President.*

Mr. HOWARD PAGE,
26 Broadway, New York City.

[Southern Railway Company, office of the traffic manager.]

WASHINGTON, D. C., August 21, 1899.

DEAR SIR: Replying to your favor of the 15th instant: Since the organization of the Southern Railway Company I have been in charge, as traffic manager, of its traffic interests, including the establishment and promulgation of all rates used by it in the transportation of passengers and freight over its line of railway, and I am prepared to say, unhesitatingly and without qualification, that the Southern Railway Company has at no time given to the Standard Oil Company, or any of its representatives, any lower rates of freight in the carriage of shipments made by that company over our rails, either by direct tariff, refund, or otherwise, than to any other shippers of similar commodities.

Our rates, as issued from time to time, are published and filed with the Interstate Commerce Commission, and with the several commissions of States traversed by the Southern Railway, and the Standard Oil Company has in no instance been given the benefit of anything less than the rates so published and filed with these commissions, and which are the same figures as are charged all other shippers of petroleum and its products.

The policy pursued by the Southern Railway Company is to treat all of its patrons alike, and to fully observe its obligations under the law, and this policy applies as well to shipments of petroleum as to other classes of freight between points on our line.

Yours, truly,

J. M. CULP, *Traffic Manager.*

Mr. HOWARD PAGE,
26 Broadway, New York.

[St. Louis and San Francisco Railroad Company.]

ST. LOUIS, MO., August 25, 1899.

DEAR SIR: Absence from home has prevented an earlier reply to yours of the 15th instant.

Since the passage of the interstate commerce law there has been no time that the Standard Oil Company, or any of its subordinate companies, have enjoyed any lower basis of rates on the business handled by our line than that which has been charged all other oil companies doing business with us. This statement is made absolutely, and without qualifications of any kind or character.

In all of our dealings with the Standard Oil Company we have found it to be the rule that they have never in any instance asked us for any lower basis of rates than was enjoyed by any other company.

Yours, very truly,

D. B. ROBINSON, *President.*

HOWARD PAGE,
Standard Oil Company, New York

[Southern Pacific Company. Office of the third vice-president.]

SAN FRANCISCO, *August 23, 1899.*

DEAR SIR: I am in receipt of your letter of August 15, in which you refer to the Industrial Commission which recently met in Washington, and before which appeared a number of oil producers and refiners, who testified generally that it was their belief that the railroads of the United States were giving the Standard Oil Company and its interests many advantages on its shipments of petroleum and its products as compared with those of other oil shippers.

I respond to your invitation to state the facts bearing upon this question in its relation to the Southern Pacific Company, not only because I believe the Standard Oil Company is entitled to it, but I believe that it is my duty to my own company and to the railroad interests of the United States that these facts should be published.

Since the passage of the interstate commerce law, the Standard Oil Company has not solicited nor received from the Southern Pacific Company any lower rate of freight for the transportation of oil or of the products of petroleum, or anything else in which the Standard Oil Company deals, than the lawful, published tariff rates, which at the same time were given to every other shipper of like commodities for similar and contemporaneous service, nor has the Standard Oil Company, in its use of the transportation lines of the Southern Pacific Company, employed any device such as misrepresentation of the contents of packages or cars or under-billing in weights in order to avoid the tariff or to gain advantages over its competitors. I say that the Standard Oil Company has not employed these devices because it has not been detected in any such attempts, and our system of inspection has been such that I do not believe such attempts could have escaped detection. In other words, according to my observation and experience, and I have full knowledge of its transactions with the Southern Pacific Company, the Standard Oil Company has obeyed the law in its spirit as well as letter.

Yours, truly,

J. C. STUBBS,
Third Vice-President.

MR. HOWARD PAGE,
Standard Oil Company, 26 Broadway, New York.

[The Lake Shore and Michigan Southern Railway Company.]

CLEVELAND, OHIO, *August 17, 1899.*

DEAR SIR: Replying to your favor under date 15th, relating to rates charged Standard Oil Company on traffic as compared with charges on similar traffic from other shippers.

The Lake Shore Company does not now, and has not heretofore, so far as can be ascertained from the records for a period of years, charged the Standard Oil Company any less rate per hundred pounds on its property, whether oil or products, in tanks or barrels, carloads or less, than charged to the trade in general on such property; in other words, the Standard Oil Company has not received any lower rates on the vast traffic handled by that company than other shippers of the same commodities, regardless of quantity.

I would further state that the Standard Oil Company, nor its representatives, have at any time asked that we give them any form of concession, but, on the other hand, have insisted that the full authorized tariff rates be charged on its shipments, and that all other shippers of similar commodities be treated likewise.

The conditions in that respect do not differ from the practice during the time I was connected with the Chicago and Northwestern Railway, as the Standard Company insisted then, as it does now, on application of the tariff rates on all shipments of petroleum and its products.

Very respectfully, yours,

W. H. NEWMAN, *President.*

MR. HOWARD PAGE,
Vice-President Standard Oil Company, New York City.

[New York Central and Hudson River Railroad Company, Grand Central Station.]

NEW YORK, August 17, 1899.

DEAR SIR: Referring to your letter of the 15th instant, you may state explicitly, for this company, and also for the Lake Shore and Michigan Southern Railway Company, of which I was president and am now a director, that no discrimination in the matter of rates has been, since the passage of the interstate law, extended in favor of the Standard Oil Company over either of these lines. So far as my knowledge goes, no application has ever been made by any of the officers of the Standard Oil Company for any discriminating rate.

Yours, truly,

S. R. CALLAWAY, *President.*

Mr. HOWARD PAGE,
The Standard Oil Company, New York City.

[Pennsylvania Railroad Company, General Office.]

PHILADELPHIA, August 28, 1899.

MY DEAR MR. PAGE: In reply to your inquiry, in which you call my attention to statements in the newspapers relating to the inquiry of the Industrial Commission, in which statements witnesses say that the railroad companies pay rebates to the Standard Oil Company and permit preferences by under-gauging tank cars and by paying fictitious prices for oil supplies. I beg to say that if said assertions are meant to apply to this company, in its relation to the Standard Oil Company, they are wholly groundless and without foundation in fact.

Yours, truly,

W. H. JOYCE,
Freight Traffic Manager.

Mr. HOWARD PAGE,
#6 Broadway, New York City.

NO PREFERENTIAL RELATIONS SINCE 1887. DISCRIMINATIONS INJURED THE STANDARD.

Q. (By Mr. SMYTH.) You state very plainly that there were no rebates or advantages in rates given to the Standard Oil Company. Have you been given any advantages with reference to quicker movement of freight—immediate dispatch?—A. None that I am aware of.

Q. You have not asked for any?—A. We have not asked for any. I do not know of any such preferential arrangements.

Q. (By Mr. JENKS.) Is this a general statement you make that covers the entire period since the passage of the interstate commerce law?—A. Yes.

Q. That the Standard Oil Company has in no way had any preferential relations in freights?—A. That is my answer.

Q. Preferential relations would seem to cover it? With reference to the period immediately preceding that, you state that before that time for some years the freight rates to all large shippers were made by special contract, and that you did have special rates then?—A. Yes.

Q. Did I understand you to say further that so far as the Standard Oil Company was concerned the prices to consumers were based upon freight rates in part, so that consumers received the benefits of any benefits you had?—A. I make that statement very broadly.

Q. You make that statement very broadly, then, that the Standard Oil Company did not receive any benefit in preferential rates?—A. On the other hand, I think the old system in vogue among the railroads prior to the passage of the interstate-commerce law was altogether contrary to the interests of the Standard Oil Company. I repeat again that the strongest evidence of that lies in the statement that I have made here, that the greatest prosperity has come since the passage of the interstate-commerce law.

Q. (By Representative LIVINGSTON.) In your answer a moment ago you said, "Not in any way covered by interstate-commerce law."¹ Are you getting rebates in any way not covered by this law?—A. We are not. There may be local shipments, as between some points within a State where tariffs are not issued, that I am not familiar with at all,² but not to my knowledge in any way that would

debar any other shippers in the same business, if there was another shipper there, having the same thing.

Q. There is some specific testimony that in some place on the Pennsylvania Central, between two given points, the charge on a tank of oil was \$1.80, and that the Standard Oil Company got, or the railroads gave back, the 80 cents and put the \$1 into their treasury, and with the independent company kept the whole \$1.80.—A. I do not know of any such case.

Q. Would that be a violation of the interstate-commerce law?—A. If within the State it might not be; but I have never heard of any such case as you say.

Q. You say they charge them all the same rates?—A. Every shipper could have had the same thing. To my own knowledge I do not know of the case you specifically refer to.

Q. (By Mr. FARQUHAR.) Are there not many railroads not under the interstate-commerce law, whose lines are within a State, and which are not in the interstate-commerce business?—A. There may be, but I do not know. I do not know, on our part, of any arrangement that would be exclusive in connection with any such railroad, if there is such.

Q. (By Mr. JENKS.) Have you any further reference to make to this freight question?—A. I think that is all.

Q. (By Mr. KENNEDY.) In one of these letters your correspondent spoke of your policy in refusing rebates. Have any of the railroad companies offered the Standard Oil Company rebates in consideration of securing their business?—A. Well, that would be a very difficult question for me to go into. That the Standard Oil Company during the past 10 or 11 years, since the passage of the interstate-commerce law, have not secured large amounts of rebates is true; but that they may have been offered rebates at times is undoubtedly true; but I have no specific cases to state. It is one of our duties to keep looking after our competitors a little bit, and we are so shining a mark we could not if we were so disposed, but we would not, even if we could and if we were desirous, which we are not.

Q. (By Mr. SMYTH.) You state positively that you did not accept them in general and have not accepted them?—A. We have not and do not expect to accept them.

Q. (By Mr. JENKS.) Your statement applies also to your shipments within a State?—A. Yes; and I speak of them in a general way—that we have no rates that would debar any other shippers from the same basis.¹

Q. (By Mr. FARQUHAR.) Under the old rule of special contracts, is it or is it not a fact that the Standard or any other great company never needs to solicit special contracts from great roads, but that the railroads, competing among themselves, offer the shipping contracts and then cut below their original contracts themselves?—A. Unquestionably.

Q. That was the character of all traffic business before the interstate-commerce bill?—A. It was.

Q. (By Mr. SMYTH.) That was proved by the case of the Pennsylvania Railroad you have spoken of when you shipped by the Erie Canal? (Question not answered.)

Q. (By Mr. PHILLIPS.) Do we understand you, Mr. Archbold, that large shippers never solicited low rates—that they were always solicited on the part of the railroads?—A. I answered that question by saying that a business as large as ours is sought for by railroads. I do not say other shippers do not solicit rates; I have no doubt they secure them.

Q. (By Mr. JENKS.) In one of the letters you read a statement was made to this effect—that the Standard Oil Company, by not asking for rebates and adhering strictly to the established or published freight rates, had aided in keeping the freights up. Is it your opinion that the railroads, generally speaking, feel that the Standard Oil Company is aiding them in keeping their freights up, so as to make them good paying railroads?—A. That is true, and the railroads will say so if they are frank enough to say so. Any of you who have contracts with the great railroads in this country, if you will talk with them on that subject, will find that to be the case.

Q. (By Mr. PHILLIPS.) How will keeping the rates up affect the general public? Is that in their interest?—A. It is to the interest of the general public to have a uniformity of rates under the interstate-commerce law, as the public consider it.

Q. (By Mr. SMYTH.) You are in favor of the interstate-commerce law?—A. I am, most decidedly.²

Q. (By Mr. RATCHFORD.) Mr. Archbold has made himself very clear, I think, on the question of rebates on the shipments of the Standard Oil Company. We have received specific testimony to the effect that the Standard Oil Company received rebates from the shipments of other companies. What do you know of that?—A. I will treat on all that matter later if you will allow me.

¹ See p. 774.

² See p. 593.

THE CONSUMERS GOT ALL REBATES AND MORE.

Q. (By Mr. PHILLIPS.) You stated, if the Chair remembers, that since the passage of the interstate-commerce law your profits have been greater than they were prior to that. Now, was that due to the passage of the interstate-commerce law, or on account of the larger business and less competition?—A. Well, I think that one of the causes—a number of causes may have combined in the growth of the business—but one of the causes is the better settled condition of business incident to the passage of the interstate-commerce law. I think that my assertion that the consumer was given cut rates of freight is not only true, but that the effect was greater than I have stated it; for, in the strain, the anxiety, that the manufacturer was necessarily under lest his neighbor, his competitor, might get a lower rate than he was getting, they were always all very anxious sellers of oil. I think that oftentimes the price was made lower than it needed to be because of the belief or expectation that lower rates of freight were either prevailing or might prevail. I think the business was sacrificed on that account.

Q. But you do not wish to leave the impression that your greater income or greater profits are due to the interstate-commerce law?—A. Oh, no; business has grown.

Q. And competition has not been so great?—A. Oh, I think competition has been quite as vigorous.

PRICES OF REFINED OIL IN NEW YORK, AND OF CRUDE, IN 1896.

Mr. Lee made the statement,¹ as to the course of prices for domestic refined oil for New York, or Greater New York, during the period from March, 1896, to July, 1898, I think it was, that the Pure Oil Company, the company with which he is related, having made its advent in the market of Greater New York in March of 1896, found the price which we were charging to the people of that great metropolis to be 9½ cents a gallon, and that because of their advent and of their supposed competition we dropped the prices on them until in July of the same year it was 5½ cents. He spoke of this not only as illustrating our method of attack as against the competitor, but, I believe, claimed some credit from the people of Greater New York to the Pure Oil Company because of their advent there. I will read from the list prices of the period named as they prevailed at the time and show that, to all the trade in Greater New York and its vicinity, in March, 1896, our selling price averaged for the month 7.98 cents, as against his statement of 9½ cents.

Q. In that immediate territory?—A. In that immediate territory.

Q. (By Mr. PHILLIPS.) Was that immediately before or at the time of the advent of the Pure Oil Company?—A. Their advent there was in March, according to his statement.

Q. Can you give us the statement of the month prior to that?—A. I made it only for the period covered by him in his testimony. I can give you the other. And I will also quote from that statement as showing the relation between the two—the crude-oil prices as they prevailed. In March the average price of crude oil per barrel of 42 gallons at the wells was \$1.42. In April our price was 7.81 cents, the average price of crude oil being \$1.22. In May the average price of refined was 6.94 cents, and the average price of crude was \$1.14. In June the average price of refined was 6.72 cents, and the price of crude \$1.15. In July, the average price was 6.28 cents, and the price of crude \$1.09. It is only an illustration of the carelessness which marks the statements which our competitors make, with reference to any feature of the business in which they want to make a point.

Q. (By Mr. PHILLIPS.) One question there; did you sell any oil in March as high as 9 cents?—A. I give the average prices.

Q. Was there any other selling price?—A. I should say not, because there could not be an average of that.

Q. It could be sold at 10 or 11 cents in the beginning and 3 or 4 cents at the close?—A. The following month would show that.

ANY GREAT VARIATION IN PRICE IN ANY LOCALITY WOULD BE SPEEDILY KNOWN AND WOULD BE DISHONEST.

Q. (By Mr. JENKS.) You give these average prices for Greater New York. The statement has been made at different times that it is your habit in dealing with the customers of competitors to find out the individual customers and make special cut rates to them. It might easily be, therefore, that your average price would be what you have given, and that to a good many special customers, with

¹ See p. 265. See also Mr. Westgate, p. 335.

whom the Pure Oil Company was trying to deal, it would be 5½ cents?—A. I can not make any definite statement, but I would reply that it would be utterly impossible for us to have any great variation in price to any special customers in any locality. It would be speedily known, and it would be dishonest, and I want to say that dishonesty will not win in any business. We have got our hold on the trade in 30 years because we treated the trade honestly and not dishonestly.

Q. You would be safe in saying that in March, 1896, no oil was sold to any customer for less than 6 or 6½ cents?—A. Oh, not for less than 6½.

RAILROADS V. U. S. PIPE LINE—NO FIGHT OF THE STANDARD'S.

Mr. Lee makes a statement regarding the difficulty of his pipe line, the United States Pipe Line, in crossing railroads and securing right of way to the seaboard, and makes a general statement implying that we have instituted and carried out great obstruction to their progress.¹ I want to make general denial of this statement. We have not at any time had any different relations with reference to any obstruction or effort at obstruction of their line than would attach to any competitor in a line of business engaging against another. With reference to the special features referred to by Mr. Lee, and which he attempts, by implication at any rate, to connect us with, in the crossing of the Delaware and Lackawanna Railroad in New Jersey, I want to say that the contention in that respect was entirely at the hands of the railroad, and not at our hands in any possible respect. They went there surreptitiously and endeavored to force their way, on a Sunday, over a line where they had no right, either by private purchase or by public franchise. Having accomplished the crossing of the road in that surreptitious way, they stationed there an armed force to prevent the railroad company from asserting its rights and taking out their lines, and kept that force there for a long period. The railroad went about it in a peaceful way, in the courts, and the final result is that the decision is against the line, after the case has been carried up finally to the supreme court of the State, and they must, of course, remove their line. But any statement on Mr. Lee's part, or any other witness, that we had anything to do with that matter, or with reference to any of the difficulties interposed in their progress to the seaboard, is absolutely false.

Q. (By Mr. PHILLIPS) Did your company own in fee simple the tract of ground, and was a roadway reserved by the landholder? Was that purchased by them?—A. It was not my case, and I am not conversant with the details regarding it. The fact that after having been fought in the newspapers and in the courts for a term of years, seeking the sympathy of the judges as well as the public, the supreme court of the State has ruled against them is the best evidence, I think, that the right was against them. I want to say with reference to our pipe lines, that we never endeavored to cross any man's right of way without first seeing him about it.

Q. Still did they not go through the railroad on their own ground, and was not this the final decision, that they had not the right to lay a pipe line where a man had reserved a right of way under the ground?—A. It was not only decided that they had no right there, but they were ordered to remove.

THE STANDARD NEVER HAD SO LOW A FREIGHT RATE.

I want also to present a statement showing the rate of freight which Mr. Lee's United States Pipe Line enjoys from the Central Railroad of New Jersey on the crude oil and refined oil also transported over that line from the terminal point of their pipe line to the seaboard; it being a lower freight, I think, than the Standard Oil Company ever had for an equal distance at any time in the history of their business. (Witness here reads a letter from the Central Railroad of New Jersey.)

Central Railroad of New Jersey's rate to United States Pipe Line, Hampton Junction, N. J., to Bayonne, N. J.

[Distance, 52½ miles; mileage, ½ cent each way, equals 78 cents per car; empty car returned free. Weight per gallon, crude oil, 8½ pounds; refined oil, 8½ pounds.]

	Rate per barrel of 50 gallons.	Actual weight per barrel of 50 gallons.	Rate per 100 pounds.	Rate per car of 120 barrels.	Rate per car, less mileage.
Crude ...		333	0.0808	\$8.20	\$7.42
Refined .	.0769			9.22	8.44

¹ See p. 267. Compare also the testimony of Mr. Phillips, p. 668; Mr. Emery, pp. 650-655; Mr. Boyle, p. 486.

The above shows that this oil is being carried 52½ miles in tank cars, averaging 120 barrels or 30 tons to the car, at a gross average revenue to the railroad, on the crude and refined oil, of \$7.98 per car, and out of this revenue the railroad returns the empty car free.¹

The contract between the railroad and the pipe line is for 100 years from January 1, 1894, and provides for various rates from different points along the line of the Central Railroad of New Jersey to tidewater. The oil is now (and has been for three years) shipped from Hampton Junction, and the above rates are being paid.

The contract further provides the right upon the part of the Pipe Line Company to abrogate the arrangement upon 5 years' notice at any time during the 100 years. The railroad has no right to cancel, excepting for violation of lease.

Q. (By Mr. SMYTH.) The lease is on record?—A. Yes; it would seem that if there ever was a preferential contract, that is one of them.

Q. (By Mr. JENKS.) You say this is on record?—A. It is not a lease; it is a contract.

Q. (By Mr. PHILLIPS.) You do not assume to say that it is an illegal contract?—A. I am not a lawyer; I am not passing on the legality of the question.

EFFORTS TO BUY OUT THE INDEPENDENTS—ADVANCES FROM THE OTHER SIDE.

Mr. Lee claims at great length and with great particularity that we have at different times done our best to buy them out, offering them large inducements in the way of extraordinary prices for their properties, and have done our best to get them out of the business by purchase.² I want to say that any approaches on that line that have been made have come from Mr. Lee's side to us; and I want to say, now that he has forced the question, that approaches of that kind have been made by pretty nearly every person in connection with his company, every prominent person in connection with his company, at various times, including not only Mr. Lee, but Mr. Phillips, Mr. Nichols, Mr. Murphy, Mr. Jennings, Mr. King, and Mr. McDonald, and, as I said, pretty much every gentleman prominent in the affairs of that company. I want to say further that we have persistently declined the considering of any such combination with them on the ground, first, as we have said to them at various times, of its illegality; and, second—and this would have been enough in itself—our unwillingness to enter into any business relations with them because of our lack of faith in them. We have had experience with the gentlemen, different ones of them, at different times, and we should have known if there had been no legal difficulty in the way of such combination that it was impossible for us to enter into any such relation with them.³ I am making the broadest possible denial to Mr. Lee's statement that we have gone after them with reference to their purchase or combination; and I am making in return a statement that they have up to this very day, within the period of your sitting here, approached us on this question.

Q. (By Mr. PHILLIPS.) Do you mean to include all of them?—A. I mean to include the gentlemen I have named and others I have not named.⁴

Q. Have any persons or any agent or gentleman from whom you bought property approached individual members, coming direct from your office, to solicit the selling of an interest to you?—A. No; I say broadly that the approaches have been made from your side, and the answer is as broad as I can make it.⁵

Q. You have no knowledge of a person coming from your office after soliciting you to make a transaction with these people?—A. I have knowledge of persons coming to our office who came there at the instance of different people in that connection, to raise a question about it; you came there—many of them—if that is what you mean.

THE INDEPENDENTS PROPOSED A DIVISION OF THE BUSINESS.

Q. Was not that to have a stop put to the litigation that was going on in New Jersey, and to have a right to live as a company?—A. I do not know what you mean by that.

(By Mr. ROGERS.) May I have the privilege of prompting Mr. Archbold?

(By Mr. PHILLIPS.) Certainly, you have the privilege.

(By Mr. SMYTH.) I think so, certainly.

(By Mr. PHILLIPS.) Any information of that kind is entirely admissible.

(After talking with Mr. Rogers.) A. I answer broadly again, after conference with Mr. Rogers, that we have never sent anybody for any purpose.

¹ Compare Mr. Phillips, p. 601; Mr. Emery, p. 663.

² See pp. 270, 271. Compare Mr. Westgate, pp. 270, 282.

³ Compare the testimony of Mr. Phillips, pp. 593, 594.

⁴ See Mr. Phillips, p. 594.

⁵ See Mr. Westgate, pp. 270, 271.

Q. (By Representative LIVINGSTON.) Those propositions, were they written or verbal?—A. Oh, no; they were all oral. You do not get that company into making written propositions; they are too crafty.

Q. (By Mr. PHILLIPS.) Do you say, Mr. Archbold, that you were approached by a large per cent of those persons in an unfair and unjust way?—A. Oh, I did not say so; I do not say so. It may have been entirely fair and just in their view; but their proposition, in our view, was illegal and not to be entertained.

Q. Was not that after you had purchased a large amount of stock, a controlling interest, in the Producers' Oil Company, Limited, and also purchased a large amount of the United States Company's stock, and was it not to make some fair, honorable, and just contract that would leave these companies the privilege of living and doing business years ago when they were very badly crippled by opposition from the Standard Oil Company, by the lowering of prices of oil in Europe and other places?—A. Using your own case, Mr. Phillips, as an illustration—and you can hardly find fault with that—I do not think that at the time you came to Mr. Rogers or myself you raised any question whatever with reference to any possible minority ownership in any of these companies. What you and they proposed was simply that a division of the business be made, so that you would have a percentage and we a percentage, in order to cooperate in the marketing of the oil and in all that pertained to the welfare of the business; is it not so?¹

Q. Was it not to get the privilege of handling the capacity of the lines then existing, and to cease further opposition, and to do away with the opposition which was very badly crippling these companies; and had you not at that time lowered the price of oil in Germany, so as to make it entirely unprofitable to the refiners? They lost very large sums of money, and you had bought out a per cent of the refineries that were engaged in these independent lines?—A. Nothing of the kind existed. Our business was entirely satisfactory, was on a profitable basis in Germany and elsewhere, so far as I am aware; and we had no special desire that a combination should be made, as is evidenced by the fact that we were unwilling to entertain it. And I now further state that we were unwilling to entertain it not only because of its illegality, but because of our lack of faith in the individuals connected with it. There can be no question about that.²

Q. Well, do you know that at that time a Mr. Poth was managing the business of the independent refiners in Germany? Did he not sell out to the Standard Oil Company the tankage procured in Germany, so that these companies could not do business? Did they not have to reestablish connections and send agents there, and build tankage in which their oil could be received and distributed in Germany? For a number of years, did not you put the prices there so that there was no profit? And during that period did not you buy out some of the largest refineries that were connected with these companies?—A. My answer, Mr. Phillips broadly is that none of these questions have anything to do with this company, with that proposition. You came to us seeking these propositions. That is my statement and you dare not deny it. That is true, every word of it.

CHARACTER OF MEN PROMINENT IN THE STANDARD.

In answer to the query regarding gentlemen prominent in the Standard Oil Company, Mr. Lee saw fit to speak of them in a most depreciatory way.³ It is not amiss for me to ask these gentlemen to think for a moment of J. D. Rockefeller, William Rockefeller, H. M. Flagler, William G. Warden, Charles Pratt, J. W. Bostwick, Benjamin Brewster, Henry H. Rogers, W. H. Tilford, and James Magee, and I might mention scores of others prominent in the Standard Oil connection, whose business genius and boundless energy have been given to the building up of the petroleum industry. Will you think of these gentlemen in comparison with the men who have appeared here to defame them? I might go further and speak of the beneficent use these gentlemen are making of their substance, but they require no such eulogy at my hands.

In answer to the query as to what would be the effect if the Standard Oil Company were abandoned or dismantled, Mr. Lee said that the prices of refined products would go lower all over the world.⁴ I will not occupy your time by any lengthy argument in refutation of this most absurd proposition, that if we were really out of existence, and put out of existence that which represents to-day two-thirds or three-fourths of the active capital, energy, and equipment employed in the manufacturing and distribution of oil, the prices would go lower; but I will call your attention to what Mr. Lee says in practically the same breath, as showing his utter inconsistency. He gives it as his opinion that if the Standard

¹ Compare the testimony of Mr. Phillips, p. 598.

² Compare Mr. Phillips, pp. 598, 594.

³ See p. 271, under the heading "Practical experience."

⁴ See p. 272.

were out of the way prices would be lower, and in the same breath testified that he wanted them out of the way because for 5 years he, in his own business, has not made a fair profit. And the utter inconsistency of his testimony is shown by this question and answer: "Q. (By Mr. NORTH.) What do you call a fair manufacturing profit?—A. They would be entirely satisfied to do this business at 10 cents a barrel on crude oil that runs through the refinery; I think the Standard Oil Company makes \$1.50 to \$2 on every barrel that goes through their works."¹

If it is true that the Standard Oil Company make \$1.50 to \$2, and they can not make 10 cents, they are not good people to serve the public.

REFINED OIL FROM OHIO CRUDE AS GOOD AS THAT FROM PENNSYLVANIA.

He says that the quality of Standard oil has deteriorated because of using Ohio crude, and that the reason is that Lima oil contains arsenic and sulphur.² I want to say of the gentlemen connected with the companies represented by Mr. Lee, that they have from the very beginning of the great production of oil in Ohio and Indiana, because of their small interest in competition with it in the Pennsylvania region, done their very utmost to depreciate and discredit the standing of the products of Ohio oil in the markets of the world. They came to New York, and before the New York Produce Exchange made a very vigorous effort to have the exchange rule that refined oil produced from Ohio crude should not be a good delivery in the markets of the world. Their course has been utterly indefensible in respect to the great interest involved in those States, and nothing but the most active effort on our part has saved to those States the markets which are to-day giving them the profit that is inuring to them in the production of the oil in those States. And I want to say that this is in spite of the fact, which they must have known or could have known, if they had any intelligence on the subject whatever, that after the sulphur element in the Ohio crude was conquered—and it was a very difficult work to conquer it, which we applied ourselves to successfully—the average of the refined oil produced from the Ohio crude has been and is quite equal to that produced from the Pennsylvania crude. That is now admitted by all buyers and in all markets, and it is known to consumers where they know anything about it at all.³ The talk which the agents of the Pure Oil Company and which the Pure Oil Company have made, and continue to make, as to the superiority of their products over even that which we make from the Ohio crude is entire nonsense; it is not true.

I want to call attention to Mr. Lee's testimony, given somewhat in detail, indicating that we obtained higher prices for oil abroad than we do in this country.⁴ If that is so—and I do not admit that it is so, but admitting for the sake of the argument that it is—it is a pretty good argument that the consumers in the United States are being very well treated by the Standard Oil Company.

FOREIGN GOVERNMENT CONTROL—POPULATION AND OIL CONSUMPTION OF GERMANY AND FRANCE.

He makes a long talk about foreign governmental control,⁵ which is about as silly as anybody ever listened to, and I will not take the time to comment on it.

He makes a statement regarding the comparative population and oil consumption of Germany and France, and I refer to this statement only to show how exceedingly careless he is in respect to statements made before this body on matters in which he seeks to influence your minds and that of the public. (Reading.)

"Q. Abroad, where the oil of the independent refineries goes, which is not of such a grade as can be consumed in the States here, does it come into competition with the oil sent there and sold by the Standard?—A. Yes; the Standard is doing a very large business in Germany. Germany is the largest oil market in the world; although the population is about the same as France, it uses probably twenty times as much oil as France. I think I am not far wrong in that."⁶

The relative population of Germany and France, by the last census of 1891, was: German population, 49,421,803; French, 38,343,192. The consumption of oil in the year 1896, the last year of record, in barrels of 50 gallons, was, in Germany, 3,357,397, and in France, 1,683,146. Mr. Lee said it was twenty times as great in one as the other, and that their population was about the same. I submit this statement to you.

¹ See p. 273. See also p. 277. Also Mr. Phillips, p. 602.

² See p. 273.

³ Compare Mr. Emery, p. 624; Mr. Gall, pp. 672, 681.

⁴ See p. 276. Compare Mr. Emery, pp. 616, 631, 632, and chart of prices in introduction.

⁵ See pp. 276, 277. See also Mr. Emery, pp. 616-618.

⁶ See p. 273. Compare also Mr. Emery, p. 623.

PRICES OF COAL AND MINERS' WAGES.

He makes the statement that the Standard fixes its own price at which it buys coal, and is thus enabled to oppress not only labor in its own line of business, but also the coal labor.¹ The statement is entirely and absolutely untruthful. The Standard buys its coal on competitive offerings, and if the price is so low as to compel low prices for labor it is the result of competition.

He claims that prices were fixed by the South Improvement Company,² when he knew well that the South Improvement Company never did any business.

PRICES OF CRUDE OIL.

He goes into an elaborate argument to prove that the prices paid for crude oil have been unremunerative to the producer.³ This charge, which is more specifically, and I may say hysterically, made by Mr. Lockwood, I will reserve for fuller answer until I reach Mr. Lockwood's testimony.

THE STANDARD'S MANUFACTURE OF CANS AND CASES.

In answer to a query Mr. Lee says that the Standard are largely supplying Eastern markets with Russian oil and making their tin cans abroad.³ I want to submit, gentlemen, a series of statements on this interesting subject. Our business in the canning of oil, for the markets where the oil must be put into tin cans and packed into wooden boxes for the market, has been a very important feature from the beginning. It is a business in which we have perhaps expended as much or more industry, in keeping and maintaining the markets, as in all the other sections of the world combined, because in those markets we have found our great competitor, Russia, most active. In answer to Mr. Lee's statement that we have practically abandoned this business, and that we are buying Russian oil in bulk and making tin cans abroad in which to put it and send it to the market, I present this statement, being a memorandum of our manufacture of tin cans for the 5 years beginning with the year 1894 and ending with 1898:

Number of 5-gallon cans manufactured, five years, 1894 to 1898, inclusive; also cases.

Years.	Cases.	Cans.	Equiva- lent in boxes of tin plate.	Years.	Cases.	Cans.	Equiva- lent in boxes of tin plate.

¹ See p. 273.² See p. 279.³ See p. 282.

About 2,500 men are steadily employed in this industry in the United States.

In 5 years we manufactured in the United States 228,116,660 tin cans, which were packed in boxes holding 2 tins each, the requirement being in boxes made from our native pine. The boxes were made mostly from Canadian pine, but made in this country, lumber being brought here and the labor being employed here. This business involved the use of 111,558,890 wooden boxes, holding, as I say, 2 cans each. And we used in this manufacture 4,590,285 boxes of tin plate. The only business that we do outside of the United States in the manufacture of tin cans is where we are compelled to do it by the exigency of freight; in Mexico City a small business, in Vera Cruz a small business, and a small business in Tampico, Mexico, also, the amount of which is entirely inconsiderable. We also do a little canning—a very little—in the exportation of bulk oil and the manufacture of tin cans in Italy, at Venice and Savona, where the tariff and customs make it necessary that we do the canning there. And there are employed in this great industry, at the minimum, in steady, remunerative labor, 2,500 good Americans.

RUSSIAN AND AMERICAN EXPORTS OF OIL IN CASES.

I present here also a statement made up to show the exports of refined oil in cases from Batoum, Russia, from 1894 to 1898, inclusive. I present this statement for the purpose of having you understand something of the menace which attaches to this business at the hands of this great Russian competitor. Our aggregate in all this great business with the East, which we have made such a fight to retain for the American petroleum industry, is now 109,000,000 cases for the 5 years, as against Russia's 53,000,000; but for the year 1898, perhaps I should read to you, as showing the change in the matter, their shipment was 10,728,608, as against our 22,479,745.

I also present a statement which you, gentlemen, at your leisure, will find great interest in studying, showing the enormous exportation of this particular packing of oil in tins and cases to the markets of the world. It is a business, as I say, which is competed for by these foreign countries most vigorously, on which our hold is uncertain, and which requires the utmost vigilance and encouragement on the part of everything pertaining to the business from America:

Exports of refined oil in cases from Batoum, Russia, during years 1894 to 1898, inclusive.

Q. (By Mr. SMYTH.) Is there any competition from America?—A. There is practically no competition from America. I do not know but these gentlemen do some small amount of business. It is almost inconsiderable from the fact that we do not even know that they are doing it.

Q. The principal competition comes from Russia?—A. The principal competition comes from Russia, and now from the far East, as I will explain a little further along. There is getting to be a large production of oil, especially in the Dutch East Indies, but I will go into that in another place.

I may add, gentlemen, just by way of a word of explanation, that I think in all those countries to which we send oil we have our own active American agents on the alert for the American oil and the American industry; and this gentleman comes here and states that we are not doing this business.

CONDITION OF THE OIL REGION.

In answer to the query, or in pursuing the argument, rather, that the Standard had so governed prices for oil as to have made it an unremunerative business in the oil country, Mr. Lee made a most astonishing statement, that the counties producing oil are not as well off as though they had never produced a barrel of oil.¹ That section prior to the opening of the oil industry was a comparative wilderness, noted, if it was noted at all, principally for its hemlock and buckwheat. The oil production has made it a world-renowned center of marvelous activity. It has taken there a population of tens of thousands, I may say hundreds of thousands, of prosperous, happy, contented people, the like of which probably does not exist in the same territory in any place on God's footstool. The oil production has built towns and cities and railroads. It has given employment—steady, remunerative employment—to thousands of American workmen through all this period; and for a man to stand up, who comes from that section, with a knowledge of conditions as they exist there, and make such a statement, is, as I say, utterly incredible.

CAPITAL, PROFIT, STOCKHOLDERS, OF THE STANDARD.

Q. (By Representative LIVINGSTON.) In connection with this statement you have just made, will you give us the amount of capital invested in the Standard Oil Company, and a list of all the stockholders, and the profits on that investment?—A. The figures with reference to all the questions are being made up, as Mr. Jenks knows.

Q. A list of the stockholders?

(By Mr. JENKS.) A list of the stockholders, I may say, was not asked for in the general schedule.

Q. (By Representative LIVINGSTON.) Well, I am asking for it now?—A. I can not answer as to that.

Q. (By Mr. PHILLIPS.) Would you be willing to meet the commissioner's request and furnish a list of the Standard's stockholders in the trust as it formerly existed, and the combination as it now exists?—A. I could not answer now without further conferring in reference to that statement.

Q. (By Representative LIVINGSTON.) Will you promise the commission that you will confer with the authorities, and if these things are not inconsistent and impracticable, you will furnish them?—A. If they are not inconsistent and impracticable, I should be glad, of course, to give any statement that might be asked.

Q. (By Mr. A. L. HARRIS.) Would not this be the best testimony in refuting the statements made by Senator Lee, to give the taxable property of those countries previous to the discovery of oil and at the present time?—A. I think it would be very interesting.

Simply as an illustration of the point I make of the absurdity of Mr. Lee's statement, I present for your information a statement of the value of Pennsylvania crude oil as compared with that of other States, the total production from the beginning of the industry to the year 1898, inclusive, and figured on a very conservative basis.

¹ See p. 282.

Total production and value of Pennsylvania crude oil, 1859 to 1898, inclusive.

[Barrels of 42 gallons.]

¹ See explanation below. Compare Mr. Boyle, pp. 434, 435.

This table shows during this period, and this is an interesting statement, I am sure, that there has been taken from the oil fields of Pennsylvania 662,048,642 barrels; and that the average for all that period of the prices paid at the wells for the oil is \$1.163, or a total value of \$769,948,397.37.

ROYALTIES TO LANDOWNERS.

Q. (By Mr. SMYTH.) That amount had been paid to the producers for crude oil?—A. This amount has been paid to the producers for crude oil. Now, as has probably been brought out to you in the course of this testimony, the oil-producing business is done largely on a basis of what is called royalty. That is, the operator takes a lease of the land and pays to the landowner, who is usually a farmer in that section, a certain free-royalty interest for the right to occupy and drill the land.

Q. (By Mr. SMYTH.) That right to occupy does not interfere with the agricultural pursuit of the farmer?—A. No; it is held as free as possible from that interference. That royalty right of payment has varied during the history of the business from one-half of the oil found to the present ruling basis of one-eighth, which basis prevails perhaps to-day through the larger part of the

oil-producing country. Of the crude produced one-eighth goes over to the land-owner;¹ and for that he does nothing, as I say, but furnish the surface on which to drill.

Q. (By Representative LIVINGSTON.) Now, will you go further and give us the average profits you have made on all those wells?—A. Now, what I want to say is, that figuring for the whole period that the payment was one-eighth and not the high amount that has prevailed through most of the period, the payment in royalties alone to the people of that section on the oil produced would amount during that period to the sum of \$96,248,549.67.

Q. (By Mr. SMYTH.) You think these counties are worse off than before the oil wells were drilled?—A. If you have traveled through them you will not think so.

Q. (By Mr. CLARKE.) What is the population of that region?—A. It would be a mere guess on my part. Mr. Boyle or Mr. Lee could answer more intelligently than I. I have not lived there for some years; I would say about 850,000.

SOUTH IMPROVEMENT COMPANY.

Again, Mr. Lee refers, in answer to a question by Mr. Jenks, to the South Improvement Company, as though it was actually doing business;² which was not true.

Q. (By Mr. PHILLIPS.) The South Improvement Company did fix rates, did they not?—A. Never to do business.

Q. But they had rates fixed?—A. There was a contract entered into, but abolished before it became operative.

Q. But there was another contract, and is it not in sworn testimony that that contract was in existence only two weeks afterwards, and did or did not the rates fixed by the South Improvement Company prevail after the Standard Oil Company came into existence?—A. I have no knowledge of any relations on the part of the Standard Oil Company succeeding to the South Improvement Company whatever. I have been an opponent of the South Improvement Company, as you well know. I have disapproved of it in theory, and practically disapprove of it to-day. I want to say that the statements that that which was the South Improvement Company is continued in the Standard are not true; if they had been true, I would not have been in it.

THE SHUT-DOWN MOVEMENT.

Mr. Lee refers to the shut-down movement,³ so called. It was entered into at the request of the producers, who alleged they were suffering from low prices incident to a large accumulation of stock. Our relation to it was entirely the result of the urgency of the producers, who were represented by a committee; they expressed the greatest satisfaction with our course. I want to present for your knowledge, in support of my statement in this respect, the testimony of Mr. Thomas W. Phillips, given before the Congressional committee inquiring on this subject in 1888, page 112. I will read the concluding part:

"We are certain that there would have been much bankruptcy in that region had this movement not been made. I will state further, in justice to them, that this was not a movement on the part of the Standard Oil people. It was a movement conceived by the producers themselves. They approached the Standard people in regard to this matter, and after long negotiation, which you have here in testimony, the contract, which you also have, was formulated and signed."

Q. (By Mr. PHILLIPS.) I assert the same thing to-day.—A. That answers Mr. Lee's statement.

Mr. Lee says: "I believe if there had been 50 concerns engaged in the manufacture of petroleum, that just as wide markets would have been obtained for the article, and that while the consumer would not have paid any more for his oil, the producers would have realized better prices, and have had a handsome profit, whereas I think they have not made any profit."⁴

I present here a statement showing in detail the list of oil refineries in the United States, with their capacity, averaging a life to this time, the first of this year, the end of December, 1898, of 14 years, and numbering 66 in all.

¹ See Mr. Monnett, p. 811; Mr. Davis, p. 364.

² See p. 233. Compare pp. 619, 644.

³ See pp. 277, 284, 288.

⁴ See p. 263.

Capacities of outside refineries.¹

Year built.	Name and place of refinery.	Number and capacity of stills.	Total still capacity.	Remarks.
Oil City, Pa.:				
1882.	Independent Refining Co., Limited.	2, 250; 1, 500 1, 600; 2, 700	3, 000	Naphtha plant.
1885.	Continental Refining Co., Limited.	3, 590; 1, 600 2, 250; 1, 500	2, 340	
1887.	Penn Refining Co., Limited	3, 500	1, 500	Do.
1888.	Rouseville, Germania Refining Co.	1, 800; 2, 250	1, 300	Pressing plant.
1888.	McClintockville, Crystal Oil Refining Co.	1, 250; 5, 100	750	
1883; burned and rebuilt 1890.	Reno, Empire Oil Works	2, 500; 2, 250	1, 500	Naphtha plant; pressing plant.
1882.	Franklin, Pa., Relief Oil Works	2, 250; 1, 600	1, 100	
1880.	Petrolia, I. Dougherty	1, 16	16	
1880.	Karns City, Bech Bros.	1, 100	100	
	Norristown, Montgomery Oil Works	2, 100	200	
1887.	Beaver, Beaver Oil Works	2,	120	
1887.	Industry, Scott Oil Co.		50	
1882.	Kendall, Pa.: Emery Manufacturing Co	8, 600; 3, 125	5, 175	Naphtha works, paraffin and tar stills. Make lubricating oils.
1883.	Kendall Refining Co.	1, 150; 2, 100	350	Lubricating and re-fined.
1882.	Eldred, Pa., United Oil Co.	1, 80	80	
Titusville, Pa.:				
1881.	Robert Foggan	1, 250; 1, 350 1, 600; 1, 815	2, 015	Naphtha works.
1885.	American Oil Works	1, 750; 1, 500 1, 500; 1, 280	1, 250	
1888.	Titusville Oil Works	1, 140	920	Do.
1887.	Oil Creek Oil Co.	2, 350; 2, 125	950	Paraffin plant.
1896.	Climax Gasoline Co.	1, 250; 1, 350 1, 350	950	Naphtha works.
1893.	Pennsylvania Paraffin Works.	4, 350; 1, 250	1, 650	
East Warren:				
1888.	Cornplanter Refining Co	2, 150; 2, 100 1, 125; 1, 100 1, 250	975	Filtering works.
1885 and 1889.	Crew-Levick Co.	3, 125; 3, 150	825	Do.
1892.	Seneca Oil Co.	4, 150	600	Do.
1897.	Wilburine Oil Works	1, 500; 2, 300	1, 100	Lubricating works,
1886.	North Warren, Warren Refining Co.	2, 225; 1, 225 1, 200	875	Filtering works.
Clarendon:				
1885.	Tiona Refining Co.	3, 100; 1, 50 3, 100	350	Do.
	Fidelity Oil Works		300	Wax plant.
1894.	Bolivar, Bolivar Refinery	1, 50	50	
Pittsburg, Pa.:				
	Miller Oil Works	1, 1,400 2, 250; 1, 275 2, 500	2, 175	Barrel factory, naphtha works, tar stills.
1890.	Waverly Oil Works	2, 300; 2, 35 2, 40	1, 670	
	Union Oil Works		80	Do.
Freedom, Pa.:				
	St. Clair Oil Co.	2, 40	80	
1879.	Freedom Oil Works	1, 250; 1, 300 2, 50	650	Tar still, naphtha and paraffin works.
Washington, Pa.:				
1890.	Beaver Refining Co.	1, 150; 1, 100	250	
1887.	Leader Refining Co.	4, 200	800	
Coraopolis, Pa.:				
1892.	Pittsburg Refining Co.	1, 250; 2, 200 1, 375	1, 0	
1899.	Penn Petroleum Works.	1, 150; 1, 250	400	
1894.	Murraysville, Pa., Philadelphia Co.	1, 50	50	
Philadelphia, Pa.:				
1881.	Crew, Levick & Co.	2, 80; 1, 500 1, 125	735	
1881.	Delaware Oil Co.	1, 300; 3, 100 3, 200; 1, 250	1, 450	
1877.	Bossard & Wilson.	1, 220; 2, 125	470	

¹ 26 of these refineries are said, in a letter from Scofield, Shurmer & Teagle, of Cleveland, to be, according to their information, either out of business or absorbed by the Standard Oil Company. Mr. Archbold verifies that the list is correct as dated, December, 1898, though some "may not be in operation or may not have been at some given period;" that the Standard is a minority stockholder in the Tidewater Oil Company, New York, but in no way controls it. It will be noted that these two statements are not contradictory.

Capacities of outside refineries—Continued.

Year built.	Name and place of refinery.	Number and capacity of stills.	Total still capacity.	Remarks.
Philadelphia, Pa.—Continued.				
1874.	Philadelphia Lubricating Co	1, 250; 1, 100	350	
Marietta, Ohio:				
1875.	Ohio Oil Works	1, 150; 1, 100	1, 150	
1882.	Marietta Oil Works	1, 600; 1, 300		
1884.	Producers' Refining Co.	1, 225	225	
1893.	Buffalo, N. Y., Crystal Oil Works.	1, 250	250	
Cleveland, Ohio:				
1883.	National Refining Co.	1, 300; 2, 85	470	Naphtha works.
1883.	Cleveland Refining Co.	3, 75; 1, 110	885	
1873.	Great Western Refinery.	2, 100; 1, 85		
1884.	Merriam & Morgan	1, 65	1, 240	No crude stills; tar and pitch.
Toledo, Ohio:				
1889.	Paragon Refining Co.	4, 400; 8, 500	8, 000	
1895.	Craig Oil Co.	3, 600		
1895.	Diamond Oil Co.	4, 550; 1, 600	2, 800	Tar stills, wax works.
1890.	Walker, Ohio, Manhattan Oil Co.	3, 400; 2, 400	2, 000	
		12, 600	7, 200	Do.
Florence, Colo.:				
1887.	Florence Oil Co.	2, 600; 5, 100	1, 700	
1887.	Western Oil Co.	2, 78; 2, 65		
		1, 75; 2, 78	3, 653	
		2, 500; 4, 250		
		2, 570		
1879.	San Francisco, Alameda Refinery.	1, 1000; 1, 200	1, 900	
1898.	Los Angeles, Franklin Oil Co.	1, 400; 1, 80		
		8, 35	200	
1896.	Oelum, Cal., Union Oil Co.	2, 50; 1, 100		
1896.	Puente, Cal., Puente Oil Co.	1, 150; 3, 150	600	
1897.	Ventura, Cal., Ventura Oil Co.	2, 250	500	
	New York:	2, 60	120	
1879.	Tide Water Oil Co.	18, 800; 16, 600		
		12, 650; 17, 600	43, 150	{Have tar and reducing stills.
1899.	Columbia Oil Works.	2, 450; 1, 250		
	Edgewater Oil Co.	4, 650; 4, 700	5, 400	
		7, 400	2, 800	
	Total (66 in all) .		125, 079	
	Total capacity of outside steam stills		19, 825	
	Total capacity of outside tar stills		1, 355	
	Grand total outside capacity		146, 259	

The average time since the above refineries commenced operations is now 14 years.

COMBINATIONS AND LABOR.

Mr. Lee makes a very labored effort to show that trusts and combinations affect labor injuriously.¹ The best refutation possible of this statement is the record of our own experience, the fact being that for all the years we have been engaged in business we have had scarcely any serious difficulty with the vast body of men employed. On the other hand, we assert most positively that, as a whole, there never was a more zealous body of employees than have been connected with our interests. We have been practically without strikes; our labor is well paid and contented in every department, and I submit that our experience in this regard is the best possible proof of the advantage of labor and capital working together on intelligent lines, where the rights of each are fairly considered. I am a firm believer in the right, and, indeed, the duty, of labor to organize, as I am in favor of the combination and organization of capital. Of course it is true that the labor organizations often do very unwise and arbitrary things. They fall frequently into the hands of leaders who are demagogic and lack the qualities of

¹ See pp. 238, 239, 290.

intelligent leadership, and they are badly influenced also by political demagogues, whose sole stock in trade is often their ability to talk loudly against capital and the employing class; and, above all, they are too much influenced by the bad advice of an element in the public press that is utterly depraved and demagogic and which teaches them altogether false ideas as to their duties. They are taught that it is no sin for them to cheat capital. They will, however, learn better as time goes on. Capital, on its side, has made and is making grievous mistakes in the treatment of labor; but the two are moving together on irresistible lines toward organization and a better mutual understanding, and one of these days labor will realize, as the employing class already knows, that the howling of a demagogue is hurtful to all concerned, and a better era of understanding between the employer and the employee will be brought about.

MR. LEE'S REMEDIES.

At the end of his testimony Mr. Lee suggests remedies.¹ They seem almost too frivolous to demand attention. His views on destructive competition, the limitation of capital, etc., seem altogether too absurd to call for special attention. I may say, in conclusion, that he has taken good care to organize his own company or embryonic trust in the very State (New Jersey) which he criticizes so severely, with a view, undoubtedly, to make his capital quite unlimited if he finds it will float.

OPERATIONS OF THE STANDARD IN OHIO.

I turn next to the testimony of Mr. Monnett, the attorney-general of the State of Ohio. I want to say, by way of preface, before answering directly the points presented by Mr. Monnett, that we are interested in Ohio, in whole or in part, in a number of corporations, duly chartered by the State, and all carefully observing the obligations imposed on them by their charters. The actual amount paid in taxes is in the neighborhood of \$250,000. The aggregate amount paid in wages to about 4,700 employees in the State by this corporation is over \$3,250,000 per annum. The further distribution of money in the State for fuel and supplies of all kinds would amount to a vast sum. I submit for your consideration whether we are not a valuable client of the State and entitled to protection rather than persecution. That Mr. Monnett's course has been an effort at the most malignant possible persecution, and probably worse, I will endeavor to show in taking up his testimony.

Mr. Monnett makes a statement that there has been great discrimination in favor of the Union Tank Line or Standard Oil Company.² The rates fixed by the railroads in connection with tank car lots and single barrel or part car lots have been the same to all, and carried with them no discrimination whatever in favor of the Standard Oil Company. In other words, I deny the allegation particularly.

ALLEGED BURNING OF BOOKS.

Regarding the alleged burning of books at Cleveland, Ohio,³ I want to deny the fact of any such burning absolutely. At the time of the original inquiry on the subject we offered to produce every employee who could have any knowledge on the subject, who would each have denied the statement as to the burning of the books. The attorney general refused to have them sworn at the time, and at the time Mr. Monnett gave this testimony he knew that Mr. Squires, the then secretary of the Standard Oil Company of Ohio, had made an affidavit in the litigation pending in Ohio that the books were in his possession. Any denial that I have made regarding the matter, or any statement that I have made in reference to the testimony in connection with it, is true, and it is not true that I have made any retraction, as Mr. Monnett states, with reference to any statement that I have made. Mr. Monnett's reiteration of this matter, after all that has been shown regarding it is most reprehensible. I would like to characterize this in stronger terms, but I bow to the wish of the commission.

AMOUNT OF TRUST CERTIFICATES ISSUED.

Mr. Monnett endeavors to carry the impression that more Standard Oil Trust certificates were issued than our statements have shown.⁴ The allegation is made without a scintilla of truth to sustain it. It is contrary to all the evidence that was offered in the case, and it is utterly destitute of the truth. The stock and

¹ See pp. 294-296.

² See p. 299.

³ See p. 303.

⁴ See pp. 307, 309.

transfer books of the trust were placed in the hands of Mr. Monnett's associate, Mr. Kincaid, during the Ohio investigation, who examined them thoroughly and expressed himself as thoroughly satisfied.

DISMANTLING OF WORKS.

He speaks with feeling with reference to our having dismantled some works at Marietta.¹ I want to call attention to 2 at Marietta, Mr. Rice's and Mr. Davis's,² and I do not recall that we have dismantled any there. I do not know of any works there that we have dismantled.

Q. (By Mr. FARQUHAR.) This commission, in some of its testimony, has had considerable stress laid on the dismantling of the works by your company, and the delocalizing, transferring of business from towns and other places and the concentration into larger plants. Would you give the business reasons of the Standard with respect to any of these changes?—A. I shall be glad to, and I have it in another place. I think you will find it amply treated.

THE STANDARD'S OHIO BUSINESS.

Mr. Monnett makes a statement which, even to a person unfamiliar with the oil business, is quite unintelligible, to the effect that somehow from the business of Ohio oil we make \$120,000,000 a year.³ It is entirely ridiculous. As I say, it is exceedingly difficult to know what he has in his mind. It certainly had no relation to the facts. I have had prepared a statement which shows the total sales in the State of Ohio of refined-oil products for 1898 to be \$979,798.56.

Q. (By Mr. JENKS.) That includes all by-products?—A. Yes; I will ask you to discount his statement at least \$119,000,000.

Q. (By Mr. CLARKE.) That is the sales by your company?—A. These were the total sales.

BRIBERY CASE IN OHIO.

I must speak somewhat guardedly, in the nature of things, about what Mr. Monnett saw fit to say about the conduct of bribery cases in Ohio.⁴ With reference to the so-called "bribery" case in Ohio, I desire to say that affidavits have been filed with the supreme court of the State of Ohio denying specifically all of Mr. Monnett's charges of attempted bribery and all of his allegations in relation thereto, and asking the court to appoint a commissioner to investigate the charges. The court has not yet acted upon the subject. If they do not, we will then see whether there is not some other method by which Mr. Monnett can be compelled to answer on this matter.

Q. (By Mr. FARQUHAR.) What is the supposed amount of bribery?—A. The newspapers have it about \$400,000.

Q. (By Mr. SMYTH.) Paid to whom—to Monnett?—A. To Mr. Monnett; yes. I say we have answered the matter and our answer is before the supreme court. With reference to what our final attitude will be it would be unwise for me to state now. We court an investigation.

Q. (By Mr. RATCHFORD.) Are you prepared to say that such a proposition might not have been made without your knowledge, or do you deny?—A. We have denied it to the very uttermost. Our answer is now in court.

Q. The answer of your company?—A. The answer of our company.

I want to speak a word regarding the recommendation by Mr. Monnett of Mr. W. H. Clark, of Newark, Ohio, as a competent witness.⁵ In recommending this witness to you Mr. Monnett must have known that he was an untruthful, dishonest, discharged employee, and his imposing him upon you as a witness was an insult alike to you, to our interest, and to the country at large.

COMPETITORS IN OHIO.

Mr. Monnett testifies, in answer to a question by Mr. Harris, as follows: "Q. What companies are competing with the Standard Oil Company in Ohio now?—A. There is only a limited competition—I think the Scofield, Shurmer & Teagle

¹ See p. 308.

² Compare pp. 548, 549, 550; Mr. Davis, pp. 351, 361; Mr. Rice, p. 687.

³ Compare pp. 311, 315.

⁴ See pp. 313, 316.

⁵ See p. 313.

...and a man by the name of Strall, of Mansfield, has an independent agency for a limited product. The Sumner & Teague people originally had a contract whereby they were allowed to five—to sell and five.”¹

Mr. Monnett again refers to the absence of competition in Ohio and repeats that he does not know of a single independent chartered corporation left in the State of Ohio.² However, he attempts to carry the impression that we are attempting to deceive the public by operating through different names in the State. He quotes the Penn Oil Company.³ I do not know what he means by this, as we have no such company operating in the State.

I now submit statements showing a partial list of our competitors in Ohio, composed of pipe lines, refiners, and producers, covering corporations, partnerships, firms, and individuals. The list is only partial, but it gives some indication of the utter lack of knowledge, or worse, that actuated Mr. Monnett in his statement.⁴ I will give you a summary of the incorporated companies engaged in the State of Ohio; not in the southern part, but in the Lima district. There are 159 corporations.

Q. (By Mr. SMYTH.) Not controlled by the Standard Oil Company?—A. Not to the interest of a dollar. They are, of course, all creatures of the State of Ohio, and if not chartered under the State they are all registered under the laws of Ohio and paying taxes in that State. There are partnerships, 258.

Q. Not owned or controlled by the Standard Oil Company?—A. Not to the extent of a dollar.

Q. Not agents?—A. Not agents of the Standard Oil Company in any way or sense.

Q. (By Mr. PHILLIPS.) Have you any interest in these companies, in producing with them?—A. None that I know of.

Q. You have alliances with producers in the Pennsylvania field?—A. Our business in Ohio is done in the name of the Ohio Oil Company.

Q. The point I wish to make is this. Have you not an eighth, a quarter, or a third in the leases in Ohio, as you have in Pennsylvania?—A. Not in these that I am presenting.

Q. In Pennsylvania and West Virginia you have?—A. Not that I know of.

Q. Are you not interested a quarter or an eighth?—A. We may be to a small extent.

Q. (By Mr. JENKS.) But not at all in any of these?—A. It is such a trifling exception as not to be an exception, if at all. Of individuals there are 1,240, 150 corporations, 258 partnerships; and there are of refining concerns not in the remotest degree related to the Standard Oil Company 8 active large concerns chartered by and doing business in the State of Ohio, which makes a grand total of concerns doing business in competition with us of 1,665 in the Lima district against Mr. Monnett's 1 concern that he could name and 1 business man that had a station at Mansfield.

Q. (By Mr. PHILLIPS.) What per cent of the Lima field do you control in production?—A. I have that here.

Q. (By Mr. A. L. HARRIS.) I had in my mind, when I asked Mr. Monnett the question, the refining companies, not the producing companies.—A. He answered also regarding the producing companies—regarding them all.

Q. I asked the question with reference to the refining companies, and I think that he intended to make the answer to my question.—A. His answer mentioned producing companies, and he spoke about the Penn Company being a producing company, but claimed that was ours.

Q. Is that a refining company?—A. It is a producing company.

Q. (By Mr. RATCHFORD.) The witness has stated that the Standard Oil Company has virtually no interest in a number of producing companies he has mentioned. Have they no interest in the refining companies?—A. None whatever, I believe.

Q. No relations with refining companies?—A. None whatever.

Q. (By Mr. A. L. HARRIS.) How many refineries outside of the Standard are in operation in Ohio now?—A. I have just given them. I do not think this covers them all, but the larger ones. This was made the first of the year. They are: Craig Oil Company, Cleveland Refining Company, Diamond Oil Company, Manhattan Oil Company, National Refining Company, Producers' Refining Company, Fargun Refining Company, and the Sun Oil Company. This is made up with

¹ See p. 318. ² See p. 325. ³ See p. 326.
⁴ Detailed list filed with commission. The refiners are included in the general list of competing refiners given above, pp. 541, 542.

reference to the Ohio field. I might say also that the business done by these companies, and in which we had not one dollar of interest, direct or indirect, or one iota of control in any way, aggregated for the 5 years from 1894 to 1898, inclusive, 14,647,949 barrels. I am reminded there are some Cleveland refineries in competition with ours, not included in this list. By the way, these Cleveland refineries are included in the general list of refineries which I gave in answer to Mr. Lee's testimony. I have further a supplementary list of competitive producing companies, made up of organizations, corporations, partnerships, and individuals operating in southern Ohio, apart from the Lima field, aggregating 16 corporations, 8 partnerships, 69 individuals, or a total of 93 in that section, which should be added.¹

AGITATION OF THE OIL-TEST QUESTION IN ENGLAND.

Mr. Monnett shows his vindictiveness as against the American oil industry by applauding a scurrilous pamphlet put out by one of the yellow journals of London at the instance of the Russian oil dealers as against American oil.² There was not a word of justification for the statements made, and a committee of Parliament, who have gone into the subject most thoroughly with reference to possible legislation on the oil-test question in England, have upheld American oil as against all the outrageous charges made by the Russian industry and given publicity through this scurrilous pamphlet. I wish to say one word on the magnitude of the Russian oil industry and its menace to our American industry. Nowhere during the past year have they made so determined an effort against American oil as they have in England, and they have retained a journal of the lowest order to make these scurrilous attacks. The name of the journal is the *Star*, and this pamphlet is published undoubtedly at their instance, although it is anonymous in its character. Even the Russian people who put it out would not put their names to it. I have here a further statement of the Russian oil industry, giving statistics in detail, which I am sure you will find of great interest.

Q. (By Mr. JENKS.) Can you give us a reference to the official statements of the committee of Parliament to which you refer?—A. I will get that for you.³

Q. (By Mr. FARQUHAR.) You state the *Star* article is on the side of the Russian industry?—A. They applaud the Russian oil and decry American oil; that is the purpose of the publication. The thing is to cry down the American oil.

Q. And you claim they injure the Standard?—A. That is where they—yes; we are the large distributors.

Q. What is the test?—A. 78 Abel.

Q. What is the equivalent of the test?—A. About 120. I might add a further list of the Ohio companies organized since November, 1898, and not yet published. I will put them in.⁴

PRICES OF CRUDE AND REFINED OIL, 1870 TO 1898.

Mr. Monnett endeavors to make a statement that the dismantling of the Standard Oil Company would reduce prices of oil to consumers.⁵ I wish to answer this by giving statistics showing the record of cost and prices for a period.

The world-wide facilities employed by the Standard Oil Company and its affiliated interests for the distribution of refined oil would involve years of effort, and a similar amount of capital to replace, and would immeasurably increase the cost of oil to the consumer.

Q. (By Mr. JENKS.) The price of refined oil in the table is the average export price?—A. Yes.

Q. Export prices fix the price of domestic refined?—A. Substantially so.⁶

Q. Can you furnish to the commission also a list of prices of refined water-white oil in the oil markets of New York, Chicago, and Cincinnati?—A. If you will give me a memorandum of that I will.

¹ Placed on file with commission.

1898	85,206	.91½	6.31	752,101		11,541,753

Since 1870 the daily production has increased 450 per cent, the price of crude oil has declined 75 per cent, and the price of refined about 75½ per cent.

Average prices received for deliveries of standard white illuminating oils at New York City, Chicago, Ill., and Cincinnati, Ohio, during years 1885 to 1899, inclusive.

[Prices given are cents per gallon in bulk, exclusive of the package; 2½ cents per gallon added will give average price, including barrel.]

Whereupon the commission, at 1 o'clock p. m., took a recess until 2 o'clock.

INDEPENDENTS WANTED TO COMBINE WITH THE STANDARD.

Q. (By Mr. PHILLIPS.) Will you continue your statement?—A. I will, with pleasure. I desire to make a word of explanation. Senator Lee has called my attention to the fact that in his opinion my testimony indicated that his approach to us with reference to their business was with a view to selling their properties. I did not mean so to state. His approach to us was with a view to combination. I supposed I had so clearly stated it; I make this statement in the fear I did not.

Q. Was it in regard to combination, or was it just not to be interfered with in getting a line through to New York—the right to live, rather than the combination; was it not put in that form?—A. My understanding of it was, as I have stated, a combination.¹

MR. THEODORE F. DAVIS.

I take up further the testimony of Mr. Theodore F. Davis, of Marietta, Ohio. It is a trifle difficult for us to understand why this gentleman should have appeared before you; he certainly has had no experience in the refining of oil, or as an owner of a refinery, that would at all qualify him to appear before you as a witness on this important subject. He has had an interest in a little alleged refinery at Marietta, which he bought when he was somewhat in politics. He immediately approached us to sell the property. We declined to buy it, on the ground that it was valueless as a working plant and had no value as competition;

¹ See above, pp. 530 and 531.

and I had forgotten that there was such a thing until his appearance here. Immediately after his appearance before you he evidently thought he had again made himself prominent enough to succeed in selling it, and he came to me in New York offering to sell this property. I will submit a letter from him on the subject, and my reply thereto, which covers all that need be said of this case. I think the only possible explanation on this matter with reference to his appearance is, that he came at Mr. Monnett's invitation as one of his combination. His letter was written after his interview with me; my reply, as you will see, immediately followed it. His letter is dated July 13, 1899; his appearance here before you was on June 9, 1899.

"I called on you about 2 weeks ago with letter of introduction from ———, and I presented the matter of negotiation for my refinery property at this place. You made memorandum of it and stated that you would present the matter to your people soon after the 4th of July, and as I have not heard from you, presume you have overlooked it. I have permitted one option to expire and have declined the proposition of another party to negotiate for them, not intimating why I do so, which is my appointment with you in regard to the matter. Please indicate your desire in regard to whether you are inclined or desire to further consider the negotiation. I, as stated, much prefer dealing with your people than with others, yet do not want to let the favorable conditions pass by. Hoping to hear from you soon.

"Very truly, yours,

THEO. F. DAVIS."

To which I replied, under date of July 18:

"I am duly in receipt of your favor of July 13. I beg to return you herewith the schedule of refinery property which you left with me. The property is of such a character as to be without value to us, and we do not care, therefore, to buy it.

"Appreciating your expression that you prefer to sell the property to us rather than to other buyers, I am,

"Truly, yours,

JNO. D. ARCHBOLD."

I do not suppose it is at all necessary to take up any further statements regarding this gentleman. I have an interesting letter here regarding him from his partner in the refinery business, but I will not read it unless you ask it to be read.

Q. What do you say about reading this letter?—A. It is a personal letter, but I can read that part of it referring to the matter. It is from Mr. Macdonald, and he authorized me to use it if I cared to. Some parts of it are so personal that under suggestions made here I would not read them.

Q. (By Mr. CLARKE.) What is your purpose?—A. Nothing, except to show the character of the gentleman in relation to the refining trade, appearing here as one having knowledge.

MR. PHILLIPS. Without objection, the letter will be read, omitting the personal parts.

The WITNESS. The letter is dated at Newark, Ohio, July 17, 1899, and is from George T. Macdonald.

(Witness at this point read the letter.)

MR. T. B. WESTGATE—THE PURE OIL COMPANY IN NEW YORK.

I have to answer next concerning T. B. Westgate. Mr. Westgate begins by going over substantially the same ground with reference to the advent of the Pure Oil Company in Greater New York,¹ which has already been covered in the testimony of Mr. Lee.

IMITATING BRANDS AND COLORS.

He makes a statement charging that the Standard Oil Company imitated his yellow barrels and used his brands so that they might get trade which he had built up by the use of these barrels and brands as a special trade-mark.² I have carefully investigated that question, and I find it to be the fact that instead of our having attempted to use Mr. Westgate's brands the real facts are he used our brands. The yellow brand, as defining a certain special quality of oil, had been in use by us in that territory for many years before Mr. Westgate appeared there, and when he came he adopted our yellow barrel so as to facilitate his chances for

¹ See p. 365. Compare Mr. Lee, p. 205; Mr. Archbold, p. 528.

² See p. 366.

getting business. I deny emphatically that we have ever used his barrels and brands, and assert that he did use ours.

Q. (By Mr. JENKS.) That he used your brand?—A. That he used our color. I deny his statement with reference to both, and charge in turn that he used our barrels.

Q. (By Mr. SMYTH.) How about the charge of using their brands?—A. It is absolutely untrue; absolutely and unqualifiedly untrue.

Q. (By Mr. JENKS.) The statement was made here, I believe, that you had used the brand "Sunlight Doubly Refined," but put your name on the outside of the circle, which would not be an exact imitation, but would be using the name that he was using for his oil?—A. No; I deny the whole matter in toto.

Q. You had yourselves been using barrels of that same color before he began selling in that territory?—A. I know so, because I had to do business in that section and with the company who made the yellow barrels, and knew all about it.

COMPETITION AT FULTON, N. Y.

Q. In regard to the statement about Fulton, N. Y.?—A. The facts are that he first enticed away from us the man Crandall, to whom he refers. He began a campaign against our trade by cutting prices. We, in self-defense, finally put on another seller of oil to compete with him and to regain lost trade.

CHARLES FREY, OF HOBOKEN—ALLEGED PRICE AGREEMENT.

He goes with great particularity into the case of Charles Frey, of Hoboken, N. J., whom he characterizes as a German with Bismarckian blood in him, who had threatened us with dynamite, etc.¹ I carefully investigated the case, having talked personally with our Jersey City agent, who was our agent at the period mentioned by Mr. Westgate. He denies emphatically ever having made any such threat toward Mr. Frey as Mr. Westgate testified to, or ever having had any understanding with him as to prices in connection with the marketing of Mr. Westgate's oil or any competitive oil, as Mr. Westgate testifies. As a matter of fact, the man Frey was a customer of ours to a considerable extent, having bought, in the year 1890, his principal supplies from us; he was a man of violent temper, an avowed anarchist; he has not been in the business for a number of years now, although Mr. Westgate's testimony would carry the impression that he has continued to help him in the sale of oil at Hoboken. The last known of him was that he was running a saloon in Brooklyn.

UNDERBILLING OF TANK CARS.

Mr. Westgate alleges at great length and with some particularity the under-billing of tank cars, citing, as a special case of which he had special knowledge, shipments from Olean, to points eastward.²

I beg to present to you here letters from the officials of the Western New York and Pennsylvania Railroad and the Erie Railroad, being the only two lines out of Olean, on that subject. I will read first, if you please, the letter of Mr. Edward T. Johnson, general freight agent of the Western New York and Pennsylvania Railway Company, dated at Buffalo, August 10, 1899, addressed to me.

"My attention has been called to the testimony of Mr. Theodore B. Westgate (who I think is a refiner from Titusville, Pa.), before the Industrial Commission of Washington, in which he testified that it was his belief that shipments of the Standard Oil Company from Olean, N. Y., in tank cars, were billed at a weight less than the actual contents of same.

"In answer to Mr. Westgate's testimony I would say that I have investigated the matter, and of my own knowledge am positive that there is no arrangement of this kind now, nor has there been at any time heretofore, between this company and the Standard Oil Company, or any of its representatives. On the contrary, I do know that on all oil shipments from Olean, where the weights have been per 100 pounds, we have charged and collected freight on the full capacity of the tank cars, based on, first, 6.3 pounds to the gallon, subsequently on 6.4 pounds to the gallon, the change at Olean being made at the same time that it was put in force over the entire Western New York and Pennsylvania Railway. Where the weights have been per barrel we have charged and collected freight on basis of maximum number of barrels that the tank could contain. It is possible that in

¹ See pp. 366, 369.

² See p. 370.

³ See p. 373. See also the testimony of Mr. Rice, p. 731; Mr. Page, pp. 770-775.

view of the hundreds of cars of oil that are shipped from Olean some clerical errors have been made by which the weight of a car on the freight bill may have been misstated, but if so it has been by clerical error only, and not by any arrangement with the Standard Oil Company or any of its representatives.

"The above is the situation now, and has been the case for at least 15 years, during which time we have had full knowledge of all traffic matters pertaining to shipments from Olean, and the above statement applies from all other points on this road as well as from Olean, N. Y.

"If it will be of any service to you I will be glad to put the above in the form of an affidavit, or will appear before any United States commissioner and testify in regard to same.

"Yours, truly,

"EDWD. T. JOHNSON,
"General Freight Agent."

For the Erie road, dated at New York, August 20, 1899, addressed to me by George G. Cochran, fourth vice-president:

"Referring to Mr. Harriott's letter to you of the 28th inst., in regard to weights on oil.

"I was traffic manager of the Erie lines from January, 1892, until March, 1896, and concur fully for this period in what Mr. Harriott says. The weight of 6.4 pounds per gallon was maintained from the date of its adoption; previously, the average weight applied was 6.3 pounds per gallon.

"Yours, truly,

"GEO. G. COCHRAN,
"Fourth Vice-President."

Also the letter of Frank Harriott, general freight traffic manager of the Erie road:

"In regard to the testimony given before the Industrial Commission in Washington, June 8, 1899, by Mr. Theodore B. Westgate, of Titusville, in which he alleged that on shipments of the Standard Oil Company from Olean, N. Y., tank cars were billed at less than their actual weight, and in this way an advantage was given the Standard Oil Company over other shippers, I beg to say that for 3 years I have been in charge of traffic matters, covering shipments from Olean and other points on the line of the Erie Railroad, and I can state positively that there is not now, nor has there ever been, an arrangement between this company and the Standard Oil Company, or any of its agents, of a nature testified to by Mr. Westgate. On the contrary, I know that on all shipments from Olean, as well as from all other points on the Erie Railroad where our tariff rates are 'per 100 pounds,' we have charged and collected freight on the full-weight capacity of the tank car, based on 6.4 pounds per gallon, and in a few instances where rates have been 'per barrel,' we have charged and collected freight on the basis of the maximum number of barrels that the tank car held; and this has been true on all shipments made by the Standard Oil Company, as well as by all other shippers.

"You are authorized to use this letter in any way that you think best, and if I can furnish you any further information, I will be glad to do so.

"Yours, truly,

"FRANK HARRIOTT,
"General Freight Traffic Manager."

I desire to submit also a pamphlet,¹ a book known as the Tank Gauge Handbook, which covers by number every tank car with its full capacity that is in use in our business, and which is in the hands of every railroad organization over which we make shipments; and I want to state positively that we have no understanding, and never have had, with any railroad, with reference to the under-billing of any car.

Q. (By Mr. JENKS.) You state you have in your freight business paid full weights according to the schedules given in this pamphlet?—A. According to the schedules given in this pamphlet.

Q. These two railroads from which you have supplied letters are the only ones out of Olean?—A. They are the only ones out of Olean. The concluding part of Mr. Westgate's testimony, with reference to railroad discriminations, is covered in the statement already made in reference to the same question in Mr. Lee's testimony;² namely, that the cases pending in the United States court are to recover freight which the railroads charge all shippers on barrels. The Interstate

¹ On file with commission.

² See Mr. Lee, pp. 227, 232; Mr. Westgate, pp. 379, 380; Mr. Archbold, p. 516.

Commerce Commission decided that railroads should carry barrels free, and the railroads, refusing to accede to such a decision, are testing the question in the United States court. A final decision will interest us to a larger extent than all other shippers.

THREAT TO CUT PRICES AT SOUTHBEND, WASH.

Q. (By Mr. JENKS.) Mr. Westgate presented a letter from Portland, Oreg., which he put in evidence, with reference to some statements made by the special agent of the Standard Oil Company. The essential part of it is this: "You can rest assured that if another carload of Sunlight oil arrives at your place, it will be sold very cheap. We do not propose to allow another carload to come into that territory, unless it comes and is put on the market at one-half its actual cost. You can convey this idea to the young man who imported the carload of Sunlight oil." Signed by George C. Flanders, of the Standard Oil Company.¹ The question is whether in competitive territory your people are authorized and instructed to make statements of that kind?—A. If any such statement was made, it was a foolish statement by a foolish and unwise man, and in our thousands of employees we do have some. The statement had missed my attention, if it was in my copy, or I would have investigated it.

Q. I will give you a specific reference to it: It is, Portland, Oreg.; George C. Flanders, special agent.—A. I will say again the gentleman had no such instructions: any such statement as that was unauthorized and unwise.

(The following letter, with the annexed newspaper clipping, was subsequently submitted by the witness:)

26 BROADWAY, NEW YORK, October 27, 1899.

DEAR SIR: Referring to the letter submitted to the Industrial Commission at Washington, written by George C. Flanders from Portland, Oreg., to a merchant at Southbend, Wash., and to which you called my attention. While the Standard Oil Company does compete with other merchants for business, it is done, though, on the basis of a fair margin of profit, and Mr. Flanders did not have any authority to write that oil would be sold on the basis mentioned in his letter. The letter referred to was written some years ago (in March, 1894), and was intended to be written in a jocular manner to deny a claim that he was selling an oil inferior in quality to that sold by others. The Standard Oil Company is at times unjustly accused of doing this, as is evidenced by the inclosed article taken from a Los Angeles paper, and a wrong construction might at times be put on a letter written to refute a claim of this kind.

Yours, truly,

H. M. TILFORD.

J. D. ARCHBOLD,

26 Broadway, New York.

ASSASSINATION KEROSENE.

POMONA, Oct. 6.—[To the Editor of the Times:] To my positive knowledge 90 per cent of the kerosene sold in Pomona, Pasadena, Riverside, and Anaheim is a dangerously low-test oil. To sell kerosene for domestic use under a test of 120 in the Eastern States is punished by long terms of imprisonment and from \$250 to \$500 fine. There are no laws regulating this matter in southern California. The result is human life is sacrificed and many homes destroyed. This oil is shipped into these towns by the Standard Oil Company and sold to the grocers, who in turn sell it to the public as the best Eastern kerosene. By actual tests I find the lowest grade used about the buildings of the Santa Fe Railroad Company is 150 fire, and that sold by the Standard Oil Company to the grocers of those towns as follows: Elain, in cans and cases, 118 to 120 fire; Pratt's Astral, in cans and cases, 98 to 104 fire; Pearl, in cans and cases, 98 to 104 fire; Eastern, in bulk, 98 to 104 fire. The meaning of the fire test is at what temperature Fahrenheit will the oil throw off an explosive gas. An ordinary lamp often attains a temperature of 120 degrees.² Therefore, any oil that will throw off this gas under that temperature is termed by oil men "Assassination oil." With these facts in view, is it any wonder that lamps explode and human life is sacrificed? In the name of humanity, can not the public be protected from this dangerous imposition?

H. S. WALKER.

² See Mr. Emery, pp. 624-626; Mr. Mathews, p. 493, top.

PROSPEROUS OIL PRODUCERS.

I will take up the testimony of Mr. Lockwood. Mr. Lockwood says:¹ "The Standard Oil Company have driven into financial obscurity, bankruptcy, or servitude the men whose energy and enterprise have developed this great oil producing and refining industry of America." I hand you a statement, made so much in detail that I will not attempt to weary you with its reading, of producers who have been prominent in the business in what is known as the Pennsylvania oil-producing section—the section Mr. Lockwood was treating of.

Q. (By Mr. SMYTH.) How many names?—A. There are hundreds of them; I have not figured it up—about 800.²

Q. (By Mr. KENNEDY.) Is Mr. Lockwood's name in the list?—A. I suppose it is.

Q. Are they arranged alphabetically?—A. Yes; I see they have omitted Mr. Lockwood.³

SOUTH IMPROVEMENT COMPANY.

I deny emphatically Mr. Lockwood's statement that everything contemplated to be done for the South Improvement Company has been done for the Standard Oil Company.⁴ As a matter of fact, the South Improvement Company never did any business, as Mr. Lockwood well knew, and the special features of exclusive freight contracts, which were contemplated in the South Improvement Company, were not attempted to be perpetuated by the people of the Standard Oil Company. It was at once recognized that that special feature was not defensible, and it was abandoned absolutely.⁵

PIPE-LINE CONSOLIDATION—COST OF PIPAGE.

Mr. Lockwood refers to the small pipe lines which sprang into existence in the early history of the oil business.⁶ They were inadequately capitalized in many cases; they were inefficient, and gave the producers such poor service that the remedy which was proposed, consolidation, was very gladly welcomed by the producing class as a whole. The result was the pipage was reduced from 40 cents, which was the prevailing price through the life of the small lines, to 30 cents, and after consolidation to 20 cents.⁷

Q. About what time was the cost of pipage reduced to 20 cents?—A. Shortly after the consolidation of the United Pipe Line system.

Q. Has the price lowered since?—A. The price has remained at that figure.

Q. There has been no reduction in the cost of piping for many years, 20 years or so?—A. No. It was considered a minimum price and has been considered a fair price.⁸

Q. (By Mr. SMYTH.) A universal price to all?—A. A universal price to all comers.

Q. The cost of building, controlling, and managing, I presume, has lessened?—A. It has lessened and increased. If you figure from to-day's standpoint it will be higher of course. The long distances involved in laying the lines to some of the fields, notably the field that Mr. Rogers spoke of—the West Virginia field—of course require extensive operations.

NO DISCRIMINATIONS SINCE THE INTERSTATE-COMMERCE LAW.

Mr. Lockwood's statement that discriminations were continued in favor of the Standard Oil Company after the interstate-commerce law was passed,⁹ I desire to meet with absolute denial, and challenge him for any such record. He makes this statement, and then attempts to give it color by referring to a ridiculous case which he and some of his copatriots had brought in Clarion County, Pennsylvania, 9 years before the interstate-commerce law was passed. In connection with this case he goes to the length of accusing the supreme court of the State of Pennsylvania of violating the constitution in order to prevent a conviction of the Standard Oil people. The statement is so outrageous for a gentleman of his calling that it carries its own answer, and perhaps should have no further comment.

THE MATTHEWS-BUFFALO CASE.

Mr. Lockwood goes at great length into that so-called Matthews-Buffalo case,⁹ this case as first instituted attracted a great deal of attention. It has been made much of in the sensational press, and has been made much of by careless writers,

¹ See p. 384; also Mr. Lee, pp. 279, 281-283.

² On file with commission.

³ See Mr. Emery, pp. 619, 644; Mr. Rice, pp. 706-708, 711; Mr. Archbold, pp. 556-559.

⁴ See pp. 386, 388.

⁵ See p. 413.

⁸ Lockwood Oil Company is mentioned.

⁹ See pp. 386, 388.

and I am very glad, indeed, of the opportunity to put this presentation on record in answer to the charges that Mr. Lockwood has made about this case and the sensational statements regarding it which he gave to the public through your hands. We shall be glad to go down, as repeated, exposing the sensational charges that have been made in connection with it. I will, therefore, with your permission, read this statement:

"Mr. Lockwood attempts to make much of the so-called Matthews-Buffalo case.

"And indeed, gentlemen, this case has been more often and more thoroughly exploited in the way of misrepresentation, not only by men of Mr. Lockwood's type, but by careless writers of magazine articles pamphlets, and books, than any other case, unless it be that of Rice. It is high time that a simple, succinct statement of the case should be made, and I am glad to make it.

"The simple facts are that in 1881 Matthews, with two others, were in the employ in confidential capacities of the Vacuum Oil Company, of Rochester, N. Y. The executive officers of this company were Messrs. H. B. and C. M. Everest, of Rochester, who, with their friends, represented a large ownership in the stock of the company, and were by contract fully in control of the management of the business of the company. Messrs. Everest were not at that time, nor have they ever been, interested in the stock of the Standard Oil Company. The Standard Oil Company were owners in the stock of the Vacuum Oil Company, but had no direct relation whatever with the management of its affairs. While still in the employ of the company Matthews and his two associates conspired together to leave the employ of the Vacuum Oil Company and establish a like business at Buffalo. To this end they had entered into a partnership arrangement, had prepared themselves by using the Vacuum Company's patents for castings of the material to be used in construction, had thoroughly familiarized themselves with all methods of manufacture and with the patrons of the Vacuum Company, and in every way prepared themselves to take advantage of the various business processes—many of them covered by patents owned by the Vacuum Company. There is plenty of indisputable evidence that they did not expect their venture at Buffalo to really succeed on its merits, but they believed that by so imitating the brands and processes of the Vacuum Company they would induce the latter to buy them out at a high price. As I say, there is plenty of evidence, even including that of one of the parties who was to join with Matthews, a man named Miller, that they expected to be bought up by the Vacuum Oil Company or the Standard Oil Company. Efforts were also made by the Matthews party to entice away other important employees of the Vacuum Company. After the business was gotten under headway at Buffalo, and the infringements became evident, various suits were brought by the Vacuum Company against Matthews and his associates. During this period Miller, one of the Matthews party, solicited reemployment with the Vacuum Company, and finally, after considerable discussion, was reemployed. Later, having some disagreements with the Vacuum Company with reference to the question of his employment, he again coquetted with Matthews and the Buffalo party, and as a result of his statement before the grand jury as to what his intercourse had been with Messrs. Everest, and of other statements made before the grand jury, the nature of which was never disclosed, an indictment was found by the grand jury charging Messrs. Everest and all the directors of the Vacuum Company, namely, Messrs. H. H. Rogers, A. M. McGregor, and myself, with conspiring against the business of the Buffalo company. The evidence produced in the case clearly indicated a carefully concocted effort on the part of Matthews and his associates as against the Vacuum Company, and the balance of the testimony was tremendously in favor of the Vacuum Company. At the conclusion of the evidence for the prosecution the judge held, as he could not have held otherwise, that not a scintilla of evidence had been produced against the so-called Standard people, namely, Messrs. Rogers, McGregor, and Archbold, and directed the jury to acquit them, which they did.

"As I have stated, the balance of the evidence in the case was so much against Matthews that it seems an act of gross injustice that the judge should have allowed the case against Messrs. Everest to go to the jury. The result of the trial was that the jury, plainly influenced by the cunning plea of the district attorney in behalf of the individual, Matthews, as against the so-called rich corporation, rendered a verdict against Messrs. Everest. Six of the jurors made affidavits, copies of which I attach hereto, that they only agreed to a verdict on the basis of the minor charge presented in the indictment, that of the enticing away from the Buffalo works of the man Miller by the Messrs. Everest. The judge imposed a fine, the largest permitted by the statute. As a matter of simple justice, the verdict should have been set aside entirely. All talk about the blowing up of the

Buffalo works, which has been so much exploited by the yellow journals and by careless writers, is the purest fiction. There never was anything of the kind.

"With reference to Mr. Lockwood's statement¹ that Matthews had verdicts against the Standard Oil Company people for civil damages for \$270,000, I may say that the statement is as false as every other feature which he presents. An action was brought by Matthews for \$30,000, and a sympathy verdict for that amount was rendered by the jury. Judge Baker promptly set the verdict aside as being excessive and on the ground that the jury were guided in their action by prejudice, passion, or sympathy.

"Matthews brought further action for \$250,000, which he never brought to trial. Any careful student of the case who will go thoroughly into the literature of the matter, which can be easily presented, will, after this lapse of all these years, reach no other conclusion than that Matthews and his associates, lay and professional, were engaged in an effort at extortion."

The following is the copy of the affidavit of six jurors, referred to above:

STATE OF NEW YORK, *County of Erie, ss:*

Nicholas Demerly, of the town of Boston, John J. Kinney, Bernhard Schlebus, R. B. Musan, George W. Havens, John Ueblueher, being severally duly sworn, each for himself, deposes and says: That he was one of the jury that served on the trial of H. B. Everest and C. M. Everest for conspiracy in the Erie County Oyer and Terminer in May, 1887; that the said jury rendered a general verdict of guilty against both of said defendants. And deponent further says that, as he verily believes, it was not the intention of said jury, in rendering said general verdict, to pronounce the defendants guilty of an attempt or conspiracy to blow up or burn the works of the Buffalo Lubricating Oil Company, Limited, but the conviction was, in the mind of deponent, based upon the enticement of the witness, Miller, from the employ of said oil company, and he believes that the other members of the jury convicted the prisoners on the same ground. And deponent further says that he believes the ends of justice will be met in this case by the imposition of a fine upon the defendants, and he therefore begs to recommend to the court that the sentence of said defendants be that they pay a fine only, and that they be not sentenced to imprisonment.

NICHOLAS H. DEMERLY.

STATE OF NEW YORK, *Erie County Clerk's Office, ss:*

I, Otto H. Wende, clerk of said county, do hereby certify that I have compared the annexed copy of affidavit and copy indorsements thereon with an original and its indorsements entered and on file in this office, and find the same to be true transcripts of and from the said originals, and the whole of each thereof.

In witness whereof, I have hereunto set my hand and affixed the seal of said county, at Buffalo, this 29th day of August, A. D. 1899.

OTTO H. WENDE, *Clerk.*

Q. (By Mr. JENKS.) You have detailed records of the court which are at the disposal of the commission if they desire them?—A. Yes.

Q. (By Mr. FARQUHAR.) After the finding of the court with respect to conspiracy in destroying the works, in the several actions for damages, I understood you to state that Matthews did not recover at all?—A. After Judge Barker set it aside there never was any further case brought to trial. There was an action pending for \$250,000, which was never brought to trial.

Q. (By Mr. JENKS.) Did Matthews make any settlement of any kind with those against whom judgment was awarded? He received no settlement at all?—A. I do not know what his relations were with his lawyers. It seems, as far as I have recollection of the matter, that after the decision, in the final settlement of the matter, his lawyer partners got most of what was left. I do not know that that is a very exceptional thing, but it is true in that.

THREATEN THE INTERSTATE COMMERCE COMMISSION.

Mr. Lockwood makes the ridiculous statement that the "combines" had threatened the Interstate Commerce Commission.¹ He evidently, in making this statement, desired to be understood that they had threatened it boldly, but this, I believe, he afterwards disavowed.²

THE CASE OF GEORGE RICE.

Mr. Lockwood goes at length into the Rice case, and attempts to enlist the sympathy of the commission regarding Rice.¹ I now desire, first, to present to the commission a full statement of the original Rice case, made by Mr. D. O'Day, before the committee of the House of Representatives in 1888,³ pages 273 to 276, inclusive. This statement covers the exact facts regarding the much-talked-of Rice case.

I would like to read Mr. O'Day's testimony, if I may make it a part of my testimony. I will try and limit it so as not to weary you unduly, reading that which pertains as directly as possible to the Rice case:

Q. Do you remember the Cleveland and Marietta Railroad Company?—A. I do.

Q. You remember Mr. Pease was receiver?—A. I met him once; yes, sir.

Q. Did you not have a conference with him upon the subject of making a rate over his railroad for crude oil?—A. Yes, sir; but not for refined oil.

Q. When was that?—A. I think it was in 1882 or 1883.

Q. Where did you desire that oil to be transported; from what point to what point?—A. The arrangement that you speak of was not made with Mr. Pease. An arrangement was made with the managers of the Wheeling and Lake Erie Railroad, I think, who at that time controlled the Marietta Railroad, which was continued after Mr. Pease, the receiver, was appointed. The arrangement consisted in making a through traffic with the railroad company of which the Macksburg line was a part. We made a connection from Marietta to a point south, the total arrangement of charge being divided between the railroad and the pipe line.

Q. What rate did you get over that railroad for the transportation of oil?—A. To where?

Q. For the distance it passed over the railroad?—A. A good deal of oil was transported from Marietta to Cleveland. The bulk of it was transferred south to Marietta and Parkersburg.

Q. At what rate?—A. I think the through pipage rate and rail rate was 35 cents, as I recollect it.

Q. What part of that did the railroad company get?—A. I have forgotten what the divisions were. My recollection is it was 20 and 15 cents.

Q. Was it not 10 cents?—A. I can not say, sir; I can not be positive.

Q. I will read the following to you to aid your recollection. It is an extract

¹ See p. 390.

² See p. 398.

³ Fiftieth Congress, first session, House Reports, vol. 9.

of a letter to Mr. Rappello, general counsel of the receiver, and signed by P. Pease. He states that—

“Mr. O'Day, manager of the Standard Oil Company, met the general freight agent of the Wheeling and Lake Erie Railroad and our Mr. Terry at Toledo about February 12, and made an agreement (verbal) to carry their oil at 10 cents per barrel. But Mr. O'Day compelled Mr. Terry to make a 35-cent rate on all other oil going to Marietta, and that we should make the rebate of 25 cents per barrel on all oil shipped by other parties, and that the rebate should be paid over to them (The Standard Oil Company), thus giving us 10 cents per barrel for all oil shipped to Marietta, and the rebate of 25 cents per barrel going to the Standard Oil Company, making that company, say, \$25 per day clear money on Mr. George Rice's oil alone.”

“State whether that is a true statement.—A. It is not a true statement.

“Q. In what respect?—A. In the respect, first, of the divisions. It may be true regarding that, but I am not sure of that; I do not recall it well enough to know. It is not a true statement that we compelled the road in any sense to do anything of the kind.

“Q. Were you not under your agreement to have your oil transported from Marietta over the railroad at 10 cents a barrel?—A. We had an arrangement by which the through rate from the wells, which included the pipeage charge, was to be a certain figure, and was to be divided between the railroads and ourselves.

“Q. What share did the railroad get?—A. My recollection, which is rather hearsay, was 20 cents pipeage rate and the railroad 15 cents.

“Q. And not 10 cents?—A. I do not want to be positive of that.

“By the CHAIRMAN:

“Q. Does that rate which you give include your local pipeage, too?—A. Yes, sir.

“By Mr. GOWEN:

“Q. Where did this oil strike the railroad?—A. At a place known as Macksburg.

“Q. Went from there to Marietta, Ohio?—A. Yes, sir.

“Q. Now, I ask you if the rate which the railroad received out of the joint rate was not only 10 cents a barrel?—A. My recollection is, as I said before, 15 cents; I won't be positive of that.

“Q. Would you assert your recollection against a judicial determination of this question by the court?—A. I certainly should not.

“Q. Now, did you not make it as a part of that arrangement that this railroad company, or its receiver or manager, should charge a certain Mr. George Rice, who was a competitor with you, a higher rate on his oil?—A. No, sir.

“Q. You did not?—A. We did not.

“Q. Were you not to receive and did you not receive from this railroad or its business a payment to your company on account of the oil they transported for Mr. George Rice?—A. Yes, sir; the railroad company agreed that the rates should cover all oil transported.

“Q. What rate?—A. The fixed rate as between the railroad and the pipe line.

“Q. That is to say, that when the through rate of 35 cents was charged on the oil which passed through your pipe line and their railroad together, and out of which you received 20 or 25 cents, as your recollection may be, they were to charge the same rate to Mr. George Rice, whose oil passed only over their railroad and not through your pipe line?—A. There was nothing special about George Rice; it covered the oil.

“Q. But did that other oil which was in competition with you pass through your pipe line?—A. No, sir.

DRAWBACK ON OTHERS' OIL RETURNED BY ADVICE OF COUNSEL.

“Q. Did not they, therefore, on that oil which only passed over their railroad and not through your pipe line pay to you the same allowance or rebate that they did on your oil which did pass?—A. They did, but we returned it, through the advice of our counsel, Mr. Dodd.

“Q. How long did you keep it?—A. A very short time.

“Q. It was a hot time for Mr. Rice?—A. I don't think it was; he was a hot man.

“Q. The result of that arrangement, if it had been carried out—assuming your recollection to be correct—you would have paid 15 cents to the railroad for your oil and Mr. Rice would have paid 35 cents, would he not?—A. No, sir; he had the privilege of doing what he did, which he afterwards did do.

“Q. He was not using your pipe line?—A. No, sir; we tried to get him to make

an arrangement with us to use our pipe line, but he would not do it; he wanted a better rebate than anybody else.

"Q. He had his own means of bringing this oil to the railroad; he did not require your pipe for that service?—A. He required the pipe to get his oil to Marietta, and subsequently laid a pipe to Marietta.

"Q. Was not this the fact, as Judge Baxter has found in this case, that Mr. Rice, who at that time only used the railroad, paid 35 cents for the transportation of a barrel of oil? Was not that true?—A. I took it to be true.

"Q. Now, out of that sum how much did you get from the railroad out of what they received from Mr. Rice?—A. We did not get any; that is, we did not retain any. The railroad company agreed to account to us for the oil that went over its lines, and they did make an accounting, to my recollection, of about \$200 or \$250, or something like that, on oil other than that which passed through our lines. Our counsel, Mr. Dodd; advised me that we could not do that business, and we refunded the money.

"Q. Was that refunded before the investigation of the case took place in court?—A. I do not know; I do not remember.

"Mr. BUCHANAN. Before this examination proceeds any further, I wish to say that the use of the terms 'in court' and 'Judge Baxter' indicates to me that there has been litigation upon this subject between Mr. Rice and some company. I would like to know before the examination goes any further whether there has been such litigation between Mr. Rice and any company represented by or that would be bound by the statements of the witness now upon the stand; and, second, whether, if such litigation has been had, it is concluded and the matter disposed of in the courts, or is in any way still pending. I ask this question solely for information, because I do not know anything about the matter.

"Mr. GOWEN. No, sir; the proceedings are entirely completed. It was not a suit between Mr. Rice and anybody. It was a proceeding against the receiver of this road to dismiss him from his receivership. That has been terminated. It has been dismissed, the case is ended, and reported in the Federal Reporter.

"Mr. SMITH. Who rendered that decision?

"Mr. GOWEN. Judge Baxter; he removed him.

"Mr. SMITH. Was he judge of the United States court?

"Mr. GOWEN. He was judge of the circuit court for the southern district of Ohio.

"Mr. SMITH. A United States court?

"Mr. GOWEN. Yes, sir.

"The CHAIRMAN. I understand, in answer to Mr. Buchanan, the information is furnished that there was a proceeding pending to remove a receiver; that proceeding resulted in the finding by the court removing him, and that litigation is closed.

"Mr. GOWEN. That branch of the litigation is closed.

"Mr. BUCHANAN. That answers my inquiry. But there has been another remark made that leads me to ask if there is any other branch of the case remaining unclosed?

"Mr. GOWEN. Only this: The jurisdiction that the United States court was enabled to take over this case arose from the fact that a receiver had been appointed in a proceeding in that court to foreclose the mortgage, and therefore as the receiver was an officer of that court, the court took jurisdiction of this question. Whether the proceeding to foreclose the mortgage is ended or not I do not know.

"Mr. BUCHANAN. That answers my question.

"Mr. GOWEN. There is no other suit pending about it that I know of.

"By Mr. GOWEN:

"Q. Where did this oil that was transported over this railroad to Marietta originate?—A. In the country in and about Macksburg.

"Q. Ohio?—A. Yes, sir.

"Q. There is a small oil field near the Macksburg field in southeastern Ohio?—A. Yes, sir.

"Q. How far is that field from the Ohio River?—A. Perhaps 15 or 20 miles; somewhere along there.

"Q. The largest town near to it on the Ohio is Marietta?—A. Yes, sir; south.

"By Mr. SMITH:

"Q. You stated that the charges on oil were lost in trying to get the business, if my memory serves me right?—A. Very largely.

"Q. How were they lost?—A. In competition in buying the oil—bidding for the oil

"Q. Bidding for the oil?—A. Yes, sir.

"Q. Did you have to purchase of somebody?—A. We had to purchase oil."

That covers the record of the case as given under the sworn testimony of Mr. O'Day, who had to do with it on behalf of our interests at the time, and I now state further, on careful personal inquiry of Mr. O'Day, he informs me that the amount involved in the Rice contract, some \$300 to \$250, was immediately, under Mr. Dodd's instructions, refunded, and that such refunding was made before any proceedings were instituted as against the receiver. We were in no sense a party to the proceeding against the receiver; were not present in court when the matter was heard, and had nothing whatever to do with it.

MR. RICE NOT A REFINER OF LATE YEARS, BUT AN AGITATOR.

I desire to state further, from my own personal knowledge, that Rice's efforts for many years have been directed, not toward making a success of his refining business, but to the pursuit of such a vexatious course toward us as would lead us to buy him out of the business at an exorbitant price. In other words, his course for many years has been a direct effort toward extortion. In a personal interview which I had with him, on his request, as far back as 1886, he demanded of me that we pay him \$250,000 in cash and \$50,000 per year for 5 years, or a total of \$500,000, for his Marietta refinery, which was worth at that time possibly \$25,000 or \$30,000. He based this demand on the statement that he had already inaugurated a number of suits before the Interstate Commission, that he could influence the action of the commission, and had other suits in contemplation which he would at once press unless we submitted to his demand. He claimed that if we did make the deal with him he could influence the discontinuance of the suits already pending, and that he would refrain from bringing others. He further stated that he had the ability to cost us a very large amount every year by making what are termed "cut quotations" in the markets for refined oil, thereby unsettling the trade and compelling us to make concessions to our customers in the localities affected. I drew him out as much as possible on this subject in the hope of getting him to expose his plans as thoroughly as possible, and then asked for time in order to make investigations of his statements. He evidently realized, after some delay in the matter, that we had not been specially influenced by his statements, and the matter was allowed to drop. Later, however, he made further efforts in the same line.¹

Rice has had no active relation with the business nor made any effort to have any for many years. I can not say positively, but I believe that he has been supported as an agitator by our enemies and those seeking in this indirect and underhanded way to annoy us.²

MR. LLOYD—WEALTH VS. COMMONWEALTH.

I desire to say a word regarding the effort at pathetic reference of Mr. Lockwood to the Rice case in Lloyd's book. I desire to characterize this statement in Mr. Lloyd's book, as well, indeed, as all the other statements with reference to our business, as cunning fiction, made up entirely on one-sided testimony and dressed for sale. Whether Mr. Lloyd expected to share, as a result of his advocacy of Rice, in what Mr. Rice might be able to get from us, I am unable to say, but he certainly lays himself open to that suspicion.

I desire to say further with reference to this book of Mr. Lloyd's, that if you are disposed to waste your time reading it you will find it with reference to its statements regarding the business of the Standard Oil Company one of the most untruthful, distorted compilations that was ever inflicted on a suffering public.

Q. (By Mr. FARQUHAR.) Will you state the title of the book?—A. *Wealth vs. Commonwealth*.

PRICES FOR EXPORT, AND IN NONCOMPETITIVE HOME MARKETS.

Mr. Lockwood makes an absurd statement, intended to convey the impression that at the same time refined oil is sold to Germany at 2 cents a gallon the people of Texas and Arkansas are forced to pay 25 cents.³ There is, of course, not a word of truth in any such statement, nor does he pretend to furnish, nor can he offer, any evidence in support of it. It is the sort of statement that a silly demagogue would make in an effort to create sentiment on this question.

¹ See pp. 561, 562. Compare Mr. Rice's testimony, pp. 749-754; Mr. Page, p. 785; Mr. Rice's affidavit, p. 798.

² See Mr. Rice, p. 749.

³ See pp. 384, 385. See also Mr. Emery, p. 616; Mr. Westgate, pp. 371, 372.

With reference to the course of production and present competition and prices, Mr. Lockwood makes the startling admission that he himself at one time aspired to be a monopolist and plutocrat. We can not escape a shudder at the thought of such a thing.

SOUTH IMPROVEMENT COMPANY.

He makes an absurd statement¹ regarding the railroad companies raising the price of crude oil from 40 cents to 80 cents and paying the additional 40 cents to the South Improvement Company. There is not a shadow of basis to support it. He convicts himself with reference to this matter by testifying that the South Improvement Company was not carried out.² As a matter of fact, I repeat that they never did any business.

THE STANDARD'S CONTROL OF REFINING.

Mr. Lockwood testifies:

"Q. (By Mr. KENNEDY.) Mr. Lockwood, can you state, approximately, what per cent of the refined oil of this country is turned out by the independent companies?—A. We calculate that they are handling about 4 per cent.

"Q. Only 4 per cent?—A. Only 4 per cent; you know this is an immense business.

"Q. (By Mr. PHILLIPS.) That is, taking the Ohio oil?—A. Taking the Ohio oil and the Pennsylvania oil and all these different grades of oil."³

I will now present a statement showing the aggregate business done by the Standard Oil Company and by others in the United States for the 5 years, 1894 to 1898, inclusive, in which it appears that the aggregate percentage of all business in petroleum and its products done by the Standard Oil Company was 82 $\frac{1}{2}$ for this period of five years as against competitors 17 $\frac{1}{2}$.

Q. (By Mr. SMYTH.) That includes all by-products?—A. Petroleum and all its products.

Business of Standard Oil Company and other refiners, years 1894 to 1898, inclusive.

[Barrels of 50 gallons. All products, domestic trade.]

Year.	Standard Oil Co.		Others.		Total.
	Barrels.	Percent of total.	Barrels.	Percent of total.	Barrels.
1894.....	18,118,938	81.4	4,145,232	18.6	22,264,165
1895.....	18,348,051	81.8	4,064,720	18.2	22,412,771

Total.....	90,949,593	82.8	19,591,376	17.7	110,540,969

THE STANDARD'S CONTROL OF PRODUCTION.

Mr. Lockwood testifies that by manipulation of price of Ohio crude oil, in conjunction with the railways, we succeeded in getting the price down to an abnormally low figure, and then bought substantially the whole Ohio producing field.⁴

I now present a statement covering the years from 1890 to 1898, showing our relation to the business of producing oil, not only in Ohio, but in Pennsylvania, thinking it would set the matter at rest, as the question has been raised:

¹ See p. 399. Compare pp. 619, 644.

² See p. 400.

³ See p. 402.

⁴ See p. 403. See also Mr. Monnett, pp. 318, 319; Mr. Boyle, p. 426.

Production of Pennsylvania and Lima crude oil by Standard Oil Company and others, years 1890 to 1898, inclusive.

[Expressed in barrels of 42 gallons.]

Year.	Pennsylvania oil.			Lima oil.			Grand total.		
	Total production.	Standard Oil Co. production.	Standard Oil Co. per cent of total.	Total production.	Standard Oil Co. production.	Standard Oil Co. per cent of total.	Pennsylvania and Lima production.	Standard Oil Co. production.	Standard Oil Co. per cent of total.
1890..	30,065,867	2,618,637	8.71	15,014,882	8,400,568	55.95	45,080,749	11,019,205	24.44
1891..	35,742,127	4,913,775	13.74	17,381,923	9,319,156	53.61	53,124,050	14,232,331	26.79

1898..	31,645,151	11,248,443	35.55	20,266,328	7,220,606	35.63	51,911,479	18,469,049	35.58
Total	292,708,726	65,323,225	22.32	175,481,558	69,073,522	39.36	468,190,284	134,396,747	28.70

This is in answer to Mr. Lockwood's statement, as I repeat, that we had bought substantially the whole of the Ohio producing field.¹

Mr. Lockwood's statement, that when the Standard Oil Company buy pipe lines producers have to pay for it two to forty times over² is so ridiculous as no to call for any answer.

In conclusion, gentlemen, it is really difficult to answer seriously a man who indulges in such extravagance of statement as has characterized Mr. Lockwood's testimony. Indeed, it is difficult to believe that he takes himself seriously. We can forgive much in a man in whose veins runs the boiled-down pugnacity of 147 revolutionary sires, but when he ruthlessly attacks judges and courts, and claims that the entire railroad and corporate interests of the country find their chief avocation in the "corrupting of public affairs and the debauching of public men,"³ I think you will agree with me that we must conclude that the "fool killer" has been very remiss in his duty in the vicinity of Zelenople, Pa.

MR. RICE'S CONNECTION WITH CONTEMPT PROCEEDINGS AGAINST THE STANDARD.

In confirmation of the statement which I have made regarding my interrogatories with Mr. Rice, and his overtures to me in connection with his business,⁴ I desire also to read for the information of the commission a transcript from the testimony of Mr. Rice given on cross-examination in the suit of the State of Ohio v. The Buckeye Pipe Line Company, taken on the 20th of February, 1899:

"First. In relation to Rice's connection with the contempt proceeding against the Standard Oil Company of Ohio.

"Q. Mr. Rice, you know that a proceeding for contempt was instituted by the attorney-general of Ohio against the Standard Oil Company?—A. Yes, sir.

"Q. Did you employ counsel in that case?—A. I did.

"Q. Who?—A. W. L. Flagg.

"Q. What other counsel did you employ?—A. Mr. Kinkead.

"Q. He is now acting as special counsel for the attorney-general?—A. Yes, sir.

"Q. How long prior to the commencement of these proceedings in contempt against the Standard Oil Company did you employ Mr. Flagg?—A. Two or three weeks—less than a month.

"Q. Did you employ him to assist the attorney-general in instituting and conducting the proceedings in contempt?—A. I should say that would be most natural.

"Q. Did he come here to Columbus for a consultation with the attorney-general?—A. Yes, sir.

"Q. Did you come with him?—A. I guess I came on before.

"Q. You had your consultation with the attorney-general before he came?—A. Yes, sir.

"Q. You three had consulted together?—A. Yes, sir.

"Q. When did you employ Mr. Kinkead?—A. That was about the same time, not just exactly.

¹ See p. 285 as to holding oil land undeveloped.

² See p. 403. Compare Mr. Phillips, pp. 302.

³ See p. 393, middle.

⁴ See p. 559.

"Q. Was he brought into this conference by you?—A. Yes, sir.

"Q. At that time he was not employed by the State?—A. I do not think he was.

"Q. He was your private counsel?—A. Yes, sir.

MR. RICE'S OFFERS TO MR. ARCHBOLD.

"Cross-examination in relation to Mr. Rice offering to sell his property to Mr. Archbold.

"A. He (Archbold) wanted to know what I would take to go out of the business, and I told him \$250,000 and \$50,000 per year for 5 years; but several years before that he wanted to buy my plant and I offered to sell it for \$25,000 and \$5,000 for 5 years, and before that time I offered to sell it for \$20,000. I have a perfect right to ask what I please for my plant.

* * * * *

"Q. Did you authorize or request Mr. Orvis to have an interview with him (Archbold)?—A. No, sir; not at first.

"Q. Did you at any time?—A. I may have done so.

"Q. Now, coming to the second interview, did you have another interview in June, 1890, with Mr. Archbold, at his office in the Standard Oil building, at 26 Broadway, in New York?—A. I do not recollect.

"Q. Did you then make a similar offer to him?—A. I did not have a second interview with Mr. Archbold.

"Q. Did you at that time authorize Mr. Orvis to make an offer to sell your property for \$500,000?—A. Yes; I guess I did.

"Q. You were to get \$250,000 cash, and \$50,000 for 5 years?—A. I guess so."

"Q. What were you to give to Mr. Archbold for that consideration?—A. I was to sell out my plant and get out of the business.

"Q. Were you to refrain from bringing any further litigation?—A. That was to settle up the whole trouble; I was to do nothing further—have no litigation or anything of that kind."

Q. Have you a general statement to make with reference to the organization of the company?—A. I have a general statement I would like to make.

Q. (By Mr. PHILLIPS.) Just proceed with your statement.—A. I desire to say that this is a much pleasanter task to me than attempting to answer the allegations of the various witnesses. I did not come here, gentlemen, desirous of making this answer, although I am naturally under some feeling with respect to these charges so often and unfairly reiterated against us—to assail anybody harshly—and if I have been led into any expression that seems harsh at any time during the course of my answers I am sorry for it. It is out of the fullness of what I believe to be the correct answer, and a desire to make it as positive as possible, certainly not with any disrespect to this commission. It is a much pleasanter task for me to undertake, gentlemen, to say a word more particularly in defense of the organization with which I have passed almost my entire business life, intimately related with it, and in which I have the most personal pride. Shall I proceed?

Q. (By Mr. PHILLIPS.) Certainly.

LARGE CORPORATIONS A NECESSARY RESULT OF GROWING COMMERCE.

Trusts, or, speaking correctly, large corporations are the necessary—indeed, the irresistible—result of our rapidly growing commerce. In adopting them we are but following the example of that greatest of all commercial nations, England, under whose commercial charters capitalization and scope are practically unlimited. Any legislative restrictions imposed here would operate alone to the benefit of foreign commercial competitors. The claim that such restriction would help the weak and incompetent of our own country as against the strong and aggressive is too puerile to call for serious answer. I speak to-day especially in defense of the aggregation of capital and experience in the petroleum business, on the ground of its absolute necessity, for the successful development and promotion of that business. I am here to defend the Standard Oil Company organization, also, on economic and ethical grounds. Not to indulge in undue length, I will lay down a number of leading propositions in support of my position, which may serve as texts for more extended discussion, if you so desire.

GOOD RESULTS OF THE RISE OF THE STANDARD.

The early years of the petroleum industry were marked by a chaotic and crude condition in all branches of the trade, namely, the production, manufacture,

¹ See Mr. Rice, p. 749; Mr. Page, pp. 785, 786; Mr. Rice's affidavit, pp. 793, 794.

transportation, and marketing; and the average quality of the refined products was inferior and unsatisfactory. The advent of the Standard Oil Company aggregation changed this entirely. It brought to the business ample capital, and combined into effective working shape the best possible talent in all branches of the business. It improved quality and greatly reduced costs. It supplanted old and inferior methods and refineries with the newest and most progressive methods and most perfectly equipped and favorably located refineries. It has been ever on the alert to engage the best obtainable practical and technical talent for the development and improvement of the business in all its branches. It inaugurated new systems of transportation,¹ which not only gave to the producer the most efficient possible service at greatly reduced cost, but a daily continuing cash market for his product on a basis of the best price obtainable in the world's markets. Further, it reached out and occupied the markets of the world for American petroleum. Individual effort could not have accomplished any such herculean task in many times the same period, and, indeed, the efforts of the Standard Oil Company were none too quickly made.² If there had been as prompt and energetic action on the part of the Russian oil industry as was taken by the Standard Oil Company the Russians would have dominated many of the world's markets which have been made to inure so largely to the benefit of the American oil industry. Later in the history of the trade Russia and other oil-producing countries have followed in the footsteps of the Standard Oil Company in the general markets of the world, and I now hand you a statement, partial in character, of the oil companies of Russia, the Dutch East Indies, Galicia, Japan, and other countries, which will give you some faint idea of the menace which even now threatens the American oil industry; and when you reflect, gentlemen, that there has been brought into this country during the past thirty years from the exportation of petroleum and its products nearly \$1,500,000,000 you will appreciate the importance of this subject.

LIST OF CORPORATIONS AND INDIVIDUAL FIRMS PRODUCING AND REFINING PETROLEUM.

Russia.—Production on the Peninsula Apsheron, on the west shore of the Caspian Sea: Nobel Bros., capital 15,000,000 rubles (\$7,500,000), bonds \$3,750,000; Russian Petroleum and Liquid Fuel Company, formerly Tagaieffs, capital £1,200,000 (\$6,000,000); Anglo-Caucasian Company (Rothschilds); European Petroleum Company; Anglo-Russian Petroleum Company, Limited, capital £120,000 (\$600,000); Sheibieff Petroleum Company, capital £750,000 (\$3,750,000); Baku-Russian Oil Company, capital £1,500,000 (\$7,500,000); Mantashoff's property, capital 26,000,000 rubles (\$13,000,000); Société Caspienne (Rothschilds), capital 6,000,000 rubles (\$3,000,000), but money invested much larger; Caspian Oil Producing and Trading Company, capital 2,000,000 rubles (\$1,000,000); Mirzoff Brothers Oil Producing Company, capital 2,140,000 rubles (\$1,070,000); Ropes Refining Company, capital 1,200,000 rubles (\$600,000); Troovianoff, Billsky, Asadoolaeff, Zeitlin & Zirkvich, Caucasian Oil Company, Toomayeff & Co., Kaplan & Lev, Kascheyeff, Lianozeff, Viziereff, Nagieff Moosa, O. Leites, Kvarenstron, Lootch, Zeinaloff & A. Dembot Bros., Hatzasiantz, Pogossoff, Hagan & Zeitlin, Metrofanoff, Beneinson, Egiazaroff, Nedezda, Shagidanoff, Melikoff, Mananoff, L. M. Leites, Sarkiesoff, Chicnaverooff, Adamoff Bros., Sergaieff Bros., and ten other smaller concerns.

Grosni.—Oil territory in northwest from the Caspian Sea oil territory: Grosni Company, of Akhverdoff, capital 1,500,000 rubles (\$750,000); Moscow Oil Producing Company, Grosni, capital 3,000,000 rubles (\$1,500,000); Maximof & Co., Petersburg Petroleum Company; Ronsanofsky; Belgian Company, at Soupsa, near Batoum, Black Sea, capital 575,000 rubles (\$287,500).

Galicia.—Anglo-Austrian Petroleum Company, Limited, capital £125,000 (\$75,000); Mineral Oil Company, Budapest (Rothschilds); Anglo-Galician Oil Company, Limited, capital £560,000 (\$2,800,000); Galician Petroleum Company, capital 1,000,000 florins (\$400,000); and the following oil territories are offered for sale: T. Laszez at Kobylouka, 71 acres; Mad Jodwigo Biechomka, 569 acres; G. Kropiwnsk at Schodnica, 250 acres; Veadomir Podhorodezki, 125 acres; Mad Malwine Szezpanaska, 57 acres; W. Posteuski at Swoboda, 426 acres; Kosimerz Lipinski, 128 acres, and a great many others.

Roumania.—Roumania Oil Syndicate, capital £500,000 (\$2,500,000), bonds \$1,000,000; Roumania Oil Trust, capital £710,000 (\$3,550,000), bonds \$1,250,000; Holland Roumania Petroleum Company, capital 1,000,000 florins (\$400,000); Neth-

¹ Compare, as to pipelines, Mr. Lee, p. 237; Mr. Boyle, p. 489; Mr. Emery, p. 604; as to tank cars, Mr. Boyle, p. 412.

² Compare Mr. Phillips, pp. 600, 602; Mr. Emery, pp. 626, 628.

erlands Roumania Petroleum Company, capital 500,000 florins (\$200,000); Amsterdam Roumania Petroleum Company, capital 1,000,000 florins (\$400,000); Roumania United Oil Company, Limited, capital £720,000 (\$3,600,000), bonds \$600,000; Estate Prince Cantacuzino; Estate Harnia, Campine; Estate Prince Montiosa, Buzen; and many concessions for drilling granted to natives and foreigners.

Borneo, Dutch East Indies.—Netherlands, India Industry and Trading Company, capital 2,000,000 florins (\$800,000), but \$1,750,000 invested; Bolangan Exploring Company, capital 150,000 florins (\$60,000); Kotei Exploring Company, capital 300,000 florins (\$120,000); Martapoera Mining Company; Tarakan Mining Company, capital 240,000 florins (\$96,000); Bombay Burnah Trading Company, British Borneo, capital large.

Sundries in East Indies.—Doda Mining Company, Celebes, capital 125,000 florins (\$50,000); Boela Company, Ceram, Molucca Islands.

British India.—Burmah Oil Company, Limited, Rangoon.

Alsace, Germany.—Pechelbronn Oil Works, capital 3,000,000 marks (\$750,000); Rudolf Biblisheim Company, capital 1,200,000 florins (\$480,000); Gute Hoffnung Company; Alsace Petroleum Company, capital 2,000,000 florins (\$800,000); the Petrolia Company.

Japan.—Mitsumata oil field, Ogidaira oil field, Kitayama oil field, Tatsuno oil field, Yamatera oil field, and Amase oil field are worked by Nippon Petroleum Company, capital unknown; Tokyo Petroleum Company, capital unknown; Osaka Petroleum Company, capital unknown; Echigo Petroleum Company, capital unknown; Oriental Petroleum Company, capital unknown.

Miyagawa oil field, Nagamine oil field, Hirayama oil field, Nita or Samata oil field, Akata oil field, Miyohoyi oil field, Abnaradan oil field, Jabani oil field, Ida oil field, Betsuyama oil field, Koshi oil field, Katsubo, Uruse, Katsurazawa, Tsubakizawa, Mijyaji, Asoda, Mizuana, subdivisions of Koshi oil fields, are partly worked by individuals and the above companies. In addition there are about 20 more oil fields, of which are most prominent as to their production the following: Niitsu oil field, Shiodani oil field, Koguchi oil field, Niigata oil field, worked by individuals and the above companies.

Sumatra.—Royal Dutch Company, capital 5,000,000 florins (\$2,000,000); bonds, (\$1,200,000). Sumatra Palembang Petroleum Company, capital 7,000,000 florins (\$2,800,000); Boissevain Syndicate; Moera Enim Petroleum Company, capital 10,000,000 florins (\$4,000,000); Netherlands India Exploration Company, capital 300,000 florins (\$120,000); Moesi Iir Syndicate; Sumatra Petroleum Company, Limited, capital 2,400,000 florins (\$960,000); Shanghai Langkt. Tobacco Company, \$500,000; W. T. Wisse; Deli Company; Banjoe Asin Exploration Company, capital 120,000 florins (\$48,000); Nagel Concession, Ali Cohen Bengkoelen Concessions, Kessler Concessions (about 5,000,000 acres), Petroleum Company Hiran, capital 1,200,000 florins (\$480,000); Belang Mining Company, capital 140,000 florins (\$56,000); Palembang Exploration Company, capital 250,000 florins (\$100,000); Langsar Petroleum Company (Acheen), capital 800,000 florins (\$320,000), and many millions of acres under concession to private parties.

Java and island of Madoera.—Dordt'sche Petroleum Maatj., capital 15,000,000 florins (\$6,000,000); bonds, \$2,000,000. Rembang Petroleum Company, capital 500,000 florins (\$200,000); Japara Petroleum Company, capital 500,000 florins (\$200,000); Company Insulinde, capital 3,000,000 florins (\$1,200,000); Toan Lok Sourb. Petroleum Company, capital 300,000 florins (\$120,000); Eastern Exploration and Exploiting Company; Tegal Petroleum Company, capital 500,000 florins (\$200,000); Netherlands, The, India Petroleum Company, capital 700,000 florins (\$280,000); Java Petroleum Company, capital 1,000,000 florins (\$400,000); Batavia Japara Petroleum Exploration Company, capital 200,000 florins (\$80,000); East India Exploration Company, capital 300,000 florins (\$120,000); Rotterdamische Petroleum Company, capital 1,500,000 florins (\$600,000); Gabaes Petroleum Company, capital 600,000 florins (\$240,000); Sourabaya Petroleum Company, capital 250,000 florins (\$100,000); Central Java Exploration and Exploitation Company, capital 240,000 florins (\$96,000); Polynesia Petroleum Company, capital 2,400,000 florins (\$960,000); Temajang Rembang Petroleum Company, capital 500,000 florins (\$200,000); Bantjar Development Company, capital 500,000 florins (\$200,000); Madoera Petroleum Exploitation Company, capital 100,000 florins (\$40,000); Archipelago Exploration Company of Amsterdam, and many millions of acres under concession to private parties.

It is true beyond a question that the result to the public of the operations of the Standard Oil Company has been highly beneficial, and not hurtful, as its enemies claim. As has been already stated, it has given the public goods of vastly improved quality at greatly reduced prices.¹ It has, by its effective system of distribution, supplied this most necessary article for domestic consumption promptly

¹ See Mr. Lee, pp. 272, 277; Mr. Monnett, p. 317; Mr. Westgate, pp. 371, 372.

and cheaply to the most remote sections of our country and, indeed, to the world. Beyond all this, however, it has given to the community at large an opportunity for investment in the business itself, which it could never have had under the old system. Thus there are to-day partners in the Standard Oil Company, as shareholders, to the number of fully 8,500, where less than one-twentieth of that number would have been interested as partners under the old system.

NO TROUBLE WITH LABOR.

It has been most beneficial in its effect on labor. There could be no stronger evidence that the labor involved in its vast operations has been well paid and contented than lies in the statement that for more than a quarter of a century, since the Standard Oil Company began its operations, it has scarcely had a serious strike of any kind among any branch of its employees—one or two temporary strikes among some special classes of workmen in sympathy with other labor organizations who were striking, constituting the sole disturbances. Indeed, it is not too much to say that to the loyalty, zeal, and intelligence of its vast army of about 35,000 employees the company is largely indebted for its strength and efficiency.¹

I unhesitatingly express the opinion that, when the history of our time is written, it will appear that the marvelous commercial and industrial evolution which we are experiencing in this great country during the year 1899 marks one of the most important steps of progress in our country's history. It will prove to be of immense value to all classes of our population. The investor, the consumer, and the laborer will all be benefited by it; the investor by the better security which arises through amplitude of capital for the business contemplated, and the combination of talent in the various departments of administration; the consumer, through improved processes resulting in better products at lower prices, and more efficient distribution; the laborer, by steadier employment at better wages, and a better opportunity for improvement in condition, if special talent is shown.

The outcry, gentlemen, against corporations does not come from the great, busy, industrial classes, but from impractical sentimentalists, yellow journals, and political demagogues; from the latter, perhaps, more than any other. It is a veritable attack upon thrift and prosperity. To listen to their voice to the extent of imposing restrictive legislation would mean a frightful step backward in the commercial development of our country.

NATIONAL CORPORATIONS THE NEXT STEP OF PROGRESS.

If you should ask me, gentlemen, what legislation can be imposed to improve the present condition, I answer that the next great, and, to my mind, inevitable step of progress in the direction of our commercial development lies in the direction of national or Federal corporations. If such corporations should be made possible, under such fair restriction and provisions as should rightfully attach to them, any branch of business could be freely entered upon by all comers, and the talk of monopoly would be forever done away with. Our present system of State corporations, almost as varied in their provisions as the number of States, is vexatious alike to the business community and to the authorities of the various States. Such Federal action need not take away from these States their right to taxation or police regulation, but would make it possible for business organizations to know the general terms on which they could conduct their business in the country at large. Lack of uniformity in the laws of various States, as affecting business corporations, is one of the most vexatious features attending the business life of any great corporation to-day, and I suggest for your most careful consideration the thought of a Federal corporation law.

Q. (By Mr. JENKS.) Have you any further statement with reference to the organization of the Standard Oil Company itself?—A. That will be included in the statement Mr. Dodd will submit; or the data regarding the organization, I think, will be in that.

PETROLEUM CONCERNS IN RUSSIA AND ELSEWHERE.

I want to hand you, in connection with this paper, this most interesting statement, which I think, perhaps, is the first general compilation of the information that has ever been made in the country here; almost a surprise to us, who are daily familiar with the oil business, as showing a tremendous growth of the foreign petroleum business. I will only refer by name to the countries in which petroleum is now successfully mined and prepared for market. Capitalization,

¹ See Mr. Lee, pp. 285, 286.

so far as we are able to obtain it, and the names of the companies which, as I think, are substantially accurate, appear on this statement.

Q. (By Mr. SMYTH.) Could you give us anything like the proportion?—A. I have the statement which I think shows the proportion of business done. It will be a little surprise to you to see the enormous capitalization of the business attaching to the Russian development, and I may say in a word of oral explanation that the business there is getting to be in strong hands. When I mention the name of the Rothschilds, that will be a sufficient guaranty as to the strength of the company; and they are growing now enormously in the extension of their business in the various markets of the world.

The Nobel Brothers are there competing for the business with tremendous energy. Recently, perhaps within the past year more than in the aggregate time before, English capital and English corporate organizations have engaged in the petroleum trade in Russia to an enormous extent; the largest concern perhaps being the Shell Company, Sir Samuel Samuels, late lord mayor of London. I hand you this list showing firms in Russia, and this showing list of corporations in Galicia, a further statement from Roumania, one from Borneo, and sundry places in the Dutch East Indies, in British India, in Japan, and in Alsace, Germany. It will probably be an item of information to many of you that the production of petroleum is assuming great proportions in Japan. They are now very rapidly progressing, are coming to the front in improved methods of production, and will ultimately become a formidable competitor to our American industry. The system of petroleum refining in Japan is by corporations and individual firms going out into the different fields and producing and refining. In Sumatra the business has already attained large proportions, and in Java and the island of Madeira.¹

Q. (By Mr. SMYTH.) Is there any American capital represented in these firms?—A. There is no American capital that I know of. But they have sent out and taken from our oil-producing country here many artisans.

Q. (By Mr. A. L. HARRIS.) Then the Standard Oil Company is not represented in any of those corporations?—A. Not in any way.

Q. Not even in the Nobel Brothers?—A. Not a dollar of interest in any way, or relationship or understanding.

Q. (By Mr. SMYTH.) I suppose English capital being interested in Russian refining is one of the causes of attack on the American oil in London?—A. Undoubtedly, but as I said this morning, I think the attack was undoubtedly made by the people directly and largely interested now in the Russian distribution in the different countries. It may be of interest to read a short letter from our foreign exporters:

NEW YORK, September 1, 1899.

J. D. ARCHBOLD, Esq., *Building.*

DEAR SIR: I beg to hand you herewith the statements you desired, in duplicate, and wish to say that the Russian production is on the peninsula of Apsheron, on the west coast of the Caspian Sea, and the Grosni district, northwest from the same.

We estimate the Russian production at present to be about 160,000 barrels per day, and Grosni about 10,000 barrels daily. The Galician production is about 2,000,000 barrels crude, and Roumania 500,000 to 600,000 barrels, per annum, and the Alsace production about 175,000 barrels crude annually. The Dutch East Indies, about 3,400,000 barrels; Burmah, about 2,000,000 cases refined per annum, and Japan will probably amount to about 2,000 barrels crude oil per day.

Of course we give you these figures as near as we can get to them, and where we give you the output of refined we have no reliable figures as to what it may represent in crude.

Yours, truly,

C. F. ACKERMANN.

I have here another statement. This covers the information which you ask as to the percentages of these various countries. It is for the year 1897. Unfortunately we have not the full data at hand with which to give you the 1898 figures. This statement shows the business of all countries of the world producing refined oil. Some little percentage of it, as you will observe, is not the production of our country, but is shown in this way because the country named compels, by its tariff laws, the bringing into that country of the crude petroleum for refining there; but the larger items are the production of this country, as you will observe.

The total production in the world of refined petroleum illuminating oil, for the year 1897, was 39,338,991 barrels, of 50 gallons each, and was divided as follows. I will give the percentages, if you please.

¹ List on pp. 563, 564.

Q. (By Mr. JENKS.) Yes.—A. United States, 64.23; Russia, 23.28; France, 3.25; Austria-Hungary, 2.66; Sumatra, 2.32; and the remainder, Scotland, Canada, Java, Roumania, India, Spain, Mexico, Cuba, Brazil, Germany, Peru, Italy, Japan, and Porto Rico are all fractions of less than 1 per cent, making the grand aggregate of 100 per cent; the great factors, as you will see, for the year, being the United States and Russia; and a rapidly increasing factor, of course, in Austria-Hungary and Sumatra.

World's production of refined illuminating oil, 1897.

Product of—	Barrels of 50 gallons.	Per cent of total.	Product of—	Barrels of 50 gallons.	Per cent of total.
United States	25,268,628	64.23	Mexico	104,287	.27
Russia	9,100,700	23.28	Cuba	58,413	.15
France	1,277,701	3.25	Brazil	35,306	.09
Austria-Hungary	1,046,359	2.66	Germany	34,822	.09
Sumatra	914,000	2.32	Peru	19,193	.05
Scotland	331,857	.84	Italy	15,136	.04
Canada	251,843	.64	Japan	13,689	.03
Java	230,332	.59	Porto Rico	8,236	.02
Roumania	230,000	.59			
India	180,685	.46	Total	39,338,991	100.00
Spain	157,684	.40			

The population of the world is 1,349,140,091; the production of illuminating oil is therefore equal to 1.5 gallons per capita.

Q. (By Mr. CLARK.) Do you suppose there has been an increase since these statistics were given?—A. The business of Russia is increasing rapidly. Here is a further statement of crude oil, the world's production, which may be of interest in looking over in a general way.

World's production of crude petroleum, 1897.

[Barrels of 42 gallons.]

Country.	Barrels.	Per cent of total.	Country.	Barrels.	Per cent of total.
United States.....	60,496,499	47.96	France	70,000	.06
Russia	57,094,303	45.26	Peru	68,452	.05
Austria-Hungary	2,087,617	1.66	Argentina	21,000	.02
Sumatra	1,777,560	1.41	Italy	18,149	.01
Scotland (1896)	1,316,894	1.04	Other countries (esti- mated)	200,000	.16
Canada	809,199	.64			
Java	726,373	.58	Total	126,136,528	100.00
Roumania	570,886	.45	Total production 1896 ..	118,298,631
India (1896)	430,203	.34			
Japan	283,571	.23	Increase	7,837,897	6.6
Germany	165,822	.13			

Crude oil production by States, years 1896, 1897.

[Barrels of 42 gallons.]

States.	1897.		Increase or decrease.	Increase or decrease.	Average value per barrel.	
					1896.	1897.
						<i>Per cent.</i>

Colorado	361,450	477,499	116,049	32.1	.883	.810
California	1,252,777	1,903,411	650,634	51.9	.990	.900
Kansas	113,571	81,098	32,473	28.6	.450	.400
Wyoming	2,878	3,650	772	30.3	8.00	8.00
Illinois	250	500	250	100	5.00	4.00
Texas	1,450	65,975	64,525		.720	.570
Indian Territory	170	625	455		4.000	3.30
Total ..	60,864,401	60,496,499	367,902		.900	.676
Total value of production, 1896					\$58,518,709	
Total value of production, 1897					40,929,611	
Decrease					17,589,098	

Total production in the United States, 1859 to 1897, inclusive (38 years) 837,494,059 barrels, on the basis of 5.6 cubic feet to 1 barrel of oil. This amount of crude oil would fill a pipe line 6.9 feet in diameter, extending entirely around the earth. It would cover a surface if 10,000 square miles to a depth of 0.3 inches, or fill a reservoir having an area of 1 square mile and a depth of 167 feet.

PETROLEUM EXPORTS FROM THE UNITED STATES, 1861 TO 1898.

Q. (By Mr. FARQUHAR.) Have you furnished the commission to-day with the total exports of the Standard Oil Company, from the first, all over the world out of the United States?—A. I do not think I have submitted any statement. It may be among these statistical reports given that there are such statistics, but I hardly think so. I have for periods given the exports.

Q. (By Mr. JENKS.) Can you furnish the exports year by year?—A. From the day we began.

Value of exports.

Total value of petroleum products exported from United States for the years 1861 to 1871, inclusive, amounted to	\$199,030,333
Value of exports from 1872 to 1898, inclusive (i. e., since the organization of the Standard Oil Company)	1,246,846,381
Value of exports by Standard Oil Company	1,126,401,021
Standard Oil Company, 90.84 per cent of total.	

PRICES UNDER COMPETITION—WOULD NOT ADVISE GOING BELOW COST.

Q. With reference to the effect of the Standard Oil Company on prices, you have made the general assertion that through the influence of the Standard Oil Company, in your judgment, prices of refined oil have been very greatly lessened to the consumers. Is it generally true that the prices at the present time are considerably lower at competitive points than at those where you have little competition?—A. Well, I can not speak with any precision regarding that matter. I have no manner of doubt that, when we are closely pressed with competition at any point, we try to hold our trade. That is a natural law of trade, to which we are, of course, subject.

Q. And your general practice is, if a competitor comes into the market that you have had before, to put down the prices and hold the market?—A. I think,

as a rule, the history of our transactions would be that the competitor forces the fight.

Q. About what proportion of the refined oil of the country do you supply?—A. Well, the grand aggregate is there.

Q. Can you state generally?—A. I should say that of this country it would be, approximately, the same as the whole; that is, about 82; 80 to 82 per cent.

Q. Do you think that an organization that controls 80 per cent of the goods that go into the market will, generally speaking, have the power, within moderate limits, of course, to fix the prices and force their competitors to follow?—A. It might temporarily have such power. If it exercises it unjustly or arbitrarily it would surely lead to its own downfall.

Q. That is, if it attempted to push the prices too high it would call in competition?—A. It would invite competition.

Q. And if there is fierce competition between large institutions, prices cut in any locality—prices will go down how low; to the lowest rates?—A. Personally, I would never advise selling goods at a loss. I expect it is done in some cases. I would not personally advise selling goods at a loss. I think when you get to cost you are low enough.

Q. You would say, then, as regards your own methods of competition, that where the fighting is forced by competitors you do not cut prices below your cost?—A. I hope not when they get to that point, because I would rather keep my works going and labor employed there than to shut down, even at the cost point.

Q. You would not, temporarily, in a special locality, go below the cost point for the sake of freezing out a smaller rival, with the expectation of keeping or getting control of your market?—A. I do not believe I would. There might be a greatly aggravated case where such a thing would seem advisable, but it would be a rare one.

Q. You would not say that your company had never done that at all?—A. I would not say that it was never done it at all—no.

Q. So far as an organization of the size of the Standard Oil Company is concerned, if you put prices down to cost you can afford to hold them there, of course, very much longer than a smaller rival could?—A. I think so.

Q. And I presume you are in the habit of doing that to get rid of a competitor at times?—A. We are in the habit of fighting vigorously to hold our trade and advance it.

Q. To the extent of holding prices down to cost until the rivals give way?—A. Yes.¹

HOPES THE STANDARD GETS PRICES SLIGHTLY ABOVE COMPETITIVE PRICES.

Q. Now, the general result then is this: By virtue of your greater power you are enabled to secure prices that on the whole could be considered steadily somewhat above competitive rates?—A. Well, I hope so. I think we have better merchandizing facilities, better marketing facilities, better distributing facilities, and better talent than a competitor can have.

Q. I am not asking with reference to your power of making profits, but it is with reference to getting the prices from the consumer.—A. Prices are what make the profit. If we had a better average price, we could get a better profit.

Q. You think, generally speaking, that you get prices for oil slightly above competitive prices?—A. Well, I should think so; I could not answer—that is a very general question and very difficult to answer. I could not answer that specifically. I hope that we do.

Q. Of course, in this investigation we are seeing if we can get some general principles on which legislation might be based, and these questions are to bring out, if we can, the power that so great an organization has in fixing prices. Would you say, then, that in the case of an organization that controls perhaps 80 per cent of the markets of the country, there is a monopolistic element that enters in which enables them to hold prices above the regular rate? Is there a monopolistic power that comes merely from the power of capital itself?—A. Undoubtedly, there is an ability, and when that ability, as I have said, is unwisely used, it is sure to bring its own defeat.

Q. If that ability goes to get an exorbitant price, of course it will invite competition, but when that ability is kept within modest limits, would you still say that it was in the power of such an organization to get the benefit of the monopolistic power that comes merely from the power of capital itself?—A. Well, I should say that that would be a very restricted power, a very restricted limit. The competitors in this country are very active.

¹ See Mr. Lee, p. 270; Mr. Monnett, p. 317; Mr. Clark, pp. 331, 337, 340, 350; Mr. Westgate, pp. 366-370.

Q. What?—A. The competitors are very active; they are alert at all points with their small offerings in the hope to find just such a condition as you describe.

Q. Certainly.—A. But, as I say, as business is and as it has been for many years, we could not have that ability to any considerable extent as merchants.

Q. If the ability were operative only to a slight extent, would it still be enough, do you think, to make a difference between what we may call a moderate dividend, say 6 or 7 per cent, and a pretty high dividend of between 15 and 20 per cent?—A. Well, that involves so nice a question that I could hardly undertake to answer it; but generally, as to the effect on the community, I should say—

Q. Generally on the prices in the United States?—A. I should say that the lessened cost incident to doing business in a large volume would more than compensate the consumer for any ability in getting higher prices.

Q. Then that leads to this point, whether the large capital does itself give an organization the power to get a somewhat higher price than it could in the market provided the competitors were substantially equal in power?—A. Oh, it may be so; but that is a difficult question to answer.

BY-PRODUCTS.

Q. In your business has there been any decided increase within the last 10 or 15 years in the by-products that come from the refining of oil?—A. Oh, my, yes; oh, yes. Their utilization has been greatly improved, and the uses of the by-products throughout the world have been enormously increased.

Q. Will you give us a few specific illustrations from your own business?—A. Our leading by-products are the light gasoline and naphtha products, the paraffin product that is used in candle making and kindred uses; lubricating oils for all classes of machinery, as taking the place of the animal and vegetable oils; the vaseline products, and numberless small products that I do not at the moment, perhaps, recall. I have named the leading ones.

Q. Can you say whether it would be possible for these various by-products to be secured to as great an advantage by an organization that had in its control, we will say, only half a million dollars?—A. I don't think it possible for them. I don't think they could undertake the different branches of the business involved in the producing of these various articles to which I have referred with anything like the advantage that we have in a large specialization.¹

Q. That is what you would put down as one prominent advantage that is secured by this large aggregation of capital—the use of the by-products?—A. I do; the use of the by-products. It may be rather surprising to know that the by-products of petroleum now equal substantially in value the illuminating oil itself.

OIL SOLD BELOW COST IN THE FAR EAST—BUT FOR THE BY-PRODUCTS.

Q. If so large an income is secured at the present time from the by-products, would it be possible for you still to make profits, even though the main product of the refined petroleum were sold substantially at cost?—A. Well, we may possibly, yes, secure a profit. It may be. However, we count the profit from the by-products as part of the whole profits in the management of our business; we take it as a whole.

Q. (By Mr. SMYTH.) Which is the larger profit, from the by-products or from the oil?—A. Well, I should say—I do not know which is the larger—from the by-products. In estimating the outcome from a barrel of crude, we consider the whole proposition as to what we get from the by-products and the ruling prices for the illuminating oil, and base our prices as a whole on that. Of course, it is to our interest somewhat, or in special cases, if not to our interest, these gentlemen who are our competitors in the near-by market and do not have to face the problem that we do, more particularly in competition with Russia and in the markets we have reached in the far East, will force us to do the best we can. We have been basing our calculation on the expected output; made the prices for refined oil in competition with them there, which would have given no margin of profit whatever to us here. We have had to do that so as to hold those markets for the general American trade as against the Russian aggression.

Q. If I understand you, you say that in the eastern market you have done it?—A. On a very low basis; I should say at below cost, figuring transportation and the ordinary charges.

Q. And secured your profits from the by-products?—A. Yes; been satisfied with that.

¹ Compare Mr. Lee, p. 269; Mr. Boyle, p. 441; Mr. Emery, p. 627.

GENERAL IMPRESSION THAT THE MARGIN HAS NOT INCREASED IN SIX YEARS.

Q. As regards the home market here, the statement was made by you that the prices had been steadily lower. If we take the margin between crude petroleum and the refined petroleum, we find that for a number of years past this margin does not seem to have lessened very materially in spite of the increased profit that has come from the by-products?—A. There is a basis below which it is not possible to go very much.

Q. How far?—A. I think the experience of our competitors is perhaps the best proof of the fact that with reference to the business as a whole it is pretty close. It has been carried on a pretty fairly close basis.

Q. Would you say that the margin of profit now in the refining industry was no greater, if we take the period of, say, the last 3 years, than it was 8 or 10 years ago?—A. Well, I could not speak from memory as to 8 or 10 years ago.

Q. About 6 years ago, your general impression is—A. That it is not. My general impression is that it is not. I speak of all these matters with some little reservation, from memory. I am just as accurate as I can be from memory. I should not like to be incorrect.

Q. On account of the many assertions which have been made on all sides on this question, I should like to get as close as possible.—A. I will answer you just as well as I can. If I err, I will endeavor to err on the safe side.

BUYING CRUDE IN PENNSYLVANIA—REFINED CHEAPER THAN CRUDE?

Q. The general question has been asked as to the general effect of the Standard Oil Company upon the price that is paid the producer for crude oil. Do you know about what proportion of the Pennsylvania product you purchase?—A. Well, I think the percentage of the business done by us as a whole would be perhaps the best illustration of that.

Q. Can you recall, offhand, the figures?—A. Perhaps our percentage of the Pennsylvania would be less than 82 per cent, because a larger proportion of the competitive business is done in Pennsylvania than in Ohio. I should say in the neighborhood of 80 per cent.

Q. Your purchases in this Pennsylvania field are made through your pipe line. Have you a general purchasing agent?—A. Not through the pipe line.

Q. It is through your general purchasing agent?—A. Mr. Joseph Seep, of Oil City.

Q. The prices that Mr. Seep there gives are fixed by you?—A. Well, they are suggested, as a rule, by us.

Q. He is your general purchasing agent, and there are various subagents there?—A. Yes.

Q. Do you recollect about how many?—A. I should say forty or fifty.

Q. The prices are fixed for it generally, as you say, from your office. As covering the principles on which those prices are fixed, a circular Mr. Seep issued some time ago was produced here, stating that the prices that he would pay would be fixed, in general, by the world's markets.¹ The implication would be that the prices would not vary probably very frequently or very violently. Has it been true, generally, that prices have kept stable for the crude oil of Pennsylvania?—A. Well, the prices have varied somewhat during the past several years, according as the outlook was for the production, and as the demand was. It could not be better stated by me than the circular states it. We have before us daily the best information obtainable from all the world's markets, as to what the offerings are, and as to what it is possible to sell for; and we make from that the very best possible consensus of prices, and that is our basis for arriving at the current price.

Q. Generally speaking, are the relative prices of the crude oil and the refined oil kept substantially uniform?—A. We know all about it every day, of course.

Q. And is the relation kept substantially uniform?—A. Oh, substantially so. Of course, it is not always the same. Of course, it seems possible sometimes to get a higher price, and we are glad to avail ourselves of the opportunity; and sometimes we have to take a closer margin and still buy the crude, and there, of course, we suffer a loss.²

Q. Statements have been made here by some of the witnesses to the effect that there have been times when refined oil at the seaboard was selling lower than the crude.³—A. I should say that is a very exceptional case. I do not recall.

Q. Can you suggest any circumstances where that would be the condition of affairs?—A. I do not recall any such period. The answer is already given by me that, in competing with the Russians at certain times for certain markets, we have made prices for refined that were as low as the crude products and have

¹ See p. 436.² See tables, pp. 437-439.³ See Mr. Lee, p. 270.

taken our returns on the profits from the by-products; but they have been very exceptional cases, and it is not the case to-day; it does not at all exist to-day.

REASONS FOR DISMANTLING REFINERIES.

Q. You have at times purchased the plants of your competitors and dismantled them? Instances of that kind have occurred?—A. Oh, my, yes.

Q. Will you state the business conditions which, in your judgment, justified that?—A. I endeavored to do that as directly as possible in my general argument.

Q. Will you sum it up again?—A. It is this, that we have at times bought refineries with the expectation of succeeding to the volume of business done by them. We have universally replaced the capacity of these refineries by better ones and better equipped construction at more favorable points. We would not buy refineries and dismantle them for the pleasure of doing it. We have done it because of a carefully considered business proposition, that being in the direction of economy in the business.

Q. I will call your attention to the case of some refineries that were bought up at Titusville. Perhaps you can explain somewhat in detail those cases.—A. They were no exceptions to the rule. We had opportunities to utilize some of that property quite advantageously as small refineries. I think one of them was taken to Porto Rico. One was taken to Kansas, where it was put in after the new production; and one to Porto Rico, where we were compelled by the tariff laws to refine.

Q. (By Mr. SMYTH.) Is the production equal to the demand?—A. Oh, always vastly in excess of it; vastly in excess of it.

Q. (By Mr. JENKS.) You made the statement that the dismantling of the plants at different times had not lessened your output.—A. Oh, no. Of course there has been at all times an excess of capacity as compared with the demand. The capacity of the refineries is never run full—on very rare occasions—I should say, never. And the sole purpose in the abandoning of any plant would be to conduct the business at a point where it might be more economically done.

Q. Incidentally, in connection with that, it might be a more convenient way of holding your market in the locality where competition would figure?—A. Precisely.

Q. That would enter as one factor?—A. That would enter as one factor; yes.

NOT THE STANDARD'S POLICY TO MAKE PRICES SPECIALLY HIGH AFTER THEY HAVE BEEN CUT SPECIALLY LOW.

Q. The assertion is frequently made—I do not recollect whether it has been made on the stand—that in certain localities where you are compelled, in order to keep the control of your trade, to put prices down for a time until a rival withdraws from business, prices are afterwards put up above what they were before in order to recoup the losses incurred?—A. There is no such policy in that business.

Q. You have no such policy?—A. We have no such policy. It is possible that, in the zeal and anxiety to serve of some overzealous servant, such a case might occur. If so, and if it was known, it would not be approved.

Q. That is not your policy?—A. No; that is not our policy. We fully realize that if we survive with our business we must treat the public very fairly.

THE STANDARD DOES 75 PER CENT OF THE CANADIAN REFINING—NO RAILROAD DISCRIMINATIONS IN CANADA.

Q. Statements have been made several times of late in the papers with reference to special discriminations in freight rates that have been secured by the Standard Oil Company in Canada. It is said that they affect very unfavorably other American refineries.—A. I am not familiar with it all. I know there have been such agitations in the newspapers, but I have considered it as one of the usual class of such agitations. I will gladly inquire about it, if you wish, and see what information I can secure about it. I do not know of any discriminations in our favor; that is, any rates to the exclusion of other shippers of like character at all. Mr. Rogers says Mr. Harris asked a question in that direction, as to our being interested in the refining business in Canada. I did not hear him.

Q. Will you please tell us about your interest in the Canadian business?—A. We are interested in the Canadian refining business and are doing our best in the business there to get it on a fairly profitable basis. It has been very much disorganized there for some time, and we have come into relationship there with that in the past year or so.

Q. How large a proportion of the Canadian refining interest do you control?—
A. I think about 75 per cent; about 75 per cent.¹

Q. Have you of late, to your knowledge, made any contracts with the Canadian Pacific and the Grand Trunk with reference to advancing rates from Buffalo and Toledo?—A. Well, sir, I have not any personal specific knowledge about the matter; I will gladly inquire about it.

Q. Will you look it up and send us a reply?—A. I will.

Q. You will get full information on that subject?—A. I will. The advance in rates on American oil from Buffalo and Detroit was made by the Canadian roads in their own interests and is in no way discriminatory in favor of the Standard Oil Company, but rather to the contrary, for that company pays these advanced rates in full and ships over 75 per cent of the American oil consumed in Canada.

DOES NOT KNOW OF ANY RECENT CHANGES IN FREIGHT RATES.

Q. Aside from the question of special rates or special favors by the railroads, the statement has been made that at times you have been enabled to influence the railroads to put rates over certain lines so high that it would work to the disadvantage of competitors who had to use those lines more than you did. For example, Mr. Westgate testified that in shipping oil into Canada he had found himself at a disadvantage on account of this increase in rate of which I have spoken and of which you say you have no knowledge, and that in attempting to ship to Canada by another route, through the State of New York, he found that rates from his refinery to the northern part of New York State were very much above the rates that might be considered normal there, judging by the rates on other goods. For example, he found that on other goods the general freight rates to those places in northern New York were Boston rates; but on oil they were special rates. He felt that he was put at a disadvantage on account of the location of his refinery, and that the Standard Oil Company had succeeded in influencing the railroads there to make those special rates to the disadvantage of their competitors.² What would you say on that general question?—A. I do not know.

Q. The matter would be entirely within the law, of course?—A. I don't know of any such condition at all. I have no knowledge of the rates—the tariff rates on petroleum—having been changed in New York State or any place else for a long period. I don't know that to be so. It is within the bounds of possibility, but I should be disposed to doubt it exceedingly.

Q. You would be likely to know in detail with reference to the arrangement of freight rates?—A. In New York State?

Q. In New York State and in Rhode Island.—A. I think I would. I can make inquiry about it. I would say, with reference to the question of coming into relationship with the Canadian refining interest, the question of rates was considered in connection with the refining, but, as I say, I don't know of any rates that are not open to all comers.

Q. That is not the question. Competitors say that rates over one line have worked to their peculiar disadvantage and not to yours?—A. I don't know of any such condition. I would say that it would be to the interest of the Canadian roads naturally to encourage business in their own territory. I don't know about that at all as to any preferential condition with us.

REPORTS ON COMPETITORS' BUSINESS NOT SECURED BY IMPROPER OR QUESTIONABLE METHODS.

Q. In the testimony of Senator Davis a statement of this kind was made: That a man in his employ had been approached by a Standard Oil official and offered pay regularly if he would inform the Standard Oil Company with reference to their shipments.³ Does the company under any circumstances get information from the employees or officials of their competitors?—A. The company does nothing of the kind. If any such case occurred—and it might as an exceptionally rare case on the part of an overzealous employee, who, in his anxiety to know about his competition, might do a foolish thing—it is not approved by the company. When Mr. Davis or Mr. Westgate or anybody else says that we in New York get down to our offices to get our reports early in the morning from the spies we have out, it is utterly untrue. We do nothing of the kind. We are not figuring on Mr. Westgate's or Mr. Davis's business; we are figuring on our own business.

Q. Do you make the general statement that no reports are secured from your

¹ See Mr. Gall, p. 673; Mr. Page, p. 788.

² See pp. 373-379. Compare also the testimony of Mr. Gall.

³ See p. 356. Also Mr. Monnett, p. 316.

agents with reference to the business of competitors?—A. I don't say that. I should say there would naturally be reports, such reports as they could rightfully secure; but that they should secure them by improper or questionable methods of any kind would not be approved by any member of the Standard Oil Company; and I would be only too thankful to have any such case brought to our attention.¹

STANDARD OIL TRUST DISSOLVED, BUT THE AGGREGATION HAS WORKED AS
HARMONIOUSLY AS BEFORE.

Q. You have said that the general information with reference to the organization of the company would be furnished in the answer to the schedules of inquiries that were given you. But there are some matters that would not be covered in that, particularly. From Attorney-General Monnett's testimony,² the different forms of organization of the Standard Oil Company are brought out somewhat. You had earlier the trust organization; afterward the trust was dissolved. I believe, and you had a different form of organization. Will you sketch briefly the changes in organization that the Standard Oil Company has gone through since the dissolution of the trust?—A. Would it not be vastly preferable to have that in such succinct shape as Mr. Dodd would furnish it?

Q. That is not covered directly in the schedule?—A. I think it would be so much more intelligently stated from the records than I could give it from memory in an oral statement, and I would like very much if you would await that.

Q. I think it possible that some of the commissioners would like to base some questions on your statement, and then we shall have that for record from Mr. Dodd.—A. Well, briefly stated, the Standard Oil Trust, as such, existed from the year 1882 to 1892; formed in 1882 and dissolved in 1892. In 1892, at the time of the dissolution, the majority of the stocks of the various companies concerned or involved in the Standard Oil Trust were distributed to the equitable owners, and that distribution has gone on steadily until this time in the hands of liquidating trustees.

Q. Nevertheless, since that time the different Standard Oil companies have worked together in harmony, have they not?—A. The ownership has naturally brought them into harmony of action; the like ownership, of course.

Q. The general way in which the control has been kept uniform has been this, that the men who were the former trustees have held the majority of stock in each one of these different companies?—A. Exactly so.

Q. So that the Standard Oil combination, as we may say, has worked together as harmoniously since the dissolution of the trust as before?—A. It is hardly fair to call it a combination, but you might call it an aggregation.

Q. An aggregation?—A. An aggregation.

Q. But as a matter of fact it has worked as harmoniously as before?—A. Yes.

THE AMOUNT OF TRUST CERTIFICATES OUTSTANDING IS SMALL.

Q. Will you explain also briefly—because that was dwelt on also at length by Attorney-General Monnett—the method of distributing the profits to the stockholders under the trust and since?—A. Under the trust the profits, of course, were centralized into the hands of the trustees and distributed ratably.

Q. Distributed to the certificate holders?—A. Since then the dividends have gone directly to the owners of the shares of the various companies. They have kept the same in one case as in the other, of course.

Q. (By Mr. PHILLIPS.) Have they been paid on the original Standard Trust certificates?—A. To the extent that those remained out, they have.

Q. Is there a very large per cent of them remaining out?—A. Not very large.

Q. (By Mr. JENKS.) Do you recollect what per cent?—A. I could not state; it is becoming very small.³

Q. (By Mr. PHILLIPS.) The market quotations are based on the original trust certificates?—A. I supposed the quotations were based in New York on stock.

Q. (By Mr. JENKS.) Will you repeat your answer?—A. Well, it covers some equitable ownership, as it was.

Q. (By Mr. PHILLIPS.) It is largely distributed now?—A. Largely distributed now.

Q. On the original trust certificates?—A. No; oh, no; not largely, but to a very small extent only.

Q. And was for quite a time after the dissolution?—A. Yes; but it is very rapidly being extinguished.

¹ Compare Mr. Clark, p. 335, 341; Mr. Westgate, 306-308; Mr. Emery, pp. 614, 615; Mr. Gall, p. 684.

² See pp. 299-307.

³ See Mr. Monnett, pp. 303, 306, 315.

Q. When the Standard is quoted in the neighborhood of \$500,000,000, or \$490 a share, do we understand that to be the quotation on the original Standard?—A. On what was represented by the original Standard.

Q. On what was represented by the original Standard?—A. By the original Standard Trust.

TRUST CERTIFICATES EXCHANGEABLE FOR STOCK OF THE NEW JERSEY CORPORATION REPRESENTING SUBSTANTIALLY THE SAME INTERESTS.

Q. When a purchaser buys on the market 100 shares or 50 shares of what is nominally the Standard Trust certificates and takes it to the company to transfer, what do you give in the place of that? If I should buy 100 shares of Standard Trust certificates and take it to you—A. You would be entitled to receive a share or an equitable interest in the various companies composing the Trust.

Q. What form is that now in when it is transferred?—A. It may, if it is so desired, be in the form of a certificate of stock in the various companies.

Q. They take it in that way when they purchase, transfer, or sell?—A. They do.

Q. Do they take it in a divided form, or do they give them a certificate representative of these aggregations?—A. What is the question? What he would be entitled to? What he would be entitled to would be his interest in the business of the various constituent companies.

Q. Yes; and what form of paper do you give for that in the way of a certificate? If I buy 100 shares on the market at, say, 490 or 480 or 500, and take that for transfer, or if a man dies and it is sold and transferred to some other person, what kind of a certificate do you give that person; will it represent all these aggregations?—A. We give him, if he so desire—we could not at all reissue a certificate of the Standard Oil Trust; we won't issue any new certificate of the Standard Oil Trust, that being in final liquidation—we would give him his stock in the various companies, or, as some of us are now doing, holding our stock through the New Jersey corporation, he would hold his interest in that way. We would give him a certificate in that representing substantially the same interests.

Q. Have you such transfers being made?

Q. (By Mr. SMYTH.) Have you got yours in the new stock?—A. Oh, to a small extent.

Q. (By Mr. FARQUHAR.) The question is whether the general Standard Oil certificate of stock is on the Stock Exchange of New York?—A. None on the Stock Exchange.

Q. Not at all?—A. No.

Q. Then you take up the eight subdivisions?—A. How many—seven or eight.

Q. And the New Jersey company?—A. And the New Jersey company.

Q. And the stock that is so quoted in the New York market is what?—A. It is the remaining fraction of the Standard Trust.

Q. Of the old Trust?—A. Yes. Although, I think, to a very limited extent, the stock of the New Jersey corporation, which substantially represents all, would be also quoted.

THE MANAGERS OF THE STANDARD HAVE NOT SPECULATED IN ITS STOCK.

Q. (By Mr. FARQUHAR.) The stock that is usually seen quoted in the New York market is what we might call little dribbles of stock?—A. That is it.

Q. Ends of estates and stock that has come from the division of property into their hands; in other words, the Standard stock is not in the market, in the general sense of the term, as a dealing stock?—A. No, sir; the listing of it on the Stock Exchange is carefully avoided, and they have never endeavored to make it a speculative affair at all.

Q. Have you never, of your knowledge, at any time, known when your stockholders and your directors or officers or others have dealt in those stocks?—A. Oh, I think to a limited extent there have been some transactions on the part of the officers in the stock, usually in the way of adding to their interest, perhaps, as opportunity has occurred. I think I have myself. I must myself plead guilty to the charge of having bought 100 shares and then resold them again within the past 10 years. I think that represents my entire stock transactions in 10 years.

Q. Are not usually the stock transactions confined to the officers and the present shareholders of the Standard properties?—A. There are a large number of shareholders—3,500.

Q. These are simply figures. It is the main fact that we want. The stock of the Standard Oil, the great properties, is not stock that is usually put into the New York market or any other market, but is property that is confined within a

circumscribed number—say, 40 or 50 people—who are the main great owners and managers?—A. Undoubtedly, the majority is held within as limited a number as that.

Q. Have you at any time in the history of your company ever sought to make a profit through your stock?—A. Oh, dear; no, sir.

Q. At any time?—A. Only in the promotion of the business, in the improvement of the stock as a whole, but not as a speculative thing in the stock itself. As I say, I have within the past 10 years personally bought and sold 100 shares. That shows the extent of my operations.

Q. (By Mr. JENKS.) Will a list of the dividends that have been declared on the stock, the value of it, and so on, be furnished in answers to the schedule?—A. Undoubtedly.

Q. Those answers have been made?—A. So far as I know; Mr. Dodd has the matter in charge, if that was called for.

THE STANDARD OIL COMPANY OF NEW JERSEY.

Q. Now, will you take a moment to explain the organization of this new New Jersey corporation out of the others?—A. It is simply that a New Jersey corporation, with a capital of \$100,000,000 of common stock and \$10,000,000 of preferred stock, is formed that shall be competent to own the stocks of these different corporations, to buy from all parties who own stock as they may desire to sell.

Q. It is expected that these other corporations will practically throw their stock into that?—A. Not the corporations; the individuals owning the stock.

Q. (By Mr. PHILLIPS.) Then would it not be a case of a hundred-million company absorbing a five-hundred-million stock? What would they give them in value for it?—A. It is substantially the same value that was represented in this Standard Trust ownership; substantially the same value, whether it is one hundred, two hundred, three hundred, or four hundred.

Q. This new stock would be put out at three or four hundred per cent premium?—A. No; there is no new stock being put out.

Q. (By Mr. SMYTH.) The capital is to be one hundred millions?—A. That is it.

Q. And it is simply a reissue under the New Jersey charter?—A. It has nothing to do with the issue; there is no new capital sold at all.

Q. Simply a reissuing of the present stock to the present stockholders under another name and another charter?

Q. (By Mr. PHILLIPS.) Necessarily carrying the same value?—A. In other words, the trust being dissolved and the parties in it receiving their equitable shares in the various companies, bring them and sell them to the Standard Oil Company, of New Jersey.

PREMIUMS ON CRUDE OIL MEAN USUALLY QUALITY; SOMETIMES COMPETITION.

Q. (By Mr. JENKS.) Will you explain to us briefly the system of premiums on crude oil in the districts where the crude oil is purchased?—A. In the producing districts?

Q. In the producing districts.—A. The premiums are usually the result of the question of value in the different parts of the district. I will not say that in some cases they have not been lower somewhat, caused by competition; where we have had private facilities in certain districts to take care of the oil, and other people have come in and tried to take it away from us, in some cases we may have paid more than we would like to pay. I can not say; perhaps that is so; but, as a rule, in the special case of the Franklin oil and the case of the Lima oil and Scio oil, that is not it. It centers entirely on the question of value.

Q. I infer from what you say that at times, in order to dispose of competitors, the premiums have been kept on till the competitors have been bought out and have been dropped afterwards?—A. As I said, when our business has been attacked we have endeavored to protect it.

Q. (By Mr. PHILLIPS.) I am somewhat familiar with the pipe-line business in the oil fields. Take our district, where an independent line went in a short distance from Oil City; a premium was put on that oil, and no one claimed that that oil was more valuable than Oil Creek oil or other oil. It was not put on there on account of the value of the oil.—A. As I have already said, that may be a case in point; where we have found, after providing these special facilities, which have no value for any other purpose, that our business was attacked by a newcomer, we have, of course, endeavored to protect it.

Q. You put on a premium on the oil which the Standard purchased after the American—you will remember that they built a line through to Philadelphia

and established refineries there, and it became quite valuable. Now you put on a premium both in Butler County and in Washington County, those very large fields at that time, did you not?—A. We undoubtedly did.

Q. It was taken off when you purchased, was it not?—A. Undoubtedly, and we would do the same thing again. We could not do less and be in the business.

Q. And you do not do that as a mode of discrimination?—A. We do not; we do that as a matter of self-protection.

Q. And when you think you can do it in a legal way you do it, whereas you can not give a rebate?¹—A. That is it, precisely.

Q. Now, there is a pipe line in the Scio field in Ohio, and there is an independent line there,² and there is a premium existing there?—A. There is, but it is a question of quality. The Scio oil is of very superior quality. We could not pay a premium for it with the light business that is being done were it not for the quality.

Q. But in the case I have referred to in Butler County and Washington County that was not a question of value, but of competition?—A. It was competition, unquestionably. There were very strong competitors, and we were there to fight them, of course.³

THE STANDARD'S STOCK IN INDEPENDENT COMPANIES.

Q. (By Mr. JENKS.) Several times in the course of the investigation statements have been made with reference to the very decided interest that the Standard Oil Company has taken in the Producers' Oil Company, Limited. Statements have been made as to their buying stock in that company and attempting to get control of it. Will you give your version of that?—A. We bought some stock in the Producers' Oil Company, Limited. We bought some stock also in the United States Pipe Line.⁴

Q. About what proportion of the stock did you buy?—A. Well, I could not state from memory—a fractional interest in the United States Pipe Line and a larger part in the Producers' Oil Company.

Q. A majority of the stock in the Producers?—A. No, no; I should say considerably less than a majority.

Q. At any time?—A. That is, in the Producers' Oil Company, Limited?

Q. Yes.—A. To the Producers' Oil Company, Limited, we found such difficulty in the way of admission—

Q. (By Mr. PHILLIPS.) I always understood that it was a little over half, and I want to be corrected by Senator Lee if that is wrong.—A. Senator Lee, I think, is mistaken, as well as yourself. We never owned more than one-half. The gentleman who bought ours, pending the ownership decision, did own a little more than half; we never did.

Q. It was under your control, and you worked in harmony?—A. It was until we sold it.

Q. You worked in harmony with the other person?—A. We generally work in harmony with him.

Q. You would in the management, if there had been a change?—A. If there had been a change we should have hoped for a better relationship, but it did not come. We bought that stock and were so opposed in the exercise of ownership that we sold it. We sold it in good faith, and the courts have upheld the ownership of Colonel Carter; that has been finally upheld in a most remarkable adjudication. The court held that he was the beneficiary, but because of some by-law on the books of the corporation he could have no voice in it whatever. We have no interest in it whatever, not even a dollar's worth. Our ownership in the United States Pipe Line was bought at a time when we thought that the business ought to become profitable. It was bought as an investment and with a view to having such knowledge as we could have rightfully through such ownership, as we should acquire in the progress of the affair. There is nothing covered about it. Our ownership was contested by the gentlemen in charge of the property, and the courts have passed upon it, upholding our ownership, our right to own, and giving us our place and recognition on the board, and we have never done a thing to hurt the business of the company. We have been greatly pained that the results from it have not been more profitable, and we do not understand why they have not been. We think that one of these days, if that iniquitous voting trust is ever dissolved, the shareholders will awake to a feeling that somebody else than those who have managed it could do something for it.

Q. (By Mr. PHILLIPS.) Did not all the shareholders agree to the voting trust?—

¹ See pp. 479, 562.

² See p. 581.

³ See Mr. Lockwood, pp. 394, 395; Mr. Boyle, p. 475; Mr. Monnett, p. 321; Mr. Rogers, p. 582.

⁴ Compare Mr. Phillips, pp. 552, 550; Mr. Lee, p. 270; Mr. Westgate, pp. 370, 382; Mr. Emery, p. 456.

A. You got all of them to agree to it, but there have been some that want to get out of it mighty bad.

Q. Then you did control, through Colonel Carter, in the Producers' Oil Company, Limited, a little over half the stock? That was carried up to the supreme court. It was organized, a partnership, limited, in which the law itself requires the person to be admitted by consent of a majority of interest and stock in order to vote, and the by-laws recognized the same thing. The supreme court decided that purchase would not make your party a partner in that concern any more than, if I should buy a partner out in the dry-goods business, I could force myself in. The law was gotten up for that special purpose, as it is understood in Pennsylvania, the same as the English law, was it not?—A. I must correct you very positively, once and for all, when you say that we are controlling through Colonel Carter. We have nothing whatever to do with Colonel Carter. The purchase made by Colonel Carter of the stock that we owned was made in good faith, and he owns it entirely. He can give it away or tear it up without raising any question with us or anybody that I know of. The question of the decision of the law I am not here to criticise. I am not criticising judges or courts. But the law was a very queer one, that a man should be adjudged by the court the equitable owner of a majority of the stock, and then it should be ruled that because of some by-law of which he had not been cognizant, passed by the company, he could be kept out of any voice in the company. That is a very queer law, whether in New York or Pennsylvania, or anywhere else.

Q. Did Colonel Carter buy that stock of his own instance?—A. He did buy it of his own instance.¹

Q. And without any consultation or agreement with the Standard Oil Company?—A. He was in a contention regarding the matter of his individual ownership, and he became enlisted in it and bought our stock, as I say, in the negotiation, the same as you, or I, or anybody else would buy it. We were glad to get out of it.

Q. You had purchased a large amount of stock?—A. We had purchased a large amount, and we sold it.

SUSPECTS FREIGHT DISCRIMINATIONS AGAINST THE STANDARD.

Q. (By Mr. JENKS.) You have stated emphatically several times that you have received no discriminating favors from railroads at all since the passage of the interstate-commerce law. The statement is frequently made that railroads are making discriminating rates on freights of different kinds at different times. Have you, in your own business, met with opposition of that kind, or have you had reason to believe that your competitors were receiving special favors against you?—A. Well, I would rather not go into that question. I do not feel that I am prepared to go into it. That we have strong suspicions on that line is true enough, but I am not here to make charges against other people. I am not here prepared to do it. There might arise exigencies in the course of the testimony where it would seem necessary for us to look up the records; and if so, I shall be glad to do it.

Q. You have no evidence to give on that subject?—A. I have nothing to present to-day on that subject.

FAVORS PUBLICITY OF ACCOUNTS UNDER A NATIONAL CORPORATION LAW.

Q. You made a suggestion near the close of your direct testimony with reference to legislation. Would you consider it advantageous to the country as a whole to have greater publicity regarding the business of all of the great corporations that now exist? For example, with reference to the amounts of stock that are represented by plant, the amounts represented by patents, by good will, the amounts that are water, and so on. In other words, would you consider it an advantageous thing for the country to have substantially the English corporation law apply in this country?—A. If it could be put into Federal hands, yes.

Q. Into Federal hands?—A. Into Federal hands; yes, by all means.

Q. And you would favor, then, the publicity of accounts, the making of reports to the Federal Government quite in detail?—A. Oh, unquestionably.

Q. Somewhat the same system as is applied to our national banks?—A. Unquestionably.

Q. You would favor any law of that kind?—A. I certainly would.

MARKET PRICE OF STANDARD STOCK.

(By Mr. PHILLIPS.) Will you state what the highest price is that the Standard Oil Company's stock has reached on the market?—A. I think the present is about the highest price.

¹ See p. 550.

Q. What is the last quotation?—A. I think 460 or 465.

Q. That would represent \$460,000,000 or \$465,000,000?—A. If it could all be sold at that price.

Q. Do you object to stating the amount of dividends you have been paying?—A. That is to go in the statement asked for.

(By Mr. JENKS.) I have furnished to Mr. Archbold one of the schedules prepared by the commission, and that is to be filled out and returned in 10 days.

NO REBATES ON OIL OF OTHER COMPANIES—NO COMPELLING REFINERS TO SELL TO THE STANDARD.

Q. (By Mr. RATCHFORD.) Has your company received any rebates on the transportation of oil of other companies?—A. It has not.¹

Q. What have you to say as to the charge, so generally made against your company, particularly, I believe, in the Western States, to the effect that small producers and refiners are forced to sell their product to the Standard Oil Company? That is a phase of the question which, I believe, has not been touched upon to-day.—A. I think we have gone into it very fully.

Q. What have you to say with reference to the charges, so generally made, to the effect that smaller concerns, individual producers and refiners, are forced to sell their product to the Standard Oil Company? This is a charge that is made in Colorado, and I want to give you an opportunity to deny if it is untrue.—A. It is untrue; there is no such compulsion of any kind, either with reference to the producers or refiners. In fact, we buy very little of the product of the small refiner—next to nothing.

Q. Your company has made no agreement with reference to such small concerns?—A. No.

Q. Did the paper you have submitted in evidence here to-day state that certain other companies have received rates of transportation from certain points cheaper than your company have ever received?—A. I stated only the one case in connection with transportation of oils furnished by the Central Railroad of New Jersey to the United States Pipe Line. I furnished a statement on that.²

Q. (By Mr. KENNEDY.) There was testimony in Colorado to the effect that a distributing company there took all the products of the two refineries of the Colorado field, and Senator Hill, of Colorado, who owns one of these refineries, testified that the distributing company, or merchandising company, which bought all of this refined product, was the Western concern of the Standard Oil Company.—A. They may do so, but it is entirely a voluntary act on the part of the company refining the oil. There is certainly no compulsion about it.

Q. You said they do not buy?—A. We do not here at the East—the Standard Oil Company. I did not have in mind the question of a possible purchase in Colorado of the local production; that might be so.

Q. (By Mr. RATCHFORD.) Is there not such a thing as cutting the prices on that distributing company and forcing them, through business reasons, to dispose of their product to your company?—A. I do not know how we could do so. It might prove they were incompetent buyers.

Q. They hold otherwise.—A. Their relation to the company—the distributing company—although I am not familiar with it, must be voluntary; certainly no compulsion about it.

AMERICA NOT IN THE MARKETS OF THE WORLD, BUT FOR THE STANDARD.

Q. (By Mr. SMYTH.) Do we understand from your testimony that you claim the Standard Oil Company has been of vast benefit to the oil industry in the United States and abroad?—A. I believe that it has been of vast benefit to the country.

Q. Do you believe it has been a benefit to the American people?—A. To the American people and the American producer of oil. I believe firmly that America would not have been in the markets of the world if it had not been for the Standard Oil Company.

OBSERVED THE STRICT LETTER OF THE LAW.

*

Q. Do you state, since the passage of the interstate-commerce law, in 1887, your company has not received rebates of any kind from the transportation companies?—A. I think we have observed the strict letter of the law in all that pertains to interstate transportation.³

¹ See pp. 556-559; Mr. Rice, pp. 706-709.

² See pp. 528, 530.

³ See p. 528, bottom.

CAUSES OF THE STANDARD'S PROSPERITY.

Q. Yet, since that period your company has prospered more than ever before?—
A. Yes.

Q. How do you account for that?—A. One of the contributing features, in my mind, is the greater stability that has attached to the trade since the passage of the law: the extension of business, growth of business, and better utilization of by-products, and all that; but very largely the stability of business incident to the stability of rates through the interstate-commerce law.

Q. I suppose the Standard buys the best that is to be had?—A. They are on the lookout for the best.

Q. And probably their success is due to their nerve and ability and money?—A. It is, undoubtedly, and to the further fact, which I must repeat, that we treat the trade fairly. We realize fully that no business can have any permanent success that is not carried on on honest principles, and you will not find customers of ours complaining of our treatment.

A NATIONAL CORPORATION LAW.

Q. (By Mr. CLARKE.) You have stated that you would favor the formation of national corporations. Would you have the capital of these corporations limited by law or by a national commissioner of corporations, or would you have it unlimited?—A. I would have it unlimited, but would put upon its issue such restrictions as to value involved as would fairly protect the community; I mean the general public.

Q. You would have these national corporations subject to the supervision of a commission or some other Government authority?—A. Undoubtedly, as is the case under the English corporation law.

Q. Do you not think one of the greatest evils of State corporations is the lack of supervision?—A. The lack of supervision, and the entire lack of uniformity as between the States.

Q. Do you think the formation of national corporations would overcome most of the objections that are now raised to combinations commonly called trusts?—A. I do. I believe it would do away with the talk of monopoly, make every business free to all comers, within the law and under the provisions as made.

Q. (By Mr. KENNEDY.) Favoring national charters and national supervision as you say, would you go to the extent of favoring inspection of the books and affairs of each concern, as the national banks are inspected by Government officials?—A. I have not made a study of the subject so as to make a statement in detail as to what the supervision and restriction should be. I should say that is a question that ought to be very carefully considered before expression is made, and I could hardly answer it to-day. On general principles, I favor all fair supervision and making of statements that would enlighten the public.

ADVANTAGE OF A GREAT AGGREGATION.

Q. (By Mr. FARQUHAR.) Is it not a fact that, since you control the products of petroleum in this country, when you acquire, by purchase or through the agency of your own men, the formula of a better oil and a better way possibly of producing oil, you can beat all competitors by the fact that you can put it into effect in every single one of your plants? Has not that been one of the great reasons of your success in carrying your oil under a Standard title all over this country, and accepted as a standard wherever sold?—A. Undoubtedly.

Q. An advantage that a smaller concern, independent or otherwise, can never obtain because they can simply work a formula within themselves, whereas you can put it in the hands of fifty or sixty?—A. That is entirely correct. That is one of the great causes of the success of our business, and comes from combination alike of capital and talent.

Q. (By Mr. PHILLIPS.) Have you any further or supplementary statement to make, Mr. Archbold?—A. Nothing.

Testimony closed.

WASHINGTON, D. C., September 9, 1899.

TESTIMONY OF HENRY H. ROGERS,

President of the National Transit Company.

The commission met at 10.30 a. m., Vice-Chairman Phillips presiding. Mr. Henry H. Rogers appeared and, after being duly sworn, testified as to the oil industry.

Q. (By Mr. JENKS.) You may state your name and residence.—A. Henry H. Rogers, New York City.

THE WITNESS'S CONNECTION WITH THE STANDARD OIL COMPANY.

Q. What connection have you with the Standard Oil Company, the Standard interests?—A. I am president of the National Transit Company.

Q. Are you connected with the Standard Oil Company of New Jersey?—A. I am one of the vice-presidents of the Standard Oil Company of New Jersey.

Q. Your position is such that you would be entirely familiar with the questions discussed in Mr. Archbold's testimony?—A. I think mainly so.

Q. You heard the testimony yesterday. Do you agree substantially with all that was said?—A. I do.

REASONABLENESS OF PIPE-LINE CHARGES OF THE STANDARD.

Q. You have been familiar with the pipe lines, their charges, etc., for several years?—A. I have.

Q. About how long is it since the charges on the pipe lines were lowered to 20 cents?—A. I think, as Mr. Archbold testified, it was about twenty years ago.

Q. Can you give us any explanation as to why it is that the pipe-line charges have remained substantially the same for twenty years, whereas the charges of railways and prices in general have decreased very decidedly?—A. You will understand the pipe-line charges of 20 cents are what are termed "gathering charges"—that is to say, the oil is taken from the wells of the producer and delivered to the stations of the pipe line and the tanks. Wherever the oil is found we run a line to it. We are frequently called upon to run a line 15 or 20 miles. We never object; we make no extra charge for that. In some instances we pump oil but a very short distance to the tanks, and in some instances we pump it 15 or 25 miles, so that we consider it an average charge, really, rather than an arbitrary charge.¹

Q. (By Mr. FARQUHAR.) You mean not an average but an equalizing charge?—A. An equalizing charge, if you please to term it so.

Q. (By Mr. SMYTH.) Based on the circumstances of the producers in the same field?—A. Yes; and because the producer, if he is a patron of our line, is at liberty to feel that no matter where he finds oil in the vicinity of the pipe line—it may be 15 or 20 miles away; but if he is a patron and has a producing well of paying size, we will spend the money and run the line to him and take care of his oil.

COMPETING PIPE LINES.

Q. Is there any competition in the pipe-line business?—A. Yes.

Q. What is the competition?—A. The competition in the Butler field is with the Producers and Refiners' Pipe Line. The competition in the Ohio field is with the Manhattan Oil Company, and in the Indiana field with the Cudahy Company.

Q. (By Mr. PHILLIPS.) Is there any competition in the Scio field in Ohio?—A. There is a trifling competition. The production in that field is about 6,000 barrels a day, and the run of the outside lines is probably between 400 and 500 barrels a day.

Q. (By Mr. JENKS.) These competing pipe lines run into the same territory, so that they might equally well take the product?—A. If they had the capacity to handle it.

Q. So far as the location is concerned?—A. So far as the location goes.

Q. Are the prices of these independent pipe lines in Pennsylvania the same as yours?—A. I do not know. I have hearsay evidence, but that is all.

¹ Compare pp. 588, 589; Mr. Lee, pp. 280, 284; Mr. Davis, p. 352; Mr. Phillips, p. 594; Mr. Emery, p. 666.

PREMIUM ON OIL IN VARIOUS FIELDS.

Q. (By Mr. PHILLIPS.) Have you any premium on oil in any competing field except the Scio field?—A. Yes.

Q. What other fields—the Tiona and Franklin field?—A. The Tiona—the Franklin field is a lubricating-oil field. The oil is superior to the ordinary petroleum.

Q. And the oil in the Tiona field is also superior, as it is generally understood?—A. Yes.

Q. Now, the Scio is a newer field. Do you understand that to be somewhat superior?—A. It is.

Q. Mr. Archbold testified yesterday that you had applied premiums on oil in fields where there was no special difference in the quality of the oil, as, for instance, in Butler and Allegheny and Washington counties, when there was competition there.¹ Do you understand that to be substantially correct?—A. I understand Mr. Archbold's statement to be absolutely correct.

A PREMIUM IS NOT A REBATE.

Q. He testified that you put these premiums on, but did not give a rebate.² I would like you to explain to the commission the difference between putting a premium of 10, 15, or 20 cents per barrel on oil and granting a reduction in transportation prices on it. Would it not in effect be the same?—A. First I would like to say that as I understand Mr. Archbold he did not testify that we had been the first to put the premium on the oil; that it had been brought about by competition. I do not think the money that goes into the pocket of the producer as an advanced price could be classed as a rebate, because he loses interest in the oil as soon as it goes into the pipe line. The pipe-line charges are paid by the man who transports the oil for refining, the exporter.

Q. Did not all who shipped in these fields get an advantage over other producers in other fields the same as if it was a rebate? Is it not another name for the same thing?—A. No; not nearly so, as I have explained. The producer loses interest in the oil from the instant when he delivers it to the pipe line. If he gets a premium on the oil, the producer is benefited by it. He has surrendered it to the man who owns it after it goes into the pipe line, for refining or for sale to foreign markets, for export. The producer has no interest in the oil after he parts with it at the well.

Q. Could he get a larger price for it if there was a larger price on that oil?—A. I could not answer such a hypothetical question as that.

NO PREMIUMS AT PRESENT EXCEPT FOR SUPERIOR QUALITY.

Q. (By Mr. SMYTH.) Do we understand, then, in the instances of fields where you say there is a premium, that it is due to the superior quality of the oil?—A. It is.

(By Mr. PHILLIPS.) At the present time?—A. Yes.

(By Mr. SMYTH.) I understand there is no premium now except in two cases where the oil is of superior quality?—A. There are three points.

Q. And at these points there is a premium?—A. There is a difference in the price of oil in Ohio. There are two fields in Ohio, the North Lima and the South Lima. The oil of the North Lima field is more valuable than that of the South Lima field, and there is a difference in price of 5 cents.

Q. That difference goes to the producer?—A. Yes.

DISCRIMINATING FREIGHT RATES IN CANADA.

Q. (By Mr. JENKS.) We received some information yesterday with reference to the interests of the Standard Oil Company in Canada; it was said you had some refining interests there. About what proportion of the refining in the Canadian fields do you do?—A. I am not familiar enough with that branch of the business to answer. Mr. Archbold, I think, will furnish that.

Q. Have you any information as to an advance of rates from Buffalo and Toledo through to Montreal or other Canadian points in the latter part of 1898 or first part of 1899?—A. I never heard of it.

Q. You did not hear that any complaint was made by Canadian oil dealers to the railroad committee of the Canadian Parliament with reference to discriminating rates on the part of the Canadian Pacific and Grand Trunk?—A. I heard something about it, but am not posted as to details.³

¹ See pp. 578, 577. Also Mr. Boyle, pp. 475, 476.

² See p. 577. See also p. 476.

³ Compare Mr. Archbold, pp. 572, 573; Mr. Westgate, p. 378; Mr. Gall, pp. 675-677.

THE DISSOLUTION OF THE TRUST—FRACTIONAL SHARES RECEIVE NO DIVIDENDS.

Q. When the Standard Oil Trust was dissolved, in what form did the certificate holders receive their claims on the various companies that had been combined in the Standard Oil Trust?—A. In what form of certificate?

Q. Yes.—A. First, I think, they had to surrender their trust certificates, and receive a certificate that gave them equitable ownership in these constituent companies, and then that certificate was exchanged for actual stock in the company.

Q. There were some twenty constituent companies?—A. Yes.

Q. In the case of a holder of two or three shares of stock, would he receive fractional shares in each one of these companies?—A. Yes.

Q. Did these fractional shares receive their dividends the same as others?—A. No.

Q. In that case, if a person had held less than twenty shares of the trust certificates he would not receive dividends from the different companies?—A. No; I believe it is for legal reasons.

Q. Does that mean that these holders of trust certificates, who have only fractional shares in these various companies, have not received any dividends since the trust was dissolved?—A. That is as I understand it.

Q. Is that a reason why the trust certificates have been surrendered so slowly on the part of many?—A. I could not answer that; I do not know.¹

AMOUNT OF OIL THAT THE PIPES HOLD—AMOUNT OF CREDIT BALANCES AND CERTIFICATES.

Q. (By Mr. PHILLIPS). About how much oil does it require to fill the pipe liner of the National Transit system in the Pennsylvania and Virginia field?—A. I never figured it. I can give you that information if you will give me twenty or thirty days' time; it is a mathematical calculation.

Q. One witness estimated the amount sufficient to fill the lines as about 4,000,000 barrels?—A. The amount of residuum in the bottom of the tanks is published every month by the National Transit Company. That is a matter of public record and can be had.

Q. About how much oil has recently been standing out in the shape of credit balances and certificates at the end of each month?—A. I can not answer, but we can furnish that from the monthly statements published in the office; that information is given to our Oil City and New York offices every month and published in the Oil City Derrick. Do I understand you would like to have it for a period, Professor Jenks?

Q. (By Mr. JENKS). Yes.—A. You are welcome to it.

Credit balances in National Transit Company.

[In barrels of crude oil of 42 gallons each.]

Time.	Barrels.	Time.	Barrels.
June 30, 1889	3,217,749.16	December 31, 1894 .	1,644,255.13
December 31, 1889	3,160,156.81	June 30, 1895	783,592.96
June 30, 1890	3,794,873.84	December 31, 1895 .	1,809,325.78
December 31, 1890	2,758,654.30	June 30, 1896	3,275,075.49
June 30, 1891	5,408,170.38	December 31, 1896 .	4,215,060.28
December 31, 1891	3,201,351.34	June 30, 1897	5,413,417.10
June 30, 1892	5,987,819.53	December 31, 1897 .	4,523,054.39
December 31, 1892	5,532,079.21	June 30, 1898	4,450,703.02
June 30, 1893	4,340,713.15	December 31, 1898 .	3,322,997.28
December 31, 1893	2,705,563.20	June 30, 1899	4,910,451.22
June 30, 1894	2,453,417.82	September 30, 1899	5,349,302.54

As to the capacity of the lines, that would be a very difficult thing to say. We probably have 85,000 miles of pipe, or more, scattered all over the country, 2 inches, 2½, 3, 4, 5, 6, and 8 inches in diameter. Now, to figure out just how many miles there are of each and how much oil it would take to fill it is a great mathematical problem.

Q. (By Mr. PHILLIPS). We only want an approximation. You could probably tell within four or five hundred thousand barrels.—A. We could do that, certainly.

¹ See p. 587. Compare Mr. Archbold, p. 574-576; Mr. Monnett, p. 307.

[Estimate supplied later: The estimated amount of what is known as Pennsylvania crude oil in pipes of 5 inches in diameter and over of the National Transit Company and connecting pipe lines, as of 7 o'clock a. m., October 1, 1899, in barrels of 42 gallons each, is 535,528 barrels.]

RELATIONS OF VARIOUS "INDEPENDENT" COMPANIES TO EACH OTHER AND TO THE STANDARD.

Q. (By Mr. SMYTH.) There was a matter mentioned yesterday that several of the commissioners did not thoroughly understand. That was in reference to the pipe lines in which the Standard Oil Company owned a half interest; I think it was in Pennsylvania.¹—A. The Oil Producers' Company, was it not?

Q. No; I understand the Standard Oil Company owned a half-interest and sold it to Colonel Carter, but under some decision of the courts of Pennsylvania he is not allowed to control or manage that company. We wanted to ask who owns the minority shares.—A. I only know from rumor; rumor is that Mr. Phillips and his friends—

Q. The Pure Oil Company?—A. Not the Pure Oil Company. The Pure Oil Company is a company, you understand, that contemplates the ownership of the Oil Producers' Company, the Producers and Refiners' Pipe Line, the United States Pipe Line Company, and numerous refineries in the oil regions and one or more at the seaboard. In practice, it would prove to be a repetition of the Standard Trust—a very wise thing to do, I concede.

Q. These individuals that own a minority of the stock, according to the testimony, really control the management of the company?—A. It would seem so.

Q. (By Mr. RATCHFORD.) Are they an organization?—A. I think an organization under the Pennsylvania law.

Q. (By Mr. SMYTH.) What is the name of that pipeline?—A. The United States Pipe Line is one and the Producers and Refiners' Pipe Line is another.

Q. Does this ownership that the Standard Oil Company sold cover both companies?—A. The Producers' Company, as I understand it, own and control an interest in the Producers Oil Company, Limited, and the Producers and Refiners' Pipe Line Company. The answer to Mr. Smyth's question is, as I understand, that the Producers' Oil Company own and control an interest in the Producers and Refiners' Pipe Line, which line gathers oil in Butler and adjoining counties, and the Producers and Refiners'.

Q. This company was the United States?—A. The Oil Producers' Company, Limited.

Q. And the minority of stock, you think, is held by individuals?—A. I think so, but I do not know.

Q. You state the Standard Oil Company has no interest in it?—A. None whatever.

MR. CARTER'S STOCK, AND HOW HE GOT IT.

Q. (By Mr. FARQUHAR.) Was it conceded in the opinion of the court that Carter did positively own a majority of the stock?—A. I so understood it.

Q. You could not positively give testimony as to that?—A. Only mere hearsay.

Q. (By Mr. PHILLIPS.) Was not Mr. Carter furnished the money to buy that stock by a trust company in New York?—A. That I do not know; I think not.

Q. And he was introduced to that company by a member of the Standard Oil Company?—A. What was the name of the company?

Q. I do not remember the name.—A. He may have been introduced to the company; I could not answer for the moment. I suppose if Mr. Carter or Mr. Phillips came to me I would feel perfectly free to introduce them.

Q. (By Mr. SMYTH.) It is not an unusual thing?—A. Not an unusual thing to borrow money.

Q. (By Mr. PHILLIPS.) Did we not understand Mr. Archbold yesterday to state that the Standard Oil Company, or the trust, or the United Pipe Line, controlled a majority of this stock at one time that was sought to be voted by Colonel Carter?²—A. He testified, I think, that the Standard Oil Company did not ever own any of the stock, but the parties in said—

Q. But the affiliated companies under the control of the Standard Oil Company did?—A. It seems to be a question of memory between Mr. Lee, Mr. Archbold, and me as to whether Carter owned a majority of the stock or we owned a majority of the stock before his purchase.

¹ See p. 580.

² See p. 577.

Q. Can these facts be fully ascertained by the proceedings and hearings in New York?—A. There were no proceedings brought there.

Q. I am not certain whether it was brought there or not, but I so understood it. There were some proceedings and some testimony taken in New York.—A. I never heard of it. I would like to say that Colonel Carter did commence an action in Pennsylvania, and the court decided that he was a bona fide owner of the stock and ought to be allowed to vote it, but under the rules or by-laws he could not do it.

Q. And that was carried to the Supreme Court and affirmed?—A. I could not testify to that; I know nothing about it.¹

Q. (By Mr. RATCHFORD.) I was going to follow my previous question with a second one, but others were interjected. This organization (and I would like to have you mention the name of it) is it an organization under the law of the State of Pennsylvania?—A. Which company do you refer to?

Q. The company to which you refer as "Mr. Phillips's friends," the oil producers, the Pure Oil Company.—A. The Pure Oil Company is an organization under the laws of the State of New Jersey.

A GENERAL FEDERAL INCORPORATION LAW IS DESIRABLE—ITS ADVANTAGES.

Q. (By Mr. CLARKE.) Are you acquainted with the antistock-watering laws of Massachusetts?—A. I am not.

Q. You favor Mr. Archbold's suggestion about conducting such large interests as you are now carrying on under a national corporation?—A. Most certainly, and I would like to explain. I think the English law, as referred to yesterday, is most desirable in its operation, and is most encouraging to capital and protecting to labor and to everybody interested.

Q. Would you be willing, in case there should be a general corporation law of the United States which seemed to be fair and equitable, to organize under that law and transfer or abandon your organizations under the State laws?—A. Most assuredly.

Q. You would favor publication of records and a supervision of stock issued by Federal authority?—A. Certainly.

Q. (By Mr. A. L. HARRIS.) I should like to ask Mr. Rogers whether he has investigated that question from the legal standpoint, to know whether it can be done under the present Federal Constitution?—A. I should judge, from all I have heard, that it can not.

Q. (By Mr. KENNEDY.) You would be in favor, then, of amending the Constitution so that it can be done?—A. I believe, if we are going to be the greatest commercial nation in the world, that the Constitution ought to be amended so that Federal charters can be granted on some such plan as the English.

Q. (By Mr. FARQUHAR.) Has not the United States already granted a charter in the matter of the Nicaragua Canal?—A. I understand special charters have been granted by the Federal Government under the old constitution; but to make such a change as is contemplated here it should be applied to no particular corporation, but should be general and should cover everything.

Q. You would rather have a general provision that they could incorporate under, without special authority of Congress?—A. I would practically use the same machinery in the Federal Government that is now used by the several States.

Q. As a business man, would you state the advantages that you see in these Federal corporations as to commerce and the public generally?—A. The advantage would be, in my judgment, the power to do business in the several States under the Federal law, subject only to such laws of the States as pertain to taxes and the police regulations that govern in our States.

Q. And that supreme regulation and supervision should be vested in the Federal authority?—A. Yes; so far as legislation is concerned it could rest with the Federal Government very largely.

Q. Also, I suppose, that would lessen litigation in respect to corporations?—A. I think so, decidedly.

Q. Is not that one of the features the Standard people would naturally propose as an amendment to the Constitution?—A. We are rather case-hardened. We are getting along in years, but we think the new and younger industries would be benefited very materially.

OVERCAPITALIZATION REGULATES ITSELF—GOOD WILL MUST BE ALLOWED FOR.

Q. Now, as to this question of overcapitalization?—A. That always regulates itself.

¹ Compare the testimony of Mr. Lee, p. 270; Mr. Phillips, pp. 589, 590.

Q. Do you take it now that the organization of these companies in New Jersey, with the enormous capitalization that some of them have and of which a large part, in a good many instances, is watered stock, is detrimental to business generally and ultimately amounts to swindling?—A. Of course, there may be a large amount of watered stock of that kind, and undoubtedly many of them could be reproduced for less money than is put into them; but we must not forget that in the organization of great businesses a great deal of time, labor, and money has been spent that can not be accounted for. Take a newspaper in New York City; it has a large circulation; its plant could probably be reproduced for a hundred thousand dollars; it would sell readily for \$1,000,000. Now, a certain amount of allowance for good will must necessarily go with any business. It is practically the same as the case of a lawyer. A man with years of experience and standing in the law very naturally receives larger fees than the younger man who has just taken his diploma.

Q. Is there only one thing covered by overcapitalization—that is, good will?—A. That is generally the thing. There may be another; that is patents.

Q. Would good will enter into the issue of bonds?—A. I should not say it would enter into the issue of bonds, because the party would probably examine the papers to see that there was absolutely enough property on which to rest his security.

Q. If a man is making a mortgage trust on it, do you suppose the good will would enter into that?—A. Not at all.

Q. So the foundation of your public security ought to rest, for the benefit of the public and the safety of the public, on intrinsic value instead of fictitious good will?—A. Certainly, on the underlying security.

SPECULATION CAN NOT BE REGULATED—WE SHOULD HAVE FEDERAL CHARTERS.

Q. Do you not think that in the enlargement of these great combinations in this country, the whisky trust and others, the great harm has come from issuing stock, as in England, and hoodwinking the public?—A. No doubt a good deal of that has been done, and many of these industries have gone to the wall for lack of management. You can not regulate speculation as long as it is born in us to gamble, and there happens to be a Wall street and a Lombard street. There is no law that compels a man to go into Wall street to speculate, and experience has shown that it is a dangerous place. I think we should say to the public, "Here is this property. You can investigate it if you want to, and if you are satisfied with the security you can put your money into it, and if you are not satisfied with the security don't put the money in."

Q. Do you think it is right for any State like New Jersey to incorporate these companies?—A. We can not very well discriminate.

Q. Do you think it is comity between the States that there should be such an open law as in New Jersey, and such a close law as in New York?—A. I think it would be decidedly better if all could agree upon something sensible and reasonable in that respect. Of course the laws of New Jersey have recently been followed by Delaware in liberality, and all the bad will naturally go to New Jersey and Delaware for incorporation. I think a Federal charter would do away with that evil.

Q. Remedy all these evils?—A. I do.

IS THE "GOOD WILL" OF A NEWSPAPER COMPARABLE WITH THAT OF AN ORDINARY BUSINESS?

Q. (By Mr. JENKS.) With regard to your illustration of a newspaper as an example of the value of good will in an enterprise, is it a fair parallel for ordinary business corporations? Is it not true that newspaper success depends upon the individual capacity of one man rather more than does the ordinary corporation?—A. I know very little of the newspaper business, but I know this: in a business way it is largely successful through the amount of enterprise put into it by the head of the newspaper, the standard of excellence, and capable people. The good will of the paper is established by reason of its money-earning capacity, and that might be true of a corporation.

Q. To the same extent?—A. That would depend on circumstances, amount of capitalization and amount of business. You can give the illustration of a valuable patent.

Q. That is exceptional also.—A. Yet at the same time it is monopolistic.

Q. That is it. The point of the question is this: In the case of a patent we have a monopolistic element capitalized; in the case of a newspaper we have the individual talent of the manager, influential to a greater extent than in ordinary cor-

porations. That might be capitalized.—A. Still men come and go, but newspapers continue and their value increases.

Q. Sometimes it decreases very rapidly when the head man goes?—A. I refer to the New York papers.

OVERCAPITALIZATION SETTLES ITSELF BY DEPRECIATION OF STOCK.

Q. (By Mr. KENNEDY.) You said that overcapitalization in combinations settles itself finally. Will you state how in your opinion that is done?—A. If the corporation is overcapitalized and unable to pay dividends on its capitalization, its stock will depreciate in value. Investors first look for the security and then at the amount they get for their money. They will take a little gamble on the overcapitalized company if it will pay them. They will invest in stock that sells at 75 and pays 6 to 8. They will take chances rather than put it away in their pockets.

Q. (By Mr. SMYTH.) You stated that you thought the question of good will ought not to enter into the valuation on which bonds should be issued; but do you not think that in the capitalization of a large industry or combination the question of good will enters into the value of the stock?—A. I do.

THE ATTITUDE OF NEWSPAPERS TOWARD THE STANDARD AND ITS OPPONENTS.

Q. It was stated by Mr. Boyle in his testimony that, of his knowledge, in Pittsburgh numerous articles attacking the Standard Oil Company were published from time to time gratuitously as communications, but that the replies of the Standard Oil Company, when made, always had to be paid for, even if published in the local or news column. Can you give us any information about that?—A. I do not think we have undertaken to answer these anonymous communications very much. I know of one case where I, at one time, undertook to get in a little communication in reply and I received a bill of \$12. I paid it.

Q. The Standard receives no favors from the papers in general in the way of defending them or publishing their communications?—A. I think the papers publish a good many things prejudicial to the Standard Oil Company, perhaps through ignorance about it. We are so busy we do not have time to think much about it, but I think the newspapers mean to be generally pretty fair. Undoubtedly they would open their columns freely if we cared to talk, but talk is so cheap we prefer to keep sawing wood. We have not had our side of the case fairly presented, perhaps.¹

THE STANDARD WILL DO WHATEVER IS FAIR FOR THE HOLDERS OF FRACTIONAL SHARES.

Q. (By Mr. JENKS.) You said some time ago that the holders of the fractional shares in the constituent companies that formerly composed the Standard Oil Trust did not receive dividends. Will you explain that a little more clearly? Does that mean, as has been intimated here on the stand,² that the holders of these fractional shares lost every opportunity of receiving any returns from these shares?—A. I think that is a legal question that I can not go into. I think the fractional shares we have issued have had as a denominator about 975,000, and the numerator would range—I could not say where, but it was very small, so that the participating interest was so trifling that it would be impossible to pay a dividend.

Q. In this reorganization that has lately been made by the New Jersey corporation is there to be an opportunity for the holders of these fractional shares to get their stock back in such a form that they can receive dividends?—A. Whatever is fair we will do. We will treat everybody fairly, and if there is anybody here that has anything of that kind I would like to confirm it now, and perhaps Mr. Archbold will indorse it.

THE CHARTER OF THE NATIONAL TRANSIT COMPANY.

Q. (By Mr. PHILLIPS.) What is the capital stock of the National Transit Company?—A. I think \$25,000,000.

Q. What kind of charter has it? By whom was it granted? Was it a special charter?—A. I think it was a charter granted by the State of Pennsylvania a good many years ago and termed a special charter. It was granted to a company of another name, but by due process in the Pennsylvania legislature we received this

¹ Compare Mr. Monnett, pp. 812, 821; Mr. Lockwood, p. 399; Mr. Boyle, pp. 404, 487.

² See p. 307. Compare p. 668.

special charter. Of course, after the constitutional convention in the State of Pennsylvania, held 20 years ago, no special charters were granted; so we have an advantage in that charter. Practically it is the same charter that the Pennsylvania Company has that is owned by the Pennsylvania Railroad, under which, in turn, the Pennsylvania Company owns the stocks of the lines west of Pittsburg.¹

Q. The charter is very liberal in its terms, is it not?—A. Yes; I think it is.

Q. What did the National Transit Company pay for that charter?—A. As I was not an officer or connected with it, I could not tell you.

Q. Do you not know there was a very considerable sum of money paid for that charter?—A. I should suppose every good thing had to be paid for; I should say a man who owned a charter of that kind would sell it at the best price he could get.

THE WITNESS DOES NOT KNOW THE COST OF GATHERING OIL.

Q. There was a question asked you about the expense of gathering oil, and you illustrated by pipe lines going out a long distance to take care of oil. You have no special knowledge in regard to what the cost would be in the gathering of this oil. Have you any idea of the profit in gathering this oil at 20 cents a barrel?—A. I could not answer that; but I could probably say and be confirmed by you that we are not in business for our health, but are out for the dollars; what that profit is I could not say.

Q. The charge is the same as it was when the transit company was first organized, notwithstanding the cheapening of everything and the new means of doing business? In your opinion it has cost 6 or 8 cents to do this?—A. I do not know.

Q. What is your charge for carrying oil to the seaboard?—A. Forty-five cents to New York.

Q. Was it not testified to by one of the members of your company, or an employee of the company, that the cost did not exceed 7 cents, or about 7 cents?—A. I never heard of such testimony.

Q. Well, have you an idea about what the cost is?—A. I do not think anybody knows. I do not know.²

Q. It is not a difficult matter to determine after a pipe line is established. I supposed that almost any member of the company would know, approximately, what the cost was, and I think it was a fair question.—A. Oh, no; of course it is not difficult—but you must let me say that there are a great many things I do not know.³

PIPES ARE TAKEN UP AND RELAID.

Q. (By Mr. SMYTH). The cost of laying pipe lines to-day would be immensely greater than it would have been one or two years ago, would it not?—A. I think the advance is as much as 100 per cent in some material.

Q. In the cost of pipe material?—A. Yes.

Q. Now, if a pipe line is abandoned on account of the giving out of the oil, of course, a pipe line in that locality is of no earthly use or value?—A. There is a certain amount of salvage; it can be taken up and used elsewhere. If the oil business were to die out, then the value or amount of the salvage would be very trifling; but so far as material is concerned it can be used a second time. It has a certain value.

Q. Do you ever take up pipe lines and transplant them?—A. We change from one field to another. We utilize our old material when we can.

Q. That, of course, is a great expense?—A. There is a great expense involved in doing it—labor chiefly.

THE CHARGE FOR PIPING DOES NOT AFFECT THE PRODUCER—TWENTY CENTS IS VERY REASONABLE.

Q. You do not think, then, that 20 cents a barrel, being the uniform price, is excessive?—A. I consider it very reasonable.

Q. Has there been any demand on the part of the producers to reduce that charge?—A. I think there have been demands of the producers: I think it has been pretty clearly established now that it does not matter to the producers what the pipe line charges are; it is the man that buys oil from the producers.

Q. The oil is generally bought from the producer at his well, practically?—A. Practically at his well. The receipts are given there for it by the pipe line, and the receipt is a merchantable receipt.

¹ See the testimony of Mr. Emery, pp. 607-609, 619-622.

² For the National Transit Company's contract to furnish the through transportation, exclusive of gathering, for 6 cents, see pp. 665, 666. For the same company's contract, possibly implying that the cost of gathering is about 5 cents, see p. 734, footnote.

³ Compare the testimony of Mr. Lee, p. 284; Mr. Phillips, p. 594; Mr. Emery, pp. 666, 667.

Q. In your opinion, the standard or average price per barrel for transporting this oil through pipe lines, regardless of cost, is best for all producers of oil?—A. We think so, because of the varying character of the business, the new fields that are constantly getting on, the decline of the oil, and the wearing out of the pipes, or rather their lack of usefulness.

Q. (By Mr. FARQUHAR.) How does 20 cents a barrel in pipe lines compare in cheapness with any other class of transportation—railroad, wagon, or otherwise?—A. Oh, it is so infinitely cheaper that it can not be compared.

Q. (By Mr. SMYTH.) What is the greatest distance you carry oil at 20 cents a barrel?—A. I do not think I can answer that specifically.

Q. Well, approximately?—A. Approximately, I think we carry 25 miles or 30 miles.

COMPETING LINES COVER ONLY LOCAL FIELDS—CIRCUMSTANCES OF THE BUSINESS

Q. That is cheaper than the railroad companies deliver?—A. Why, certainly. May I explain a little and say our affiliated interests, so to speak, of the pipe lines gather the oil in Ohio, Indiana, West Virginia, Pennsylvania, and New York? All competing lines gather in some small local field, as for instance, the Producers and Refiners' lines. It has occurred to me—I have heard that their charge was 15 cents a barrel for refiners, but they only gather within short distances. I do not know what they are. I will say that we are willing to run a line 15 or 20 miles, and do it for the patrons of our line at times. I do not know whether they do that or not; I do not think they do, because I think they are in a confined district.

Q. I suppose you investigate a well very thoroughly before running out 15, 20, or 25 miles?—A. Naturally we look into the business.

Q. But at the same time there is a certain amount of risk as to the perpetuity of the well?—A. Yes.

Q. All that risk you assume?—A. We do.

Q. (By Mr. FARQUHAR.) Is the only salvage the pipe, when you abandon a well?—A. That is all.

Q. (By Mr. SMYTH.) You have to buy the right of way generally?—A. Sometimes—we always expect to pay for it. It is worth having and worth paying for.

Testimony closed.

WASHINGTON, D. C., *September 9, 1899.*

TESTIMONY OF MR. THOMAS W. PHILLIPS.

At a meeting of the commission, Saturday, September 9, 1899, Mr. A. L. Harris presiding, Mr. Thomas W. Phillips appeared before the commission at 11.15 a. m., and, after being duly sworn, testified concerning trusts.

Mr. A. L. HARRIS. I have been called to the chair at the instance of the vice-chairman, in order that he may give some testimony as a witness to the commission. Mr. Phillips desires to make a statement in his own way.

PERSONAL STATEMENT—THE PURE OIL COMPANY; ITS VOTING TRUST.

The WITNESS. I desire to refer to the statement which two witnesses have made before the commission that I am connected with a trust. They assume that I am here, as a member of this commission, opposing trusts, thus giving the impression that I have prejudged the case. This is what they imply in alleging that I am connected with a trust.

I am free to state that I am connected with a corporate organization the object of which is to combine several interests in the same company, namely, the Pure Oil Company, organized under the laws of New Jersey. A fraction over one-half of the stock of this company is in a voting trust. The sole duty of the trustees is to act with the other stockholders in electing directors. The trustees have no right to manage the business affairs of the company. The stockholders have consented in writing to this voting trust. The reasons for creating it are as follows:

PRODUCERS' OIL COMPANY, LIMITED; ATTEMPT OF THE STANDARD OIL COMPANY TO CONTROL IT.¹

A very large number of the independent producers in the oil country organized a number of years ago what is known as the Producers' Protective Association.²

¹ Compare Mr. Lee, p. 270; Mr. Westgate, pp. 370, 382; Mr. Archbold, pp. 577, 578; Mr. Emery, p. 657.

² See Mr. Boyle, pp. 428, 429, 441-446, 449.

I was the first president of that organization. As a means of protection the Producers' Oil Company, Limited, was formed in June, 1891, with a capital of \$600,000. Shortly after the formation of this company the Standard Oil Trust, through one of its affiliated companies, the National Transit Company, commenced to buy stock in this company and continued to do so until it had accumulated a small per cent over half the stock. It paid in some instances as high as 220, or 120 per cent above par, and this at a time when the company had not yet earned any money, but had, in fact, lost money. The members of the Standard Oil Company say that they afterwards sold this stock; but before the time when they claim to have parted with it they turned it over to Mr. Carter, to whom they allege they afterwards sold it, and he attempted to vote it at an important meeting of the company as his own and secure control. This was in March, 1894. He returned it to the National Transit Company after his fraudulent attempt to use it as his own to accomplish a purpose which the Standard Oil Trust evidently desired. Subsequently, on the 16th day of January, 1896, the same individual alleged that he purchased the stock from the National Transit Company. It was proven in evidence that this person was introduced to a trust company in New York, from which he borrowed the \$300,000 with which the purchase was alleged to have been made. When it was attempted to show that this money came from the Standard Oil Trust, the witness, Mr. Archbold, and other agents of the Standard Oil Trust declined to answer all important questions touching the ownership of that money. The Producers' Oil Company, Limited, declined to permit Mr. Carter to vote the additionally acquired stock, amounting to \$297,000, without first being elected to membership by a majority in number and value of the interests remaining in the company.

This was in accordance with the statute of Pennsylvania of 1874 and the supplement of 1885, creating and regulating limited partnerships. A by-law of the company also provided that such election should take place before admission to membership.

As to his effort to vote this stock without being elected, the decision was against him in the court of common pleas of Warren County, Pa., after a two weeks' trial, and an appeal was taken by Mr. Carter, the alleged owner, to the supreme court of Pennsylvania. That court decided that both according to the letter and the spirit of the statute he was not entitled to vote that stock as a member of the company without having been elected as indicated above. That decision I have here and submit it to the commission as sustaining the position which the company took.

THE STANDARD OIL COMPANY GETS A MEMBER ON THE BOARD OF DIRECTORS OF THE UNITED STATES PIPE LINE COMPANY.¹

The Standard Oil Trust, through the same affiliated company, the National Transit Company, acquired large amounts of stock in the United States Pipe Line Company, another company organized by the independent oil producers and refiners. This company was formed to transport refined and crude oil to the seaboard. The aim of it was to cheapen transportation and to avoid discriminating rates. The United States Pipe Line Company excluded the Standard from its meetings on the ground that the Standard acquired its stock to compass its destruction and to get information that would lead to the destruction of the independent movement.

Mr. Archbold stated yesterday that one of the objects of the Standard in buying that stock was to secure information.² The National Transit Company brought a bill in equity to secure admission to the meetings of the company and permission to vote that stock. The decision in the lower court was in their favor. On appeal to the supreme court, the case was prepared on both sides with elaborate briefs for argument, and counsel on both sides were present in the supreme court to argue the case. When it was called, instead of proceeding to argument upon its merits, counsel for the National Transit Company moved to quash the appeal on the technical ground that the affidavit to show that the appeal was not "taken for the purpose of delay" was not made by the chief officer or secretary of the company; and the supreme court, because the statute required such an affidavit, quashed the appeal, and the case was not heard on its merits. It was then too late, under the statute, to take another appeal and have the case heard on its merits.

The entire stock acquired by the National Transit Company in the United States Pipe Line Company was \$383,000 out of a total of \$1,190,000. To defend these two

¹ Compare Mr. Lee, p. 270; Mr. Westgate, pp. 370, 382; Mr. Archbold, pp. 577, 578; Mr. Emery, p. 656.

² See p. 577.

companies from the hostile invasion of the Standard Oil Trust cost about \$15,000 in actual money, besides vast labor and trouble.

THE PURE OIL COMPANY NOT A TRUST.

Because of the attempt of the Standard Oil Trust to force themselves into these independent organizations, without invitation and against the will of all the independent members, it was thought wise in the organization of the Pure Oil Company to have at least half of its stock put into a voting trust in the names of men of known and tried loyalty to the independent interests. This was done solely for the purpose of securing that company against the hostile inroads of this giant monopoly and to prevent its destruction.

The Pure Oil Company is not a trust in the commonly accepted sense of that term. A trust, as I understand it, is a corporation or combination of corporations with vast capital, organized for the purpose of securing a monopoly in any branch of trade. The Pure Oil Company is not organized for the purpose of securing a monopoly, but to prevent a monopoly and preserve competition in the petroleum industry, its promoters believing that by fair competition the highest and best interests of producer and consumer can be secured and the public interest best conserved.

It was therefore incorrect for the witness yesterday¹ to state that the Pure Oil Company is a trust, or that any of the independent producers or refiners are members of a trust, in the obnoxious sense in which that word is understood, meaning monopoly.

The Standard's dividends will show, perhaps, without regard to the surplus they have accumulated, that they have at times made more profit on every barrel of oil they handled than they paid to the producer for it. I have known a producer to pay \$100,000 or more for a limited number of leases, on which wells were obtained which would flow from 2,500 to 3,000 barrels per day; and yet the profit that the Standard Oil Trust reaped on each barrel of oil from these wells was evidently more than they paid for the oil.

As to amount, or as to the principles involved, the tax on tea and other articles, against which our fathers revolted, was nothing in comparison to the tribute the Standard has levied on the oil producer and consumer.

THE STANDARD OIL COMPANY'S AVERAGE PROFIT.

During the time the Standard Oil Trust has been engaged in the oil business they have made more than \$1 per barrel on all oil produced. This is capable of easy demonstration. The entire production of what is known as Pennsylvania oil for 17 years in round numbers is 500,000,000 barrels. The market value of the Standard stock is very close to \$500,000,000. I believe it has been stated before this commission that it is at least \$450,000,000. This has been made chiefly out of the profits of the company; and it is practically equivalent to \$1 a barrel on all oil produced since they have been in business. During this period, or from the time the Standard came into power, oil has averaged about 90 cents a barrel; their profit has been more than a dollar per barrel. This does not take into consideration their enormous dividends nor their vast reputed surplus.²

PROFITS OF THE INDEPENDENT REFINERS.

Q. (By Mr. SMYTH.) That has been the profit of the independent refiners too?—A. No, sir; not by a great deal.

Q. You could not give an estimate of the profits made by the independent refiners?—A. Upon this I am not well informed. I will say this: For a number of years they lost a very considerable amount of money. They sold what is known as cut cargoes. At the close I will give all the information I can, and will submit a statement of all the companies with which I am connected. I have reason to believe the companies will not object.

Q. Will that statement be made to-day?—A. I should not have time to do that to-day, but will be willing at any time to submit a complete and full statement.³

¹ See p. 507. See also pp. 596-598; Mr. Boyle, pp. 443, 463, 488; Mr. Emery, p. 658.

² See table of annual production and average prices of Pennsylvania oil, pp. 539, 547; production of Lima oil from 1890, p. 561. Compare Mr. Lee, p. 298.

³ Detailed balance sheets of the Pure Oil Company, the United States Pipe Line Company, and the Producers and Refiners' Oil Company, Limited, were afterwards filed with the commission; together with a full analysis of profits and losses.

THE STANDARD OIL COMPANY—THE VALUE OF ITS STOCK REPRESENTS PROFITS.

Q. (By Mr. KENNEDY.) I should like to ask why, if you are able to state the profits of the Standard Oil Company, you are not able to state the profits of your own company?—A. That is very easy to answer, I think. I have given the facts of their stock; it is a very large concern, and we know the market value of their stock; we could not estimate the market value of our stock. For my own part I would not take a hundred per cent.

Q. (By Mr. SMYTH.) How do you know they have made a profit of a dollar a barrel?—A. Their capital stock has been selling at about \$500,000,000, and there has been about 500,000,000 barrels of oil produced since they organized and the average price of that oil has been about 90 cents. This is saying nothing about the enormous dividends they have paid—I believe last year it was \$35,000,000—nor anything about their surplus. There is no kind of question of my deduction and figures.

Q. That is only an estimate or a guess?—A. It can not be considered so in view of the fact that they built their lines and establishments out of their profits.

Q. How do you know that?—A. We have every reason to believe it, because of the capital stock with which the company was originally organized and the dividends that they have made. They built it in that way.

VALUE OF STOCK IN THE STANDARD AND IN THE PURE OIL COMPANY.

Q. (By Representative LIVINGSTON.) Have you any exact way of getting at the market value of your stock or the Standard Oil Company's stock? Are both of them listed on the market?—A. No; they are not. The Standard has always kept its stock from being listed on the market, though the papers give quotations of it from time to time. Ours is not listed on the stock market; there have only been individual sales; I can give the costs of our company, though, and the profits; then you can better judge what the value is.

Q. What would you take for your stock?—A. Now, since we have won against the greatest opposition that ever existed in the commercial world by cutting our way through to Germany and getting a market there, I consider this stock very valuable, even though we sell at lower rates.

Q. What will you take for your stock?—A. I would not, under the circumstances, take 100 per cent profit.

Q. At how much can you buy Standard Oil?—A. I think it was stated yesterday that the last market quotation is at the rate of about \$465,000,000. It has sold within a fraction of \$500,000,000 within a year.

PRODUCERS CAN NOT AFFORD TO SELL THEIR INDEPENDENT OUTLETS. THE STANDARD MAKES PRODUCERS AND CONSUMERS PAY FOR WHAT IT BUYS.

Q. (By Mr. KENNEDY.) You say you would not take 100 per cent profit?—A. I would not sell now. I will make a statement here in that regard, since the matter is brought up. In our best judgment, i. e., that of the most intelligent producers, when the Standard buys a pipe-line system and refineries they are charged up to the producers. At the time of one of their largest purchases the price of oil was put down 7 cents per barrel the day the purchase was made, or the next day after. They were then shipping about 60,000 barrels per day through the pipe lines; and that 7 times 6 would be 42—\$4,200 per day that they assessed to pay for that. And I heard Mr. Archbold say that the producers would never know what that pipe line cost them. And we do not know to-day; but the price was assessed, and a short time afterwards oil was dropped again. Now, along that line I could state this, that the Standard has bought very large amounts of property when oil is very low, and especially in 1895, when oil went up from less than a dollar to \$2.60. They bought a number of million dollars' worth of producing property. It is fair to say that that property did not cost them anything, because the world, the consumer, was assessed for it. In my best judgment the Standard in purchasing either pipe lines or producing property, since its organization, has not paid any money directly that they have not recouped indirectly. When they buy a pipe line they levy the cost on the producers by dropping the price of oil. They buy large amounts of producing property when oil is low, and then the price to the consumer advances.¹ They fix both the price at which they buy and the price at which they sell.

Q. You consider this stock to be worth a premium of 100 per cent on the par value?—A. Prospectively. You see, I would not sell it, because I am a producer of oil, and I am thoroughly convinced, and it is understood by the directors, that

¹ See Mr. Lockwood, p. 408; Mr. Archbold, p. 560.

if we were to get twice its cost from the Standard we should be assessed to pay it. We do not know how much money the producers have been deriving through the existence of these companies. We would not sell as long as we are producers; we keep the stock for self-preservation.

OIL MONOPOLY DUE TO LACK OF CONTROL OF RAILROADS.

The WITNESS (continuing his statement). Mr. Archbold stated before this commission¹ that he was in favor of the Interstate Commerce Commission. If there had been such a commission with proper authority over the transportation of oil, the Standard Oil monopoly would not be in existence to-day.

I am present as a member of this commission with a full determination to hear impartially, and to endeavor to the best of my ability to suggest such remedial legislation as will be for the greatest good of the greatest number; not only in regard to combinations, but also with respect to all industrial questions.

NEGOTIATIONS OF INDEPENDENT PRODUCERS WITH THE STANDARD OIL COMPANY.

In regard to the statement that I, in company with others² connected with the independent movement, called upon the Standard Oil Trust seeking a combination with them, I will state that we did call upon them some three or four years ago. It was after they, or their affiliated companies, had bought the large amounts of stock, spoken of above, in our independent companies. They had bought a number of the independent refineries connected with the independent pipe lines. They had made every possible effort to prevent our marketing oil in Germany and other places. They had bought out Mr. Poth, who was handling the oil of the independent refineries in Germany. They had got almost complete control of the German petroleum installation plants or receiving tanks. The remaining refineries, as well as those who had sold out, had met with great losses in handling oil in Germany, selling what they call "cut cargoes."

The object in calling upon them, as far as I personally was concerned (and I believe it to have been the object of the other persons who were with me at the time, and who were men of the highest character), was to obtain from the Standard Oil Trust cessation of hostilities, both in regard to piping the oil and in regard to selling it. It was to secure the right to deliver in New York, without their opposition, the capacity of the then existing lines, which would not exceed seven or eight thousand barrels of oil per day.

We believed then and still believe that the opposition to laying our pipe lines across the State of New Jersey to reach the harbor of New York was instigated by the Standard.³ I am informed that Mr. William Rockefeller, a trustee in the Standard Oil Trust, is a director in the principal opposing road, the Delaware, Lackawanna and Western Railroad.

The members of the Standard Oil Trust with whom we conversed—and Mr. Archbold was one of them—refused absolutely to grant us any concessions, or to allow us, on any fair basis, to ship and market oil without such aggressive opposition as Mr. Archbold admits they employ to defeat competition. But in lieu thereof they proposed to buy our pipe-line system, a proposition which we did not entertain.⁴ It was then proposed by one of the members of the Standard Oil Trust to buy our producing property. This was also rejected, as we did not desire to go out of the producing industry. No proposition was made to those gentlemen by me or by any gentleman with me, to the best of my knowledge and belief, on that occasion or any other, that any fair and honorable business man could not make to another.

I had not then and have not now any conscientious scruples about anything that was said to them, and should be perfectly willing, were it possible, to have all the conversation that occurred repeated now before this commission.

THE STANDARD OIL COMPANY DESIRES THE COOPERATION OF THE INDEPENDENT PRODUCERS.

In regard to the statement⁵ that they had not entertained a proposition for combination because of lack of faith, both in the legality of the proposition and in the men connected with the independent movements, I have this to say: That there has never been a time when I should have been willing personally to go into a com-

⁴ See Mr. Lee, pp. 271, 292, 293.

bination with the Standard Oil Trust. In proof of this I will state that in the year 1890 I sold to the Standard Oil Trust quite a large oil field in Butler County, Pa., composed of 7,500 acres of land held by lease, with 125 producing wells. The chief reason for selling this property to the Standard Oil Trust was that at that time they had purchased the Union Oil Company's interests and those of the Anchor Oil Company and the McKinney Brothers' property and also the Forest Oil Company's property, these being the largest oil properties in the country.

The Forest Oil Company was negotiating for my property before they sold to the Standard. After having sold their interests they stated that the Standard would purchase mine if I so desired and the price could be agreed upon.

Fearing the power of the Standard, fearing that they might reduce the price of oil, and considering that they had bought the largest properties in the oil field, I concluded to enter into negotiations with them for the sale of this property. The negotiations continued for two days at their office, 26 Broadway, New York. During this period, at two or three times when we differed in regard to the value of the property, they asked me whether I would act in harmony with them. At each time I absolutely refused to consent to this proposition, and finally stated that if they should insist upon that as a condition I would not sell; that I was willing to sell the property, but would retain my individuality; that I had nothing to sell but my property. They bought the property for \$750,000, which was paid partly in cash and partly in stock. I subsequently sold the stock for a less price than I took it at in payment for the property, not desiring to be connected with them in any way.

As further evidence that the Standard Oil Trust desired my cooperation: A few months after the sale of this property, while spending a short time at Lake George with my family, I met Mr. Dodd, the attorney of the Standard Oil Trust, at the Fort McHenry House. In talking to my son and myself in regard to the Standard Oil Trust, he said that the Standard always sought connection with successful men, and, turning to my son, said they had sought "your parent." This conversation is fixed most distinctly upon my mind because of the use of the word "parent."

As a result of these large purchases which the Standard made, the vendors became active in the producing departments of the Standard Oil Trust. I presume that it was there that they desired my work or influence.

There is not now and there never was any inducement that the Standard could hold out to me sufficiently strong to induce me to become an active participant in their business.

The statement that they declined any business arrangement with the independent producers because of lack of faith in them can not be true and is a gratuitous insult to a large body of business men of high character. For four years they have been trying to force business relations with us by buying large blocks of stock in the companies and going into court to force us to receive them as business associates, and they have so far succeeded as to have a director in the United States Pipe Line Company. The statement is, therefore, both false and slanderous.

COST OF PIPE-LINE TRANSPORTATION.

Q. (By Mr. KENNEDY.) What is the cost per barrel of transporting oil through the United States pipe line?—A. I am informed that with the line carrying half its capacity, about 3,000 barrels a day, it is about 5 cents per barrel to the terminal in New Jersey, and with full capacity of the line it would cost less than 4 cents. In the gathering in the field I have had personal experience connected with lines, and we estimate from 3 to 5 cents per barrel, and yet the Standard's price is 20 cents per barrel.

Q. Twenty cents?—A. Yes; and it is the same now as when they were organized.¹

NO RECENT OVERTURES TO THE STANDARD OIL COMPANY.

Q. It was stated under oath yesterday,² I think, that you had called upon Mr. Archbold for the purpose of combining with the Standard Oil Company since the organization of this commission, and you state positively under oath that this is false?—A. I positively state it is false. I have had nothing to do with them except as I have set forth here. If others have called upon them, it was without my knowledge, advice or approval.

THE PURE OIL COMPANY—ITS VOTING TRUST.

Q. You stated that this voting trust, in this company with which you are connected, vote simply for directors and have no voice in the management of the

¹ Compare Mr. Rogers, pp. 581 and 588; Mr. Lee, p. 284; National Transit Company's contract, pp. 605, 606; Mr. Emery, p. 606.

² See p. 580.

business affairs of the company. Do not the directors, who are their creatures, have the control of the affairs of the company?—A. Oh, yes; those who are elected. The trustees have a majority of the stock, and they vote with the other stockholders and elect a board of directors. They expect to elect men of character and ability to conduct the business affairs of the company, just as any other corporation would be conducted. It is expected that everything will be open to inspection. It will be if I have my way. I do not think there will be any objection to furnishing to this commission at any time, or to the State or to the United States, a statement of any of these lines, or a full statement of the Pure Oil Company, which will probably absorb the other lines in the manner I have stated.

Q. Well, is it not true that this voting trust of five members, who vote more than the majority of the stock, do manage the affairs of the company through this board of directors?—A. Yes. The voting trustees are fifteen. The number was made large in order that they might be very representative throughout the oil country. They do elect the directors. That is the object of it, and I have fully stated the reason why it is done, to prevent being crushed by this great monopoly. It was the only means of safety, as we have learned by experience. And I will further state that voting trusts are not uncommon either in Europe or America. It is nothing new to have a voting trust.

THE PURE OIL COMPANY'S VOTING TRUST NOT SIMILAR TO THE STANDARD OIL TRUST.

Q. Will you state how this voting trust feature of your company differs from the old Standard Oil Trust's manner of doing business?—A. The voting question?

Q. Yes.—A. At the present time?

Q. Yes.—A. I know nothing about their methods of later years, except that one suit was brought against them in Ohio to dissolve their trust, and they agreed to dissolve it. I know of persons holding certificates of the same trust and receiving dividends on them up to a very recent day; but it was also acknowledged here yesterday that they were still paying dividends on these trust certificates.

Q. Was not the old Standard Oil Trust, through a voting trust, electing a board of directors to manage the affairs of the trust?—A. No; they were a close corporation, as I understand.

Q. A what?—A. What we would call a close corporation. I mean a trust, a body of men associated together in the most secret form, probably, that exists in any business enterprise of magnitude. They themselves conducted their business, and they would make no statement to the public. The most I heard, at the time when they bought this property, from another individual, was this: He said that he had had the privilege to look at what he called their quick assets, and they were enormous. That was in 1890. I do not know about their business affairs since that.

Q. You state then that this voting trust feature of yours is not similar to the old voting trust feature of the Standard Oil Company?—A. Not in any way, manner, or form. It has been fully explained, and the object of it has been fully explained. I have nothing to conceal about my public transactions in connection with that business or anywhere else.

Q. I ask because the Standard Oil officers have testified in respect to this that you began where they left off.¹—A. Well, if they said that, they said what is not the truth. The matter is fully before the commission, and the only object of the voting trust is the one I have stated.

THE REPRESENTATIVE OF THE STANDARD OIL COMPANY ON THE BOARD OF THE UNITED STATES PIPE LINE.

Q. (By Representative LIVINGSTON.) I have an allegation here, by a party who signs his name to it, that the Standard purchased stock in the name of a spy sufficient to place one director on the board of each of "the following companies," and yours is included, the Producers'. What do you know about that?—A. From what do you read?

Q. I am reading from a letter signed by a man. It does not make any difference who he is now. Has the Standard Oil Company a member on your board of directors?—A. Yes; they have a member on the board of the United States Pipe Line Company. They failed to secure an election in the other company, although they had a majority of the stock, as I explained. One of their members, one that is openly connected with them, though not in a managing capacity, is on the board.

Q. On your board?—A. On the board of the United States Pipe Line. I have stock in it, and I am also a director in it, and I have met with him.

Q. There are several companies here mentioned in which they did purchase stock enough to put one member on the board, among them the Producers and Refiners'

¹ See Mr. Boyle, p. 438.

Oil Company and the United States Pipe Line Company. Now, this man charges that the Standard Oil Company and your company and these other two companies are one and the same thing, by a private understanding, to this extent—that you sold stock enough to the Standard to authorize them to put a member on your board and on these other boards. Is that correct?—A. No; it is absolutely false.

Q. Do you mean it is false in toto—that you have not any member?—A. No, I said we had a member, but we did not consent; the stock was bought without our knowledge and consent, and he was forced there by law.

Q. I understand that. They had purchased stock enough to force a member on your board?—A. And forced him on us. They said they would not be associated with any of these affiliated companies because of lack of faith both in their ability and in their honesty.

Q. Of what advantage to the Standard Oil is that member of the board of directors in your company? How can they utilize him?—A. They get all the information. That is, he is called to all the meetings and treated like any other member of the board.

Q. Then they find out all your secrets in that way?—A. The witness, Mr. Archbold, yesterday testified that it was one object in purchasing the stock—to get information.¹ We have never had a doubt of their purpose in any of these purchases; that the purchases were made for the purpose of destroying or crippling our industry and breaking down opposition to them.

Q. I will show this letter both to yourself and to the representatives of the Standard Oil Company. [Representative Livingston here produced a letter and handed it to the witness.]

Q. I just request, if I am not present when you get through with the letter, that if any representative of the Standard Oil Company be present he may have the same use of it.—A. If any use is made of it by one side the other shall have the same privilege.

"MONOPOLIES"—THE STANDARD OIL COMPANY NOT A MONOPOLY BY LAW.

Q. (By Mr. RATCHFORD.) In the early part of your testimony you observed that your company is not a trust, but is a combination. Do we understand that it is chartered under the laws of the State of New Jersey, as is also the Standard Oil Company?—A. Just recently the Standard Oil Company has been chartered, as has been testified here.

Q. You also define a trust to be a monopoly.² Now, I want to ask whether the laws of New Jersey give to the Standard Oil Company any advantage that is not given to your company?—A. Not so far as I know. All these large combines that have been organized under the laws of New Jersey are organized alike, as I understand it; some have preferred and common stock, and others just common, etc.

Q. The combination or trust has no privilege before the law, as you understand it. That being the case, then the Standard Oil Company is only a monopoly in the State of New Jersey providing they are able to monopolize the business. Is that right?—A. Yes.

Q. If that be correct, then it follows that your company will also be a monopoly, provided you are able to monopolize the business?—A. Both companies have a perfect right—

Q. (Interrupting.) They have the same right under the law?—A. Yes. We organized under the same law.

Q. What I meant to ask was whether they had any special privileges under the law?—A. I understand all of these great industries organized in the State of New Jersey are organized under this same law and have the same privileges.

THE PURE OIL COMPANY ABSORBS ITS ALLIES—THE STANDARD ABSORBS ITS COMPETITORS.

Q. Another statement I understand you to make is that the Pure Oil Company will eventually absorb the other lines.—A. It will purchase a majority of the stock of the independent lines.

Q. This is the company you are interested in?—A. I am interested in all of them; I am interested in all four of the independent companies.

Q. From your standpoint I want to ask if the absorption of smaller enterprises is not the greatest objection that has been urged against the Standard Oil Company?—A. Certainly; but these independent companies are practically one already. The producers formed one organization, and then another and another. The stockholders are the same, or very nearly the same. They are simply getting together

¹ See p. 577.

² See p. 591.

because the Standard was likely to absorb them in detail. But if organized in this protective form, with a voting trust, it will be impossible for the Standard to buy the stock and control these companies. It is self-defense.

Q. But is it not in every case the purpose of the larger companies to absorb the smaller competitors?—A. I do not know the purpose of others, but it was the purpose of this Pure Oil Company to unite—if you please, to consolidate—the companies in one, because practically the stockholders were the same. It was not to get control of any other person's business; it was simply to put our own business in such a form that we could not be destroyed by this giant monopoly.

Q. In your experience with the Standard Oil Company has that not been one of its objects—to absorb the smaller concerns?—A. The smaller concerns that have been absorbed have been independent and opposition companies. These are not, and the cases are not similar.

THE PURE OIL COMPANY, UNLIKE THE STANDARD, DOES NOT DESIRE A MONOPOLY—
THE WITNESS WOULD REFUSE TO BE CONNECTED WITH A MONOPOLY.

Q. (By Mr. CLARKE.) Did your company compete with the Standard Oil Company in any operations in the fields?—A. Yes.

Q. You would get business away from them if you could honestly and fairly?—A. Certainly; that is, in an honest, fair manner. Competitors will always do that.

Q. You would get away all of their business if you could honestly and fairly, I suppose?—A. It would be very difficult to do that.

Q. Well, suppose you could?

Q. (By Mr. FARQUHAR.) There is the same object before the two trusts, your company and the Standard?—A. I would not say so. I would say that we only want a fair portion of the competitor's business, not the whole of it. I would not be connected with a monopoly. I would not control a great product and fix the price at which I would buy, transport, and sell. It is too great a responsibility for any one man to have, and it is a greater responsibility than tyrants as a rule assume toward their subjects. The profits are enormous which have been fixed by this trust.

Q. Now, you wish us to understand that if this company should become large and be an octopus you would sell out and be no longer connected with it?—A. I would not be connected with it.

Q. If your company should be large enough to monopolize the business by means of fair competition, you would no longer have anything to do with it?—A. I would not have anything to do with it if it pursued the methods of the Standard, influencing legislation and preventing others from doing business. If it grew naturally and the profits were fair, I should be willing to accept them, but I certainly should not want the responsibility of monopolizing a great industry and fixing the prices. I do not think that such a power should be in any hands. I would be in favor of throwing it open to Government inspection and of requiring public statements and of putting it under any laws that would be fair and just to the people.

Q. You would not, then, if you could, by perfectly fair and legitimate means, irrespective of the means of the Standard Oil Company, monopolize the oil business in any way?—A. I would not. I say I would not have the responsibility of fixing, according to my own judgment, what my profits should be from a great community. I would rather die poor than have it.

Q. That would be a matter of your own conscience?—A. Yes.

Q. How would it be under the law? Do you consider that it is not legal for any company to gain all the advantages that it can fairly and legitimately?—A. Well, now, I have pretty strong views in regard to competitors and competition, and being a member of the commission, I would rather not enter into this subject and give my views in regard to it now.

“TRUSTS”—DIFFERENT MEANINGS OF THE WORD—THE PRODUCERS' OIL COMPANY
AND THE STANDARD.

(By Mr. FARQUHAR.) The witness states here that the Pure Oil Company, so led, is not a trust. Will you explain to this commission why it is that your articles of agreement all through characterize it as a trust? There are five articles in your agreement. It explicitly declares in the first article (reading):

“First. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement. Such ownership of the shares, or interests therein, may be sold at the will of the holder; but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any rights other than are provided for in the by-laws, rules, and regulations of the

company; and in accordance with this trust the trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares to carry into effect the purposes of this trust, and all equitable owners of trust shares or interests therein shall specifically agree in writing to the terms of this trust, and no transfer of any such shares or interest shall be made, or be effective if made, unless the transferee of such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust."

The objects set forth in the original trust of the Standard are the same objects, with just one exception, as are claimed for this Pure Oil Company. How can it be possible to escape the idea that this Pure Oil Company is a trust? What explanation have you to make?—A. It is a voting trust. The company itself is organized under the laws of the State of New Jersey, and all those trust papers, as I understand it, were drawn solely for the purpose of protecting the stockholders in voting this stock and electing directors. The stock itself was put into a trust, a voting trust, so that it could not be sold or alienated or monopolized, and if the stock were sold the trustees would have a voice in electing directors.

Q. How do you explain here in the fourth subdivision of this agreement [reading]:

"Fourth. This agreement may be canceled, and the trust hereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase at \$110 per share, in cash, of all the preferred and common shares of the company at the time outstanding."

Is not that trust pretty nearly perpetual? Is not that company a perpetuity?—

A. I do not so understand it, because it provides for its own method of dissolution.

Q. How do you provide for dissolution? Because, under the general laws, that is under the power of the trustees, and you have trustees here who hold the entire property in their hands; they make their own board of directors; the administrative power of your whole concern is in men who are creatures of your trustees. How much worse than that is the whisky trust or the Standard Oil?—A. I have defined my meaning of the word "trust," and it has been often repeated that the intention in that agreement was only to preserve this stock intact, so that the Standard Oil Company could not monopolize it. I have explained how they attempted to monopolize one of the companies.

ADVANTAGE TO PRODUCERS FROM THE EXISTENCE OF INDEPENDENT REFINERS.

Q. Do the producers who sell oil to independent refiners get better prices than producers who sell to the Standard?—A. That varies at different times. In the beginning, when the Standard had so stopped the outlet abroad and had so monopolized everything and thrown everything in the pathway, the producers got together and made sacrifices for the benefit of the refiners. They were selling cargoes at great loss, and we gave them a reduction in the pipe-line charges. There were other times, when the market was good, when the pipelines have sold to the refiners at a profit. Now, in this recent advance the Producers and Refiners' Pipe Line advanced the oil 3 cents more than the Standard. The Standard in a few days came up to it; and then they advanced again to \$1.37 and this line advanced it to \$1.40. They were very anxious, however, to get the oil to win the fall trade.

Q. That was simply incidental?—A. Yes; incidental. They have been competitors in every way.

Q. Now, at the present time, is not the market on all fours to the producers, whether they are sellers to the independents or the Standard? As prices go, does it pay the producers to sell to the independent refiners as well as to the Standard?—A. Yes; they have the privilege of selling to other pipe lines. There is sometimes, as I said, an advance by the one and not by the other. But this line has never paid the producers less than the Standard was paying. It has always kept pace with the Standard in advancing, and very frequently has advanced 1 or 2 or 3 or 5 cents more. We are handling the high-grade oil—Pennsylvania oil. That is very desirable both at home and abroad.

Q. Now, I would like to know what the character of the competition is that caused the United States Pipe Line to put it up 10 cents more. Was it the Standard?—A. That forced the United States?

Q. Or the refiners or other pipe lines?—A. No; we did not do that.

Q. I thought you said they raised 3 cents and then the Standard raised 3.—A. Yes.

Q. Was it the presence of the Standard that forced them up?—A. I do not know how that would be.

¹ See modified form, p. 511, footnote.

² See Mr. Boyle, pp. 443, 444.

Q. Well, it is a business proposition?—A. It is a business proposition that in order to benefit their friends the refiners were perfectly willing to make the advance; furthermore, it was the time of year when they wanted to get this oil to ship abroad and to supply the markets at home.

Q. What I want to get at is whether the producers expect greater benefit through this pipe-line company or through the Standard in selling their oil.—A. We believe that were it not for these companies the price of oil would be much less than it is. We believe that as large producers we have reaped great benefit from the competition, limited as it is. It is remarkable what a little competition may accomplish; they do not overlook small things. They have the power of a giant, and they use it as a giant.

Q. I want to know if these producers are any better off in connection with this independent organization than they are with the Standard, as far as prices go; then I want to have the question answered, after that, whether the refiner pays the extra profit that is paid into the hands of the producers.—A. There is no doubt, in my judgment, that the producers are better off on account of this independent movement. There is no doubt that the independent refiners are better off. If it were not for these pipe lines none of these independent refiners would be living to-day. It is for mutual protection that these people have united. We believe we have received much better prices for oil; the last year the refiners have given much better prices than they would have given if there had not been this independent movement.

Q. You have stated repeatedly, or, rather, it has been stated repeatedly before this commission, that the Standard has made inordinate profits. Now, is it a fact that the independents are not making as much money, either as refiners or producers, as the Standard people are? I am not talking about commercial reasons at the seaboard. I am speaking about the field, because the producer is not concerned with anything outside of the Pennsylvania field and Ohio field.—A. I think that as far as production is concerned they are substantially on a par; but as far as the selling is concerned the Standard have an advantage, because they have an accumulated capital to handle all the by products with, and so on, as the others have not.

Q. So we come to this plain business proposition, that the producer is just as well off dealing with the Standard as he is with this Pure Oil Company.—A. No, indeed; I would say not.

Q. Why is he not?—A. Because when there is no opposition they pay much less prices. My judgment is, while we could not prove it, that the price of oil has been so much better that we have already paid for the plant out of the increased prices that the Standard has paid for oil on account of this opposition.

Q. You said one minute ago that the advance made by the independents was 8 cents, and was met by the Standard with another advance.—A. How do we know but the oil would be 50 or 60 cents to-day if it were not for this organization?

Q. That is entirely hypothetical. I want to know if they are any better off.—A. I said that they are better off; the producers are better off, probably by 25 cents per barrel, on account of this opposition to the Standard.

PROFITS IN THE OIL BUSINESS.

Q. These men that are engaged in the independent movement have made money out of the oil business?—A. A great many of them are quite well to do, but a majority of the producers are comparatively poor.

Q. Many of them are millionaires?—A. Some of them have made a great deal of money.

Q. So these men who are cooperating with you are millionaires and the Standard is simply a greater aggregation of millionaires?—A. I do not know the wealth of those gentlemen, but very few are considered millionaires. I am quite sure they would have much more wealth if prices had not been depressed by the Standard.

Q. Of course that is a business question, just like railroading. The largest corporation is going to make the most money.—A. I have given facts and figures here which will convince anybody, I think, that the Standard have been making more profit on each barrel of oil than they have paid for it. Now, that affects both the producer and the consumer.

Q. What I wanted was to find out whether these producers are able to get their share of the proper profits that belong to them?—A. The producers could not have received their share of the profits when it is a fact, as has been shown, that the Standard makes more on each barrel of oil than they pay the producer for it.

CAPITALIZATION OF THE INDEPENDENT COMPANIES—VALUE OF THEIR STOCK.

Q. (By Mr. SMYTH.) Will you tell us what is the capital of the Pure Oil Company—the amount it is capitalized at?—A. Something over \$400,000; but there has been an application to increase it. It is my recollection that the authorized capital originally was \$1,000,000, \$377,000 of which was paid in.

Q. What was the value of the different companies associated with or controlled by the Pure Oil Company?—A. None of them are controlled by it as yet. It is a marketing company; but there is an effort, which we presume will be successful, to combine a majority of the stock of the others, as I have explained, into this Pure Oil Company, with an increased capital.

Q. What would be the aggregate value of these companies?—A. There is about \$3,000,000 invested in all these companies to-day, as I understand it.

Q. Then you propose to increase the capital of the Pure Oil Company?—A. Yes; it has been proposed to increase it.

Q. Has it been decided to what amount?—A. It has been thought we would probably increase it to \$10,000,000.

Q. Now, in your judgment, the value of that stock would be about \$20,000,000?—A. No, not at all.

Q. I understood you to say a short time ago that you would not take a hundred per cent advance for your stock?—A. I should not feel like taking a hundred per cent for my stock in all these companies, because I think I am benefited in various ways by getting a better price for my productions.

Q. (Interrupting.) Now, you think that this Pure Oil will be a competitor in the market for the benefit of the consumer?—A. For the benefit of the consumer and the producer.

THE FOREIGN MARKET—THE STANDARD WAS NOT THE PIONEER.

Q. Can you tell us what portion of the products of these companies with which you are connected goes abroad?—A. About 40 per cent of the crude we handle, I am informed by the president of the company.

Q. How long have you been exporting 40 per cent of your crude?—A. About two or three years.

Q. Was your company the first to export oil, or was the Standard Oil Company the first to open up the market?—A. Oh, they were not; there was a large amount of oil shipped abroad before the Standard existed.

Q. One must have been first.—A. The Pure Oil Company was organized in 1895, and the Standard Oil Trust, I am informed, was organized in 1882, and of course shipped oil abroad before the Pure Oil Company; but millions of barrels of oil was exported before the Standard Trust existed.

Q. They did not go into the refining business as the Standard Oil Company for a number of years after the discovery of oil?—A. No.

Q. You do not consider the Standard Oil Company the pioneer in building up the export business?—A. Not at all; no.

Q. At the same time they had a large proportion of it to meet?—A. Oh, certainly they did, but they were not the pioneers.

Q. And covered the world, as we learned yesterday from Mr. Archbold?—A. Yes; but others preceded them in almost all countries. I do not believe, as was stated by Mr. Archbold yesterday, that they have better talent than others engaged in the same business.¹

AGAIN THE QUESTION OF MONOPOLY.

Q. Now, the charter of the Pure Oil Company is taken in the State of New Jersey, and the charter of the Standard Oil Company is now being taken there. You spoke of the Standard Oil Company as the Standard Oil Trust. Yet you deny that the Pure Oil Company is in any manner a trust; how do you distinguish them?—A. The Standard is a monopoly. The Pure Oil Company is not.

Q. How can the Standard Oil Company be a monopoly when the Pure Oil is not? The Standard Oil Company handles only 80 per cent of the product.—A. It does not require all of any commodity to make a monopoly and fix prices; anyone knows that. They do have a sufficient control to make a monopoly.

Q. You stated just now that you had advanced the price of the crude oil to the producers, and then the Standard had. So you were not alone in fixing the prices?—A. That was in one locality, and in advancing crude oil.

Q. But, as a fact, it was done?—A. Yes; that is, where our pipe lines went; and I may say the advance was universal over the field.

¹ See Mr. Lee, pp. 277, 278.² See p. 563.

FREIGHT RATES AND REBATES—THE INDEPENDENTS HAVE NOTHING TO CONCEAL.

Q. Mr. Archbold stated that he was distinctly and clearly in favor of the interstate-commerce law, and since the passage of that law in 1887 he affirmed and gave positive testimony that no rebates, no special rates of freight, no advantages of any kind, had been offered by any railroad company or transportation company or canal, or accepted by the Standard Oil Company or asked for by them. Do you say the same for the Pure Oil Company and the companies with which you are connected?—A. Yes; to the best of my knowledge and belief there has been nothing of that kind.

Q. No special rates have been given to your company at all?—A. No; not unless you consider contracts made when we could not get through to New York. Of course there was a rate through to New York when our pipe line reached a certain point in New Jersey, and when it reached a certain further point there was a lower rate, etc. The freight was very large, and it was the only way we could get oil through to the market. It was an open rate.¹

Q. It was a special rate to your company?—A. No; it was an open rate. They probably had no other shipper of crude oil from that given point, but it was in proportion to the rate from other shipping points, from Oil City, for instance, through.

Q. Wasn't it less than by competing lines?—A. Not that I know of.

Q. Could it have been without your knowledge?—A. Yes, possibly.

Q. You could not say from your own knowledge?—A. I will say that there are other witnesses that will come here and give you the facts. We are perfectly willing to aid you and show whatever there is in the whole business. We have nothing to conceal whatever.

Q. Would you be willing to give a list of the dividends paid by your companies?—A. Yes. I am assuming this, that we would be perfectly willing to have all our companies, and certainly I should be willing to have anything that I am in, open to State and governmental inspection; and if it was doing any injury I would not object to having it either abolished or restricted.²

Q. You stated positively that, to your knowledge, no rebate has been received or accepted by any of your companies since the passage of the interstate law?—A. Not to my knowledge.

Q. Do you know of any such rebate being given to the Standard Oil Company?—A. Personally I have no absolute knowledge on this question, but have been told and believe they have received such rebate. I will qualify my former statement. Pipe lines may have sold to independent refiners at special rates, as stated heretofore.

Q. To that extent it was a special rate extended to the Pure Oil Company?—A. No; it was to the refiners. The Pure Oil Company is a marketing company.

THE FOREIGN MARKET—RUSSIAN OIL—DISTRIBUTION OF PETROLEUM WOULD HAVE BEEN WIDER IF THE STANDARD HAD NOT EXISTED.

Q. When you entered the German market you found the Standard already there?—A. Yes.

Q. And you got in and competed with them?—A. Yes; we entered into competition, as anybody had a right to, and we found the competition a very bitter one. At least the refiners did.

Q. Did you find the Russian competition there?—A. There is very little Russian oil sold there now.

Q. In Germany, as far your knowledge goes?—A. There is very little Russian oil shipped to Germany.

Q. But there was a very large amount of Russian oil shipped to Germany before the Standard went in?—A. They were not the pioneers. My own judgment is that there would have been a better distribution of oil, better both for producers and for consumers, and they would have been more fairly treated, if there had been competing companies instead of this monopoly.

Q. You do not think the Standard Oil Company has been a benefit?—A. The Standard Oil Company? I don't believe I should be willing that one railroad should control 80 per cent of the passenger traffic and the freight traffic of this country and have the absolute power to fix rates. I think we should have had wider distribution of petroleum, and the public would have been better served, and the producers would have been better remunerated, if it had not existed.

Q. (By Mr. FARQUHAR). Do you believe that any of the independent refiners or

¹ See Mr. Archbold, pp. 529, 530; Mr. Emery, p. 653.

² See p. 591, footnote 3.

producers of this country, any number of them, could ever have reached the field that the Standard have all over the world unless they combined?—A. Yes; the markets of the world were largely reached before the Standard combination.¹

PROFITS OF THE STANDARD OIL COMPANY AND OF THE PURE OIL COMPANY.

Q. (By Mr. KENNEDY.) Can you state what profit the Pure Oil Company makes per barrel of oil?—A. I will have the officers present that. I have not gone over it in detail. We have no public records of the amount.

Q. You have private records?—A. Yes; but I have not examined into this matter. I will present the exact figures.² It has varied at different times. We have met with great losses, and sometimes we have made some profits. I would state this, that the profit would be less than 10 cents a barrel at the present time.

Q. While the Standard profit is more than a dollar a barrel?—A. It seems to me that the data given show conclusively that the profit is more than a dollar.

Q. And the Standard can make a profit of a dollar a barrel and you can only get a profit of 10 cents?—A. We have met with this great opposition. We expected to make more than that perhaps after a time; but if we should average 10 cents a barrel and could do one-fourth of the business the Standard does, the company would get enormously rich. If a party of capitalists had purchased the right from the Standard in the State of Pennsylvania—where we could not get any free pipe line for a long time—to manufacture and sell one-fourth of the oil that the Standard did when they were organized, they could have made two or three hundred million dollars very readily had they been willing to exact the prices the Standard did. It would have been a splendid investment to have bought the right from the Standard to do business in this country without their opposition.

THE STANDARD OIL COMPANY HAS AN ADVANTAGE IN THE USE OF BY-PRODUCTS.

Q. You have stated that the Standard Oil Company has made more profit from a barrel of oil than the Pure Oil Company. Is that in any measure due to the fact that they use the by-products?—A. Yes; that has considerable to do with it.

VALUE OF STANDARD AND PURE OIL STOCK—PROFITS.

Q. (By Mr. SMYTH.) You wish us to understand that your company, on a profit of 10 cents per barrel, is to be considered worth 200, whereas the Standard Oil Company, on a profit of a dollar a barrel, is only worth 465?—A. I have tried to explain that before. I am a producer of oil, and as a producer I would not sell my stock for twice the amount; and then I do anticipate very fair profits in the near future.

Q. Do you think the Standard Oil Company makes a thousand times the profits you do?—A. For a long time we made nothing, as has been testified, and I think some of the witnesses testifying in the interest of the Standard charged us with using people's money in some of these companies and not paying them any return;³ but we do not know how much the return has been in the advanced price of crude oil.

Whereupon the commission took a recess until 2 o'clock p. m.

WASHINGTON, D. C., *September 11, 1899.*

TESTIMONY OF MR. LEWIS EMERY, JR.

The commission met on Monday, September 11, 1899, Vice-Chairman Phillips presiding. Mr. Lewis Emery, jr., appeared at 10.55 a. m., and, being duly sworn, testified as follows:

PERSONAL STATEMENT.

The WITNESS. Mr. Chairman and gentlemen of the commission, in advance I desire to beg your indulgence in giving my testimony from this fact, that I have been absent from my home, in the State of California, for the past two years. Under the extreme weight of business and cares I broke down in health, and it was only on the 15th of August that I returned to this part of the country; and since that

¹ Compare Mr. Archbold, p. 563; Mr. Emery, pp. 626, 628.

² Filed with the Commission.

³ See Mr. Boyle, p. 445.

time I have been very busy with the many points in business that were left for me to decide. I have not been able to give the questions that are propounded to me to-day the full attention that I should have done.

I desire the privilege, with the consent of the commission, of referring to my memoranda, or to some of my colleagues, that I may refresh my memory, for this reason, that I have this question for the years from 1872 to 1898 in my memory, excepting my testimony in 1888 before the Committee on Commerce in the city of Washington.

I desire to say that I hold no animosity toward the Standard Oil people or any association. They were thirty-four years my companions, and I only meet them here to-day upon fair and equitable terms. They believe in their method of doing business, and I believe in mine. We agreed to separate. Many of the stockholders of the Standard Oil Company have been associates of mine all these years in the ownership of property, and I own property with them at the present time. We simply differ on methods of transacting business. Therefore I feel that there is no one here in this room who will say I tell an untruth because I may differ from him or because of testimony that I may give in answer to the questions you may ask.

Q. (By Mr. PHILLIPS.) Where is your residence?—A. Bradford, Pa.

Q. Your name in full?—A. Lewis Emery, jr.

Q. What is your occupation, and what has it been?—A. My occupation for the past thirty-four years has been in the production and refining of oil.

CONNECTION WITH VARIOUS OIL COMPANIES.

Q. (By Mr. KENNEDY.) I should like to ask your present connection with the independent companies—producing companies, pipe-line companies, and the Pure Oil Company?—A. I am connected with them.

Q. In an official connection?—A. I am not an official, except that I am trustee of some stock.

Q. (By Mr. LIVINGSTON.) How do you stand in relation to all these companies?—A. I am a stockholder in three of them.

Q. Which three?—A. United States Pipe Line, Pure Oil Company, and the Producers' Oil Company, Limited.

Q. Any connection with the Standard?—A. No; none whatever.

EARLY HISTORY OF THE OIL BUSINESS.

Q. (By Mr. PHILLIPS.) You can proceed in your own way and make a statement to the commission as to the facts.—A. The discovery of oil was in 1859, in the vicinity of the city of Titusville. The commodity was new and practically unknown to the commercial or scientific world.¹ The oil was transported from the wells down Oil Creek, near which the first well was drilled, by teams, or by pumping the oil into boats, or, rather, at that time it was carried in buckets into flatboats made of inch lumber. These flatboats ran down Oil Creek to Oil City, Pa., and from there the oil was transferred into larger bulk boats and carried down the Allegheny River to the city of Pittsburg.

The first refineries for putting this oil into a merchantable condition were in the State of Pennsylvania, the natural and most economical place for the manufacture. The business was free and untrammelled from 1859 up to 1872. The transportation by boat gave way to transportation by pipe line and by rail. The production of oil in 1865, at which time I came into the business, was about 6,000 barrels a day. In the meantime the refineries had dotted the Oil Creek Valley and the Allegheny Valley and reached as far south as Cincinnati and Louisville and as far north as Portland, Me. In 1872 we find these refineries all in active operation, north and south from the points named. From 1859 up to 1865 the oil was drawn in barrels by teams from the interior of the district, Pithole and Cherry Creek and numerous other places I could mention, each team carrying, according to the condition of the road, from 3 to 7 barrels. A barrel of oil was about 450 pounds at that time. Then, in 1865, the pipe lines were introduced. This business was free and open to all the railroads, all the people, and all the world up to 1872. If the commission will kindly refer to this little pamphlet which I have prepared:²

THE FIRST PIPE LINES.

“The first successful effort to transport oil from the well to the railroads by pipe line instead of in barrels by teams was made in 1865.”³

¹ See pp. 405-407.

² Lewis Emery, jr., to the Industrial Commission, 1899.

³ See pp. 409, 413.

"The idea of transporting oil by a pipe to the Allegheny River originated with Thomas C. Bates, of Syracuse. A company was formed with a capital of \$100,000, Joseph Casey as president, and Thomas C. Bates as vice-president. Colonel Brackett and S. M. Spencer completed the arrangements, and David Kirk was appointed superintendent. The laying of the pipe was commenced in November, 1865, and the first oil was piped on the 10th of December, 1865. From that time to January 28, 1866, the company piped 20,000 barrels of oil. The pipe was 6 inches in diameter, extending from Pithole to Oleopolis, a distance of 7 miles, and run entirely by gravity. It had a fall of 360 feet between the field and the river. This company was known as the Pennsylvania Tubing Transportation Company.

"Another company was organized in the spring of 1865—the Rochester and Oleopolis Petroleum Company—with a capital of \$100,000.

"The Miller Farm and Pithole Pipe Company commenced to lay pipe August, 1865, and completed its line in October, 1865. The length of the line was 5½ miles. It was a 2-inch line, and originally four pumps were used, but afterward only one pump was found necessary to do the work."

To give you an idea of how crude men's ideas were at this time I will mention that it was thought necessary to place a pump at the foot of each hill in order that the oil might be carried over that hill into the next valley. In a distance of 5 miles there were four distinct relays of pumps. It would have been held absurd to think that oil could be pumped 4 miles. Now we put oil into a pipe and pump it a distance of 100 to 150 miles with one stroke of the pump.

"The men who were interested in this enterprise were: M. E. Van Sycle, of Jersey City; Henry C. Ohlen, of New York; Charles Hickox and Charles W. Noble, of Cleveland, Ohio.

"The Titusville Pipe Company was organized by H. E. Pickett and G. J. Sherman, of Titusville. They commenced laying pipes in January, 1866, and completed the line in April, 1866. There were two lines of 2-inch pipe from Pithole to Titusville, 9½ miles. The line cost \$120,000.

"Harley & Co. line, from Bennihoff Run to Shaffer, 2 miles, was built in 1865.

"The Vandergrift & Foreman pipe line, from Bradensburg to Oil City, in 1866.

"A charter granted in 1864 to the Western Transportation Company, from the Noble & Delemater well to Shaffer.

THE BEGINNINGS OF PIPE LINE COMBINATION.

"In 1866 the whole of the Van Sycle's line, from Miller farm to Pithole, fell into the hands of William H. Abbott and Henry Harley.

"The Avery & Hedden line, from Shamburg to the Miller farm.

"In 1867 Abbott & Harley acquired control of the Western Transportation Company. Under its charter they combined the Western and their own two lines as the Allegheny Transportation Company. The first board of directors, in 1869, were Henry Harley, president; W. H. Abbott, secretary; Jay Gould, J. P. Harley, and Joseph Douglass; T. W. Larsen, treasurer; William Warmcastle, general superintendent.

"Harley effected a combination, reorganized the Allegheny and Commonwealth as the Pennsylvania Transportation Company, with a capital of almost \$2,000,000, and 500 miles of pipe to Tidioute, Triumph, Irvineton, Oil City, Shamburg, Pleasantville, and Titusville, centering at Miller farm. Among the stockholders were: Jay Gould, Thomas A. Scott, William H. Kemble, Mrs. James Fisk, and George K. Anderson. This enterprise absorbed a swarm of small lines, and was considered the acme of pipe-line achievement.

"The Star Pipe Line was built by Vandergrift & Forman in 1867.

"In 1871 the Commonwealth Oil and Pipe Line Company was organized in the interest of the Oil Creek Railroad.

"Under the act of 1874 of Pennsylvania, Vandergrift & Forman organized the United Pipe Lines, into which a number of lines were merged.

"I desire here to submit, as the initial acts of Pennsylvania, that eventually merged the oil business of the United States into a monopoly—the Standard Oil Trust—"

Q. (By Mr. FARQUHAR.) In the detailed statement you have made of the organization of these various lines, I fail to find in the case of any of these lines any of the members, the chief officers, or directors of the Standard Oil Company itself — A. We have not come to that yet.

Q. You mean to state now that the initial one of the carrier combinations started after the United Pipe Line was formed?—A. Yes; that is what I propose to show.

That was in 1874?—A. Oh, no; the act was of 1874; the organization was in 1871.

Was not the United Pipe Line afterwards the Commonwealth Line?—A. No.

Are you referring to the old line of Vandergrift & Forman the year they made the junction of the oil lines in the United Pipe Lines in 1872?—A. We will come to that again. I can not answer that question until I come to it. I intended to show the consolidation of all these lines under the proper period.¹

THE PENNSYLVANIA RAILROAD PERMITS A PIPE-LINE LAW FOR EIGHT COUNTIES TO PASS.

"The charters for oil-transportation companies, granted by the legislature, were few in number and only to a favored few, the legislature steadily refusing to enact a general law. In 1872, after the exposure of the South Improvement scheme, the legislature was constrained by the popular indignation thus aroused to pass a free-pipe law covering the oil-producing counties—Erie, Crawford, Forrest, Warren, Venango, Butler, Clarion, and Armstrong. Under that law 18 lines were built from the producing districts to the railroads, the length varying from 5 to 30 miles."

I desire to make a remark here. In 1872, when the people of the oil field were so aroused over the report of the South Improvement Company's organization, they demanded from the legislature the repeal of the South Improvement Company's charter and the passage of the free-pipe law, giving pipe-line companies the right of eminent domain. Myself and many others went to Harrisburg and asked the legislature to give us such a law. We met Mr. Scott, of the Pennsylvania Railroad Company—people all-powerful in the legislative body at that time, and I do not think their strength is in any way lessened at the present.

I asked Mr. Scott, president of the Pennsylvania Railroad, to permit this law to become general. He refused. He said that he would permit us to have a law for the eight counties named, but he would not permit us to have a law by which we could run our pipes to the city of Pittsburgh. Our hope was to get a law by which we could reach competing lines of railroad and the Ohio River, so that we might transport our product by water. He said he would permit a law to pass for the eight counties named, but he would provide in the law that no pipe should go within a mile of the State line, or within a mile of any railroad but the Pennsylvania. The oil-producing people would not accept that provision in the bill. By force of circumstances, and almost a resort to arms, it was finally conceded that we should have the eight counties, but we were not permitted to have Allegheny County, that we might get to Pittsburgh for the competition named. This is personal experience.

RISE OF THE MONOPOLY.

"After the adoption of the new constitution, the Wallace Corporation Act, carefully excluding from its provisions transportation of oil, was passed by the legislature, and in less than two years the old South Improvement combination, now known as the Standard Oil Trust, had, by a corrupt bargain with all the railroads, forced all but one of these lines built under the act of 1872 into bankruptcy, and, practically, sale to itself."

This is where these were consolidated—the Vandergrift & Forman, but they were forced in by the monopoly.

Q. (By Representative LIVINGSTON.) Explain what you mean by monopoly; whether the word is used advisedly or not.—A. It was at that time. Perhaps I might say the word monopoly there would be a little premature, because it had not accomplished all its plans to get absolute control of the business.

Q. (By Mr. KENNEDY.) Has it ever had absolute control of the business?—A. Absolutely so.

Q. Competition wiped out entirely?—A. Entirely so; there was a time when I did not know of a living independent refiner.

Q. (By Representative LIVINGSTON.) The word monopoly means the Standard?—A. It does.

Q. We would rather hereafter you would say the Standard Oil Company.—A. It will not suit when I get a little further along.

Q. There are so many monopolies that I do not know which you are speaking of.

Q. (By Mr. KENNEDY.) Is there any monopoly now?—A. If you will allow me to go on, I will get to these things; there will come a time when you can shoot all the shot at me you want to; but to answer that question would be a little premature until you have heard all my argument.

Q. I withdraw that question.

¹ See p. 630.

² See pp. 423, 424.

"The old oil fields are now entirely at the mercy of the monopoly; and upon the development of the new Bradford district, the monopoly through its transportation—the United Pipe Lines and the American Transfer Company—took possession of that field also. Since 1876 the whole oil district, covering nine counties (and with the Pennsylvania Railroad or one of its branches within from 1 to 20 miles of every well), has been under the complete dictation of this trust. A brief statement of the history of this trust, its methods and policy, its influence upon the crude and refining industries and upon the oil regions generally, together with certain inferences to be drawn therefrom, may enable the commission to form some estimate of its future, and possibly to suggest some relief from its baneful influence. Twenty-nine years ago the Standard Oil Company was a corporation located at Cleveland, Ohio, with a capital of less than a million dollars."

SIZE OF THE STANDARD OIL COMPANY IN 1870.

Now I wish to digress; I wish to show the holdings of the Standard Oil Company. I propose to give the commission the testimony of Mr. Flagler, which I heard at the time, and which is of record in this book. The book is the report of the investigation of the sugar trust and the Standard oil trust by the Committee on Manufactures of the House of Representatives in 1888. (House Reports, Fiftieth Congress, first session, vol. 9.)

Mr. Gowen asks the question (p. 288):

"Were you a stockholder of the Standard Oil Company of Ohio, as well as an officer?—A. Yes, sir.

"Q. From what time? When did you first become such?—A. From its organization.

"Q. In what year was that?—A. I think early in 1870.

"Q. Were you not connected in any manner with the oil trade or with associations or corporations interested in or connected with the oil trade prior to the formation of the Standard Oil Company of Ohio?—A. I was a member of the firm of Rockefeller, Andrews & Flagler.

Where was it located?—A. Cleveland, Ohio.

What was their business?—A. Refining oil.

That was a private partnership, was it not?—A. Yes, sir.

Did it engage directly in the business of refining?—A. Yes, sir.

Did that firm erect refining works, or did they buy them from some one else?—A. They bought works from two firms, one of which, I believe, was Rockefeller & Co. and the other Rockefeller & Andrews. They succeeded those two firms.

"Q. Were you interested in either before you became a member of the new firm?—A. I was not.

"Q. Were you in business with them or connected with them in any way?—A. I was not.

"Q. When your own firm came into existence, or after it had gone into business, what was the extent of its refining capacity?—A. As well as I can recollect, 600 barrels a day of crude oil.

"Q. Your firm practically, therefore, formed the Standard Oil Company of Ohio and turned its works over to that company?—A. Yes, sir.

"Q. And accepted stock in that company in consideration of its theretofore private ownership in the firm?—A. Yes, sir.

"Q. What was the capital of the Standard Oil Company of Ohio?—A. One million dollars."

That is as far as I need to go; and I want this commission to bear in mind now that the Standard Oil Company of Ohio owned, in 1870 and 1871, 600 barrels refining capacity. I will call your attention later on to their ownership in 1879, in testimony before the Hepburn committee, which was appointed by the New York State legislature. I will leave that part of the subject for the present.

RAILROAD MAGNATES BECOME STOCKHOLDERS IN THE STANDARD.

Soon after this it was reorganized, when Scott, of the Pennsylvania Railroad; Vanderbilt, of the New York Central Railroad; Jewett, of the Erie Railroad; Watson, of the Lake Shore Railroad, and other railroad managers became interested in it as large stockholders. With the influence thus gained it attempted the establishment of the South Improvement Company. This attempt failed.

Just there I desire to call your attention, on page 6 of this pamphlet, to the incorporation of the South Improvement Company.

CHARTER OF THE SOUTH IMPROVEMENT COMPANY.

AN ACT to incorporate the South Improvement Company.

SECTION 1. *Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same, That S. S. Moon, R. D. Barclay, John A. Fowler, or a majority of them, their associates, successors, and assigns, be, and they are hereby, authorized and empowered to form and be a body corporate, to be known as the South Improvement Company, which shall be, and is hereby, vested with all the powers, privileges, duties, and obligations conferred upon the act to incorporate the Pennsylvania Company, by the act of the legislature of Pennsylvania, approved the 7th day of April, A. D. 1870, and the supplement thereto.*

SEC. 2. *That the stockholders of said company, by and with the consent of the holders of not less than two-thirds of the shares of stock, be, and they are hereby, authorized to change the name and title of the said company and designate the location of its general office, which changes shall be valid after the filing of a certificate in the office of the secretary of the Commonwealth, signed by the President and attested by the seal of the said company.*

JAMES H. WEBB,
Speaker of the House of Representatives.
WILLIAM A. WALLACE,
Speaker of the Senate.

Approved the 6th day of May, A. D. 1871.

JNO. W. GEARY.

CHARTER OF THE PENNSYLVANIA COMPANY.

I desire to have this act read, because I was asked this morning by one of the commissioners what power they had under the South Improvement Company charter. I should like to reply to that question before the commission, if I dare, what a very eminent judge said in our section of the country relative to the powers of this company, but as it is not perhaps preliminary, I will tell the story afterwards. I desire to have Senator Lee read this incorporating act. I do that because I wish this commission to hear the unparalleled privileges granted under the charter and why they sought it; and I desire to follow this along and show you that years after that time they acquired the same charter under a different head. Charters were for sale. They were manufactured by the legislature of the State of Pennsylvania for that purpose. I know; I have spent seventeen years of my life there.

AN ACT to incorporate the Pennsylvania Company.

SECTION 1. *Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same, That Andrew Howard, J. S. Swartz, G. B. Edward, J. D. Wellsto, and J. T. Malin, their associates, successors, and assigns, or a majority of them, be, and they are hereby, authorized to form and be a body corporate, to be known as the Pennsylvania Company, and by that name, style, and title shall have perpetual succession and all the privileges, franchises, and immunities incident to a corporation; may sue and be sued, implead and be impleaded, complain and defend in all courts of law and equity, of record and otherwise; may purchase, receive, hold, and enjoy, to them, their successors, and assigns, all such lands, tenements, and leaseholds, estates and hereditaments, goods and chattels, securities and estates, real, personal, and mixed, of what kind and quality soever, as may be necessary to erect depots, engine houses, tracks, shops, and other purposes of said corporation, as hereafter defined by the second section of this act; and the same from time to time may sell, convey, mortgage, encumber, charge, pledge, grant, lease, sublease, alien, and dispose of, and also make and have a common seal, and the same to alter and renew at pleasure, and ordain, establish, and put in execution such by-laws or ordinances, rules, and regulations as may be necessary or convenient for the government of the said corporation, not being contrary to the constitution and laws of this Commonwealth, and generally may do all and singular the matters and things which to them shall appertain to do for the well being of the said corporation and the management and ordering of the affairs and business of the same: *Provided, That nothing herein contained shall be so construed as to give to the said corporation any banking privileges or franchises or the privilege of issuing their obligations as money.**

SEC. 2. *That the corporation hereby created shall have power to contract with any person or persons, firms, corporations, or any other party, howsoever formed,*

existing, or that may hereafter exist, in any way that said parties or any of them may have authority to do, to build, construct, maintain, or manage any work or works, public or private, which may tend or be designed to include, increase, facilitate, or develop trade, travel, or the transportation or conveyance of freight, live stock, passengers, or any other traffic, by land or water, from or to any part of the United States or the Territories thereof; and the said company shall also have power and authority to supply or furnish all needful material, labor, implements, instruments, and fixtures of any and every kind whatsoever, on such terms and conditions as may be agreed upon between the parties, respectively, and also to purchase, erect, construct, maintain, or conduct, in its own name and for its own benefit, or otherwise, any such work, public or private, as they may by law be authorized to do (including also herein lines for telegraphic communication), and to aid, cooperate, and unite with any company, person, or firm in so doing.

SEC. 3. The company hereby created shall also have the power to make purchases and sales of or investments in the bonds and securities of other companies, and to make advances of money and of credit to other companies, and to aid in like manner contractors and manufacturers, and to receive and hold, on deposit or as collateral or otherwise, any estate or property, real or personal, including the notes, obligations, and accounts of individuals and companies, and the same to purchase, collect, adjust, and settle, and also to pledge, sell, and dispose thereof on such terms as may be agreed on between them and the parties contracting with them; and also to indorse and guarantee the payment of the bonds and the performance of the obligations of other corporations, firms, and individuals, and to assume, become responsible for, execute, and carry out any contracts, leases, or subleases made by any company or companies, individuals, or firms whatsoever.

SEC. 4. The company hereby created shall also have power to enter upon and occupy the lands of individuals or of companies on making payment therefor or giving security according to law for the purpose of erecting, constructing, maintaining, or managing any public work, such as is provided for or mentioned in the second section of this act, and to construct and erect such works thereon, and also such buildings, improvements, structures, roads, or fixtures as may be necessary or convenient for the purposes of said company, under the powers herein granted; and to purchase, make, use, and maintain any works or improvements connecting or intended to be connected with the works of the said company; and to merge or consolidate or unite with the said company the improvements, property, and franchises of any other company or companies on such terms and conditions as the said company may agree upon; and to fix and regulate the tolls or charges to be charged or demanded for any freight, property, or passengers traveling or passing over any improvement erected, managed, or owned by the said company, or on any merchandise or property transported over any road whatever by the said company, and to make, from time to time, dividends from the profits made by the said company; the several railroads managed by said company shall continue taxable, as heretofore, in proportion to their length within this State, respectively; and the said Pennsylvania Company shall be taxable only on the proportion of dividends on its capital stock and upon net earnings or income, only in proportion to the amount actually carried by it within the State of Pennsylvania, and on its earnings or income derived from its business beyond the limits of this Commonwealth shall not be liable for taxation.

HOW THE NATIONAL TRANSIT COMPANY (STANDARD) GOT THE SAME CORPORATE POWERS WHICH THE SOUTH IMPROVEMENT COMPANY HAD HAD.

I simply wanted the commission to understand the powers given under this incorporation. I desire to call your attention, incidentally, now to page 154 of this pamphlet: "When the popular excitement raised against the South Improvement Company, which resulted in the repeal of the act to incorporate it, had subsided, the trust, for the purpose of its transportation business in Pennsylvania, secured a franchise substantially as follows:

"An act to incorporate the Overland Contract Company was approved March 23, 1871."

That is the act for transporting oil by pipe line throughout the State of Pennsylvania; and the provisions of the Southern Railway Security act, or the Overland Contract Company act, are the same as the Pennsylvania Company, or the South Improvement Company act identically. It is simply the same act with another head. I can refer you, if you choose, to some twelve or fifteen similar charters. The body of the act has been read under another name.

Q. (By Mr. KENNEDY.) Can you refer the commission to the full text of the act?—A. That is the identical act.

Q. The one you read, incorporating the Pennsylvania Company?—A. Yes. What I mean to say is that this act as read by Senator Lee is the identical act under which the National Transit Company is organized and from which they get all their privileges; and there is nothing not set forth in that act.

Q. Do they get their powers and privileges from this old corporation without having to go to the secretary of state for any charter?—A. The National Transit Company people bought this charter under which the National Transit Company is organized on March 8, 1881, for \$16,250. The provisions of that law are just the same as the provisions of the South Improvement Company act—one and the same, in every word, letter, and line.

Q. (By Mr. FARQUHAR.) How long was the South Improvement Company in existence?—A. About three months.

Q. And immediately after, the other company was organized with the same rights and privileges, but not the same title. How did they come to get the privilege when they applied?—A. It is another company.

Q. And contemporaneous?—A. No; in 1881.

Q. When was the South Improvement Company act repealed?—A. March 25, 1872.

Q. Then how was it possible for another company, except by an entire reenactment, to take all the privileges of the South Improvement Company?—A. The body of the South Improvement Company act is just the same as the body of the Southern Railway Security Company act. As I have said, there were twelve or fifteen other charters of the same character, with the same body.

THE OIL BUSINESS WAS FREE TO ALL AT FIRST.

Now, from 1872, of which I have given you a history, up to the purchase of this charter in 1881, I will endeavor to show you what relations the South Improvement Company have had to the Standard Oil Company; and I come simply now to the South Improvement Company charter. I must travel along to 1874 before I can give you the connection. I have occasion, however, to refer to this; but bear in mind you are speaking of the Standard Oil Company, and perhaps I may be speaking of the National Transit Company, which is one of the lines of the Standard Oil Company of Pennsylvania. I desire you to understand this franchise carried with it all the powers and privileges exercised by the South Improvement Company, of unlimited capital and power.

Q. The question is, did other companies of Pennsylvania have just as good privileges at that time?—A. No; the business was in everybody's hands at this time. It was just as free for you to go into the oil business and transport your oil down the Allegheny River and on the railroads as for you to go and fish in the Potomac. You could put your money into a well or pipe line, or anything you wanted to. It was absolutely free and open to everybody. There were no encroachments, no hampering at that time.

Q. Was there any attempt on the part of any of the other refiners and producers to get a charter of equal privileges with this South Improvement Company?—A. Not to my knowledge.

Q. From 1872 to 1881?—A. I do not know about that.

DRAWBACKS AND REBATES MADE THE TROUBLE.

Q. Was it the lack of taking advantage of combination at that time that handicapped the parties who did not combine as these parties had?—A. A man was at that time, I believe, and undoubtedly is at this, disposed to obey the laws of the country. The old constitution of the State of Pennsylvania, the new, and I think every other constitution of any of the States of the Union, prohibited undue discrimination. It was against the law.

The whole difficulty arising to-day is due to the discriminating rates. The railroads of this country are responsible to-day for the existence of these trusts, because they gave the favored shippers such drawbacks and rebates that finally the Standard Oil Company, with its privileges, drove the entire oil industry into its own hands. I do not say for a moment but that these people had the right to do this if they wanted to, but I do say that when they did do it they were violators of the common law, and that I would not connect myself with them on that ground. I was an original. I was there; I had my refineries; I built my pipe line in 1868 and in 1870, long before I knew anything of these people. I did not see fit to place my fortunes in their hands. Dollars and cents—yes; it would have been millions to me if I had, but I did not feel that I could surrender my principles under the arrangement, or the law, set forth under the South Improvement Company. But the most damnable thing that followed was the contract. While it has been given

in evidence upon this floor that the Standard Oil Company are not responsible for the acts of the South Improvement Company, but the contract that followed—that was framed in Cleveland and brought to the Pennsylvania Railroad and they accepted it, and the contract was signed by J. Edgar Thompson, president of the road at that time.

Q. Were not all the railroads wildcatting at that time, anyway?—A. No, sir. I do not doubt but railroads were giving discriminating rates; I have expressed myself firmly upon that question. You know it—as a business man, you know it; and I will show you before I leave this floor that discriminations have been made right up almost to the present time.

THE CONTRACT BETWEEN THE SOUTH IMPROVEMENT COMPANY AND THE PENNSYLVANIA RAILROAD COMPANY.

Now, I desire to call your attention to the contract between the South Improvement Company and the Pennsylvania Railroad, dated January 18, 1872, and I propose to show you before I quit that this contract went into existence absolutely and was signed by the president, although it has been denied upon this stand that it ever went into operation. Page 85 of my pamphlet—

Q. (By Representative LIVINGSTON.) For what purpose?—A. It is to show you the contract that was made between the Pennsylvania Railroad and the South Improvement Company.

Q. Is that a verified statement you read?—A. I will read the contract itself, signed by the Pennsylvania Railroad.

Q. That is a verified copy, is it?—A. Oh, it is in the investigation of 1871, and it is all in the Congressional report of 1888, and the Hepburn committee's proceedings, and in all investigations that have been going on. It seems to me that investigations don't amount to a cent. It is printed; in all the libraries in the United States it can be had, or in any town library—the history of this very business I am relating. [See Fiftieth Congress, first session, House Reports, vol. 9, pp. 357.]

“Agreement made and entered into this 18th day of January, in the year 1872, by and between the South Improvement Company, a corporation organized and existing under the laws of the State of Pennsylvania, party hereto of the first part, and the Pennsylvania Railroad Company, on its own behalf and on behalf of all other railroad companies whose roads are controlled, owned, or leased by it, or with which it has sufficient running arrangements, which other roads are herein described as the connections of the said Pennsylvania Railroad Company, party hereto of the second part, witnesseth:

“Whereas the party hereto of the first part has been organized for the purpose, among other things, of increasing, facilitating, and developing the trade in and the conveyance and transportation of petroleum and its products, and for that purpose proposes, among other things, to expend large sums of money in the purchase, erection, and construction of, and maintaining and conducting works for storage, distillation and refining, warehousing and transportation, and in various other ways, upon the inducement, among other things, of this contract;

“And whereas the magnitude and extent of the business and operations proposed to be carried on by the party hereto of the first part will greatly promote the interest of the party hereto of the second part, and make it desirable for it by fixing certain rates of freight, drawbacks, and rebates, and by the other provisions of this agreement, to encourage the outlay proposed by the party hereto of the first part, and to facilitate and increase the transportation to be received from it.

DIVISION OF PETROLEUM TRAFFIC.

“And whereas it has been agreed by and between the party hereto of the second part, for itself and its connections, the Erie Railroad Company, for itself and its connections, and the New York Central Railroad Company, for itself and connections, that the business of transporting by railroad crude petroleum and its products toward the Atlantic coast, from the points of production and refining on their lines of road, shall be allotted by the party hereto of the first part to the said three companies in the proportion of 45 per cent of the whole to the Pennsylvania Railroad Company, for itself and its connections, including the Philadelphia and Erie Railway, the Northern Central Railway, the Allegheny Valley Railroad, Camden and Amboy Railway, the Pennsylvania Company, and all other railroads which are or may be controlled, owned, and leased by it or with which it has or may have sufficient running arrangements; 27½ per cent of the whole to the Erie Railway Company, for itself and its connections; and 27½ per cent of the whole to

the New York Central Railroad Company, for itself and its connections, and that the transportation beyond Cleveland and Pittsburg over the railroads of the said companies and their connections, in other directions than toward the Atlantic coast, west from said points of production and refining, shall be allotted by the party hereto of the first part in the proportion of one-third thereof to the party hereto of the second part, for itself and its Western connections, and the remainder to other railroads."

That means this: that all oil going to the Atlantic coast shall be divided as set forth, 27½ per cent to the Erie, 27½ per cent to the New York Central, and 45 per cent to the Pennsylvania, leaving the balance of trade, which was apportioned to be about 10 per cent,¹ to the Western country, and it should be divided between three roads. Do you understand? That is to say, the 10 per cent going to the West for the Western consumption, the rebate agreed by the railroads to pay to be upon the same basis, and shall be divided third and third, the Pennsylvania Railroad paying into the hands of the South Improvement Company 27½ per cent, etc. That is the division.

"Now, therefore, this agreement witnesseth, that the parties hereto, for themselves and their successors, in consideration of the premises, of the mutual execution hereof, and of the mutual advantages hereby conferred, have covenanted and agreed, and do hereby covenant and agree, each with the other, as follows:

"ARTICLE FIRST.

"The party hereto of the first part covenants and agrees:

"1. To furnish to the party hereto of the second part, for transportation, such a proportion of the crude petroleum and its products owned or controlled by the party hereto of the first part as shall give to the party hereto of the second part 45 per cent of all the crude petroleum and its products sent from the points of production and refining toward the Atlantic coast by the said Pennsylvania, the Erie, and the New York Central railroads and their connections, and 33½ per cent of that which is sent west of Pittsburg and Cleveland by those railroads and their connections.

"2. To provide suitable tankage at the points where petroleum is produced on the railroads of the party hereto of the second part and its connections in which to receive crude petroleum preparatory to shipment, with the necessary pipes, pumps, racks, and other appliances for its convenient transfer bulk into railroad cars.

"3. To deliver to the railroads of the party hereto of the second part and its connections at the places of shipment and to receive from them at the places of destination all crude petroleum and its products transported over their railroads for the party of the first part.

"4. To provide at the places of destination on the seaboard necessary and suitable yards, wharves, warehouses, sheds, tanks, pipes, pumps, and motive power for the reception of petroleum and its products and loading vessels therewith."

I want you to follow this contract right there. I propose to show to you that this contract has, in fact, been carried out to the letter from the day of its inception, in spite of the repeal of the South Improvement Company charter.

"5. To provide, maintain, and operate the works necessary to refine crude petroleum upon the largest scale practicable, and with such skill and on such a system of organization and division of labor as will secure both efficiency and economy; and for that purpose, and for the purpose of developing and increasing the petroleum trade of the country, to provide and maintain all suitable and necessary means and facilities.

RECORDS OF THE TRANSPORTATION OF ALL PETROLEUM AND ITS PRODUCTS.

"6. To keep records of the transportation over the railroads of the party hereto of the second part, and its connections, and, so far as it can obtain the same, over the Erie and the New York Central railroads and their connections, of all petroleum and its products"—

That they may ship under this contract—bear that in mind—of all petroleum and its products.

"Showing the number of barrels of 45 gallons each in bulk and the number of barrels of 47 gallons in barrels carried by each road, with the points of receiving and delivery and the amount of freight received by each road, for such transport-

¹ NOTE.—27½+27½+45=100.

tation, which records shall at all reasonable times be open to the inspection of the duly constituted representatives of the party hereto of the second part."¹

That is to say, the railroads are open, absolutely, to the inspection of this company; that they had the right to go in at any time and take down from the place of deposit those books and look over them and see that which I ship or anybody else ships.

"Monthly abstracts of all such records shall be regularly sent to the party of the second part."

See how complete. That an abstract of those books must be sent to the office of this company that they may look into the business of Governor Harris, Mr. Phillips, or Mr. Farquhar—anybody, it does not matter whom. That was the power given; and I simply say, if you will take the evidence of the investigation of 1871 and 1872, take the investigations of the Hepburn committee, take the investigations of the State of Pennsylvania, and every scintilla of evidence produced, and you will find that this contract has been carried out to the letter, even up to the present time. There is no secrecy in my business to-day. My business is known every twenty-four hours, just exactly what I do. I make that assertion because I can produce the evidence.

Q. (By Mr. FARQUHAR.) Possibly these parties entering into contracts with the railroads are a little afraid of the railroads themselves cheating?—A. That might be so.

"7. To pay the party of the second part weekly for all transportation over its roads and its connections of petroleum and its products such gross rates and half rates of freight as are hereinafter specified, less the rebates and drawbacks hereinafter provided to be retained by the party hereto of the first part for its own use.

REBATES AND DRAWBACKS TO THE SOUTH IMPROVEMENT COMPANY ON ALL OIL SHIPPED BY IT OR BY OTHERS.

"ARTICLE SECOND.

"The party hereto of the second part covenants and agrees:

"1. That the party hereto of the second part will pay and allow to the party hereto of the first part for its own use, on all petroleum and its products transported over the railroads of the party hereto of the second part and its connections, for the party hereto of the first part, rebates, and on all transported for others, drawbacks, at the rates hereinafter provided, except in the case specified in article third."

Not only what they ship themselves, but what every individual shipped; whatever oil was shipped at that time.

"2. To deliver to the party hereto of the first part, for all petroleum and its products in packages, transportation over the railroad of the party hereto of the second part, and its connections, by whomsoever shipped, and consigned to the party of the first part, at the warehouses of the party of the first part, at the seaboard and inland, at the depots of the party of the second part, at the places of destination, and to deliver all petroleum and its products, in bulk, owned by or consigned to the said party of the first part, at any point required on the line of the railroads of the party of the second part and its connections.

OPEN RATES.

"3. To transport and deliver petroleum and its products over the railroads of the party of the second part, and its connections, at gross rates, which shall at no time exceed the following, without the consent of both parties hereto:

"From any point on the Oil Creek and Allegheny River Railroad to Oil City, Union, Corry, Irvineton, which are herein designed as 'common points,' on each barrel of 45 gallons in bulk and on each barrel of 47 gallons in barrels, 30 cents.

"On crude petroleum.

From any common point (for each barrel of 45 gallons) to—

Cleveland	\$0.80
Pittsburg80
New York	2.56
Philadelphia	2.41
Baltimore	2.41
Boston	2.71

¹ Party of second part is the Pennsylvania Railroad Company.

"All other points except those on the Oil Creek and Allegheny River Railway to the places of destination last named, the same rates as from the 'common points.'"

"On refined oil, benzine, and other products of the manufacture of petroleum."

From Pittsburg (for each barrel) to—	
New York	\$2.00
Philadelphia	1.85
Baltimore	1.85
From Cleveland (for each barrel) to—	
Boston	2.15
New York	2.00
Philadelphia	1.85
Baltimore	1.85
From any common point (for each barrel) to—	
New York	2.92
Philadelphia	2.77
Baltimore	2.77
Boston	3.07

"From and to all points intermediate between the points aforesaid, such reasonable rates as the party of the second part shall from time to time establish on both crude and refined."

"From Pittsburg, Cleveland, and other points to places west of Pittsburg and Cleveland, such reasonable rates as the party of the second part may deem it expedient from time to time to establish."

REBATES AND DRAWBACKS.

"4. To pay and allow to the party hereto of the first part on all petroleum and its products transported for it over the railroads of the party of the second part and its connections the following rebates, and on all transported for other parties drawbacks of like amounts as the rebates from the gross rates, the same to be deducted and retained by the party hereto of the first part for its own use from the amounts of freights, payable to the party of the second part."

"On the transportation of crude petroleum."

[Rebate per barrel.]

From the gross rate from any common point to—	
Cleveland	\$0.40
Pittsburg40
New York	1.06
Philadelphia	1.06
Baltimore	1.06
Boston	1.06

"From the gross rate from all other points and the six places of destination last named rebates the same as on the rates from the common points."

"On the transportation of refined oil, benzine, and other products of the manufacture of petroleum."

From the gross rates from Pittsburg to—	
New York	\$0.50
Philadelphia50
Baltimore50
From the gross rates from Cleveland to—	
Boston50
New York50
Philadelphia50
Baltimore50
From the gross rates from any common point to—	
New York	1.82
Philadelphia	1.82
Baltimore	1.82
Boston	1.82

Now I will refer to page 43.

"From the gross rates to and from all points intermediate between the above points a rebate or drawback of one-third of the gross rate shall be paid.

"From the gross rates from Pittsburg, Cleveland, and other points to places west of the meridians of Pittsburg and Cleveland a rebate or drawback of one-third of the gross rates shall be paid.

TO CHARGE ALL OTHER PARTIES NOT LESS THAN THE GROSS RATES ABOVE.

"5. To charge to all other parties (excepting such as are referred to in article 3) for the transportation of petroleum and its products rates which shall not be less than the gross rates above specified, and should at any time any less rate be charged, directly or indirectly, either by way of rebate, commission, allowances, or upon any pretext whatsoever, the same reduction per barrel shall be made to the party hereto of the first part from the net rates provided for them on all transportation for them during the period for which such reduction shall be made to others.

"6. To permit the party hereto of the first part, if in its judgment the currents of trade should so require, temporarily to increase or diminish the proportion, as herein provided, to the party hereto of the second part, for itself and its connections, as the whole business of transporting petroleum and its products, as between the party hereto of the second part, the Erie Railway Company, and the New York Central Railroad Company. The party of the second part in such case to receive from the party hereto of the first part, in full payment or indemnity for the excess or deficiency, one-half the net schedule rates on such excess or deficiency, the other half to be paid pro rata to the said other companies whose apportioned quantity of transportation shall thus be varied; but such diversion of business shall not at any time exceed 1 week, nor be repeated without an interval of at least 60 days—"

That provision means that if it became necessary, in order to crush out any particular individual, they had the right to exercise the privileges of clause 6; but it should not be done for more than one week in each interval of sixty days.

"Unless with the consent of the party hereto of the second part. Also that whenever, from time to time, as aforesaid, a temporary diversion of a part of the apportioned transportation of the party of the second part to the other railroads aforesaid, or to either of them, shall become necessary, cars of the party of the second part may be loaded by the party of the first part and sent away over such other railroads, or either of them, but the cars so sent away shall be returned, without unnecessary delay and in as good order as when taken, to the railroads of the party of the second part, and mileage at the usual rates paid for their use while absent.

"7. To furnish with as much regularity as possible at all times good and sufficient cars and other means suitable and necessary for the safe and prompt transportation of all crude petroleum and its products, either bulk or in barrels, which the party hereto of the first part shall desire to send from one point to another (and which shall be supplied with as much regularity as possible) on or over the railroads of the party of the second part and its connections.

ALL DETAILS OF SHIPMENTS BY OTHERS TO BE REPORTED TO THE SOUTH IMPROVEMENT COMPANY.

"8. To make manifests or waybills of all petroleum or its products transported over any portion of the railroads of the party of the second part or its connections, which manifests shall state the name of the consignor, the place of shipment, the kind and actual quantity of the article shipped, the name of the consignee, and the place of destination, with the rate and gross amount of freight and charges, and to send daily to the principal office of the party of the first part duplicates of all such manifests or waybills."

Now, do you understand that? Sending in waybills and everything connected with that shipment. The name of the shipper even must be in that report.

SUCH REPORTS STILL MADE TO THE STANDARD.

Just here I want to give you a sample. I want to state from personal experience the carrying out of that contract within a brief space of time. It grew out of this: I shipped a carload of oil. I will not call the name of the road. I shipped a carload of lubricating oil and refined oil—that is to say, a mixed car—from Bradford, Pa., where my little refinery is located, to Dubois, which was a station down in the coal country, in Elk county.

Q. (By Mr. CLARKE.) When was this?—A. A little less than a year ago. I loaded this oil, and there was a gentleman who owned a sawmill in that section, and who had been an old acquaintance of mine for thirty-odd years; he was an employee of the road and is upon the road to-day. He runs the fast passenger

train upon that road. He says: "I want two barrels of oil sent down to my mill." I put those two barrels of oil on top of a carload of stuff. I took the precaution not to put the oil in that car until after business hours. The car was sealed by the officer of the road. It was to have left the yard the next day, but through some mistake it did not leave. The engineer got off his engine, and, without taking off his overalls, he came up Main street to my office, and he said: "Who in the devil is giving away your business?" I said: "What's the matter?" Said he: "When I got off my engine at Dubois, ——— said" (calling the engineer by name): "'You are buying oil from Emery. You have bought two barrels of oil from Emery. I was advised this morning by the agent at Dubois that I had been derelict in my duty in not selling you that oil—in permitting Emery to sell it. I am threatened with discharge.'" The gentleman turned around to him and said: "How the hell do you know I bought any oil from them; and if I have, what business is it of yours?" He left. Now, I swear that that oil was put in that car on the top of those barrels without a single man's knowing anything about it excepting the man who put it in and my son, who has charge of the business. I say again that is only one instance of the carrying out of this part of this section I have read. I have no doubt, and I know in my own mind, that my business is followed to this day under the provisions of that section, the same as it was in 1872. I speak not for anyone else, except as I speak of the evidence as set forth in 1871 and 1880. Those cases are numerous. It is not the only instance. I could give you a hundred others if necessary and the time could be taken, and I say that although the charter of the South Improvement Company was repealed and the provisions of this contract were annulled, they have been constantly carried out and are, in my opinion, being carried out at this very moment.'

Now I am coming to the most interesting article of all in this contract, and I call your particular attention to it:

EQUAL OPPORTUNITIES TO "ANY OTHER PARTY WHO SHALL FURNISH AN EQUAL AMOUNT OF TRANSPORTATION."

"ARTICLE THIRD.

"And it is hereby further covenanted and agreed by and between the parties hereto that the rebates hereinbefore provided for the party hereto of the first part may be made to any other party who shall furnish an equal amount of transportation and who shall possess and use works, means, and facilities for carrying on and promoting the petroleum trade equal to those possessed and used by the party hereto of the first part."

I desire to have questions asked upon that point. It has been claimed that anybody—yes, everybody—could enter the oil business. It is true, but they must enter the business as set forth in the articles on pages 44 and 45 of my pamphlet.

"And it is hereby ———" I am reading article fourth.

Q. (By Mr. KENNEDY.) Why not give it to us, Senator?—A. It is a question that has been denied upon the stand time and time again.

Q. (By Mr. FARQUHAR.) The statement was made on this stand that the Standard Oil Company enjoyed no other or greater privileges than were enjoyed by any other company.—A. That is true under that section. Now, here is a contract that provides for the shipment of petroleum, all of it, at that time; or rather, had the provisions of the contract been carried out as set forth in the charter, as well as in the articles of agreement, how in the world could anybody else have that which they possessed themselves—all the oil, all the rebates, and all the transportation? Would it have been possible for you to go into the business and possess an equal amount of oil, equal facilities, equal refineries, unless you had behind you a railroad company as strong as the railroad combination itself? It was impossible, absolutely impossible, for any set of men to go out and get equal contracts, because they had got all of the roads then leading to the Atlantic coast and into the western country. There was no chance whatever for a man with a single pipe line. I was a manufacturer. I had my refinery at that time. I did not have equal facilities, and I could not get them. I was one of the hundreds that went to the wall under that contract, although it is said by witnesses and everybody else that it was repealed and went out of existence. You know, gentlemen, as well as I when the fading of the business commenced. It faded from 1872, and it went out of existence in 1877, although the contract was repealed; and I may say right here that the Standard Oil Company was organized in Cleveland, Ohio, and later on, in 1872, it, with the Pennsylvania Railroad, the New York Central, the New York and Erie, became partners in that arrangement, in that contract itself. How in the world could I get equal facilities when all the railroads were in that combination? It was a moral impossibility; nobody had an equal show. Is that an answer?

¹ See Mr. WHEELER, p. 367, bottom.

THE WITNESS PAID THE OPEN OR GROSS RATES.

Q. Well, a little further. Can you give testimony to this commission as to the rates which you paid there at that time?—A. At which time?

Q. At the time mentioned here. How much more did you pay, or did you pay the open rate?—A. We paid the open rate. Although you see it did not go into existence, I can produce you bills showing that I was charged \$2.06 from my refinery on this oil. I say it did go into active operation in so far as freight was concerned.

Q. Have you before now or at any time produced any of these bills?—A. No.

Q. Have they ever asked you?—A. No; and I want to say this, that the bills at that time—now, I may be a little too fast in saying I can obtain them. We paid the open rate of freight, whatever it was at the time. That is what I say, and we went out of business in the latter part of 1873; we were compelled to go out. But what I am dwelling upon is the fact that it was laid open to the people of the country at that time. I went to Mr. Cassatt and made my complaint and said, "I can not do business." He said to me personally, "If you will give me the same amount of freight that the Standard Oil Company do we will transport goods at the same price."

Q. Did they ever make a proposition for you to transport all your oil over their lines?—A. Not at that time.

Q. Did they ever?—A. I went into the business the second time at the instance of the Pennsylvania Railroad, and they then drove me to the wall a second time.

"AGAINST LOSS OR INJURY BY COMPETITION."

Now I will read article 4:

"And it is hereby further covenanted and agreed by and between the parties hereto that the party hereto of the second part shall at all times cooperate, as far as it legally may, with the party hereto of the first part, to maintain the business of the party hereto of the first part against loss or injury by competition—"

By competition! Think of it! Didn't care anything about the other fellow!

"To the end that the party hereto of the first part may keep up a remunerative, and so a full and regular business, and to that end shall lower or raise the gross rates of transportation over its railroads and connections, as far as it legally may, for such times and to such extent as may be necessary to overcome such competition. The rebates and drawbacks to the party of the first part to be varied *pari passu* with the gross rates."

Practiced to this day. That provision is being carried out, and I desire to be questioned on that point. Anyone in this land of ours, supposed to be a land of liberty and of free trade, excepting the tariff part of it—that system extends to Germany and foreign countries generally.

UNFAIR TRADING PREVENTED IN GERMANY—INDEPENDENTS CAN DO BUSINESS THERE.

Q. (By Mr. KENNEDY.) Right there, Senator, some of your business associates have testified before the commission that at the present time in Germany you are on an equality with the Standard Oil Company?¹—A. Thanks to the Government of Germany, we are, so far as our business goes, because Germany by law prohibits unfair trading and owns every mile of railroad in the great Empire excepting two in the south, and no such thing as discrimination is known. They go further. They invite you to come to the Reichstag and make complaint, or to its officers, and I did in 1895. Oil was selling on the Rhine at 1½ to 2 cents a gallon below the price on the Elbe. Our agent, who was afterwards purchased, was in a grievous situation, and we were putting up oil here and sending it to Europe practically for nothing. I have sold oil at my works to take care of that trade, competing with the Standard Oil Company or the Deutsche-Amerikanische Company, as low as a cent a gallon—losing twenty, twenty-five, or thirty thousand dollars on a cargo of oil to maintain our agency in that country. Complaint was made by our agent, Mr. Poth. He handled at that time from four to six hundred thousand barrels. I traveled with him to Berlin and went personally before the entire ministry of that country, and in English I presented the case, and he interpreted my testimony to them and asked for help. We have been praying here from 1872 to this time, by the investigations of 1871, 1888, and the State of Ohio, and every State of the Union

¹ See Mr. Lee, pp. 273, 274, 276.

where these people are known. We have sued for it in every legislature of the country. Texas has waked up and she says: "Get out; we won't have you." The Reichstag of that country gave notice that there must be no unfair trading in that country.

Q. (By Mr. CLARKE.) No what?—A. No unfair trading. It must be on a fair, competitive basis. If it deviated from that, investigation would follow. No levying of tribute upon the Elbe citizens and advantages given to the Rhine. Prices were the same to all.

Q. How did they give that notice?—A. I can not tell you.

Q. How do you know they did give notice?—A. I beg your pardon. I do not know that there was notice given.

Q. You do not know of any legislation on the subject?—A. Oh, no, I do not; but I understand, Mr. Clarke, that there is a law in Germany prohibiting unfair trading. I never read it.

Q. Can you tell me if there have been steps taken to obtain such information?—A. Now, I do not know but there has. I do know this, however, and I read the bill. There was a bill introduced into the Reichstag which was applicable entirely to the question of petroleum. It was considered and came up, but never has passed, to my knowledge. There may have been something passed since that time, however. But suffice it to say we find the markets of Europe on even tenure, and we are in competition, as Mr. Kennedy stated.

THE DEUTSCHE-AMERIKANISCHE COMPANY BOUGHT OUT THE GERMAN AGENT OF THE INDEPENDENTS.

But when I went there in 1896 the Standard Oil Company, the Deutsche-Amerikanische Company, had bought the last vestige of tankage in Germany they could get hold of. There was nothing left. I was sent there on three days' notice by my company, with which I was connected at that time, the United States Pipe Line Company, to look up the situation. We were here with our fifteen refineries, with our pipe line running as far as it could toward the coast—we could not go any farther because the Standard Oil Company would not let us; but when I went to Germany in April, 1896, I went there on the report that Mr. Poth, with all his tankage on the Rhine, on the Elbe, at Flushing, Rotterdam, and Amsterdam, had been handed over to the Deutsche-Amerikanische Company. I do not know but the control belongs to the Standard Oil Trust of America. They had purchased a man that we had supplied that oil to for four or five consecutive years, on whom we were dependent to take care of that market, that we might have the necessary money to run our refineries.¹ They had bought it—nothing left. Where in the world we could place a single cargo of oil I did not know. Fortunately enough, I succeeded in selling three cargoes of oil to the Drennehaven Petroleum Company, which was then a Russian organization.

NEW CONNECTIONS FOR THE INDEPENDENTS.

Q. Russian?—A. Yes. That three cargoes amounted to about 90,000 barrels. I immediately went to Holland and let a contract to Mr. King for the construction of tanks. The city of Hamburg welcomed me there. They convened their congress in extra session and passed a law that they would furnish me ground upon which to build my tanks; and the contracts were let and the tanks finished in October, thank God, and our vessels went into the harbor with our petroleum. From there I went to Amsterdam, and they were constructing those tanks for us, because they wanted competition in the business. No competition is shut out in that country; no discriminating rates on the railroads in Germany; none on the canals.

CONTRAST BETWEEN CONDITIONS IN GERMANY AND CONDITIONS IN THE UNITED STATES.

I say to-day, with my years of experience in that country, it is one of the best governments on the face of the earth, because it looks out for the individual and offers him a helping hand. Do you get it here? No.

I am asked to come here to-day to go into matters I have been connected with from boyhood; not to injure Mr. Henry Rogers or Mr. John D. Archbold, my friend for thirty years, or any others connected with it. God knows I would not

¹ Compare Mr. Lee, pp. 273, 274; Mr. Westgate, p. 281.

harm a single hair in their heads. I will tell you my side of the story, from thirty-four years of experience in the business, and from participation in the politics of the State of Pennsylvania—which perhaps is a credit and perhaps not. Whatever I may do or say here, it is not from malice of the heart, though perhaps it may be a mistake of the brain.

Q. (By Mr. KENNEDY.) I asked you that question because I thought you said this practice of exclusion was being followed in this country, Germany, and elsewhere.—A. I did not say that it was followed in Germany; or, rather, it was attempted in Germany, but is not permitted there. We ask you to prevent it here. This Standard Oil Company is the parent trust of America. We in the oil business have had the experience of the struggle with monopoly from 1872 to this time. Now, whose toes are being pinched? Not the oil interests alone. It is not the ignorant only who are complaining. It is not the strikes of the coal men or of the railroad men or of the factory men alone. It has come to the intelligent part of this country. I wish to help you in every possible way to remodel our laws so we can all live, and if you don't the results are going to be very serious.

SIGNING AND RATIFICATION OF THE SOUTH IMPROVEMENT COMPANY CONTRACT.

Now, I did not intend to go off into these remarks not pertinent to the question. I do not know that it is necessary for me to read the rest of my pamphlet; but I desire to return to page 48, and I will end it up by saying this contract was signed—look at page 48 and you will see the name of P. H. Watson.

Q. (By Mr. FARQUHAR.) Did you intend that article 5 should be left out of your testimony?—A. No, let the contract go in, if you choose to have it. Cut out what you want to. I do not care, except as to the vital points. I just do not want to take up the time to read the rest of the contract. I simply want to show you that this contract was signed and this original copy has been in evidence—P. H. Watson, for the South Improvement Company, president, and the Pennsylvania Railroad, by J. Edgar Thomson, president.

Q. (By Mr. PHILLIPS.) Have you read all you desire of that contract?—A. Yes; I want to show that this contract was executed. Now, I understand that it has been stated on the witness stand here that this contract was never executed or went into effect.¹

Q. (By Mr. FARQUHAR.) That statement was made broadly here.—A. Now, P. H. Watson testified in Washington, in 1872, on the 5th day of April. Mr. Watson was president of the South Improvement Company, as I have shown in this agreement, and in this book of mine. I desire to read you (reading): "Q. Was there a ratification by the company of your contracts with the railroad—"

Q. Will you state the book and the page?—A. Well, now, this is an investigation in 1871 here in this city.

Q. Before Congress?—A. Yes; the Congressional investigation.

Q. What session and what committee?—A. Well, I can not tell you the session. It is dated Washington, D. C., April 5, 1872, if anybody knows the Congress and the dates; and it is in the archives, I know.

Q. It is an official document?—A. Yes.

Q. That is all I want to know.—A. Mr. Watson was testifying as to the South Improvement contract that was agreed upon between the Pennsylvania Railroad and the two Northern roads, the New York Central and the Erie. This is the contract which I have read a portion of. This book is precious. Nobody could buy it for \$5,000, and I do not want it to go out of my hands, because it is history that is scarcely in existence. (Reading:)

"Q. Was there any ratification by the company of your contracts with the railroad company?"

Now, this refers to the South Improvement Company. (Reading:)

"A. Yes; they were approved by the board of directors, as appears in the minutes and as I am informed, it having been done at a meeting at which I was not present."

That is all I need to read. They were executed—"it having been done at a meeting at which I was not present"—by the board of directors. The contract was executed and when it was executed it was in force. It has been stated in testimony in 1888—I did not take occasion to refer to this at the time; I did not think it was of so much importance. But I say that the South Improvement contract was executed by the board of directors, as stated by the evidence of Mr. Watson, but he was not present. That is an answer to the testimony.

¹ Compare Mr. Archbold, pp. 540, 553.

OFFICERS AND STOCKHOLDERS OF THE SOUTH IMPROVEMENT COMPANY.

Now, then, who were the officers and stockholders of the South Improvement Company? This is the testimony of William G. Warden, in Washington, March 30, 1872 [reading]:

"Q. Can you give the list of the stockholders of the South Improvement Company?—A. I can give them from the minutes. They are as follows, Mr. Warden being secretary: William Frew, 10 shares; W. P. Logan, 10 shares; John P. Logan, 10 shares; Charles Lockhart, 10 shares; Richard S. Waring, 10 shares; W. G. Warden, 475 shares; O. F. Waring, 475 shares; P. H. Watson, 100 shares; H. M. Flagler, 180 shares; O. H. Payne, 180 shares; J. A. Bostwick, 180 shares; William Rockefeller, 180 shares, and John D. Rockefeller, 180 shares."

THE MEN WHO ORGANIZED THE STANDARD OIL TRUST.

Q. (By Mr. PHILLIPS.) A good many of those afterwards became shareholders in the Standard Oil Company?—A. The people who organized the Standard Oil Company were as follows: H. M. Flagler, O. H. Payne, William Rockefeller, H. Bostwick, and J. D. Rockefeller. All these persons were stockholders of the Standard Oil Company at the time it went into existence, and they were the men who formed the South Improvement Company. I say that under oath; I know the people. The people who composed the South Improvement Company were finally the people to organize the Standard Oil Company of Pennsylvania.

DIFFERENCE BETWEEN STANDARD OIL COMPANY AND STANDARD OIL TRUST.

Q. The Standard Oil Trust?—A. The Standard Oil Trust. Let me explain the difference. There are, I think, in the United States some 23 Standard Oil companies under regular organization. For instance, it is the Standard Oil Company of New York, the Standard Oil Company of Pennsylvania, the Standard Oil Company of Ohio, the Standard Oil Company of Delaware, of Maryland, of North Carolina, South Carolina, Texas, California, and what not; but the Standard Oil Trust, as I understand, controls the whole. So distinguish the difference between the Standard Oil Company and the Standard Oil Trust. I have reference now to the Standard Oil Trust.

(Whereupon the commission took a recess until 2 p. m.)

WASHINGTON, D. C., *September 11, 1899—Monday, p. m.*

Commission reassembled at 2 p. m. pursuant to adjournment, Mr. Phillips presiding.

LEWIS EMERY, jr., again on the stand, and examination resumed.

HOW THE NATIONAL TRANSIT COMPANY (STANDARD) GOT THE SAME CORPORATE POWERS THAT THE SOUTH IMPROVEMENT COMPANY HAD HAD.

Q. (By Mr. PHILLIPS.) Senator Emery's testimony will be resumed, and he will proceed to make his statements in his own way.—A. Mr. Chairman and gentlemen of the commission, there seems to be some misunderstanding relative to the charter under which the South Improvement Company was organized and the charter under which the National Transit Company is organized, it being one of the several companies of the Standard Oil Trust. I desire to say that all the privileges granted in the South Improvement Company's charter were also granted in the charter of the National Transit Company. Both are in the same terms. Each is what is known as the Pennsylvania Company charter. I desire to prove my assertion. I will refer first to page 154 of the book that you have before you.¹ (Reading:)

"When the popular excitement raised against the South Improvement Company, which resulted in the repeal of the act to incorporate it, had subsided, the trust, for the purpose of its transportation business in Pennsylvania, secured a franchise substantially as follows: An act to incorporate the Overland Contract Company was approved March 22, 1871."

This was just previous to the act of incorporation of the South Improvement Company. The South Improvement Company's charter was passed on the 6th of May, 1871, and the Overland Contract Company's charter, under which the National

¹ Mr. Emery's pamphlet, "Lewis Emery, jr., to the Industrial Commission, 1899."

Transit Company is now organized, was passed March 23, 1871, before the passage of the South Improvement Company's charter. I desire to get that plain before the commission. (Reading:)

"Letters patent were granted them April 5, 1871. On May 16, 1871, they changed their name to the Southern Railway Security Company. They owed the State of Pennsylvania one-quarter per cent bonus on their capital stock, and for this debt, after a compromise had been effected, it was sold by the sheriff of Dauphin County to John W. Simonton and Marlin E. Olmsted for \$16,251 on March 8, 1881, upon a judgment entered September 13, 1881."

This judgment was entered by the Commonwealth of Pennsylvania. (Reading:)

"April 13, 1881, said John W. Simonton and Marlin E. Olmsted sold it to Clement A. Griscom, Thornton Pike, Elihu Roberts, W. H. Curtis, William R. Williamson, J. W. Simonton, and M. E. Olmsted. On April 14, 1881, under this charter, the National Transit Company was organized."

I read from a book in the supreme court of Pennsylvania, eastern district, No. 257, January term, 1897:

"National Transit Company and J. C. McDonald, appellees, *versus* The United States Pipe Line Company, appellant. Appeal by the defendant from the court of common pleas, McKean County, sitting in equity, October term, 1896. Paper book of the appellant. J. W. Lee, W. E. Burdick, solicitors for the appellant."

I desire to read from this book, and whatever I read from it, so far as this charter is concerned, is a transcript of the record of the department at Harrisburg, certified to by the secretary of state, so that the evidence I shall read is absolute and can not be questioned. I first desire to read on page 429 of this book:

"Commonwealth v. The Southern Railway Security Company. Resolution of company fixing the amount of capital stock. Southern Railway Security Company, in account with the Commonwealth of Pennsylvania."

Mind you, this charter lay for a long time in the archives of the State. It was discovered, and it was purchased by the parties I have named. (Reading:)

"Southern Railway Security Company, in account with the Commonwealth of Pennsylvania, debtor, for bonus on charter, per act of May 1, 1868. Amount charged in settlement in May 20, 1873, \$35,000. Capital stock, \$7,788.150 appears through certificate herewith filed. Bonus of one-quarter of 1 per cent on said capital stock, \$18,470.37, making a total debtor charge \$43,470.37. Credit by payment in the charter March 16, 1871, \$125. By settlement of May 8, 1873, hereby superseded, \$25,000. Deducting the credits, \$25,125, from \$43,470.37, due the Commonwealth, \$18,345.37. Attorney-general's office, Harrisburg, April 25, 1870. Settled and canceled. Harrison Allen, attorney-general. Treasurer's office, approved. W. E. Hitt, for W. Mackley, State treasurer. B. F. Newcombe, treasurer Baltimore and Ohio. Indorsed, bonus on charter, account of the Southern Railway Security Company, resettled April 5, 1875."

Now, I do not think it is necessary for me to go further with this, only as showing the sale, and I have shown you already that this identical charter was bought from the State by J. W. Simonton and Marlin E. Olmsted for \$16,251. This is a copy of plaintiff's exhibit in this suit, called Exhibit A. This is offered by the National Transit Company. (Reading:)

"National Transit Company charter. An act to incorporate the Overland Contract Company and to define the powers thereof. Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania, in general assembly met, and it is hereby enacted by the authority of the same."

Mind you, now, the same persons got the charter in this one as in the other, "S. S. Moon, R. D. Barclay, John A. Fowler, or a majority of them, their associates, successors, and assigns be, and they are hereby, authorized and empowered." Same incorporators as the South Improvement Company, you will note. Approved the 7th day of April, A. D. 1870. Statements as made herein were specially and particularly set forth.'

THE PENNSYLVANIA COMPANY'S CHARTER.

Now follows "an act to incorporate the Pennsylvania Company" under that head which I have shown you was changed to the name of the Southern Railroad Security Company, and finally was changed to the National Transit Company. (Reading:)

"Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same. That Andrew Howard, J. W. Swartz"—

Please refer back in my pamphlet and notice that I am not making any statement incorrectly, and follow me and see if the act is not just the same as that of the South Improvement Company. What I desire to show to this committee is

that the privileges exercised by the National Transit Company are the same as those set forth in the charter of the South Improvement Company. They are enjoying all the privileges and immunities that were granted by that law.

Q. (By Mr. RATCHFORD.) What page is that?—A. Seventh page.

Q. (By Mr. PHILLIPS.) You can read the two paragraphs to identify it.—A. I do not want any mistake because I am making the statement very broadly. This is it, the same identical charter, page 6, to the South Improvement Company.

Q. You will leave this with the commission to show that it is the same?—A. I will file this book under the seal of the court.

Q. It is quite long and will take time to read it?—A. I will read the second section if you will please follow me through. This which has been repealed is the same as this. If there is any difference I want you to state it. (Reading:)

"That the corporation hereby created shall have power to contract with any person or persons, firms, corporations, or any other party, howsoever formed, existing, or that may hereafter exist in any way that said parties or any of them may have authority to do. To build, construct, maintain, or manage any work or works, public or private, which may tend or be designed to improve, increase, facilitate, or develop trade, travel, or the transportation and conveyance of freight, live stock, passengers, and any other traffic, by land or water, from or to any part of the United States or the Territories thereof; and the said company shall also have power and authority to supply or furnish all needful material, labor, implements, instruments, and fixtures of any and every kind whatsoever, on such terms and conditions as may be agreed upon between the parties, respectively, and also to purchase, erect, construct, maintain, or conduct in its own name and for its own benefit or otherwise any such work, public or private, as they may by law be authorized to do (including also herein lines for telegraphic communication), and to aid, cooperate, and unite with any company, person, or firm in so doing.

"Section 3. The company hereby created shall also have the power to make purchases and sales of, or investments in, the bonds and securities of other companies, and to make advances of money and of credit to other companies, and to aid in like manner contractors and manufacturers, and to receive and hold, on deposit or as collateral, or otherwise, any estate or property, real or personal, including the notes, obligations, and accounts of individuals and companies, and the same to purchase, collect, adjust, and settle, and also to pledge, sell, and dispose thereof, on such terms as may be agreed on between them and the parties contracting with them; and also to indorse and guarantee the payment of the bonds and the performance of the obligations of other corporations, firms, and individuals, and to assume, become responsible for, execute, and carry out any contracts, leases or subleases made by any company or companies, individuals or firms whatsoever."

Please return to section first; I want to get rid of reading as much as possible. I will read the first section. (Reading:)

"Section 1. Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same, that Andrew Howard, J. S. Swartz, G. B. Edwards, J. D. Welsto, and J. T. Malin, their associates, successors, and assigns, or a majority of them, be, and they are hereby, authorized to form and be a body corporate, to be known as the Pennsylvania Company, and by that name, style, and title shall have perpetual succession, and all the privileges, franchises, and immunities incident to a corporation; may sue and be sued, implead and be impleaded, complain and defend in all courts of law and equity, of record and otherwise; may purchase, receive, hold, and enjoy, to them, their successors and assigns, all such lands, tenements and leaseholds, estates and hereditaments, goods and chattels, securities and estates, real, personal, and mixed, of what kind and quality soever as may be necessary to erect depots, engine houses, tracks, shops, and other purposes of said corporation, as hereafter defined by the second section of this act, and the same from time to time may sell, convey, mortgage, encumber, charge, pledge, grant, lease, sublease, alien, and dispose of, and also make and have a common seal and the same to alter and renew at pleasure, and ordain, establish, and put in execution such by-laws or ordinances, rules and regulations as may be necessary or convenient for the government of the said corporation, not being contrary to the constitution and laws of this Commonwealth, and generally may do all and singular the matters and things which to them shall appertain to do for the well-being of the said corporation and the management and ordering of the affairs and business of the same; provided, that nothing herein contained shall be so construed as to give to the said corporation any banking privileges or franchises, or the privilege of issuing their obligations as money."

Now, gentlemen, they were afraid of repealing the Constitution of the United States, or else they would have put in the privilege of issuing money; they have put in everything else.

Q. (By Mr. CLARKE.) How do you know that, Senator?—A. Why, by the reading of the act. They have got the right to do anything else; they claim they have; that is what it reads—to do anything they have a mind to.

Q. (By Mr. FARQUHAR.) Is it a rule to withhold from corporations banking privileges? This same clause is inserted in the charters of all corporations which are not banking corporations?—A. It is within the province of the United States to authorize the issue of money.

Q. Is it not a fact that all of our State laws, in the act of incorporation, contain this clause that would shut out banking privileges?—A. Not being a lawyer, I do not know.

IDENTITY IN TERMS OF THE SOUTH IMPROVEMENT COMPANY'S CHARTER AND THE EXISTING CHARTER OF THE NATIONAL TRANSIT COMPANY—POWERS IN OTHER STATES.

Q. (By Mr. KENNEDY.) What does this mean? Does it mean anything more than any other corporation might do, or business man?—A. Oh, no; I only want to show you that the same law that was repealed, known as the South Improvement Company law, was identical with this. This is one and the same thing; the privileges that they had under that law in 1872 they have at the present time under this law. That is all; that is what I wanted to say.

Q. (By Mr. FARQUHAR.) One point on that, Senator. These are privileges granted by the State of Pennsylvania?—A. Yes.

Q. There are twenty or more organizations of the Standard Oil Company. Could any of the other organizations of the Standard Oil Company take up these privileges?—A. Could they?

Q. Yes; under the State of Ohio, for instance.—A. This law says they can; they may go into any other State. It says so. I do not know whether they can legally or not; but that is what it says. The Pennsylvania Railroad runs—the Pennsylvania Company runs through a portion of Ohio, does it not?

Q. (By Mr. HARRIS.) That is under a separate organization. One is called the Pittsburg, Chicago and Fort Wayne.—A. I understand that the Pennsylvania Railroad enjoys all these privileges, although they may be in foreign States, under the Pennsylvania Company's charter. I will submit that to the lawyers. We have lawyers.

Q. (By Mr. FARQUHAR.) The only question is this: Whether the Standard Oil Company, with all its franchises, could enjoy all the privileges which are conferred by this charter in the State of Pennsylvania in any other State?—A. Subject, I suppose, to the State law. I think that would be perhaps the proper answer to it.

Q. (By Mr. PHILLIPS.) Please proceed.—A. Now, gentlemen, I have gone back to correct this. I want to show just exactly the identity of these two laws, one repealed and the other in existence, because the question was raised by two or three of the commissioners whether the one charter was like the other. I think I have proved that to them satisfactorily by reading from this book, and I will leave that book with the commission when I go.

Q. (By Mr. FARQUHAR.) Would it not be well to suggest that you furnish the commission chronologically with the dates, if you can, of these various charters?—A. The origin of them?

Q. The origin of them, the change of name, and the year and month, if you possibly can, so that we may see the connection and the interest that follows from the beginning clear down to the end?—A. I am prepared to give you all of that.

Q. (By Mr. PHILLIPS.) I think that the commission would like to have you before you go away.

Q. (By Mr. FARQUHAR.) I know you can, because I find the dates on page 154.—A. This book contains a vast amount of knowledge on everything that you have asked, compiled in legal form and with an affidavit of the secretary of the Commonwealth as to its correctness, so you may not be misled or go astray.

AMOUNT OF AMERICAN OIL USED IN EUROPEAN COUNTRIES.

Q. Where you have spoken of the opposition and interference of the German government, could you give the commission an approximate statement of the oil sold in Germany at that time by the Standard, by all the Russian companies, and by the independents?—A. I can give the statistics.

Q. That probably is in your mind?—A. No, I can not do it here. I can give you the statistics of the sales in the German Empire; I know roughly what they are now. I know that the German Empire consumes, at the present time, 6,000,000 or 7 000,000 barrels a year of the American production.

Q. (By Mr. PHILLIPS.) About how much is furnished by the Standard Oil Company and by affiliated companies, and how much by this company you have organized?—A. I knew the statistics two years ago. About 6,000,000 barrels of the American product was consumed in Germany; Great Britain was using 8,000,000 barrels; France was using about 2,000,000 barrels; Norway and Sweden were consuming about 1,200,000 barrels; Denmark, about 600,000; Holland and Belgium, I forget.¹

Q. What proportion of the oils of the Russians and the Standard were sold there through 1895 and 1896?—A. The Standard sold all the American oils in these markets with the exception of what was taken in by our independent companies. I think the largest exportation we have ever made—in fact, in 1894, I think, we sold over there about 400,000 barrels, and up to the time Mr. Poth was purchased by the Americanische—I think our sales were about 700,000 barrels.

ATTITUDE OF THE RUSSIANS TOWARD COMPETITION AND REGULATION IN GERMANY.

Q. You spoke of regulations made by the German government there. Did those cover the competition between the Standard and the Russians?—A. In what respect?

Q. In respect to fair competition.—A. The Russians were in just as bad a position as we were. They were independent at that time.

Q. Would you care to state whether, if the Standard then had the market there, both the independents and the Russians were desirous of having this free competition?—A. I do not understand you.

Q. That is, are we to understand that the Russians, as well as the independents, wanted rectification from the German government of unfair competition from the Standard?—A. I do not know what the Russian government did. I know that when I was in Europe I went on to St. Petersburg and had a conference with Mr. Nobel, and also with the prime minister. Their views were just the same as ours, that they were under an unfair competition and would like to see it rectified. I went there to see if something could not be done, and I brought American influence to bear on the Reichstag to see if something could not be done to correct it. The whole question was laid before the prime minister of Russia and Mr. Nobel to find out from the Russians if the conditions existing in the trade were the same to all.

GERMAN REGULATIONS—GOVERNMENTAL EXAMINATION OF ACCOUNTS WOULD BE A GOOD THING HERE.

Q. (By Mr. KENNEDY.) Did you get a charter in Germany from the imperial government?—A. No; the right to sell only, and then we are required to file our organization or charter. We only get a license to become merchants, that is all.

Q. Are your business affairs then subject to the supervision of the German officials?—A. Oh, yes.

Q. Inspection of your books?—A. Yes; whatever the law is we have to conform to it. I do not know whether that is the law; whether they can go to our books or not. Whatever the law is, that is the situation in which we are placed. We are glad to have them examine our affairs. Even in this country I wish something of that kind could be established, that all the books of these corporations of every kind should be examined.

Q. Would you like to see the nationalization of the corporations doing interstate business in this country?—A. Well, I heard this question brought forth the other day in the evidence of Henry Rogers. I am not prepared to say; I have not studied the question. I do not know about the English law controlling corporations or about the capitalization or the constitution of business in England, except to a limited extent.

CHARACTER OF EXPORT OIL AND OIL FOR DOMESTIC USE.

Q. What is the quality of the oil exported from this country to Germany and other European countries?—A. 78° Abel, or 112° fire test.

Q. What is the quality of oil generally consumed in this country?—A. About 120° to 150°.

Q. So it is an inferior grade of oil sent abroad?—A. No; it is oftentimes a very much better oil than we get here under 150°. Let me explain.

¹ Compare Mr. Lee, p. 278; Mr. Archbold, p. 532.

METHODS OF DISTILLING OIL—THEY ARE THE SAME AS IN 1860.

I want to state here particularly, and I want you to understand my statement as a manufacturer of oil from 1867 to 1899, that the Standard Oil Company are not benefactors and never have been benefactors. If the business had been open to the community, and the people engaged in it with their brains and ability, the development that has come up to this present time, I claim, could have been made twice as quick as they have made it. Why do I say so? Because in the year 1872 our company, known as the Octave Oil Company, was the owner of one of the best refineries on the creek—Oil Creek—right opposite that of ——— & Co., the company being John D. Archbold, who was on this stand, and others. We had every device at that day for making an illuminating oil of good quality that we have to-day.¹ We had stills that held from 100 to 3,000 barrels, Mr. Archbold having the largest still that ever fire was put under, holding 3,000 barrels of crude oil. To distill oil is not difficult. It simply means that if you build a fire under that glass [indicating], supposing it was oil, and you inclose it, the steam comes out—the vapor. That is all we do in making oil. We put it in these great cylinder stills, and the cylinder stills of 1870, 1868, 1865, and 1860 were the same as the cylinder still of to-day. There was what was known as the cheese box, which set up like a cheese box, with a grated bottom to make a fire on. But we have gone back to the old system. In spite of the modern improvements these people claim to have injected into the business we are back where we were in 1859. We put a fire under it, the vapor rises off and gives first the lightest possible oil, the cymogene; the very lightest, like carbonic-acid gas, and the moment it comes to the air it is gone. Next we come to the next lightest, gasoline. Then we come to the naphtha, and then we come on down, if you choose, to the heavy benzine. The lighter parts come off first, from which are made the various light products that are in the market, such as you use in the gasoline engines and in the kitchen to cook with and such as are used by chemists and druggists and the commercial trade. Then you come to the illuminating oil.

MEANING OF "110°" OIL—IF PROPERLY REFINED, THERE IS NO BETTER.

The first illuminating oil is the lightest, 110° oil. You may recollect that we had in this country a general law of the States requiring oil to be of 110° fire test. That means that, putting the oil in a certain kind of instrument, it has to be heated to 110° before it will burn. It may flash at 85°, but would go out. You go on up to 110° and it burns. That is the burning test, the flash test being at 85°. That is the way oil is tested. It went on for years and years, until the advent of this South Improvement Company and Standard Oil Company. That remained a law of the old States, and the law was good. There was no adulteration of it. Perhaps adulteration is not the term. When I say oil is adulterated I mean it is not properly refined; it is not properly broken up by heat; the paraffin is not taken out of it. Oil may retain a vast amount of paraffin, and show under the law 110°, but its burning properties are not good. Oil properly refined under the 110° system is the best oil you can put into your lamps. The German government—the entire German Empire—the Kingdom of Norway and Sweden, Denmark, all these countries require no other than 110° or 73° Abel. That oil is not inferior. Neither the German government nor any other government on that side of the world will permit you to send in an inferior article. There is an educated chemist at every distributing depot in that country, who tests that oil and carefully weighs it, and gives it the proper fire test; and it must pass according to the requirements of the law. That is one reason why the Ohio production has been practically ruled out of Germany because of its quality. The great German Empire and other countries are depending to-day, under the laws, upon the American product, because Pennsylvania and a portion of eastern Ohio and southern New York and West Virginia produce the best oil in the world.

SULPHUR CAN NOT BE GOT OUT OF OIL; THEREFORE OHIO OIL CAN HARDLY BE SOLD IN EUROPE.

Q. (By Mr. KENNEDY.) The Standard people on the stand claim they have processes now for eliminating sulphur and other impurities from the oil and making it equal to the Pennsylvania oil.² Is that true?—A. I say here, as a refiner and a man who has in his employ as good a chemist as there is, that they can not do it, and they do not do it. You can not eliminate sulphur. It will come back in some form. Canada has been working on it for the last thirty years and spent untold

¹ See Mr. Boyle, p. 407.

² Mr. Archbold, p. 532. Compare Mr. Gall, p. 672.

millions, and she has never been able to accomplish it entirely. It baffles all science to eradicate, and is detected by the chemists in Europe as quickly as possible, unless it may be mixed with Pennsylvania oil. That has been done before. The high-grade petroleum oils are used to supply the European countries. As to what goes to India and what goes to China I am not posted; but I do know what goes to the other countries, and they expect to get an absolutely pure oil. The consumption of Ohio oil is confined to the United States and Mexico, and perhaps to some of the other southern countries. I do not know about that, but the market is not in Germany to any great extent.

CHARACTER OF EXPORT OIL AND OIL FOR DOMESTIC USE (RESUMED).

Q. (By Mr. CLARKE.) How is the grade of oil determined, if not by the fire test?—A. What do you mean—the smell?

Q. Whether the high grade or the low grade?—A. The oil in its grade is designated by fire test. For instance, 110° oil is what we term the ordinary export oil, 112° test; 120° test is supposed to be a bit better in quality; 150° test is the common oil used in this country, and is a little bit better. The making of 150° oil is just exactly like making what they call patent flour. It is the head of the bolt. I am a miller by trade and acquainted with the making of flour in the modern way and the old way. If you want patent flour, you have to take the head of the bolt or cream of the wheat. You can get a certain limited amount of patent flour out of 100 pounds of wheat; so you can get a certain amount of 150° or 175° oil out of a certain amount of petroleum. In this country, I will say, we take off what we call the higher grade of oil and the balance is sent to Germany and other countries. But in order to get these high-test oils up to what they should be, we make the others not as good as if we had just sold the whole thing together. Just so with your flour. If you sort out the best part of your wheat, the next grade is not as good, although it passes as good family flour, and this passes as export. In answer to Mr. Kennedy, the standard has not been changed in Germany. They have the finest lamps in the world. They are the greatest inventors on illuminants, and they have continued to hold their grades the same as twenty-five or thirty years ago. We want to send that class of oil into these countries, and they are satisfied with it, because it comes within the reach of the man who wears wooden shoes; it is a commodity they must all buy, and is lower in price than the higher grade.

Q. (By Mr. KENNEDY.) It is a fact, then, that the oil exported to Germany is inferior to the oil generally used in this country?—A. That may be: but I want to say to you, in the United States of America they burn the meanest oil in God's earth, and burn the best oil that is put on the market. In California—I have spent two years there—I have a little hut, and I go down and buy a case of oil. I buy it as Pratt's Astral, a high grade of oil; it used to be the highest grade on the market. I might say here, during my early experience in the refining business, from 1867 to 1872, we manufactured and sold thousands and thousands of barrels of oil to Charles Pratt and other companies for exportation to Europe, and we were obliged to leave the head blank. When it got to New York the quality of oil was put on it—"Pratt's Astral." He bought oil from the Octave Oil Company. My oil was taken by him and sent to Europe. Now let me give more credit to the Standard Oil Company.

Q. (By Representative LIVINGSTON.) Do they not require, in Europe and in many States of this country, an oil inspection, and require you to come up to the grade?—A. In every little port where oil is sold or distributed there is a man who examines the oil, and it is passed on by the Government inspector.

110° OIL AND 150° OIL.

Q. What do you mean by first, second, and third grade oil? Does the first have less naphtha or more?—A. It is supposed to be better. One hundred and fifty degree oil is supposed to be the acme of oil in this country. You fill a lamp with it and you may get a little brighter light than you would get from 110°; there is not so much naphtha, not so much gas; but the 110° oil will last in your lamp a great deal longer than the 150°, because there is not so much body in it. The 110° will not give so brilliant a light as the 150°; that is one reason why Germany holds to that oil test.

Q. Is it not more subject to combustion than the 150°?—A. One hundred and ten degree? oh, yes. It requires 110 degrees of heat to burn 110° oil, and it requires 150 degrees of heat to burn 150° oil. If a lamp is heated to 150° at its top, gas will be created in the body of the lamp, and unless you release that gas it will explode.

¹ See Mr. Lee, pp. 274, 277; Mr. Mathews, p. 495, top.

Q. If either comes in contact with a flame, will one burn as quickly as the other?—A. The 150° will not burn as quickly as the 110°. Oil is nothing but gas practically. Take a pail of crude oil and put it out here in the sun; in all probability by night you will have lost 10 per cent of it. It has gone into the air as gas.

Q. (By Mr. PHILLIPS.) Your testimony has not been quite clear about 150° burning quicker than 110°.—A. One hundred and ten degrees oil burns at 110 degrees of heat, and 150° will burn at 150 degrees of heat—that is, the burning test. The higher the test the safer the oil, so far as explosion is concerned.

Q. Which will burn up quicker in the lamp?—A. That does not make a bit of difference. The wick is saturated and it burns at all times. The blaze from 110° is not as brilliant as that from 150°.

Q. (By Mr. KENNEDY.) The German does not get as good light from his 110° as he would from 150°?—A. That is true.

Q. They get what they want and they are satisfied?—A. Yes. Good 110° oil is a good oil. It is the cheapest for all the inhabitants of this country, and safe enough, because we burned it for years and years. There was no change in the laws of any of the States, so far as I know, until after 1872. Pennsylvania retains still the 110° test; North Carolina, Texas, and a good many of the Southern States have the 110° test; not many of them have changed. The State of Michigan has 175°, if I remember right.

RUSSIAN COMPETITION—CHARACTER OF RUSSIAN OIL—PER CENT OF ILLUMINATING OIL OBTAINED FROM CRUDE.

Q. (By Mr. KENNEDY.) Do you come into competition in Germany with Russian oil?—A. Yes.

Q. Do they have to make that test of 110° the same as you?—A. Yes.

Q. What is the quality of their oil?—A. Not so good as that of America—not so good as American 110°. The Russian is of an asphalt basis, while ours is paraffin. Pennsylvania and New York oils are paraffin, and the Ohio is of a paraffin basis. The California oils have an asphalt basis and the Russian oil has an asphalt basis. The American oil will produce an illuminant of 75 per cent. For instance, 100 gallons of crude oil of America, of what we call the Pennsylvania, the West Virginia, and New York and eastern Ohio oil, will produce 75 per cent of illuminating oil of different grades. If you ran it all straight through, and did not cut them out, you probably would get out 78 per cent—perhaps 79 per cent; but, speaking as it runs, you can get 75 gallons of illuminating oil from every 100 gallons of crude oil. The gravity of this oil will run from 30 to 52; the Russian oils run from 18 to 30. Its basis being asphalt, they can only get from that, of the ordinary export oil, such as 110°, about 25 per cent.

Q. Does their 110° oil sell for the same money in Germany as ours?—A. No; it does not sell for the same money as our 110°, because it is not as good as our oil. It contains a little sulphur, the same as the Ohio, which is not as marketable as our good oils are.

Q. Russian competition, then, is not serious on that question?—A. It is, because they sell their oil at a less price, and we have to meet it; but we have the advantage of quality.

FOREIGN TRADE—THE STANDARD HAS INVENTED NOTHING.

Q. (By Mr. PHILLIPS.) Now, I would like you to state how widely petroleum was introduced into the world at the time of the advent of the Standard Oil Company? Whether they have been very largely?—A. I want to say in answer to that question, in 1871 or 1872, when we were young and enterprising, we went to the city of Philadelphia and secured a sailing vessel. It was our determination to load that vessel with all the different inventions for burning oil—lamps, oil stoves, etc.—and also to put into the ship our oils in cases or barrels, such as we could carry; and we had arranged with one Captain Dillingham to sail that vessel to the Amazon, and go up the Amazon and introduce this product, oil, which was a new commercial commodity, and the result was we did not do it. On came this clash of arms and we did not go. I will read to you why we did not go.

Q. Can you state how far it had been introduced to the world before that time?—A. I must say in answer to that that the production of oil in 1872 was about 16,000 barrels of oil per day; back in 1870 it was 15,000 barrels of oil a day.¹ For all that great quantity of oil, from 1860 to 1872, a market had grown up throughout the world, as we knew the world at that time. It was a good while ago, of course. There were in the field at that time upward of 150 refineries, and as I said before, with all the modern improvements that existed, so far as making illu-

¹ See p 547

minant was concerned—I want to give the credit to the Standard Oil Company for this fact that, owning the business, practically, it was dependent upon them to bring out all the by-products from the residuum. They made a wonderful success of it. But do you suppose that I or any other active man, with brains and capacity, could not have done the same thing if we had had the opportunity and been left to ourselves to manage our business? Has not the iron business passed from all the world to the Sierra furnace, and every other improvement been brought about by general trade? Can one man in the business claim he was the only brain in it? Nor is it true of the Standard Oil Company. I say particularly they never invented anything. As somebody said, they did not even invent the rebate. They were dependent on the brains of the average man. They have done nothing that any member of this commission could not have done had you had the opportunity to do it, and get your product to market over the transportation lines of the country.

THE STANDARD HAD TO DEVELOP THE USE OF THE BY-PRODUCTS.

Q. (By Mr. KENNEDY.) You were just giving the Standard Oil Company credit for the wonderful growth of the by-products?—A. Yes: because I have to.¹

Q. Do you manufacture any of these by-products, such as vaseline?—A. I make the crude stock.

Q. And sell that to the Standard?—A. Not entirely; I presume they buy some of it. I make all of these products. I turn off from thirty to thirty-five thousand dollars' worth every month. Perhaps I have one of the largest refineries in existence outside of the Standard.

Q. Can you manufacture these by-products just as well as the Standard Oil Company and put them on the market?—A. If we were in like circumstances we could; but, you understand, the by-products are manufactured not only by the Standard, but in a small way by others. For instance, the druggists manufacture their own, and they come to me to buy the stock; but the Standard Oil Company, I mean to say, were the first, through the agency of somebody else's brains, not their own, to establish these factories. I say to you this product of petroleum is most wonderful. Chemistry knows nothing about it even to this day, and our colleges have scarcely taken up the science of petroleum. We have to depend on Europe for the knowledge we have obtained as to those by-products.

Q. (By Mr. CLARKE.) I can not see why you can not produce these by-products.—A. We can: I am not complaining about that.

Q. (By Mr. FARQUHAR.) Do you not sell the by-products to anybody?—A. Certainly.

Q. All refineries do?—A. Yes.

Q. (By Mr. PHILLIPS.) Is it on account of the large amount the Standard refines that they have established these different plants to produce these by-products?—A. They, having control of the business from 1872, had to take care of them. There was no one in the business to take care of them.

Q. What is the chief by-product from petroleum; is it not lubricating oil?—A. No.

Q. What is it?—A. From the by-products of petroleum there enter into the materia medica over 200 remedies.

Q. Do you speak of coal tar, etc.?—A. In addition to that the beautiful aniline colors are produced from the coal tar you speak of. Thousands of things are made from petroleum; but that has come on with time, just as the time was when we could not make a piece of sheet steel.

LUBRICATING OIL IS NOT A BY-PRODUCT; NOR PARAFFIN WAX.

Q. How about lubricating oil? Is it not a very large by-product?—A. No; it would not be termed a by-product, because there is not a lubricating oil produced from the crude. That never sees fire at all, some of the richest.

Q. (By Mr. RATCHFORD.) How about paraffin wax?—A. It is one of the products; not strictly called a by-product. The by-products, as a rule, arise from that which remains in the still, or the top, which runs anywhere from 6 to 10 or 12 per cent. From that is made the paraffin oils, red oils, yellow oils, and miners' oils. These things coming from the top are strictly the by-products. The petroleum wax comes at a certain point in distillation, if you take it out. You take it out when wax is dear, and perhaps leave it in when wax is cheap, whichever pays best. You can take out the wax whenever you want to, or break it up by heat, by destructive distillation, and put it into illuminating oil.

¹ See Mr. Boyle, p. 441; Mr. Archbold, p. 570.

RELATIVE VALUE OF PRINCIPAL PRODUCTS AND BY-PRODUCTS—THE STANDARD HAS NO MONOPOLY OF MANUFACTURING BY-PRODUCTS.

Q. (By Mr. KENNEDY.) State in dollars, if you can, what your income from the by-products of oil, or petroleum, is, compared with your income from illuminating oil.—A. I could not.

Q. Could not approximate it?—A. I can not answer the question, because I do not make any paraffin oil. I make wax, and what is called petrolatum, or what you know as cosmoline—all the same thing; all these "lins" are one and the same thing.

Q. I think the Standard people have testified that one-half their business is perhaps in the by-products.¹ Would that be so in your business?—A. No; but I have no reason to contradict their statements. I should not put down the by-product or the residuum as being a half of their business—not by any means, because, as I have said, you get 75 per cent of illuminating oil, while you will get 10 to 12 per cent of benzine or gasoline.

Q. I mean in value.

Q. (By Mr. FARQUHAR.) The statement is that the by-products amount to nearly half in value, on account of the high price of certain by-products; provided, of course, the Standard or these other manufacturers utilize these by-products themselves, instead of selling the residuum for others to manufacture.

A. I could not affirm or deny that.

Q. (By Mr. KENNEDY.) Have the Standard people a great advantage over you in the development they have brought about of the by-products of petroleum?—A. There are no developments to-day that any man can not enjoy if he wants to.

Q. You give them the credit of developing it?—A. I do; because there was no one else to bring it up. The business has been in their hands from 1872 to the present time.

Q. (By Mr. PHILLIPS.) Your understanding is, the by-products were not so valuable before their advent?—A. I mean they were not developed; they are not developed to-day.

VALUE AND USES OF PARAFFIN.

Q. (By Mr. RATCHFORD.) It has been stated that as the by-products of the refining of oils are comparatively new products it has cost more to market them, in many cases, than has been derived from their sale. What is your experience in that?—A. I do not think it is true.

Q. If that statement is true, I wanted to know whether in your judgment the price of the main product should not be reduced to the people as the value of the by-product increases?—A. Until the general rise of business these things that you term by-products did not bring a high price. I sold wax as low as 1½ cents a pound within the last three years. We had to take what we could get for it. Germany and France were full, the factories were full, people did not want any goods, and there was no market for it. We make about 4,000 to 6,000 pounds a day of it; two or three tons of nice bleached wax, white as that paper, and we get to-day, I think, about 3¢ or 4 cents a pound. It is not high, and really I do not see how you could reduce the price of that commodity very much.

Q. The main use to which that wax is put is the making of candles?—A. Oh, no. You can not make a joint of a pipe without the use of paraffin wax; you can not string a telegraph or scarcely a telephone line without the use of paraffin wax. It is used in almost everything where protection is required, because it is a non-conductor. It enters into everything pertaining to electricity. It is not used largely in candles, except in connection with stearin. The Standard mold all the candles of the country, and they mold the public opinion of the country pretty near. They are good molders; no question about that.

THE STANDARD RETARDED THE DISTRIBUTION OF OIL.

Q. (By Mr. PHILLIPS.) Will you return to that question as to how widely the use of it had gone into the world?—A. I want to say in answer to that that every civilized country where oil is used had its representative in New York, Philadelphia, Baltimore, Pittsburg, Oil Creek, Portland, Bremen, Hamburg, Paris, London, and Liverpool, and they were asking for these goods. It was pretty much all over the world before ever the Standard Oil Company was heard of. They retarded the distribution of this commodity. I was willing to go to the ends of the earth to make a market, and other manufacturers were willing to go with me and make a market; but in the first history of this business the Standard Oil Company compelled these men to step over the threshold of their offices to get this commodity. That was the condition.

¹ See Mr. Archbold, p. 561.

THE STANDARD HAS NOT CHEAPENED OIL.

And yet they say that they are benefactors, benefactors of the people, for reducing the price of the commodity! Why, I have known a single gallon of oil to sell within the territory of the United States at one and one-half times the cost of a barrel of crude petroleum to make it, but you can not get that to-day. The moment you enter the market of Hornellsville, Washington, or Wilkesbarre, if you choose, with oil from an independent refinery, and build your stations and office, down goes the price. Not four weeks ago, when I sent my oil to a certain point, the market was reduced 1 cent a gallon because I came there. It has been well said, "This business belongs to us; you get out." Take up that volume; read the *Commonwealth v. The Pennsylvania Railroad*: it gives everything. The Standard Oil Company are not entitled to the credit of being benefactors or of cheapening this product. Wails are coming up from New Mexico and from Texas and from every State in the Union on account of the exorbitant price and poor quality of the petroleum: you have read them. Look at the condition of things. Laws are passed by the several States of this Union against encroachments on the rights of the people, but when it comes to appropriating money to carry out these laws, the third-house men say to the farmer, "If you vote for the appropriation that will put this law into effect you are going to increase your taxes." The result is they strike out the appropriation that should enable the attorney-generals of the several States to enforce these laws. An attorney-general stated in an article just a short time ago, "I have to put my hands in my own pocket to pay the necessary fees to bring this suit; no appropriation." Whenever legislation can not be stopped against these people, they go to the next resort and stop the appropriation. I do not say they do it, but I say it happens.

THE STANDARD CUTS PRICES WHERE COMPETITION APPEARS.

Q. (By Mr. RATCHFORD.) You made a statement that if you erected stations or tanks in Wilkesbarre, for instance, the Standard would reduce the price of oil?—A. That is true.

Q. Can you furnish this commission with a specific instance where this has been done?—A. Oh, yes; I can furnish you a hundred of them. Take it in Philadelphia: I lost \$150,000 in one station myself in lowering the price from time to time. My wagon was there with my man on it. Their wagon would come in ahead of me. They would go to that customer and reduce the price, and they would say they would sell him oil cheaper. They employed other fellows to watch where I went.

Q. (By Mr. PHILLIPS.) When did this occur?—A. It has occurred during the years of 1891, 1892, 1893, 1894, 1895, and 1896. It occurred right along until I quit there.¹

Q. Has it occurred since you departed from that station?—A. Yes; it has occurred within the last six weeks—reducing of the price.

Q. How about New York City? Has there been any reduction there?—A. I have known New York to sell oil at 6 cents; when the Columbia Company put on their wagon it was 5 cents in 10 days.

Q. Has that continued to the present time?—A. I do not know; I have been away 2 years.

Q. (By Mr. CLARKE.) Did you ever reduce your price to get business?—A. Have to; have to compete.

Q. Do you have any competitors besides the Standard?—A. Yes.

Q. Do they follow you up?—A. The other competitors? No.

Q. Never?—A. Never.

Q. Do you try to follow up anybody?—A. Never.

Q. Do you ever reduce your price before the price is reduced by your competitor?—A. Oh, yes, I suppose so. It is trade. I am merely discussing the methods of keeping people out of business.

Q. (By Mr. KENNEDY.) The Standard people say the cutting is generally commenced by the independent people.—A. They know better.

Q. (By Mr. RATCHFORD.) That is the reason I asked the question; they make the broad statement that they never cut except to meet a cut.—A. They know better. Whenever they know your oil is on the way to a particular market they will cut the price before you get there. I have shipped oil to places—started it unknown to them, I thought; but, as in the instance I gave you this morning,² they knew what I was going to do before I did; and they went ahead and reduced the price before my oil got to the point.

¹ Compare Mr. Lee, p. 265; Mr. Westgate, p. 365.

² See pp. 614, 615.

ABSORPTION OF PIPE LINES AND REFINERIES BY THE STANDARD.

(The witness reads from his pamphlet:)

"Soon after it induced Scott, of the Pennsylvania Railroad, to surrender the oil traffic in exchange for Western freights, under a general apportionment of freights between the trunk lines. By this means was diverted a greater part of the refining trade from Pittsburg and from the oil regions of Pennsylvania to Cleveland, Ohio. It then bought a controlling interest in the United Pipe Lines."

Now, that is in answer to Mr. Farquhar's question. At this time they came in and purchased from the Vandergrift people, who were formerly the United Pipe Line. They purchased from them, as you will see, all this oil production of their lines.

"The United Pipe Lines Association moved forward steadily. It bought or combined the Oil City, Antwerp, Union, Karns, Grant, Conduit, Relief, Pennsylvania, Clarion, and McKean divisions of the American Transfer, Prentice, Olean, Union Oil Company's at Clarendon, McCalmont at Cherry Grove, and smaller lines, covering the oil region from Allegheny to Butler. Then followed, at different intervals, an association with the other pipe lines, the purchase of the Columbia Conduit Company, of Pittsburg, the purchase of all the Titusville independent refiners, who were forced to sell; the Titusville Daily Herald, Bradford Daily Era, and the Oil City Derrick, which were subsidized and then purchased; the purchase of the Union Oil Company's pipe lines in the Stoneham field."

I may say right here the Standard Oil Company are not entitled to the credit for building these lines. The leading lines were built by individuals before they came in. They were simply absorbers.

Q. (By Mr. PHILLIPS.) It was built to the seaboard was it?—A. It had the credit of building the first seaboard line, which is outside of the Standard, "the securing of the control of the Tidewater Pipe Line," and of its dependent refineries, and of its associated Western Transportation Line, and the purchase of the Pittsburg Pipe Line and its dependent refineries."

EXTRAVAGANT PRICES PAID FOR LINES AND SERVICES.

Now turn to the following history on page 57:

"At some time during the progress of these purchases, the reorganization on the trust basis, formerly referred to, was effected. The sum of all these purchases amounted to millions of dollars. All, or nearly all, of them were made at prices grossly in excess of the reasonable value of the material and business sold, the chief consideration being the absorption and accumulation of power, which the monopoly was thereby acquiring. From time to time new persons were taken into this association. As Mr. Dodd, solicitor for the Standard Oil Trust, said in his argument in 1888, or rather in the history of the Standard Oil Trust: 'Whenever, and wherever, a man showed himself skillful and useful in any branch of the business he was sought after.' It has paid salaries, fees, and bonuses with imperial prodigality, some for services, some for servitude, some for keeping out of competition, and some for keeping still.

HOW THE STANDARD USES THE RAILROADS.

"Its methods of business are in fine harmony with the manner of its growth. It has divided the whole United States into 'oil-consuming districts.' It goes to a distributing railroad company in the West and says: 'If you will receive and carry oil exclusively for me, I will furnish your whole distributing area, but if you receive and carry any oil of any other refiner or shipper I shall have to create in your district such a destructive competition as will ruin your rates.'"

That has been done, and can be proved by a thousand witnesses.

"Where there are competing roads it gets their managers together and shows them how it can supply them with all the oil they can distribute, so apportioned between them as to maintain rates on a noncompetitive basis. It never breaks a promise when that promise conveys a threat. If, therefore, it fails to make such exclusive arrangement in any district, and an independent refiner is admitted therein as a shipper on equal terms, it forthwith ignores all freight rates and all values, puts the price of oil to the consumer below the original cost, and keeps it there until it drives the independent refiner out of the district."

Q. (By Mr. KENNEDY.) When Mr. Archbold was on the stand the other day he submitted to the commission letters from a large number of the railroad managers

¹ Page 605. See also Mr. Boyle, p. 425.

² See Mr. Boyle, p. 480; Mr. Rice, pp. 696, 697, 738; p. 734, footnote.

of the United States stating that they gave no favors to the Standard Oil Company, and that the Standard Oil Company asked for none.¹ Now, that is the evidence that they put in. You make this statement here. Can you give the Commission any evidence aside from your word that this is done?—A. I am prepared to answer in full the documents in my statement.

Q. These letters referred to the period since the passage of the interstate-commerce law.—A. Yes; I do not know anything about that, but I do know that they have paid them right along.

Q. Since the passage of the interstate-commerce law?—A. Yes; and I will prove it was paid up to last January.

Q. To the Standard Oil Company?—A. I say rebates are paid. Very well; they are not only shippers of oil, not only behind oil, but perhaps behind everything else, as I have stated before.

Q. If you have it in order, I will withdraw my question.

THE STANDARD MAKES ITS GREATEST PROFITS IN AMERICA—THE INDEPENDENTS COULD NOT LIVE WITHOUT THE FOREIGN TRADE.

Q. (By Mr. PHILLIPS.) You can proceed in your own way.

“It then dictates its terms to the railroad. Where it thus secures exclusion, it establishes and maintains a price to the consumer, without the least regard for general market values, as high as the conditions will warrant” (that I can prove); “and where such exclusion is not established, as low as will be necessary to exterminate the competitor. There are exclusive districts where refined oil is sold at more than \$40 per barrel, and there are contested districts where it has been sold as low as \$1.25 per barrel. As all the export oil must be sold in Europe in competition with the Russian production, the profits are normal. The revenues of the Standard are, therefore, chiefly made between the American producer and the American consumer.”

Q. (By Mr. KENNEDY.) I think it was given in evidence by some gentleman representing your side of this question that your business was not profitable until you secured the European field—the German and English fields. That seems to be a little at variance with your statement there.—A. It is the only field we were never shut out of.

Q. (By Mr. PHILLIPS.) Could you or could you not refine oil here without selling export oil? Is that not really essential?—A. Certainly; I have shown you that the quality is not used in this country that is sold in Europe.

Q. (By Mr. KENNEDY.) You say here the Standard Oil Company makes profits chiefly between the American consumer and producer. Now, your people have testified that you have a profit in this foreign market. Therefore if you have a profit and sell in competition with the Standard they must have a profit there, too?—A. Certainly they have. I have stated that since the German government says there must be no unfair trading there has been no particular cutting of prices. That is the situation exactly.

THE STANDARD IS ABLE TO KEEP COMPETITORS OUT OF NEARLY ALL DOMESTIC MARKETS.

Q. (By Mr. PHILLIPS.) Do you undertake, then, to state that the opposition are making more out of the American trade than the independents are?—A. I simply say it is an impossibility for me to ship oil even to the Mississippi River and compete with the Standard Oil Company. I can not go to the Coast at all, and there are a hundred and one accounts I can call to prove my assertion. What I mean to say is that I can not even go to Elmira and sell in competition with the Standard Oil Company, a distance of 143 miles from my factory. I do not sell there; I do not sell to the nearest town.

Q. Why do you not?—A. Because this war is created at once.

Q. (By Mr. FARQUHAR.) Competition starts in?—A. That is right; but it goes on just as it did in Philadelphia, away below the cost of the commodity. There I lost \$54,000, and then I quit. I gave it over to the Pure Oil Company, and it is there yet—all my horses, all my wagons.² I have gone out of the outside business. I can not do business—that is all there is about it. Seventy per cent of my product goes to Europe now. I make very largely lubricating oils and wax. The Bradford oil is one that does not yield very heavily in water whites; therefore I have got to send my commodities to Europe.

¹ See pp. 518-520.

² Compare Mr. Lee, p. 306; Mr. Westgate, p. 305.

COMPETITION LEADS BOTH SIDES TO CUT PRICES; BUT THE STANDARD DOES NOT ALLOW ANY COMPETITION TO APPEAR WITHOUT WAR—AMOUNT HANDLED BY INDEPENDENTS.

Q. When you are going into the field, do you start to sell below the Standard rates?—A. No; we attempt to maintain rates.

Q. And the cutting comes sometimes from the Standard and sometimes from you?—A. Certainly it does; because we go into a market, and the astute merchant says, "I am not going to buy from you. I will buy from the Standard Oil Company." What will you do? Of course you will reduce prices. But we do not go into the market. We only handle about 3,000,000 barrels a year, all told, out of 23,000,000 produced. Only about 3,000,000 barrels of it is not handled by the Standard Oil Company.

Q. (By Mr. A. L. HARRIS.) If your competition does not exceed 10 per cent of the trade at a given point, do they pay any attention to it?—A. Yes; if we go in with a carload of oil, that is quite sufficient to create a war.¹

OIL CHEAPER IN EUROPE THAN IN AMERICA, BECAUSE OF REGULAR COMPETITION.

Q. (By Mr. FARQUHAR.) Oil for oil, quality for quality, does the European consumer get oils cheaper than the American?—A. Yes.

Q. How much cheaper?—A. I can not give you the percentage. In Europe to-day I should say that oil of this quality is 25 per cent cheaper than the same quality is sold on the average in this country.²

Q. Now, does that arise from the competition of the Russian oil with the American product?—A. It arises from the fact that we are in these markets as competitors, and Russia is there as a competitor. The competition unquestionably brings that market down.

Q. But the independents and the Standard Oil Company sell at about the same rates in Europe?—A. Yes.

Q. And you have got to meet Russian competition?—A. No. The Russians sell very low compared with the Americans. They had rather have American oil at one-half cent advance than Russian. It goes farther; no bad smell about it; it is good oil. They must come in and pick up what they can, and they do; but the distribution of the Russian goods is very small indeed.

THE AVERAGE PRICE IN AMERICA IS HIGH, THOUGH THE PRICE IS VERY LOW WHERE THE STANDARD MEETS A COMPETITOR.—THE STANDARD TRIED THE SAME POLICY IN GERMANY.

Q. (By Mr. KENNEDY.) There is one point about this that I can not understand. Some witness testified that your business was not profitable until you secured the German market. Now, you sell the oil cheaper to Germans than in this country by 25 per cent?—A. I do say that. It has been a good deal more than that at times.

Q. (By Mr. A. L. HARRIS.) Why is that? Is it because the German government does not permit cut rates to the extent of destruction?—A. No; I do not know that that is it, but until we got firmly established in the business over in Europe there was a determination that we should not go there, and they commenced the same tactics in that country as in this. They sold oil, for instance, on the Rhine at a cent, or 2 cents, or half a cent a gallon cheaper than they did at points where we were not present. In other words, in an adjoining district it would be higher than in the district where we were. Then, again, if they were obliged to cut prices, perhaps below cost, on the Rhine, they would levy a tribute upon the people on the Elbe to make up what they lost here. When I sold oil in Philadelphia as low as 3 cents a gallon it was selling in New York, 100 miles away, at 8 cents.

Q. (By Mr. FARQUHAR.) Would not you have done the same? Was it not a good policy on the part of the Standard, where they had no competition in Germany, and knew they could sell at 25 per cent less than they could in the American market, to hold these places there where there was no competition and to keep up prices there? Is not that good in any business?—A. That was not the case until that competition came in.

Q. But where they had no competition would they not very naturally get 25 per cent more if they could, to gain as many points as they could on the 25 per cent?—A. Certainly; I would hold the price as long as I could, but I would not put it beyond a reasonable price. If you had competition in this country, you would get oil, at least on an average, 50 per cent cheaper.

¹ Compare Mr. Westgate, p. 367.

² Compare Mr. Lee, p. 276.

PRICE AND QUALITY OF OIL AND GASOLINE IN CALIFORNIA.

In the State of California, where I have bought oil, I have gone to the markets and paid, in cans, 30 cents a gallon; and the same oil I was sending out of my factory and glad to get 4 cents for it.

Q. (By Mr. CLARKE.) Put up in the same way?—A. Yes. I have gone to Valley Springs, in California, and bought gasoline that was marked on the head "Double deodorized gasoline," and paid 25 cents a gallon for it; and when I paid that I was selling those goods by hundreds of barrels a day at my factory at 4 cents.

Q. What was the proper charge for transportation?—A. I do not know. The charge on oil from the Atlantic to the Pacific is 75 cents a hundred. Now, who knows anything about what the Standard Oil Company pays? I do not. They may pay \$1.35 or 50 cents or 25 cents.

Q. (By Mr. PHILLIPS.) If they paid the same as others, what would be the cost?—A. Suppose the goods were worth about 4 or 5 cents at the refinery. If freight is 75 cents, that would be about 5½ cents a gallon; call it, if you choose, 6½ cents, with the probable leakage and loss. It should be sold on that coast to-day, with a good profit, at 10 or 12 cents a gallon.

Q. (By Mr. FARQUHAR.) By the case or at retail?—A. By the case. I have given the outside limit.

Q. (By Mr. PHILLIPS.) How much did you pay at retail?—A. Twenty cents.

Q. (By Mr. FARQUHAR.) Do you know what profit the retailer made out of this?—A. I do not know what the profit was to him, but I do know I paid 25 cents for gasoline, double deodorized, and when I opened it up it was made from Lima benzine. Now, double-deodorized gasoline is absolutely like ether; you can take a smell of it and it will make you drunk in 10 minutes. But one snuff of that would knock you down.

Q. So you can not tell us what the middleman made on this deal at all?—A. The quality of the goods in America is not as it is in Germany, because the inspector of this oil does not do his duty. I could make charges here that I could prove that would make your hair stand, but I am not going to do it. It is not within your province, I suppose, to know anything of this kind.

THE WITNESS CAN COMPETE WITH THE STANDARD IF HE CAN HAVE EQUAL RAILROAD RATES.

Q. (By Mr. A. L. HARRIS.) Do I understand, then, that it is the matter of transportation that prevents your competing in this country with the Standard Oil Company as you compete with them in foreign countries?—A. That is exactly it, and that is all there is to it. If this Government can know and will know what the railroad's manifest is and its charge attached thereto for freight, and will see that there is fair competition in the market, I ask no odds of the Standard Oil Company. I can manufacture just as cheap as they can, in spite of their assertions.

Q. (By Mr. PHILLIPS.) And as good?—A. As good as they can. They have got nothing better in any of their works than I have got in mine, except it be, perhaps, in their fine laboratories, in the manufacture of residuums or the by-products. We raise no question about that. The whole question is the question of transportation. If you will force the railroads of this country to obey the law, you will have cured this evil.

PAYMENT OF REBATES HAS BEEN PROVED TO HAVE CONTINUED AT LEAST TO 1893. THE STATEMENTS OF GREAT RAILROAD MANAGERS NOTWITHSTANDING.

Q. (By Mr. FARQUHAR.) That brings the Commission face to face with this matter. You make the assertion, and so have others, in regard to rebates. The Standard Oil Company comes forward with the letters of twenty great railroad managers,¹ and we can neither verify your statements nor discredit the statements of these managers.—A. I will put you so you have got to say one or the other.

Q. The Commission comes to a stone wall there if we do not have verification.—A. Unfortunately my secretary has not brought up important documents that I should have here in this case; but I trust you will rely implicitly on my statements in what I am going to say, because it is my own case that I am going to bring before this committee. It is the case of Logan, Emery & Weaver v. The Pennsylvania Railroad Company. Here is an abstract from the records of McKean County, from the Appellants' Docket, No. 130, December term, 1887. It is the

¹ See pp. 518-526.

case of A. H. Logan, Lewis Emery, jr., and W. R. Weaver, partners under the firm name of Logan, Emery & Weaver, v. The Pennsylvania Railroad Company.

Q. (By Mr. CLARKE.) Let me inquire if the case grew out of alleged discrimination before the passage of the interstate-commerce law?—A. Yes, it did; but the discrimination lasted after the adoption of the law, and a suit was brought for rebates or difference in freight up to 1888. In the settlement of the case it was agreed between the Pennsylvania Railroad and ourselves that no further suits would be brought, because they paid a certain sum of money to me to settle the case. The rebates existed after 1887, and I have the testimony to produce, if necessary, of that fact. I will produce the testimony here, part of it taken in the same case, showing that rebates were paid up to 1888. In April, 1887, the interstate-commerce law went into effect.

Q. (By Mr. FARQUHAR.) There has never been a question before this Commission about rebates and discrimination before the passage of the interstate-commerce law. It is conceded that the old troubles, the wild-cattling system of making freights, existed up to 1889, two years after the passage of the act. There are plenty of cases there on file now showing that rebates have been issued.—A. Yes, there is a case in which I am interested now before the Interstate Commerce Commission in which we have proven rebates to 1893.

TESTIMONY OF HIGH RAILROAD OFFICERS CONTRADICTED BY SUBORDINATES.

I desire to present to this Commission a document filed with the court in McKean County, February 17, 1890, and also an order from the court, a rule for taking testimony. I should be glad to have you examine this document, to see that it was filed with the court, because there is very important testimony in it relating to transportation, and that you may be able to identify it in the future. In this suit, of which I have a transcript here from the document, which is subscribed by the county clerk, prothonotary, George W. Mitchell, we called to the stand George B. Roberts, president of the Pennsylvania Railroad, and the question was asked him if his road paid rebates on the transportation of oil.

Q. (By Mr. PHILLIPS.) At what time?—A. This was in 1890, when the suit was tried. The rebates that we claimed were paid to January 1, 1888. He replied: "No rebates are paid by our railroad on the transportation of oil." He was asked the question in various ways, and he said he knew nothing of any rebates; that was against the policy of the road. John S. Wilson, the general freight agent of the road, was put upon the stand. He said positively that no rebates had been paid on their road since the suits of 1879 upon petroleum. He said: "As general freight agent of this road I should know, and I give my oath that no rebates were paid." The auditor of the road, Mr. Taylor—or Mr. Justis; I do not know which; one was the auditor and the other the assistant auditor—said that rebates had been paid, and if I had my books here I could read you when they were paid and under what conditions. The next called was Mr. Justis, I believe, and he corroborated Mr. Taylor that rebates had been paid on the Pennsylvania road. This testimony was taken before a master.¹

Q. (By Mr. CLARKE.) Can it be produced?—A. Oh, yes, I have the testimony; I have sent for it. Mr. Roberts was examined in the court, but I have not his testimony here. The next man that was called in the case was the bookkeeper, Mr. Thayer, who had stood at one desk, he said, 26 years, keeping accounts in a certain department. He was asked whether rebates had been paid to any shippers of oil over the road, and he said they had. We called a large number of witnesses.

Q. (By Mr. PHILLIPS.) What were the rebates?—A. The rebates ran from 8 cents a barrel to 28 cents a barrel. Under the anti-discrimination law of Pennsylvania the penalty prescribed was three times the damages, to be collected of the man proved guilty. A large amount of our shipments of crude oil from the oil regions to Philadelphia, where Logan, Emery & Weaver owned a refinery, at what is called Greenwich Point, on the Delaware, were shipped from Olean, N. Y. When we came into the court with our evidence, exceptions were taken to that part of our claim which related to shipments from the State of New York, on the ground that interstate shipments could not be considered under the State law.

DIFFICULTY OF GETTING RAILROAD PEOPLE TO APPEAR IN COURT AND TO ANSWER QUESTIONS.

We commenced this suit early in 1887, and it was not concluded until 1890. The railroad people were able at will to send word to the master that they could not

¹ See pp. 635, 642. Also Mr. Lee, pp. 287, 292; Mr. Archbold, p. 516.

come to-day, but would come some other time. We traveled with our attorneys 500 miles, simply to go home again. We were bandied about for nearly 3 years in taking that evidence. It was expensive; it was annoying; but the court had no power, it seemed, to compel these people to come to the stand. When we got them to the stand, certain questions were propounded, which they refused to answer under the advice of counsel—the screen which all these criminals of this country who are against its laws and the rights of the people get under, “We can not answer that question because it may incriminate us.”¹ They would not even attend the court in McKean County, and the judge issued a bench warrant and sent the constable to Philadelphia and brought Mr. George B. Roberts and Mr. Green and Mr. Downy and others to the bar of justice.

PROPOSITION TO SETTLE THE SUIT OF LOGAN, EMERY & WEAVER.

When they got up into the county of McKean my partner said to me: “There is a proposition to settle this case.” I did not want to settle. I wanted to fight the thing out. We had compelled the Pennsylvania Railroad to bring their books, and there were three tons of them that they had to bring upon the train to answer the summons of the court. We were more than a year in getting those books into court. Now they were cornered up, and we had absolute proof of 8 to 28 cents a barrel rebates that had been paid.

THE WITNESS HAD BUILT HIS PHILADELPHIA REFINERY AT THE SOLICITATION OF THE RAILROAD, BUT THE RAILROAD DROVE HIM OUT OF BUSINESS.

I went to Philadelphia to manufacture oil in 1880, at the instance of the railroad officials themselves. They had a little bit of a quarrel with the Standard Oil Company after the close of the suits of 1879—*Commonwealth v. Pennsylvania Railroad*. They invited the refiners to meet them, and I went there at their own solicitation and built those works. I ran them from 1881, when I built them, up to 1887; but the railroad practically drove me out of business there.²

SETTLEMENT OF LOGAN, EMERY & WEAVER'S SUIT.

Their attorney came to our attorney and said: “We will give you \$35,000 to quit, and expenses of the suit.” My partners had become discouraged and disgusted. We took the money. We did not go on with the interstate-commerce suit, because we knew we should never get through. I entered one suit here in the Interstate Commerce Commission, and it was 7 years before I got a decision.

Q. What was the amount of your claims?—A. My claim was \$107,000. A great portion of that was on shipments of oil from the State of New York. If I had gone on with the suit I could have secured a large sum of money, but I had not the heart to do it; I was not able to do it. My finances were such that I could not spare the money to go into court and overcome the dilatory tactics of the railroad officials. I simply dropped the case in disgust. I took the \$35,000 and they paid the cost of the suit.

B. B. CAMPBELL'S TESTIMONY AS TO PAYMENT OF REBATES UP TO JULY 1, 1888.

This is a document of the court of McKean County. It is only a few words I wish to read to you. It is the testimony of B. B. Campbell. Perhaps I had better read, as I can not leave this with the commission. Anything I have read, or, in fact, the whole testimony or a copy of the testimony in this suit, I can give you if you would like it.

“B. B. Campbell in the suit of Logan, Emery & Weaver *v.* Pennsylvania Railroad Company.

“B. B. Campbell being first duly sworn, testified as follows in answer to questions by Mr. Lee:

“Q. You were sworn in this case and testified before?—A. Yes.

“Q. And certain questions you declined to answer under the advice of counsel?—A. Yes.

“Q. You received certain allowances on freight shipped over the Pennsylvania Railroad. From what place and by whom was that freight shipped?

“(The counsel for defendant objected to the question in the manner in which it is put, for it is assuming the fact that he did. Second, the form of the question is bad.)

¹ Compare Mr. Monnett, p. 307, top; p. 315.

² See pp. 629, 634, 648.

"Q. You may state whether you received any allowance on freight shipped by the Bear Creek Oil Refining Company, Limited, over the Pennsylvania Railroad, and from what point that freight was shipped, and to what points.—A. Those matters are fully stated in my answer to the question propounded me under a rule of court. The freight from the Bear Creek Oil Refining Company was shipped from Coleman station on the Allegany Valley Railroad as far as the junction, and from the junction I believe to Bolivar over the West Penn., and from thence mostly to Philadelphia; some few shipments were made to Communipaw and some few to Bolivar. There was some little local trade, but the great majority were shipments of export oil to Philadelphia.

"Q. During what period were these allowances made to you?—A. That is fully stated in my answers to the court, which were, of course, made up and fully stated from October 1, 1884, until July 1, 1888."

A year and four months after the interstate-commerce act went into effect.

"Q. You may give the allowances by the year.—A. They are already given. From October 1 to September 30, 1885, the rebates were \$8,607.51; until September 30, 1886, \$10,313.47; until September 30, 1887, \$15,200; until July 1, 1888, \$13,980.15; total received, \$48,101.13."

Q. (By Mr. CLARKE.) Nearly all of that was before the passage of the interstate-commerce law?—A. Yes. There was a year and a half of that time after the passage of the law.

Q. The last item given there is the only one which comes in since the passage of the interstate-commerce law, is it not? A. No; the interstate-commerce law took effect in April, 1887. During the year from September 30, 1886, to September 30, 1887, rebates were paid amounting to \$15,200.

Q. From April to September after the law?—A. And all of the last item. We knew that these same rebates were continued up to this time, and therefore the bringing of our second suit, which was settled for the \$35,000; so we dropped the whole thing.

OTHER SUITS AGAINST THE PENNSYLVANIA RAILROAD ON ACCOUNT OF DISCRIMINATIONS.

Now, I desire to further fortify this statement. After this suit was decided a great number of suits were brought against the Pennsylvania Railroad. There was the Independent Refinery, of Oil City; S. Y. Ramage, of Crown Oak, Pa.; the Germania Refining Company; the Continental Refining Company; the American Oil Company, of Titusville; Rice, Robinson & Fagin, of Titusville; the Seneca Oil Works, of Warren; the Corn Planters, of Warren. All of these companies brought suits against the Pennsylvania Railroad and other roads. This is a dispatch I received to-day. I had other memoranda of this suit, but I wanted to be able to state definitely upon this question, so I sent another telegram yesterday and find it recorded. Of course the court record of these suits can be produced to the commission; but I make affidavit here that this is true and correct to the best of my knowledge and belief. The refiners' claims (this is addressed to myself, care of the Industrial Commission)—refiners' claims were filed with Rogers Sherman (he was also a witness against the Pennsylvania) up to August 1, 1888 (which was contemporaneous, I think, with this I have read): "Compromise and settlement agreed"—that is to say, they compromised these suits and took their money. The amount collected at that time by these several refineries, as I recollect it, was about \$84,000. I may be mistaken; it may have been a good deal more, or it may be less.

Q. (By Mr. CLARKE.) Were those suits all settled by the railroad companies?—A. Yes; by the Pennsylvania. "Claims therefore filed with the Interstate Commerce Commission."

DECISION OF THE INTERSTATE COMMERCE COMMISSION, BASED ON PAYMENT OF REBATES UP TO 1893.

Q. How far does that go back?—A. They settled up to August, 1888, and from August, 1888, up to 1893 the Interstate Commerce Commission has rendered a decision that the railroads are responsible to these refineries for \$86,000.

Q. Is that decision reported in their annual report?—A. Yes; you will find it in that case. The railroads have refused to pay this \$86,000, and it has gone to the circuit court of the United States at Pittsburg.¹ The suit is now pending for the collection of this money. I want to clinch this thing right here, and I am going to do it by reading you a letter.

¹ See Mr. Lee, p. 287; Mr. Archbold, p. 516; Mr. Westgate, pp. 379, 380.

**THE RECEIVERS OF THE BALTIMORE AND OHIO PROPOSE TO MAINTAIN THEIR
PUBLISHED RATES AFTER JANUARY 1, 1898.**

“Late open public confessions from the receivers of the Baltimore and Ohio Railroad of secret rates, drawbacks, rebates, and other devices.”

Q. (By Mr. FARQUHAR.) What are you reading from?—A. I am reading from a letter addressed to the Interstate Commerce Commission by the receivers of the Baltimore and Ohio Railroad.

Q. (By Mr. PHILLIPS.) Under what date?—A. December 22, 1898.

Q. 1898?—A. 1898, less than a year ago. (Reading:) “Will maintain rates. Baltimore and Ohio Railroad adopts a new policy.”

Q. (By Mr. FARQUHAR.) Who is the author of the letter?—A. It is a letter that was published some short time ago. It is public matter. I do not know who published it.

Q. Who is the authority for the letter?—A. Why, Mr. Cowen.

Q. Mr. Cowen of the Baltimore and Ohio?—A. Yes.

Q. He signs this letter?—A. To the Interstate Commerce Commission; yes.

Q. That is what we are looking for. I want to know the author.—A. (Reading:)

“Receivers Cowen and Murray addressed a letter to the Interstate Commerce Commission stating their purpose to adhere to published tariffs and to report to the commission, in lieu of other agency, the failure of other roads to do the same.

“Chairman Knapp, of the Interstate Commerce Commission, has received a letter from Receivers Cowen and Murray, of the Baltimore and Ohio Railroad, announcing that after January 1 that railroad will maintain scrupulously the published tariff and rates filed with the commission, and will appeal to the commission for aid in cases coming to their attention of railroads failing to maintain rates to the detriment of their interests. This step is an important one, which will interest largely all other railroads. What the attitude of other roads will be is unknown here. The letter in full is as follows:

“Within the territory north of the Ohio River and east of the Mississippi the railroad carriers are transporting the larger part of the interstate traffic at rates less than those shown in the published tariff filed with your commission, which are by statute the only lawful rates.

“While this condition continues there will exist the unjust discriminations and the unjust preferences and advantages between persons, localities, and particular descriptions of traffic, the prevention of which is the main object of the act of Congress establishing your commission. Only by securing the uniform charging of the published rates can the just equality of service and of charge required by law be secured either between persons or between localities.

NO AGENCY FOR RESTRAINT.

“Heretofore the Baltimore and Ohio Railroad Company and its competitors within the territory above mentioned have maintained joint agencies or associations under various agreements intended to act as a restraint upon each carrier and to prevent the secret cutting of rates on competitive traffic. It has been the practice for each carrier to report to a joint agency or association any departure from the published rates by a competing carrier, to the end that the facts might be fully ascertained and the unfair competition stopped.

“The Supreme Court of the United States has now fully determined the so-called antitrust act applies to railroad carriers, and in legal effect prohibits any agreement between them which restrains competition in any degree, even though such agreement goes no further than to secure the observance of the restraints imposed by the act to regulate commerce. It is therefore no longer lawful for the carriers to create by agreement between them joint agencies or associations as formerly, to prevent the cutting of rates, however unlawful. Without some impartial body to investigate the complaints of one competing carrier against another and to check illegal rate cutting, if found to exist, it will be practically impossible for the railroad carrier alone to prevent that form of competition between them, however earnest the great majority of the carriers may be to stop it.

“The Interstate Commerce Commission not only commands the respect of the railroad carriers for its impartiality, but also in its powers to investigate complaints of illegal rate cutting and to put a stop to all illegal practices far surpasses any association which the carriers have ever created by agreements between themselves.

TO SEEK AID OF COMMISSION.

“We see no reason why the commission should refuse its aid to the carriers in an effort to prevent competition from taking the form of illegal concessions

through secret rates, drawbacks, rebates, and other devices; and we see no reason why the carriers should not seek the aid of the commission in such an effort by reporting to the commission any departure from published rates, to the end that the facts may be fully ascertained and the illegal practice stopped.

"The receivers of the Baltimore and Ohio Railroad Company will maintain, on and after January 1, 1890, upon the lines operated by them, the rates, fares, and charges shown on the tariffs published and filed with the commission as required by law."

After that day: a practical admission that they have not previous to that time; put your own conclusion on it. [Reading:]

"We believe that all, or nearly all of the railroad carriers within the territory above mentioned, will likewise maintain their published tariff rates from that date."

Referring to the fact that they did not. [Reading:]

"To prevent a relapse, however, to the conditions now existing, it is necessary that no important carrier shall long depart from the published tariff rates. Should such a departure occur, to the detriment of the interests in our charge, we shall invoke the aid of the commission to stop it. We hope and believe that many other carriers will do the same. In the anticipation that the other railroad carriers formerly associated with the Baltimore and Ohio Railroad Company in traffic associations will adopt the course decided on by us and above outlined, we have taken the liberty of transmitting to each such carrier a copy of this letter."

Q. (By Mr. RATCHFORD.) Is that letter the original? Is that letter signed by the receivers of the Baltimore and Ohio?—A. It is on file: I suppose it must be; it is on file in the Interstate Commerce Commission. Now, gentlemen, there is an absolute admission on the part of the Baltimore and Ohio Railroad that rebates, drawbacks, and other devices have taken place up to January, 1890.

Q. (By Mr. CLARKE.) Have you any evidence that connects that with the business of the Standard Oil Company?—A. Oh, no. These discriminations are not upon oil, but they are upon the tonnage offered by the large corporations—no question about that.

Q. (By Mr. FARQUHAR.) Possibly individuals, too?—A. Individuals as well, possibly. That is the bane of the whole thing, these discriminating rates.

Q. Have you done with that?—A. I think the commission can understand clearly from that paper that the Baltimore and Ohio have given these rebates, and they have got tired of doing it, and will obey the law.

AS TO B. B. CAMPBELL.

Q. (By Mr. FARQUHAR.) I would like before we leave this part of it to have presented the evidence of Mr. B. B. Campbell in respect to those rebates. Mr. Campbell was the signing party of the Standard Oil Company and the United Pipe Line?—A. I do not understand.

Q. He was the signing party in respect to the suppression of all rebates and drawbacks?—A. Yes.

Q. The document, as drawn up in 1880, between B. B. Campbell and the Pennsylvania Railroad Company?—A. Yes.¹

Q. Did he turn as a witness against the railroad after he received the rebates?—A. Yes. He could not help himself; he kept out of our way for a long time.²

Q. Then Mr. Campbell himself was the signer of the original agreement between the railroad and the Standard and all the other producers?—A. No.

Q. Well, it is testimony here; I have the evidence here taken by the Bacon committee.—A. But when I come to explain to you before I complete this argument, I will answer all those questions.

Whereupon at 5.05 p. m. the commission adjourned until 10 o'clock to-morrow morning.

WASHINGTON, D. C., Tuesday, September 12, 1899—*a. m.*

The commission was called to order at 10.30, Mr. Phillips presiding.

LEWIS EMERY, Jr., again on the stand and examination resumed.

Q. (By Mr. PHILLIPS.) You can resume your testimony and proceed in your own way.—A. You only let me get to 1872, yesterday, and then you hurried me on to 1889 and 1890.

REPORT OF EXECUTIVE COMMITTEE OF PETROLEUM PRODUCERS' UNION, 1872—
THE FIRST RUMORS OF THE NEW POWER.

I got up to the South Improvement contract yesterday, and I showed you its repeal. I read from a public document as follows [reading]: "History of the

¹ See p. 632.

² See p. 635.

rise and fall of the South Improvement Company. Report of the executive committee of the Petroleum Producers' Union, embracing the report of the subcommittees on transportation, legislation, investigation, and treasurer's report, at Oil City, Pa., 1872.

"On February 20, 1872, rumors were rife in business circles that the railroads, having their main lines or feeders extending into the oil regions, had formed a joint arrangement to advance the freights on crude and refined oils from the fields of production to the seaboard.

"With a production of 16,000 barrels of oil per day, and the coming of spring, which always brings renewed energy to operation, and an already depressed market, this rumor created the greatest uneasiness in the minds of all operators and shippers. Nothing definite could be ascertained, and nothing further than the rumor could be heard, and the region settled back to fancied security.

"In a few days, however, a second rumor was circulated, that not the railroads, but a company bearing the wonderfully inappropriate cognomen of the 'South Improvement Company' had purchased a right to all petroleum transportation, and were to arrange the rates of shipment of all the oil produced, and that an immediate advance of 50 per cent was but the first advance, with promise of more in the future.

THE ADVANCE OF FREIGHT RATES—PROTESTS AND STRUGGLES.

"This, however, seemed so quixotic that it did not meet with general credence until it was confirmed by telegrams on the 26th from railroad officials to their agents at shipping points in the oil regions advising them of the new rates, to take effect immediately. An advance of 100 per cent on all freight charges, on crude and refined, was equivalent to a complete paralysis of all operations for and in oil in the entire region. But oil men are made of sterner stuff than to tamely submit to so gross an outrage, let it come from what quarter it would.

"The thousands of operators were electrified with indignation, and rose as one man to defy and resist the levying of a tribute so palpably unjust. Meetings were called in all the principal towns and cities. The honor of calling and organizing the first meeting is conceded to Tidioute. E. E. Clapp was elected to the chair, and resolutions indicative of the spirit and determination of the producers of that field were passed. It was resolved, *inter alia*, to shut down all their wells until the old rates were restored, or until a new outlet could be found to remove their oil to outside markets, if such a step were necessary.

"Delegates were also chosen to attend a mass meeting called to assemble at Titusville on the evening of the 27th, 'to consider the necessity of constructing a railroad from Erie, by the way of Titusville, into the oil regions, as a competing railroad, connecting with water communication to New York and Europe, and such other business of interest to the people as might come before the meeting.'

"The meeting at Titusville demonstrated the fact that the wealth, determination, spirit, and practical ability of the men of the oil regions would render victory for them in the battle with monopoly an absolute certainty.

"The wonderful resources of oil men, when pressed by great difficulties, here became apparent in the plans and suggestions laid before the meeting. Railroad routes, with suggestions and estimates of cost, to reach the lakes on the north and railroads not in the combination on the south, pipe lines, and other remedies were suggested, and the feasibility of some, if not all, did much to reassure the mass of people that they would speedily find a solution of the difficulty."

THE SOUTH IMPROVEMENT COMPANY—THE REPEAL OF ITS CHARTER WAS OF NO PRACTICAL EFFECT.

I read so much only to show the spirit aroused at the time of the first notice of the formation of the South Improvement Company. Now, if you will turn to page 15 of my pamphlet, you will find an act to repeal the charter of the South Improvement Company. But on page 15½ I have shown how a charter in the very same terms was bought by the National Transit Company, which is one of the companies of the Standard Oil Trust. Clement A. Griscomb was president of the National Transit Company; he is not at this moment. He is a director of the Pennsylvania Railroad. I have explained to you and read to you from my book of the demoralized condition of the trade, at the time when the South Improvement Company act was repealed, through this tremendous pressure on the railroads on the part of this South Improvement Company. You will see that all this work that was done between these two Northern trunk lines of railroad and the Pennsylvania in the South was repealed by this act. I propose to

t, though the contract was annulled, the South Improvement as well as the contract between the Standard Oil Company and the annulment was never lived up to, and the business of the country is exactly as though the South Improvement Company was in full force. If you will please turn to page 48 (see Fiftieth Congress, first session, House Reports, vol. 9, pp. 361, 362) [reading]:

THE RAILROADS AGREE THAT THERE SHALL BE NO DISCRIMINATIONS OR REBATES.

Agreement between railroads and the petroleum trade, executed the 25th of March, 1872.

That all arrangements for the transportation of oil after this date shall be upon a basis of perfect equality to all shippers, producers, and refiners, and that no rebates, drawbacks, or other arrangements of any character shall be made or allowed, that will give any party the slightest difference in rates or discrimination of any character whatever.

That the present rates from Oil City, Union, Corry, Irvineton, Pittsburg, Cleveland, and other competing points shall be and remain in full force at following rates:

ON REFINED OIL, BENZINE, ETC

	Per barrel.
From Oil City, Union, Corry, and Irvineton to—	
Boston.....	\$1.65
New York.....	1.50
Philadelphia.....	1.35
Baltimore.....	1.35
From Cleveland to—	
Boston.....	1.65
New York.....	1.50
Philadelphia.....	1.35
Baltimore.....	1.35
From Pittsburg to—	
New York.....	1.50
Philadelphia.....	1.35
Baltimore.....	1.35

ON CRUDE OIL

From Oil City, Union, Corry, and Irvineton to—	
Boston.....	1.50
New York.....	1.35
Philadelphia.....	1.20
Baltimore.....	1.20
Cleveland.....	.50
Pittsburg.....	.50

And said rates shall not be liable to any change, either for increase or decrease, without first giving to William Hasson, president of the Producers' Union, at Oil City, at least 90 days' notice in writing of such contemplated change.

In the distribution of cars for shipments, it shall be done without discrimination.

On the basis as hereinbefore stated, the parties respectively agree to carry out the arrangements in good faith, and work for the mutual interests of each other.

In witness whereof the parties have hereunto affixed their signatures this 25th day of March, A. D. 1872.

For the Lake Shore and Michigan Southern Railroad Company, H. F. Clark, president; for the Erie Railroad Company, O. H. P. Archer, vice-president; for the New York Central and Hudson River Railroad Company, William H. Vanderbilt, vice-president; for the Atlantic and Great Western Railroad Company, George B. McClellan, president; for the Pennsylvania Railroad Company, Thomas A. Scott, vice-president. On behalf of the producers and refiners: G. Shamburg, E. G. Patterson, William Hasson, Henry Byrom, William Parker, John J. Fisher, Oil City producers and refiners; J. J. Vandergrift, A. P. Bennett, William M. Irish, William T. Scheide, Oil City producers and refiners; Henry N. Rogers, F. C. Fleming, Josiah Lombard, jr., New York refiners; B. Vaughan, Boston refiners.

Q. (By Mr. PHILLIPS.) Is that the same Mr. Rogers who testified before us? Is it a mistake in the print, or is it a different man?—A. I do not know whether this is the man. This is in the year 1874; but I think Mr. Archbold and Mr. Rogers did not go into the Standard Oil Company until 1875. I do not know whether it is the same or not. It does not make any difference. These gentlemen stood on the rostrum with me three or four years fighting this very principle.

Q. Did he have a refinery on Oil Creek?—A. Yes; he did.

Q. (By Mr. FARQUHAR.) This Rogers had a New York refinery. This is another Rogers; it is H. N.—A. Yes; I think you are right. Page 51 [reading]:

THE OPEN RATES RAISED AGAIN.

[The New York Central and Hudson River Railroad Company, General Freight Agent's Office, Grand Central Depot.]

NEW YORK, *September 9, 1874.*

DEAR SIR: Commencing October 1, 1874, the following rates on refined and crude oil shall govern all lines:

The rates on refined oil from all refineries at Cleveland, Titusville, and elsewhere in and adjacent to the oil region shall be as follows:

	Per barrel.
To Boston.....	\$2.10
To Philadelphia.....	1.85
To Baltimore.....	1.85
To New York.....	2.00

Net rate on Albany 15 per cent less, from which shall be refunded the amount paid for the transportation of crude oil by rail from the mouth of the pipes to the said refineries, upon the basis of 14 barrels of crude oil to the refineries for every 10 barrels of refined oil forwarded by rail from them (the refineries) to the Eastern points named.

Settlements of this drawback to be made on refined oil forwarded during each month.

No rebate on these rates will be paid on oil reaching refineries direct by pipes.

On crude oil the rates from all initial points of rail shipments in the oil region shall be as follows:

	Per barrel.
To Boston.....	\$1.75
To New York (net rate on Albany 15 per cent less).....	1.50
To Philadelphia.....	1.50
To Baltimore.....	1.50

From which shall be refunded 22 cents per barrel only on oil coming from pipes which maintain the agreed rates of pipeline.

A barrel shall in all cases be computed at 45 gallons.

You will observe that under this system the rate is even and fair to all parties, preventing one locality taking advantage of its neighbor by reason of some alleged or real facility it may possess.

Oil refiners and shippers have asked the roads from time to time to make all rates even and they would be satisfied.

This scheme does it, and we trust will work satisfactorily to all.

Respectfully, yours,

J. H. RUTTER,
General Freight Agent.

THE AGREEMENT THAT THERE SHOULD BE NO DISCRIMINATION WAS NOT KEPT TWO WEEKS.

The date of that contract was the 25th day of March, 1872. I tried to get yesterday a copy of the Hepburn report, but I could not. But in 1879 George K. Blanchard, the present manager, I think, of the Central Traffic Association (am I right?), of Chicago, was called to the stand by the Hepburn committee. You all know what that was—a committee of the New York legislature. He swore that this contract that I have just read, which is so soundly and so fairly worded, was not respected two weeks.¹ I put that in as a part of my evidence, and I refer you to the

¹ "October 1, 1872. * * * I first became general freight agent of the Erie Railroad. * * * At that time Adnah Neyhart, of Tidoute, Pa., * * * shipped small quantities of refined oil, for which he received a rebate of over \$7,000 on his shipments for the prior month, to wit, Sep-

Hepburn committee—that this agreement, solemnly drawn and signed by the railroads, that I have raised a question about in my testimony here before you, was abrogated within two weeks after it was signed, according to the testimony of George R. Blanchard. Does the commission want me to go into the fact and prove rebates and drawbacks from the date of this contract up to 1877?

Q. (By Mr. CLARKE.) My understanding is that these rebates and drawbacks are conceded by the railroad companies and the Standard Oil Company up to the passage of the interstate-commerce act. If that is so, it is not at all necessary.—A. I can produce every contract.

REBATES PAID ONLY TO MEMBERS OF THE STANDARD OR THE SOUTH IMPROVEMENT COMPANY.

Q. (By Mr. FARQUHAR.) In that matter of 1880, which concerns the agreement of the Producers' Union, would you have had that agreement at all unless they had made rebates and discriminations from 1872 up to 1880? It is conceded that in all the arrangements the rebates were payable from 1870 up to 1880.—A. To whom?

Q. To all parties.—A. No.

Q. Well?—A. Only to those connected with the Standard Trust or the South Improvement Company. If you were not a member of that organization, you could not participate in the drawbacks.

Q. But that agreement or purchase which was entered into afterwards, in 1880; Mr. Campbell was president of the Producers' Union at that time?—A. Now, you are getting too far; I will come to that.¹

Q. Oh, I understand that.—A. I will give you the whole history; but I want to know whether you want me to prove to this commission that rebates were paid from 1872 to 1887, when the business became an absolute monopoly; when the Pennsylvania Railroad surrendered everything over to the Standard Oil Trust?

MAY NOT THE EMINENT GENTLEMEN WHO SAY THE STANDARD HAS RECEIVED NO REBATES FOR TWELVE YEARS BE MISTAKEN?

Q. (By Mr. KENNEDY.) The other commissioners have said that there was no question about the practice of paying rebates before the passage of the interstate-commerce law. Since then there is some question, and it seems to me that the issue shapes up in this way: The Standard Oil Company people have come here and sworn that they have not asked or received rebates since the passage of that act. They say they were too shaming a mark under that act to get or ask for rebates.² All they desired was that they hold up the published rates and hold others to them. Now, it seems to me the thing for you to do, if you can do it, is to prove that they have taken rebates since that time. If you do that you can convict somebody of perjury.—A. I think that it is clearly proved that rebates were paid. Mr. Roberts, president of the Pennsylvania Railroad, went upon the stand in the court of common pleas of McKean County and testified that his railroad had not paid rebates from the time the interstate-commerce law took effect. Mr. John S. Wilson, whose testimony I have read, the general freight agent, corroborated Mr. Roberts. I have here the testimony in all these cases, and the witness of a hundred men, proving that Mr. Roberts and Mr. John S. Wilson were mistaken in their statements.³ You say that you have letters here filed by Mr. Archbold from honorable men representing the several railroads of the country.⁴ I have no doubt of their honesty. I have no right to even cast a reflection upon Mr. Archbold or upon his testimony, but I do venture to say that if Mr. George B. Roberts, president of the Pennsylvania Railroad at that time, now deceased, and Mr. John S. Wilson, its general freight agent, will come upon the stand and make oath that

tember, 1872. Notwithstanding this rebate the oil shipments via the Erie were so small in proportion to those by its rivals and to the aggregate seaboard receipts that I looked for the reasons.

I found the agreement next prior to that time as to shipments and rates was the one already in evidence between producers, shippers, refiners, and railroad companies, dated March 25, 1872. I asked why that contract was not observed, and was then convinced in reply that the agreement of March 25 lasted less than 2 weeks, and that at that early date the Empire Line was receiving a large drawback, or commission, from the Pennsylvania Railroad." Testimony of G. R. Blanchard; Proceedings of the Special Committee on Railroads, appointed under a resolution of the Assembly of the State of New York, 1879, pp. 336, 337.

¹ See p. 602.

² See Mr. Archbold, p. 627.

³ See p. 634.

⁴ See pp. 518, 536.

no rebates have been paid since the interstate-commerce law took effect, and following their testimony the auditors and bookkeepers of the road go upon the stand and swear that rebates have been paid, and we prove from 8 to 28 cents a barrel, and my claim is settled, and I receive my \$35,000 and costs of the suit, may not these gentlemen who have written these letters be mistaken? I would like to see their auditors and bookkeepers put upon the stand, as we put those of the Pennsylvania Railroad. We did not get this information until we brought their books into court. When they saw they were in a corner, they surrendered. I told you that out of a production of 28,000,000 barrels of oil a year the outsiders handle, I think, not over 8,000,000 barrels altogether, including the fields of Ohio, West Virginia, New York, and Pennsylvania. And do you think if these small men, handling this small quantity of oil, go into the courts and prove rebates from April 4, 1887, when the interstate-commerce act took effect, up to August, 1888, as we did in my own suit, and then bring suit before the Interstate Commerce Commission for rebates from that time up to 1893, and the Interstate Commerce Commission render a verdict of \$86,000 against the railroad; if these men of the Standard Oil Company, with their ability, as one of the witnesses has stated, or through their great competency, through their great brain, have carried oil to the ends of the earth as nobody else could, do you think for one moment that the Standard Oil Company would allow those small men, who have not the brains or the ability, to beat them on the transportation?

UNFAIR FREIGHT RATES, DISCRIMINATING FREIGHT RATES, CAUSE ALL OUR COMPLAINT AND TROUBLE.

Bring into the courts of this land the books of these railroads. They are responsible to-day not only for the acts of the Standard Oil Company, but for the oppressive monopolies in every line of business. Go to the stock exchange, where members were levied upon a dollar a head upon every cargo that came from the Western country. Go to the produce exchange, where they were levied upon barrels of flour that came from the Western fields. The interior mills of the country are paralyzed because of this unjust discrimination; I am a miller, and I make 500 barrels of flour a day. All these trusts, I say, are built up at the instance of the railroads; and I make the broad charge that had they obeyed the law and given equal rights to all shippers there would have been no trusts. There would not have been the dissatisfaction in the country. Go to Duluth, if you choose, to-day, and try to buy a carload of coal that you wish to take out into North Dakota, where I have a wheat farm. The coal is mined by the miners at from 35 to 50 cents a ton, drawn to Buffalo, I think, at a dollar, and loaded on the ship at a cost, as I understand, of less than \$1.75. Allow 75 cents for transporting it to Duluth and you have \$2.50. Three hundred and thirty-four miles from Duluth, by the Great Northern road, where my farm lies, west of Grand Forks 16 miles, bituminous coal is sold at \$6 and \$7 a ton. I say that the discrimination is the result of the coal combination, and the railroads are responsible for it.

ENFORCE THE LAW AGAINST GREAT LAWBREAKERS AS WELL AS SMALL.

The milk in the cocoanut of the success of the Standard Oil Company is transportation; unfair, illegal discriminations in transportation. Do you think that you can not prove rebates upon oil if you call the witnesses, with books and papers? The Pennsylvania Railroad had rather pay \$200,000 than permit me, or allow Logan, Emery & Weaver, and the court, to look over that 8 tons of books that were brought up to the court-house in McKean County. It would have sent them to prison. The injustice in this country is that a poor devil goes along the street and steals a loaf of bread when he is hungry, and he is arrested and taken to the courts and sent up for 10 or 15 days. If he steals a coat to keep his body warm he is sent to prison for a year. These great corporations, the men managing them, come into court and say "We won't bring out our books; we won't answer your questions; because if we do we shall incriminate ourselves."¹ There is the difficulty. The Sherman Act—the Federal act—has been proven constitutional by the highest tribunal in this land, and if it was enforced these people would go to prison. You can prove it, Mr. Chairman and Commissioners, if you choose; it is in your power to prove discriminations, I believe, to this moment, if there is any truth in the letter of Mr. Cowen and Mr. Murray.

¹ See Mr. Lee, p. 287; Mr. Archbold, p. 516.

² See p. 635, top; Mr. Monnett, p. 307, top.

REFINERIES ABSORBED OR WRECKED BY THE STANDARD.

Please turn to page 78 of my pamphlet, where you will find a list of refineries bought, leased, squeezed out, or bankrupted by the Standard. The list is taken from my testimony before the Committee on Manufactures in 1888. [Fiftieth Congress, first session, House Reports, vol. 9, pp. 232, 233.]

In this list there are some refineries that went out of business in 1867. I do not charge their going out of business to the South Improvement contract entered into by the railways; they went out previous to that. But you come up to 1870 and 1871, when some refiners had very large rebates, and others very small ones, or none at all. As I said yesterday, the Standard Oil Company have no patent on rebates. These same railroads have been violating the law ever since they were created, by giving rebates and drawbacks; but never so much, previous to 1872, that the average business man could not stand up under them. He could not make as much money as his neighbor, and he used to wonder why; and when this exposure came he learned the reason. But the contract of the South Improvement Company, and the very large rebate, the 100 per cent rebate, given to the Standard companies, was the means of driving the most of these refiners out of business. Now, then, these refiners were, most of them, in existence at the time of the South Improvement Company, 1872, a contemporaneous date. I have read to you this morning the repeal of the South Improvement Company charter. I have read to you the fair contract between the producers and refiners and the Standard Oil Company and the railroads. I have also said to you that the contract was violated within two weeks, according to the evidence of George R. Blanchard, formerly, and now, perhaps, the Central Traffic Association manager.

WHY REFINERS FAILED—TESTIMONY OF FRANK ROCKEFELLER.

The rebates from 1872, that are said to have gone out of existence practically, were so great that the business of the average refiner was silenced. I want to read to you from the evidence of Frank Rockefeller, whose testimony was given before the Congressional committee, July 7, 1876. I read from clause L.

"Q. Do you know how many refineries there were in Pittsburg prior to this alleged combination?—A. I have been told that there were sixty odd refineries.

"Q. How many are there now?—A. I was told by the same parties that there were now less than twenty, and very few doing any business.

"Q. (By Mr. REAGAN.) What is the cause of that reduction in the number of refiners?—A. I suppose the main cause has been the fact that they could not make money. I have understood that the same lever was brought to bear upon them as upon the Cleveland refiners. We had in Cleveland at one time about thirty establishments, but the South Improvement was formed and the Cleveland companies were told that if they didn't sell their property to them it would be valueless; that there was a combination of railroad and oil men; that they would buy all they could, and that all they didn't buy would be totally valueless, because they would be unable to compete with the Southern Improvement Company, and the result was that out of the thirty there were only four or five that didn't sell.

"Q. From whom was that information received?—A. From the officers of the Standard Oil Company. They made no bones about it at all. They said 'If you don't sell your property to us it will be valueless, because we have got advantages with the railroads.'

"Q. Give the names.—A. J. D. Rockefeller, H. M. Flagler, and O. H. Payne.

"Q. (By Mr. ROSS.) Mr. Payne is the son of a member of Congress of that name?—A. Yes, sir.

"Q. Have you heard these gentlemen say what you have stated?—A. I have heard Rockefeller and Flagler say so; other parties have told me that Payne had used the same argument with them.

"Q. What other parties?—A. I won't give the names now. There are some 20 men in Cleveland who sold out under the fright, and almost any of them would tell you that story.

"Q. Give us the names of some of those that sold out?—A. J. W. Faucett, of Cleveland; W. C. Scofield, Joseph Stanley, John Critchley. Those are some of them.

"Q. (By Mr. DUNNELL.) Do you make the same statement with regard to the shipment of crude oil to the seaboard that you do with regard to the shipment of refined oil?—A. We do no business of that kind."

If you will refer to my pamphlet, page 82 (or to Fiftieth Congress, first session, House Reports, vol. 9, p. 234), you will find that in Pittsburg there were 58 refineries in 1877. Thirty refineries had been crushed out and dismantled and no record left. The 28 were what were running and what was left.

Q. (By Mr. PHILLIPS.) What date?—A. 1877. The remaining 28 had been bought or leased by the great monopoly.

RAILROAD OFFICIALS STOCKHOLDERS IN THE STANDARD.

I do not read now from the same book, but it is the same testimony and it is in the same book, but I can find it quicker in this one. [Reading:]

“Q. You spoke a while ago of having personal knowledge of certain railroad officials having been stockholders in the Standard Oil Company. How do you know that?—A. I know it from the officers of the Standard Company telling me that they were stockholders.

“Q. Who are they?—A. William H. Vanderbilt, vice-president of the New York Central, was at one time, also Amasa Stone, of Cleveland, and I have very good reason for believing, though I do not know, that Mr. Devereaux and Mr. Newell, both stockholders at the present time. Mr. Stone sold his stock some two years ago; at the time when he quit the railroad he put the stock on the Cleveland market, and is not, I believe, a stockholder to-day.

THE OIL POOL—THE QUESTION, WHO GOT THE REBATES?

“Q. (By the CHAIRMAN.) Give us the names of the officials of the railroad that you think received the benefit of this rebate.—A. Understand me; I do not say that they did get it. It is merely my opinion.

“Q. Give us the names of the gentlemen who you think do reap the benefit of that rebate.—A. I think that Dr. Devereaux gets it, and that Mr. Newell gets it; that Tom Scott gets it, and that Mr. Vanderbilt gets it, and other officers of those roads whose names are not in my mind just at present.

“Q. What do you mean by a pool—a pool among the railroads or among the oil men?—A. I do not give this as a positive fact, but as I understand the argument, I understand the New York Central, the Erie, the Atlantic and Great Western, the Pennsylvania Railroad, the Cleveland, Columbus and Cincinnati, and the Baltimore and Ohio railroads had a pool or combination for the purpose of shipping oil, and oil only, and in this pool the Baltimore and Ohio gets a certain number of barrels to go over its road; the Lake Shore has so many to go over its road; the Pennsylvania got so many to go over its road from different points in the country, but on oil shipped over these roads by the pool to the Standard Oil Company there is a rebate or drawback from the shipment of so much, which is paid into this pool, over whichever road the oil may go, and the rebate is divided up between the Standard Oil Company and the railroad officials.

“Q. The railroad officials, do you say?—A. So I understand it; I do not say that of my own knowledge.

“Q. Then it does not go to the railroads themselves?—A. No, sir.

“Q. But to the railroad officials?—A. To the railroad officials; yes, sir.

“Q. How do you think it stands related to Cleveland?—A. We should do the same as we have done in the past years and are doing at the present time. We are shipping our oil at the present time by lake and canal because we can not ship by rail without losing money; by lake and canal we can just save ourselves.”

This was testimony in 1876, and the contract that I have read was taken October 1, 1874. Have you any doubt of rebate (after this evidence of these men) existing between 1873 and 1876? Why, I could read you volumes upon it.

LATER REBATES—THE WITNESS COLLECTED REBATES UP TO 1893.

Q. (By Mr. RATCHFORD.) I want to remind the witness that if he seeks to prove before this commission that rebates were paid 23 or 28 years ago, his testimony avails very little; what we want to know is whether these rebates have been paid last year or the year before. You are wasting your time in endeavoring to prove something of little consequence. I do not understand the Standard Oil Company has disclaimed discriminations in their favor prior to the passage of the interstate-commerce law. I would ask that in order to make your testimony effective and to say the most in the least time possible, you confine yourself to recent years.—A. That is what I asked yesterday morning, whether the question was to be taken up from the beginning, and I understood the object was to trace it from the beginning. The witness on the stand stated that no rebates were paid. I was endeavoring to show that contracts were still in existence and I was about to—

Q. If these contracts are still in existence, as you observe, you will make a point—A. I do not mean to say they are in existence except by rebates and the methods of carrying out—

Q. (By Mr. PHILLIPS.) He stated yesterday that the National Transit Company was organized under precisely the same language as the South Improvement Company, and he is tracing it on from that.—A. I beg the pardon of the gentleman and the commission, but I was simply following out that which I was asked to do.

Q. (By Representative LIVINGSTON.) Do you lay down the proposition now that that contract is binding and is being enforced?—A. No.

Q. How long since it expired?—A. It was supposed to expire 2 weeks after it was made, so far as the fair rates were concerned, the agreement between all the railroads in this combination to accept the rebate system entirely, and get the opportunity to go on as it had done in former years. I am trying to show you that from that time up to the present time these rebates were participated in, I do not say by the Standard Oil Company, but I do say that we have collected them on oil we shipped, and I suppose they have on theirs.

Q. How lately did you collect any rebates?—A. Up to 1893.¹

Q. That is the way to get at it.—A. I stated it yesterday; I gave the evidence in full yesterday, and produced the papers that rebates had been paid and acknowledged up to 1893.

Q. (By Mr. RATCHFORD.) The point is this; what is the use of going beyond 1893?—A. I do not want to if you do not want me to.

Q. (By Mr. KENNEDY.) These rebates ordered paid in 1893 were for oil carried when?—A. From 1888 up to 1893, because we got judgment up to 1888 in the courts of Warren County, and the balance was carried into the Interstate Commerce Commission.

Q. (By Representative LIVINGSTON.) It was made incumbent on this commission by Congress to learn, if possible, whether by combinations, trusts, or corporations legitimate competition was interfered with or lessened in any of these industrial pursuits. I want to know if you have any testimony that will lead up to the fact that the railroads, as you asserted yesterday, are largely to blame for this discrimination in favor of one oil company or against another?—A. I did not say that. I said that the Standard Oil Company under these former contracts had had rebates, and I said that, though some of these contracts had been annulled, their provisions are practically carried out, and I cited instances where the trade is being affected at the present time.

Q. I want that testimony explicit, if you have it, before you get through with your testimony.

Mr. PHILLIPS. The Senator will proceed in his own way and come to that at the proper time.

HOW THE STANDARD GREW IN 7 YEARS FROM 4 PER CENT OF THE REFINING CAPACITY OF THE COUNTRY TO 90 OR 95 PER CENT.

A. More than 95 per cent of the refineries that existed in 1872 were driven to the wall before 1877. I can give you the proof of it, but I will make that bald statement. I proved yesterday, by the testimony of Mr. H. M. Flagler, that the Standard Oil Company was formed in 1870 in Ohio. I also proved that in 1872 W. H. Vanderbilt and other railroad magnates became stockholders of it. I also proved that rebates had been paid, and I am prepared to prove that they were paid up to 1879. The testimony was taken before the Bacon committee of 1888. First, Mr. H. M. Flagler swore (Fiftieth Congress, first session, House Reports, vol. 9, p. 288) they had a capacity of 600 barrels per day of crude oil in their refinery, the production at that time being about 16,000 barrels a day. That would give them 4 per cent of the refining capacity at that time. At that time there existed in the oil country, spread out from Louisville, Ky., to Portland, Me., more than 250 refineries. Mr. Henry H. Rogers and Jabez H. Bostwick, deceased, members of the Standard trust, swore, in 1879, before the Hepburn committee,

¹ See pp. 609, 636, 516.

* Q. What are the refiners about here with whom that alliance was made, and are they or are they not all of them covered by the Standard Oil arrangement?—A. They would come in and then they would go out; there is no refiner that I know of, with one exception, about New York, but what has been in the association.

* Q. What are the refiners that are now in association of the Standard Oil?—A. The people that are working in harmony with us comprise about, I should think, 90 or 95 per cent of the refiners.

* Q. Now tell us their names, the leading ones.—A. Some of the leading ones? The Standard

that they owned 90 to 95 per cent of the oil industry of America; that is, its refining capacity.³ Bear in mind that in 1870 and 1871 they owned 4 per cent, and in the brief space of 7 years they silenced the fires in 95 per cent of the refineries, except their own. The history is here. You ought to have it. Every man ought to read it and know the method by which they accomplished that feat of throttling that great industry from 1872 to 1879.

Q. (By Mr. PHILLIPS.) Do you desire that that shall be put in the record, so it shall be before the commission?

Q. (By Representative LIVINGSTON.) Let him state in his own way how they did that in 1870.—A. My own way is simply the record of this book—the Commonwealth v. the Pennsylvania Railroad Company, a suit which was for 8 years being tried and the testimony being taken.

Q. Can you state in a few words how it was?—A. Discrimination.

Q. What particular method?—A. No different method; only what I have explained; the railroads paid it to them.

Q. If the railroads were guilty of this, tell us how they did it; in the form of rebates?—A. Certainly. For instance, a man owned a refinery or several refineries in the oil country; at the beginning of the business the Standard Oil Company did not have any. They gave a rebate to the men that owned the pipe lines of 22 cents a barrel for all oil loaded upon the cars on the railroad. The man that owned a refinery on the creek and owned his own pipe line was not permitted to have that rebate. There was 22 cents against him right there.

Q. That was one of the methods by which they drove them out of the business?—A. Certainly. How could you do business against 22 cents profit? The 22 cents alone would have driven them out; but in addition to that, they got 49 cents more.

Q. How?—A. Transportation by the railroad and under agreements. That is the way they got from 4 per cent of the oil industry in 1871 to 90 or 95 per cent in 1879, and the whole country was silenced.

IT WAS NOT TO BENEFIT THEIR STOCKHOLDERS THAT THE RAILROADS MADE ALLIANCES WITH THE STANDARD.

Q. What did the Standard Oil Company give the railroads for doing that for them?—A. I have just read Mr. Rockefeller's testimony, and he gives the names of the men. He said the railroads did not get it. I read you his evidence; take it for what you choose. He was driven out of the business. Out of the fifty odd refineries in Cleveland, 20 remained, and they were owned by the Standard Oil Company.

Q. Well, you do not mean to say that the railroads lose that 49 and 22 cents? They recoup somewhere?—A. I mean to say the stockholders did not participate in it.

Q. The stockholders lost it?—A. I can answer that question; that there were times when there were rebates of 40 cents a barrel; there were times when there were rebates of \$1.06, and times when there were rebates of \$1.32 a barrel—rebates paid to these people not only on crude but on refined as well, not only on their oil but on all the oil anybody else shipped.¹

Q. Now, then, as the stockholders evidently lost that, as you stated—A. I do not know.

Q. Where did the money go; where could it go?—A. Well, they may have spent it for wine or may have bought a farm—I do not know anything about it.

Oil Company; Charles Pratt & Co.; the Sone & Fleming Manufacturing Co.; Warden, Frew & Co., of Philadelphia; the Standard Oil Company, of Pittsburg; the Acme Oil Refining Company, of Titusville; the Imperial Refining Company, of Oil City; the Baltimore United Oil Company, of Baltimore."

Testimony of Henry H. Rogers; Proceedings of the Special Committee on Railroads, appointed under a resolution of the Assembly of the State of New York, 1879, p. 2815.

Mr. Rogers afterwards testified (p. 2754) that his estimate of 90 or 95 per cent was made "as regards the refining capacity of the country."

On pages 2806 and 2806 of the same report Mr. Bostwick's testimony appears, as follows:

"If some one man has got 95 per cent of a business, of any commodity, I don't care what it is, they are pretty near masters of the situation.

"Mr. STERN. Do you admit that the Standard has 90 per cent of the business?

"The WITNESS. I do not know that I admit it, but I am just giving an illustration.

"The CHAIRMAN. Mr. Rogers swears that they have from 90 to 95.

"The WITNESS. I will say this much, that parties that are in harmony with one another I believe do 90, if not 95, per cent of the entire oil business."

¹ See Mr. Archbold, p. 579.

Q. You have no evidence to show where it went?—A. No more than the testimony that was taken before Congress, which shows where it went.

Q. What does the evidence say?—A. I can take Mr. Rockefeller's testimony; it gives the whole history, and he is not the only witness. I read this morning that Mr. Vanderbilt got some of it and Mr. Devereaux got some of it.¹

THE WITNESS WAS TWICE FORCED OUT OF BUSINESS BY RAILROAD DISCRIMINATIONS.

Q. (By Mr. KENNEDY.) I would like to have you state to this commission how you disposed of your different refineries. What became of them? You had one in Crawford County, I believe, and one later in Philadelphia.—A. Undoubtedly someone has told you I sold out to the Standard?

Q. No; I have no such information as that.—A. In Titusville, Pa., the Octave Oil Company had about eight hundred barrels capacity—eight hundred to a thousand—when the Standard Oil Company was formed. We were invited to come into the Standard Oil Company. We were told that if we would go in, we should be allowed quite a large amount of money for our refinery, taken in stock of the company—no money. No money was used in forming this octopus from the start. They only had a capital of \$1,000,000, and the system was merely to turn the crank and make stock and take it from your pocket. The contract was presented to our company and it seemed to us illegal and not right, and we refused to go in. We attempted to do business the rest of 1872. These rebates I have named here were against us, although the South Improvement contract had been repealed. We struggled along until the latter part of 1873, and had to quit—shut down our refinery. It cost us \$85,000 and I think we got \$45,000 for it. We were forced out.

Q. Was that dismantled?—A. That ran for two or three years, and it was finally dismantled. The oil industry was at one time located in the vicinity of Oil Creek, or at least 95 per cent of the manufactured product of oil was in the State of Pennsylvania at one time, and at the coast harbor at New York and in Philadelphia, but the whole country has been depleted except some in Pennsylvania belonging to the independents—demolished.

Q. I asked you about the other one.—A. The other one is in Philadelphia.

Is that dismantled?—A. Yes.

(By Mr. PHILLIPS.) When was that established?—A. It was built in 1880 or 1881, and built at the solicitation of the Pennsylvania Railroad, after the close of the suits of 1879, in which they said they were going to do better; but discrimination again drove us out, which I have shown to you in this mass of evidence. I proved there was, on every barrel of oil I shipped to that port and about that works, a discrimination of from 8 to 28 cents a barrel.² Who could do business against it?

CARS WERE REFUSED FOR CARRYING THE WITNESS'S OIL.

I owned a pipe line in my country, from my wells and other wells down to the railroad, and they refused to furnish me cars. The Pennsylvania Railroad owned 1,126 cars—tank cars, bulk cars. I used them for a time, until the order came from the Standard Oil trust that I must get no more oil. Previous to this time they had been delivering my oil. The evidence all shows it, and there is the whole history right before you in that very book you refer to.

Q. (By Mr. FARQUHAR.) A good deal of your own business is right here?—A. It is all there.

Q. (By Mr. PHILLIPS.) You will make that a part of your evidence here?—A. Anything you want to use as evidence, use it, and anything you want to cut out, cut out.

Q. (By Mr. KENNEDY.) What became of your Philadelphia refinery?—A. It was sold to the Standard Oil Company.

Q. Was it dismantled?—A. It was torn down. Another refinery close by, an investment of \$4,000,000, that is gone—torn down.

Q. (By Mr. RATCHFORD.) Did they buy it to dismantle it, as far as you know?—A. They undoubtedly did.

Q. Dismantling took place soon after the sale, did it?—A. Within a year. These cars were sent off into Colorado, Louisiana, and all over the country. A requisition was made for these cars and every one sent out of the State excepting 248, by absolute count. I sent three men in different directions to know what became of the cars so quickly and to make reports back to me. Well, the oil commenced to come into my tanks so that I could not do anything with it, and my property was

¹ See p. 645.

² See pp. 634, 635; Mr. Lee, p. 287; Mr. Archbold, p. 516.

put into the hands of the Producers' Protective Association, because they wanted me to shut down my wells. I had a large production at that time—2,700 barrels a day—and I was blocked in it. With a great big refinery in Philadelphia and a railroad running through my land, I could not get a single car. Mr. Merchants, of the Rochester and Pittsburgh Railroad, told me I could not, and it is in evidence: "They are going to take our coal traffic away from us if I draw your oil." I immediately applied to the courts against the Rochester and Pittsburgh road, and made them bring cars in, such as I could. I got one in a week, or one in two or three weeks, or one in four weeks; but I was deviled to death, until I had to quit.

THE WITNESS HAS NOT WISHED TO COMBINE WITH THE STANDARD.

Q. (By Mr. KENNEDY.) I want to say to you in all kindness that I think you have made a remark that was rather discourteous and unkind in regard to somebody having told me that you entered the office of the Standard Oil Company in order to see them about buying your property. When Mr. Archbold was on the stand he did tell about other people having gone to the Standard Oil Company to enter a combination with them,¹ but your name was not mentioned, and I have no information that you went there at that time.—A. It was brought up in 1888, and ever since I have had to face a charge that I was groping around trying to sell to the Standard Oil Company.

Q. (By Representative LIVINGSTON.) Do you not think that you had good cause to go around to sell if you could sell?—A. Well, I did not want to.

Q. I should have sold a long time since.—A. I would not. I have stuck to my text. I do not like it; it is gross violation of rights.

Q. It is a question of sentiment with you principally?—A. No; it is a question of principle. I can not afford this—not now. I may if this thing keeps on—in 10 years longer, if God permits me life. I will go in the face of the law and protect my own rights if necessary.

NO BITTERNESS IN PENNSYLVANIA ON ACCOUNT OF THE REMOVAL OF REFINERIES.

Q. (By Mr. FARQUHAR.) In this matter of the Standard Oil Company buying up refineries and dismantling them or demolishing them, has it not been in Pennsylvania for a great many years quite an irritating subject with a great many of the smaller places there that they were abolishing these refineries and the trade passing away from this section? Has it not caused an im bitterness on the part of the people where the local refineries had been established and were then taken away? Is it not a common saying in Pennsylvania, as against the Standard, that they have changed the business from the Pennsylvania field to New York? Has not this caused an immense amount of hatred, bias, and vituperation toward the Standard Oil Company?—A. No.²

Q. You say no?—A. No.

Q. In your own former testimony did you not speak of the complaint of the Pennsylvanians that Pennsylvania, and especially Pittsburgh, had been robbed of the legitimate work that belonged to it; that the whole labor of the refining had been swept out of the State of Pennsylvania, wages had been taken away from Pennsylvania and had been taken down to New York by the pipe lines?—A. Since that time Pennsylvania has got more refining capacity than in those days. Philadelphia is one of the largest manufacturing centers. They themselves have come back to Pennsylvania and built up the most enormous works. That was not the condition when this testimony was given, but in these times it is different.

PENNSYLVANIA IS THE BEST PLACE FOR REFINING OIL.

Q. I am glad to know that. Now, as a refiner and business man, do you not think there were legitimate reasons why a good deal of the refining might better be done in New York, especially in view of the by-products that came into general use, than it could have been in scattered districts in Pennsylvania?—A. No; and I will tell you why.

Q. So you think the representatives of the Standard Oil Company were incorrect when they testified before this commission that it was purely a business matter, and not a matter of prejudice, that they had dismantled this business in Pennsylvania and Ohio and substantially done the work in New York?—A. No; that is entirely wrong. They are mistaken in the answer to that question, from

¹ See pp. 530, 531.

² See Mr. Lee, p. 208.

the very fact that they have come back there to-day and are manufacturing by-products very largely. They have come back there because fuel is cheap; because natural gas is there in large quantities. There is an abundance of most excellent water, and I believe to-day they are sorry that every single refinery they have is not located somewhere in Pennsylvania. They have come back there and spent millions and millions of money in Pennsylvania since they made that excuse, that it was not the proper place to refine oil.¹

Q. (By Mr. PHILLIPS.) You were about to go into the discriminations up to the time of the passage of the interstate-commerce law?—A. Yes; I have figured the matter up to 1890.

Q. Then will you oblige the Commission by taking it up to that time?—A. I have no further evidence.

Q. You have already covered that ground, you think?—A. I have given enough. I have some other matters where rebates are collected.

Q. Then are you ready for questions in regard to the formation of these recent companies, pipe lines, etc., at this time?—A. Yes.

THE WITNESS DETERMINED IN 1890 TO UNDERTAKE A PIPE LINE TO THE COAST.

Q. It has been charged here that you and others are connected with a trust in various pipe lines in the oil country—the Pure Oil Company. Will you oblige the commission by explaining that?—A. In 1890, in the latter part of the year, owing to the high rates of freight over the railroads, the transportation of our refined and crude oil was so expensive that personally I determined to build a pipe line to the Atlantic coast, if possible. In a secretive way, as everything had to be done then and has to be done now, I placed in the field some twenty expert right-of-way men to secure the right of way for a pipe line.

NEGOTIATIONS WITH THE READING.—“WE SHALL DISTURB OUR RELATIONS WITH THE STANDARD.”

I knew very well that it would be impossible for us to go clear through to the coast with a line, and I went to Philadelphia and saw Mr. McLeod, the president of the Reading Railroad.

I presented my question to him, with a proposition that we would get the pipe, the right of way, to Williamsport, and there connect with the Reading Railroad, and with a right to lay our pipe line, for a time, as we could build it, on a right of way of the railroad. I told him the amount of tonnage that we would give him, and made preliminary arrangements, and he said to me: “You return after a time.” I did; I was alone; nobody knew anything about what I was going to do. I met Mr. McLeod and Mr. John Taylor, the general manager, and Lowry Brill, the general freight agent. Lowry Brill is now of the New Jersey Central. All these gentlemen came into the room. And, by the way, there was one other man; I do not remember his name; anyway, all the chief officials of the road. I had to reduce my proposition to writing. The rate of freight was agreed upon and the basis of a contract was put in form, and I was to return at their dispatch when they were ready. I never got the dispatch. I returned, and took with me some other gentlemen from the office, and I said: “What is the reason of this?” And they said: “If we give you this contract we shall disturb our relations with the Standard Oil Trust, and we can not do it;” and I was dismissed.

NEGOTIATIONS WITH THE NEW YORK, ONTARIO AND WESTERN.

From there I went to New York, and had a conference with the members of the Columbia Oil Company of New York, Mr. King and Mr. McDonald, they being independent refiners of the coast. I laid the matter before them, and we went from there to the office of the New York, Ontario and Western Railroad, which runs from Oswego, N. Y., to New York City. We then concluded, Bradford being just here [indicating on map], to follow the boundary line of Pennsylvania bordering on New York, to a place called Hancock, N. Y., where the Erie Railroad crosses the Delaware, and into the small city or village of Hancock, and across to the New York, Ontario and Western Railroad, it being to the north of the Erie Railroad about 1 mile.

THE STANDARD TAKES AN INTEREST IN RIGHTS OF WAY.

Our men secured this right of way through the State without very much opposition, because the Standard Oil Trust had not got on to our movements. Finally

¹ See Mr. Lee, p. 268.

it became known; and all at once came in a number of men who were very anxious to build a line right exactly where we were building one, although the Standard Trust owned a line right parallel with the State line, back a little in the country, running clear through to New York City. They did not need the line, because lying in the ditch were two parallel lines running from the oil country, from Olean, to New York; but they did not want us to build a line, and these men, as set forth in this pamphlet, came along and took up rights of way on top of our rights of way. They went to the records of the several counties, and examined the titles to the land that we had got rights of way through; and if there were mortgages against these properties they bought the mortgages. The owner was in debt for the place, and if he had overstepped his rights in law, by holding that mortgage they induced that man to give them another right of way. In the State of New York, beyond the Stateline, we had about 6 miles to go down to the Delaware river; and they came along and bought strips of land right across our right of way in Pennsylvania—strips of land from a mile to a mile and a half long—throwing us into the courts in every instance where they could.¹

NEGOTIATIONS WITH THE ERIE.

Before we started to lay our pipe I went to the Erie Railroad office in New York, and saw Mr. George M. Thomas—the president of the road, I think he was at that time. I met Mr. Thomas, a perfect stranger to me, and I told him what we wanted to do. We wanted the right to go under the Erie Railroad at Bradford. "Why," he said, "certainly you can go under the railroad with your pipe." "Well," said I, "we are going down to Hancock, and we want to cross your railroad or pass under it, either in the deep water of the Delaware or else through the bank of the road, with our pipe." "Well," he said, "we are disposed to assist all progress, and I will take that under advisement, and you can come back here in two weeks. But you go ahead and go under our road at Bradford or any other point that you can." I said I was very glad that he received me so kindly, and that he gave me so much encouragement; that I would commence laying our line on the Ontario and Western Railroad, a mile north of Hancock, within the borough limits. "Well," he said, "you return, and the matter will be fixed up all right." I said: "I am afraid that something will intervene, some power that will overcome you in this matter, and your views will be changed." "No, sir," said he, "the Erie Railroad runs its own business, and whatever I have done will be carried out; but this other matter I shall be obliged to take up in such a way that I shall be certain." I then got up to go, and he detained me. We discussed the question of transportation and business generally; and I went away and went to work, and worked a couple of weeks connecting our line to the Ontario and Western road; bought 11 acres of ground on which to build our storage tanks, and put in the pipe.

PIPING REFINED OIL—THE STANDARD SAID IT COULD NOT BE DONE.

We laid two lines, refined and crude. That is a thing that the Standard Oil Company never did. They said it could not be done. We pump refined oil 500 miles and deliver it on board vessels in New York, and it comes out just as bright as it did at the refinery. We pump our refined oil.

Q. (By Mr. PHILLIPS.) Do the Standard Oil Company pump theirs?—A. No; they said it could not be done, although they are the inventors of everything, and are the benefactors of the world.²

THE ERIE RAILROAD IS HELPFUL.

I laid that line down to the Erie bridge—the big iron bridge that crosses the Delaware—and I commenced on the other side of the bridge, 120 feet away from the upper side, or the line of the right of way, and I laid the line out toward Pennsylvania. We had had our fights over this right of way. I knew the men that were there taking up these rights of way to have been in the employ of the Standard Oil Company. I knew the men personally, and my men knew them. If necessary I can call their names at this moment. We had overcome, as we thought, the obstacles, and I went back to New York to see Mr. Thomas, and he came from his inner room and took me by the hand and said: "You can go under our bridge at Hancock in the deep water if it is advisable, or in the bank," and he spoke to the general manager of the road—his name I forget; he was present at our conversation; so was Mr. King, of the Columbia Oil Company—and he said: "You

¹ See Mr. Lee, p. 264; compare Mr. Boyle, p. 436.

² See Mr. Lee, p. 267; Mr. Lockwood, p. 388; Mr. Boyle, pp. 413, 445.

wire Mr. Durr, the division superintendent of the Susquehanna division, to meet Mr. Emery at Hancock to-morrow morning and go with him to locate their oil pipes, either to go through the deep water of the Delaware, or to pass through the bank of the Erie grade." I took the 9 o'clock train. This was done—this message was sent—I saw the gentleman write it. I took the 9 o'clock train, went to Hancock, and got there about 2 o'clock in the morning, and I immediately went to the Chandley House, near by. I was anxious to know whether Mr. Durr was there. I was afraid something would happen; but to my surprise Mr. Durr was there waiting for me. The next morning I took a carriage—my wife was with me—Mr. Durr, my wife, and myself. We rode to the Delaware River, which was not half a mile away, crossed the river, it being low, sounded the water, went upon the bridge and saw where the rocks were, etc., and concluded the best thing we could do was to go through the bank. There were two ends of pipe 120 feet apart. He said: "Mr. Emery, I will make a profile of this and will have it in your office one week from to-day." That was to be on Thursday. I said, "All right." I went home and I started our pipe, and the very first place where we had to lay the pipe was under the Erie track.

THE ERIE CEASES TO BE HELPFUL.

Q. (By Mr. CLARKE.) What?—A. Under the Erie Railroad track. It was in the switch yard; some four tracks side by side; and it was pretty difficult to go in there. We went there, honestly supposing we had a right to do so. I had spoken to the superintendent about it, and he did not know anything different. When I returned to New York, previous to this time, he said, "All right." We were working away with our men, and the first thing I knew, down came a force of two or three hand cars, and they jumped on the track and attempted to put our men out of the ditch. I was at my office uptown. They went to the nearest telephone, and I went down there, and they were having a contest. My refinery was close by, and I ordered the whole force out, and we drove off the opposition. We had what we term now-a-days a "scrap." I drove them away, and went on with our work.

Q. (By Mr. PHILLIPS.) That was near Bradford, was it?—A. Right in the city of Bradford. The next morning we were enjoined by the court. This was the Erie Railroad that was objecting now, you understand.

Q. And was it in the State of Pennsylvania, where you had the right of eminent domain?—A. Yes; I should have said that before. A letter was addressed to me by our attorney. This letter I will put in evidence, because I know all the facts.

DIFFERENT LAWYERS, REPRESENTING DIFFERENT RAILROADS, RAISE THE SAME OBJECTIONS AND SUPPORT THEM WITH THE SAME ARGUMENTS

SEPTEMBER 8, 1899.

HON. LEWIS EMERY, Jr.,
Bradford, Pa.

MY DEAR MR. EMERY: In reply to your inquiry am pleased to make the following statement:

The first legal opposition that we met with in constructing the line of pipe of the U. S. P. L. Co., was an attempt to prevent us from laying pipe under the track of the Erie Railroad within the limits of the city of Bradford, at a point where both the National Transit Company and the Tide-Water Pipe Company had previously laid their lines, and, so far as can be learned, without the slightest objection on the part of the railroad company. We presented our bond and petition to the court of common pleas of McKean County, and were met by attorneys on the part of the railroad objecting to the granting of the prayer of the petition and the approval of the bond. They had at this hearing a very exhaustive brief, with which they seemed not to be familiar. They apologized to the court for the way in which they presented same, saying that it was prepared by Mr. Elliott, and that they had not had the time to carefully consider the same. I took very full notes of the authorities cited and of the points made by the attorneys for the railroad company.

A short time after this I had occasion to appear in the courts of Tioga County, representing the U. S. P. L. Co. in opposing a bill to restrain the company from laying a pipe under the Tioga branch of the Erie Railroad. The attorneys at this hearing seemed to have the same brief as was used in the hearing in McKean County, citing the same authorities and making the same points. Later I represented the U. S. P. L. Co., presenting a petition and bond to the court of Brad-

ford County, for the right to lay a pipe under the track of the Northern Central, at a point south of Elmira, and was again met by what appeared to be the same brief, authorities, and points. The objections in all the cases were many, and the authorities cited numerous, and what seemed to me strange was the fact that in each there appeared to be the most complete harmony. It is wonderful how the minds and labor of attorneys so far separated should bring out the same objections and support them by the same argument, yet so it was.

Very truly, yours,

W. E. BURDICK.

THE CONTEST WITH THE ERIE, AT HANCOCK.

We bought our way under every single road from there to Hancock. When we got to Hancock I knew there was something wrong. But I went with my men to connect up these 2 pipes, 120 feet apart, and we were met first with 2 derricks and 2 locomotives, a flat car containing lumber, and a little brass cannon that had been used for shooting holes through the tank that was run off the track, and a car holding about 75 men. The moment we came there with our men they supposed, of course, we were going to connect up these 2 pipes. They threw off the old slabs and stuff, and built a sort of a cob fire over each end of the pipe. They threw off the lumber and built a house on each side of the track, and put 2 men in them with Winchesters. We stayed there 8 months looking one another in the eyes. We never got under the track. We spent \$70,000.

THE NEW YORK, ONTARIO AND WESTERN VIOLATES ITS CONTRACT.

The Ontario and Western were induced to violate their contract. I should state that we went by the Ontario and Western because we got a contract out of them, by which they would transport our oil down to Cornwall on the Hudson; and there we were going to put it into boats, and draw it down to New York and deposit it in our tanks. That contract gave us the right to construct a pipe line on the right of way to the Hudson, for which we were to pay them a royalty of 2 cents a barrel. We were even cut off from that contract by the same power.

MORE LEGAL CONTESTS—THE SAME BRIEF—CONTRACT WITH THE NEW JERSEY CENTRAL.

We kept a standing army there at Hancock. We went back 70 miles to the Susquehanna River, and we flanked the enemy until we got down to Wilkesbarre. At Wilkesbarre we had contest after contest in passing under the tracks of the D., L. & W. and the Lehigh Valley and other roads. This same brief came into the court. Seven lawyers, representing different lines, were against us, each one reading the same brief, making the same points. We beat them; and we built our line through, and we connected with the Jersey Central Railroad, a friendly railroad, which had a contract with us to draw our oil for a term of 99 years, with a right to cancel the contract by a certain number of months notice.¹

Q. Who had the right to cancel the contract, the United States Pipe Line Company or the railroad?—A. The United States Pipe Line Company. We stopped there for a time because we were out of money. It cost us more than \$150,000 to fight our way to that point; their keeping us from going to Hancock, and the expense of going down to Wilkesbarre, litigation, loss of time, and loss of our business. Then we stayed at Wilkesbarre about 1½ or 2 years, and we concluded we would go on. So we secured a right of way from Wilkesbarre over to a place about 90 miles above Easton. We built that line there to the river and then we went into Jersey. The first thing we had to pass under was the Pennsylvania Railroad.

NO FREE PIPE-LINE LAW IN NEW JERSEY—THAT OF NEW YORK HAS BEEN AMENDED AWAY.

Q. Was there a free pipe-line law in the State of New Jersey?—A. No.

Q. (By Mr. KENNEDY.) Is there in New York?—A. Yes. You want me to explain the law to you?

Q. (By Mr. PHILLIPS.) No.—A. I think I had better do that. In 1878 New York passed the first pipe-line law that was passed in this country. It was passed under the same pressure as the Pennsylvania law. It was a good, free, open law, and

¹ See Mr. Archbold, pp. 529, 530; Mr. Phillips, p. 601.

the Pennsylvania law is copied from it. But someone in 1890, just before we got down to Hancock, went in and had that law amended, and it became absolutely inoperative.

Q. (By Mr. KENNEDY.) And you can not get the right of eminent domain under it?—A. You can not get the right under that. The pipe line to Buffalo was laid under the original law. It was a good law.

GOOD FORTUNE IN GETTING PAST THE PENNSYLVANIA.

We had to go under the Pennsylvania Railroad. Fortunately, we found one of the Secretaries of the Treasury of the United States who lived in Trenton—I can not think of his name now—but we searched up a title and we found that he owned an acre of land, just 1 acre, which was used many years ago, during Revolutionary times, for a wharf and a dumping place for very, very old furnaces, iron furnaces, just back there. He did not know he had it himself until we found his title. We bought it, and paid \$500 for it, and we went under the Pennsylvania track.

Q. Did they have the right of way across this?—A. Yes; but we had a title for the land. We had the title and went under there after a long contest.

TROUBLE WITH THE D., L. & W.

We got over to the D., L. & W., within the borough limits of Washington, N. J., and we bought a farm, the Stewart farm, over which the old Morris and Essex Railroad passed. The charter was granted in 1836; and an easement had been bought over that land and paid for—had a deed of it. We bought the fee title of the land over which the right of way was given. Our attorney said we had a right to occupy that land. Six or 8 months before that we had put in a piece of pipe to test what they were going to do, and they tore it out. So we thought we would not be beaten, and I took 50 men from our line and we went over there in the dead of the night and I placed my men on both sides of the hill. They had a watchman of the road passing up and down with a lantern in his hand, back and forth. He would come up to the culvert under which we were to pass the roadway, 14 feet high from the ground. He would look down and see that silence prevailed and go away. About 4 o'clock in the morning we took possession, and when 9 o'clock had arrived on Sunday morning we had two pipe lines buried 4 feet under the earth, and fastened to timbers as heavy as a span of horses could draw. We piled rocks on top of them and anchored them with chains, built a house on each side of the culvert of the right of way and took our breakfast in camp. About 12 o'clock some men came along and said: "You get out of here," and came down with their picks and bars. I was there in the pit myself and he said, "You will not get out?" And I said, "No; we belong here. It is our line and we will not disturb the railroad." He said, "You will get out; come along, boys." I said, "Don't be hasty;" but he was a little hasty and I told the boys to take the men by the shoulders and the seat of the pants and take them out and lay them down carefully, which they did. On Monday morning two wrecking cars with 250 men rode in from Hoboken. They made a charge on the little band in the pit and we drove them out. That is all there is about it; we drove them out.

Q. (By Mr. CLARKE.) When was this?—A. This was in 1891. They wanted to compromise the matter, and wanted to go to the courts, where we wanted to go. They said: "You permit our men to go into this subway, and permit them to remove some earth, and you go through the formality of arrest." I said: "All right." When we got down, and they wanted to move the wagons away, off the pipe, we said, no. He said: "The wagons are in the way." I said: "They are there on purpose, and I am not green enough to give you any advantage just now. The wagons will stay there. If you want to do any business of that character, go on." We arrested their men, and they arrested our men, and they wanted to know if we would go up and have the trial. So we went uptown, and the sheriff had the men we wanted before the justice of the peace. Each one had his trial and was bound over to the court, and the issue was made up, and we went off to our dinner at the hotel, as I supposed, when men came rushing on horseback and said: "They are in a fight." I jumped into the first buggy I found—I did not know whose it was—and I found these traitors, who had promised to take this into court, there with two locomotives standing on top of the track hitched close together. They were running hot steam and water down into this pit on my men. They went to the fire box and threw hot coals down on them, threw stones, and clubbed us; but we whipped them. I ordered every man out of the pit. I told them if they came back there I would shoot them. We barricaded ourselves, and the

Grand Army of the Republic gave us 48 muskets, and I sent to New York and got 18 Springfield rifles. We bound our pipes in with wire and we tied them down, barricaded our house, and stayed there for 7 months holding possession, until the court decided we had a right to stay there. The very men who are at the head of this—I knew them—the men who were there on watch were in the employ of the Tide-Water and the Standard Oil Company. We are punping oil through to the Junction, after the difficulty we had in getting these rights of way through New Jersey. The very same men we found up in New York were offering as high as \$5 a rod to the farmers, instead of \$1.50, which is our price. The whole community turned out to help us, and defended us because of the public wrong. We built that line through.

THE PIPE ENDS 50 MILES FROM NEW YORK—THE FREIGHT RATE FOR THAT DISTANCE.

Q. (By Mr. PHILLIPS.) Through to where?—A. Through to the Junction, 50 miles from New York. From there we have a rate of freight; not, as was stated here by one of the witnesses on this stand, a discriminating rate. The total price, I believe, as given here for transporting a barrel of oil from the oil regions to the seaboard, by the Standard lines, was 45 cents. We pay for that 50 miles on our refined oil 7½ cents, and on the crude 6½ cents. It is not by the carload, or, as stated by the witness, about \$6 or \$7 a car. We give them cars that hold from 132 to 150 barrels. That makes about \$10 a car; a great big rate of freight for a haul of 50 miles. The road is very glad to get it. It gives them in revenue \$200,000 a year.¹

Q. (By Mr. CLARKE.) What road is that?—A. The New Jersey Central, friendly to us. I commend them. No discrimination, mind you. It is a rate that is open, and not a secret rate. Anybody else can come in at the same price. We pay from that point the 7 cents, if we choose to, and the 6 cents; and we compete with the Standard Oil Company in the markets wherever we have fair competition and fair railroad rates.

THE RAILROADS HAVE WON AT LAST.

We have contested this suit in the courts of New Jersey for the last four years; and now a decision has been handed down by the chancellor's court that the contention of the United States Pipe Line against the D., L. & W. Railroad is not valid, and we have notice that we must take these pipes out. The railroads of this country are a barrier to any modern improvements of transportation.

Q. What was the ground of the decision; do you know?—A. That they had a title, not only an easement, but the title or the fee in the land, although they did not buy the fee. There were two decisions in our favor by the vice-chancellors, one by Vice-Chancellor Emerick and one by another—I do not recollect his name. But they were reversed. So our line has got to come out from under that road. It is doing no harm, lying in the midst of a large tunnel, or, I would have said, an open cut. And the old farmer, reserving the right, has egress and ingress to his fields on both sides. Nevertheless, the court is against us. I thought I could produce a letter by which we are given notice that we must remove those pipes immediately.²

Q. What State was that?—A. New Jersey.

Q. (By Mr. PHILLIPS.) The decision of the lower court, if I understand?—A. Sustained the principle that we had title.

Q. Was reversed afterwards?—A. Reversed in the chancellor's court. There is another court which is higher than that—the superior court.

Q. Has your company appealed that case?—A. Oh, we have gone through with all of it. Now, then, that is the story of attempting to stop competition in the business.

Whereupon the commission took a recess until 2.15 o'clock in the afternoon.

WASHINGTON, D. C., Tuesday, September 12, 1899—p. m.

The commission was called to order by Vice-Chairman Phillips at 2.20.

LEWIS EMERY, Jr., again on the stand, and examination resumed.

Mr. PHILLIPS. Senator Emery will now proceed with his testimony in his own way.

¹ Compare Mr. Archbold, pp. 529, 530.

² See p. 622.

THE UNITED STATES PIPE LINE COMPANY; ITS VOTING TRUST—THE STANDARD
BUYS STOCK IN IT.

The WITNESS. I desire to take up, in connection with what I was saying this morning, the subject of competition. The United States Pipe Line Company was organized with a capital originally of \$600,000, and at the present time its capitalization is \$2,000,000, I believe. We formed in that company a voting trust. I should say that the United States Pipe Line Company was organized under the general corporation act of the State of Pennsylvania. We formed a voting trust for the purpose of keeping the stock out of the hands of anyone that was disposed to attempt to control our operations. There was at the time this trust was formed, I think, about \$800,000 of the stock subscribed for, and every dollar of it was in the trust. However, regardless of the provisions of this trust, the Standard Oil Company purchased at an advance on the par value, which is \$100, \$386,000 worth of the stock. Before they had purchased it, however, the stock taken had been increased by new subscriptions to about \$1,200,000; but their expectation and attempt was to get the control of the stock. Owing to the loyalty and determination of the rest of the stockholders, they were unable to purchase any more stock. That trust is in existence to-day—a voting trust. The Standard Oil Company presented themselves at one of the yearly meetings of the United States Pipe Line Company and attempted to vote that stock. We refused, by unanimous resolution of stockholders, to allow the representative of the Standard Oil Trust to vote that stock, and he was ejected from the room, out of which grew the suit of the National Transit Company and J. C. McDonald v. The United States Pipe Line Company.

THE STANDARD GETS A DIRECTOR ON THE BOARD OF THE UNITED STATES PIPE
LINE COMPANY.

Q. (By Mr. PHILLIPS.) In what court?—A. That was brought in the McKean County court, and was appealed to the State supreme court, but was never heard by the supreme court. The case was not even called up. Our attorneys were notified that the appeal was illegally taken, because an officer of the company had not made an affidavit to the bill of appeal, although a stockholder had made an affidavit. I was absent from home. On that ground the supreme court of the State of Pennsylvania threw it out, although we gave to the court several decisions wherein other courts had held that to offer an affidavit made by a stockholder of the company was quite sufficient for an appeal to the supreme court. This is the case. The Standard representative has since been allowed in the meetings; he has listened to the deliberations, and has been allowed to vote upon such questions as he chose to vote on, ever since they have held this stock. They still own it.¹

Q. Was this gentleman elected as a director or not?—A. He was elected by the circumstance of having this stock. We recognized him, and he was elected, and is a director of the company; voted in every time we elect. He knows just exactly what we are going to do, and participates in everything pertaining to the general business of the company.

Q. (By Mr. A. L. HARRIS.) Was he prohibited by the law of the State of Pennsylvania, or by a by-law of your company?—A. From entering?

Q. From entering; from voting.—A. I can answer that question later. I can not just at the moment; I can read the plea of our people which is here. I don't know which it was. It was on some ground; we thought it to be a legal ground, and we still think so: but when we were cut off by the supreme court's decision that the affidavit was improperly made, why, of course, our case failing, we could not renew it. That is all there was about it. Our attorneys denominated it a technical matter, and not one of good law. I don't know anything about it.

THE INDEPENDENT REFINERIES ARE INDEPENDENT.

The stock that these people purchased in the United States Pipe Line belonged, some of it, to three of the largest refinery owners in the association of refiners.² The refineries belonging to the independents have no connection with any of the stock companies. The refineries are owned by individual operators, and have nothing in common with the United States Pipe Line, or the Pure Oil Company, or the Producers' Oil Company, Limited, or any other transportation or oil market-

¹ See Mr. Lee, p. 270; Mr. Archbold, p. 577; Mr. Phillips, 590.

² See Mr. Westgate, p. 370.

ing company. They market their oils individually. They are competitors with one another. I go into the market and I meet there my brother refiner, and I put a price upon my goods and he puts a price upon his goods. No objection; free, open competition among all these refineries that are in the field. There are to-day something like 15 of them, which furnish oil to the transportation companies; and we sell oil not only to the Pure Oil Company, doing business in Europe, but we sell oil to England, France, Italy, and every other country, independently of the Pure Oil Company. So do not confound these refineries with what we are going to finally deal with—the trust; because they have no connection with it. They are independent; all competing against one another in the markets of the world.¹

Q. (By Mr. FARQUHAR.) Do these refineries also sell to the Standard?—A. Oh, yes. I sell the Standard lots of goods, and I make them pay all I can, too, like everybody else.

REFINERIES RECENTLY BOUGHT BY THE STANDARD AND DISMANTLED.

These three gentlemen that I referred to as owning three of the largest refineries connected with this refiners' association—if you choose to call them such; they are not an association—when they sold their stock they sold their refineries as well, and they received a large sum of money for them. Within less than 8 months from the purchase of these refineries by the Standard Oil Company one of them, belonging to Mr. Ramage, was dismantled and destroyed. The next to be partially dismantled was that belonging to Hon. John Fertig, of Titusville, known as the National Refining Company. The next was the Continental Refining Company. All these refineries were first class, and built, especially the last two, in modern times, and with every improvement; so was Mr. Ramage's; in fact, he made more by-products, etc., than any other. All these refineries have been demolished and taken from the ground where they originally stood. That has all happened since 1895.²

Q. (By Mr. PHILLIPS.) Was any effort made to buy other refineries?—A. Oh, yes.³ These people seemed to constitute themselves a committee. They labored with me, and labored with others. They said that it was the best thing to sell out and quit. The rest of us did not think so, and we are on earth yet. I should have been glad to have gentlemen who are anxious to hear about these modern things hear those representations.

THE PURE OIL COMPANY—ITS VOTING TRUST HAS BEEN MODIFIED.

Q. Now, will you explain something in regard to the Producers' Oil Company?—A. The Standard Oil Company bought a majority of the stock of the Producers' Oil Company, Limited. Its method of operation in purchasing that stock you have before you already.⁴ Through the same method they purchased a majority of the stock of the Pure Oil Company, Limited. They have not been permitted by the courts to vote it, and it has had to go back into the hands of the original owners, if necessary, by order of court.

Q. Will you make some statement in regard to the Pure Oil Company as organized thereafter?—A. The Pure Oil Company is organized under the laws of New Jersey. Its capital at present, I believe, is \$3,000,000, with \$377,000 paid in. We are very much afraid that when our United States Pipe Line Trust expires, which will be within the next 15 months, there may be some attempt to get possession of more of that stock. We have felt the necessity of combining or putting the stock of the several companies into the hands of the Pure Oil Company and forming a voting trust, solely for the purpose of protection. I desire to say that the paper⁵ which was referred to has been amended. First, it is not a permanent voting trust. Second, three-fifths of the stock voted at any time can dissolve the trust, or can overrule the power of the voting trust. Only one-half of this stock, and ten shares over, is put in trust, and three-fifths of the whole at any time can control the policy of the company. Under the terms of the charter it terminates within 46 years. Therefore it is not perpetual.

Q. (By Mr. FARQUHAR.) Is that one of the new amendments?—A. Yes.

¹ See Mr. Lee, pp. 270, 271, 280.

² See Mr. Westgate, p. 370.

³ See Mr. Archbold, p. 580; Mr. Westgate, p. 371.

⁴ See Mr. Lee, p. 270.

⁵ See p. 508, where the amended form of this voting trust agreement, as well as the original form, is given.

Q. (By Mr. PHILLIPS.) Was it originally formed for over 50 years?—A. No; chartered for 50 years.

Q. (By Mr. FARQUHAR.) The old form required four-fifths?—A. Yes.

Q. Section four of section 12 (reading): "This agreement may be canceled and the trust hereby created dissolved only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase, at \$110 per share, in cash, of all the preferred and common shares of the company at the time outstanding."—A. Yes.

Q. Is this redemption feature still maintained, that the trust can not be dissolved until after providing in full for redemption or purchase at \$110?—A. That provision is wiped out by the fact that three-fifths can control or change the by-laws, or change anything pertaining to the organization or management of the company.

Q. Well, is this stock-redemption feature still retained?—A. I don't know, sir; I can't answer that question.

THE PURE OIL COMPANY IS NOT A TRUST, IN THE INDUSTRIAL SENSE.

Q. Now, it has been said here that this Pure Oil Company is not a trust. I called the attention of another witness to the fact that it is specifically mentioned as a trust in your articles of agreement and also of incorporation.—A. Yes.

Q. So that you are not afraid to call it a trust?—A. I call it a voting trust. I will submit your question to decision, if you choose, according to the definition of a trust given by the Commercial Year Book of the New York Journal of Commerce. The definition is, "As popularly used, the word 'Trust' is now applied to any consolidation, combine, pool, or agreement of two or more naturally competing concerns, which establishes a partial or complete monopoly, in certain territory, with power to fix prices or rates in any industry. Viewed from the standpoint of the consumer, the informal agreement and the ironclad combine look alike if the one has the same effect as the other upon prices."

Now, there is nothing in the world about the Pure Oil Company that can possibly lead up to that definition. There are several other definitions that I can refer to.

Q. Let me suggest that there are five true definitions given by Mr. Cook, who is an authority, one of the greatest lawyers in the country, and also by Von Halle. There are five forms of trusts.

Q. (By Mr. PHILLIPS.) I would ask the Senator to read the definition, under the Sherman act, of a trust, if he has it there.—A. It needs no argument to show that the Pure Oil Company is not a trust. It lacks every element of a trust. A trust is defined by the antitrust law known as the Sherman act of 1890 as follows: "All trusts and combinations in restraint of trade are unlawful." Another accepted definition is that a corporation or combination of corporations, with vast capital, made for the purpose of securing and maintaining a monopoly in any branch of industry, is a trust. The odious feature is the aim and purpose to secure a monopoly. The Pure Oil Company was organized, not to secure a monopoly, but to prevent a monopoly in the oil industry. The Pure Oil Company is not in restraint of trade, but in aid of trade, and to maintain competition. It expires by the expiration of its charter 46 years from the 6th day of next November. It is therefore neither permanent nor perpetual as alleged. It would be silly to hold that a corporation with a paid up capital of only \$377,000, opposed by a trust in the same industry with a par capital over 300 times and a market value over 1,000 times as great, could be a monopoly or restrain trade; and unless it is a monopoly, or restrains trade, it can not be a trust. That the power to vote one-half of its stock has been placed in the hands of trustees, to prevent a great monopoly from intruding to destroy it, does not change the character of the corporation or make it a trust.¹ If the Pure Oil Company should ever develop monopolistic tendencies, the present holders would be glad to have it destroyed. If any antitrust legislation, at any time, brings within its restrictive or destructive provisions the Pure Oil Company, the stockholders of that company will welcome its destruction.

NO EFFORT TO COMBINE WITH THE STANDARD.

Q. You are a large holder in most of these companies. You are president of the United States Pipe Line Company, and you are a large holder in the Pure Oil

¹ Commercial Year Book, 1899, p. 643.

² See Mr. Boyle, pp. 443, 444, 463, 464, 488; Mr. Archbold, p. 607; Mr. Phillips, pp. 591, 594-598.

Company. Do you know of any effort ever having been made to make a combine of these various companies with the Standard?—A. No, never; no, sir.

Q. (By Mr. FARQUHAR.) The commission has been furnished the original form of the incorporation of the Pure Oil Company, and it will be printed as a part of the minutes of this commission. Now, can you furnish with your testimony a copy of the amended one in proper form?—A. Oh, yes; I shall be very glad to.¹

EFFORTS NOW MAKING TO COMBINE THE INDEPENDENT COMPANIES.

Q. That is what I wanted to know.—A. Now, as to the changing of that trust; we have not got the voting trust yet. We, perhaps, are crossing the bridge before we get to it; but this has not been accomplished. It has not been accomplished, so far as the combination of the stock of those companies is concerned. All that is in the shape of a trust, out of about three or four million dollars, is \$377,000. The other is in contemplation, because we fear that when this present trust of ours—the United States Pipe Line—expires, we shall be in danger, and we are going to put ourselves under cover; that is all.

Q. You have incorporated in the State of New Jersey the Pure Oil Company?—A. Yes.

Q. You have how much capital paid in?—A. \$377,000.

Q. You are still under the operations of a majority of the stockholders bringing in other companies?—A. Oh, no; we are simply talking about it and hope to accomplish it. It is not a question that has absolutely been decided, though I expect that it will be done. The amendments have not even been printed; but we are going to try to get this stock in for self-protection, and put it into the voting trust. It has not been accomplished yet by any means.

THE INDEPENDENTS ASKED THE STANDARD FOR PERMISSION TO LAY THEIR PIPE UNDER THE RAILROADS—THEY DID NOT PROPOSE TO SELL OUT TO THE STANDARD.

Q. (By Mr. PHILLIPS.) Now, will you answer the other question in regard to any effort amongst all these companies to make a combine with the Standard Oil Trust?—A. I was president and general manager of the United States Pipe Line Company from its inception up to a little over a year ago, and probably I should have been still in the management of it had my health not failed. I was always present at general meetings and had, under our by-laws, the appointment of all committees. During our trouble that I have recited relative to the construction of this line, I appointed a committee, as chairman of the board of directors, to go to New York and see if some arrangement could not be made with the Standard Oil Company by which they would permit us to go under the railroads of the country. We did not go to the railroads. The railroads had nothing to say about it. We went to the Standard Oil Company, but not for the purpose of selling one single share or one dollar's worth of our property. The resolution or motion offered was that the committee go to New York for the purpose of seeing if the Standard Oil Company would not let up and let us go through to the coast. I appointed that committee under that resolution. Mr. Phillips, Mr. Lee, Mr. Murphy, Mr. King, Mr. Jennings of Pittsburg, and some other gentlemen were appointed to go there for the purpose I have named. They had no authority to make any proposition to sell any portion of this property or to make any settlement with the Standard Oil Company on any such basis as selling out any part of the company's property. I am sure they did not make any such proposition.²

EFFORTS TO GET A GENERAL PIPE-LINE LAW IN PENNSYLVANIA—METHODS OF THE OPPOSITION.

Q. In regard to the opposition to laying the pipe line through Pennsylvania it was said by Senator Lee that certain dodgers were circulated in the eastern part of the State.³ Can you state the purport of these dodgers, or have you any knowledge of them?—A. In 1868 the legislature of Pennsylvania passed an act for the incorporation of pipe-line companies, as I told you yesterday. We got such a law, through the permission of Mr. Thomas A. Scott,⁴ for eight counties in the northern part of Pennsylvania, and the Wallace act of 1874 repealed that law. Immediately upon the repeal we attempted to get a law passed giving the right of eminent domain for the construction of pipe lines. That was introduced regularly from 1874 up to 1883—every session during my career in the legislature, both House and Senate, for 10 years. It was my duty to introduce this bill and

¹ See p. 508 for both forms of the trust agreement.

² See Mr. Archbold, pp. 533, 531, 548; Mr. Phillips, p. 503.

³ See p. 262.

⁴ See p. 605.

endeavor to pass it. In 1883 the bill was pending, and the Standard Oil Company, by its agents, had gone all over the southern portion of the State of Pennsylvania, which is a very beautiful part of the country, as you know, and had said to the farmers that if the pipe lines were laid in that region there would be a general destruction of their property; that their orchards would be destroyed, and there would be general havoc, and the pipe lines would explode and probably destroy life as well as property. At the same time they had thousands and thousands of miles of pipe line in the States of Pennsylvania, Ohio, and West Virginia. In order to meet and counteract the impression among the people Senator Lee and myself, night after night and week after week, visited the schoolhouses and court-houses, and every place where we could get a gathering of people to listen to our explanation of the necessity of the passage of this law. Dodgers were issued and pushed under my arm. The effort was to get my attention to them. As I entered the court-house in Lancaster, Pa., there was pushed under my arm a paper which read: "Look out for false prophets." Beneath it read, "These people are endeavoring to pass a law that will destroy the springs on your farms; it will blow up your houses; it will create havoc in your fields, when the pipe bursts, by killing the grass. The most dangerous of all laws."

We had placed our circulars in all of the seats of the court-house in Lancaster, Pa., and some miscreant went in there and took all of our circulars setting forth our object and what we were after, and in their place dropped into the seats these yellow papers, on which was written, "Look out for false prophets." Those dodgers were furnished—I don't care what the other witness said.¹ He was not on the ground to make any speeches in behalf of the oil country. He can not say that those dodgers were not circulated, and if he does he certainly says that which he does not know anything about. I was there through the whole of it, and we went on with that operation week in and week out and month in and month out. We were from 1874 to 1883 getting that law.

\$10,000,000 IN REBATES FROM OCTOBER 17, 1877, TO MARCH 31, 1879—THE EVIDENCE.

Q. There was one other question on which your testimony was brought into dispute; that of the \$10,000,000 in rebates that was said to have been paid to the Standard Oil Company in a given time. This, I believe, was denominated a lie or a lusty lie. I think it was in connection with this question.—A. Well, gentlemen, I do not mean to lie; I do not mean to tell anything but the truth as I understand it, and I have said nothing before this commission that I can not prove, and my statements made in 1888 are just as sacred to me to-day as they were when I made them. If I have told any lie I shall beg the pardon of the great United States of America and all my friends therein, and endeavor to rectify any wrong that I have done.

My authority for that, which I will produce, is unquestioned, and I defy anybody to prove that my assertions or statements at that time were false. I desire you to turn to page 101 of my pamphlet, which I have given you. I need not take your time by reading over all the evidence. It is before you on pages 101, 102, and 103; you can read it as well as I can, but we will go over to 104; there is a recapitulation of the oil business. (See Fiftieth Congress, first session, House Reports, vol. 9, pp. 242, 243.)

I hold in my hand a book of testimony in the case of The Commonwealth against the Pennsylvania Railroad Company. This testimony can be had, I think, in the Library of Congress. It can be found in the library at Harrisburg, and undoubtedly at many other places.

I had the honor to be one of a committee of three to visit Gov. John F. Hartranft and lay before him our grievances; and we invoked the aid of the Commonwealth of Pennsylvania. That good, great, and kind man gave it to us. He required the Pennsylvania Railroad Company to answer the charges made against them with regard to the South Improvement Company contract and other acts, from the commencement of the history of the Standard Oil Company or the South Improvement Company, from 1872 to the final hearing of the suits in 1879. This is the testimony of Mr. Cassatt, first vice-president of the Pennsylvania Railroad, making a clean breast of everything pertaining to the contracts. From his admissions and from the admissions of other officers connected with the road I have computed the shipments of oil during 1878 and the first quarter of 1879, making a grand total of 18,556,277 barrels of oil shipped; and from this testimony I have deduced the fact that 55 cents per barrel was paid upon the transportation of that petroleum. I charge the rebates on all that oil to the Standard Oil Company; not only on what was shipped to the coast. As I showed you yesterday, on all oil

¹ See Mr. Archbold, p. 513. See also Mr. Lee, p. 202.

that went west also they had to have their rebate. Again, it was carrying out the provisions of the old agreement, the South Improvement contract, although that had been repealed. The drawbacks on that oil are even greater than I have said in this report or in my evidence in 1888.

Q. (By Mr. KENNEDY.) How much space did Mr. Cassatt's testimony occupy in that book?—A. Some 50 or 60 pages. It begins on page 660 and runs to page 787. Here is my authority, and I have given the pages in my testimony. Let anybody prove that I am mistaken. But \$10,000,000 is nothing compared to the rebates paid; it is a bagatelle.

STATEMENTS OF PREVIOUS WITNESS AS TO THIS ESTIMATE OF THE REBATES.

Q. (By Mr. A. L. HARRIS.) I think it was stated that the testimony of Mr. Cassatt has been perverted, and the conclusions drawn are not warranted by the testimony.¹ That is the reason, I suppose, that you were asked to refer to the part of the testimony in which this admission is made.—A. I have given each page in my testimony of 1888.

Q. (By Mr. KENNEDY.) I thought there might be a paragraph or a page in which he made the admission.—A. The testimony is not by him only, but by other officers of the Pennsylvania Railroad; that was the object, to find out what the discrimination was.

Q. I think the testimony was to the effect that this \$4,771,000 which the Pennsylvania Railroad got was all that you could figure from his statement, and all the rest is assumption.—A. Oh, no; because, not only did the Pennsylvania Railroad Company get it, if he admits they got \$4,000,000, in this twelve or fourteen millions they must have participated.

Q. He says that is an assumption.—A. It has been proved; proved by the Hepburn committee, just as plainly as this is proved. If he admits \$4,000,000 was paid to the Pennsylvania Railroad alone, it is more than I gave them. My computation is based on the total shipments of oil. I did not say that the Pennsylvania alone got it. I say the rebate is so much; even more.
